Endorsed at head of fol. 21^v in the same hand as the inscription “Liber Christopheri Taylour”: Out of mr Garlandes book of ye Earle of Trevisan./*

NOTES

¹ Elias Ashmole, *Theatrum chemicum britannicum* (London, 1652), 481-484. Anthony à Wood, *Athenae Oxoniensis, An exact history of all the writers and bishops who have had their education in the University of Oxford. To which are added the Fasti, or Annals of the said University*, ed. Philip Bliss, 4 vols (London, 1813-1820), I, 639-643, III, 286. Thompson Cooper, “Kelley, Edward”, in *DNB*, X, 1230-1232.

² Numerous records of Kelley’s travels are given in Halliwell’s edition of Dee’s diary, starting with 18 October 1586: “E. K. recessit a Trebona versus Pragam curru delatus; mansit hic per tres hebdomadas” (*Private Diary*, 21.) 30 December 1586 “E. K. versus Pragam. [...] Jan. 18th, rediit E. K. a Praga” (*Private Diary*, 22), “Jan. 21st, E. K. again to Praga and so to Poland ward. [...] Feb. 19th, E. K. cam from Poland about none to Trebone.” (*Private Diary*, 22.) “Sept. 30th, T[homas] K[elley] and J[ohn] C[arp] went toward Praga. / Oct. 12th, Mr. E. K. toward Praga on horsbak [...] Oct. 26th, Mr. Edward Kelly cam to Trebona from Praga” (*Private Diary*, 24). And in 1588 “Oct. 25th, Mr. Ed. Kelley and John Carpio rode toward Praga; [...] Nov. 6th, Mr. Kelly cam home from Praga and Mr. Francys Garland, and Edward Rolls with him from Englis” (*Private Diary*, 29). And finally, in 1589: “Feb. 16th

Mr. Edward Kelley rode toward Prage after none, John Carpio, Edmond Hilton, Henry Garlande, Thomas Simkinson, Lodovik.” (*Private Diary*, 30)

³ *NP*, 223–226.

⁴ Ashmole, *Theatrum chemicum*, 482.

⁵ The Alexander Robert mentioned by Ashmole seems to be the same Roberts, who at least once delivered a letter from Kelley to Dee (Dee did not always give the names of those from whom he got Kelley’s letters), as a note from November 1594 suggests, “Receyued a letter from Sir Ed. Kelley by Roberts” (Oxford, Bodleian Library, Ashmole MS 487, containing diary notes and occasional short memoranda of John Dee from January 1577 to December 1600 in Iohannes Stadius, *Ephemerides novæ*, Cologne 1570. Hereafter referred to as “Ashmole MS 487” and the relevant date).

⁶ Ashmole, *Theatrum chemicum*, 481–2.

⁷ Ronald Sterne Wilkinson, “The Alchemical Library of John Winthrop Jr. (1606–1676) and his descendants in Colonial America”, *Ambix*, 11 (1963): 33–51.

⁸ John Winthrop Junior to Samuel Hartlib, 16 December 1659, in *Massachusetts Historical Society Proceedings*, 72 (October 1957–December 1960): 38–39, cit. Wilkinson, 43.

⁹ Wilkinson, 43.

¹³ Ashmole, *Theatrum chemicum*, 483.

¹⁴ Arthur Edward Waite, “Biographical Preface” in *The Alchemical Writings of Edward Kelley* (London: Robinson & Watkins, 1973), xxxix.

¹⁵ Quoted from Waite, xxxix. My emphasis.

¹⁶ Prague, Nat. Mus. MS VI.D.17, cit. R. J. W. Evans, *Rudolph II and his Time* (Oxford: Clarendon Press, 1973), 227. Evans does not give any mention of the death of Kelley. Louise Schleiner kindly informed me of a Czech historian, Ivan Sviták, who gives Kelley’s date of death as 1598. As I have not been able to read Sviták’s two biographies of Kelley, I do not know which sources Sviták uses for that statement, but they are obviously better than the usual ones. The books are: *Hledání kamene mudrcu. Rehabilitace pana Edwarda Kelleye – neoplatonického hermetického filozofa a rytíře Českého království, který žil v letech 1584–1598 v Praze* (Prague: [n.pub.], 1991) and *Sir Edward Kelley: česká rytíř, 1555–1598* (Prague: Samisdat ISIS, 1994). Nevertheless, in the “Bibliographical notes” – which are written in English – of the first monograph, Sviták writes: “A. The Published Works of Edward Kelley (1555–1597, often given with the wrong date 1595)” (*Hledání kamene mudrcu* ..., 213).

¹⁷ Cf. Oxford, Bodleian Library, Ashmole MS 488, containing diary notes and occasional short memoranda of John Dee from December 1586 to April 1601 in Iohannes Antonius Manginus, *Ephemerides coelestium motuum* (Venice 1582). Hereafter referred to as “Ashmole MS 488” and the relevant date. During the period from January to September 1590 there are at least eight notes relating to correspondence and “talks” about Kelley: for the period January 1593 to the aforementioned “death news” of 25 November 1595, there are at least thirteen such entries.

¹⁸ *NP*, 228.

¹⁹ In British Library, Sloane MS 68 containing different loose items, mostly letters, we read in item 85, “A true copy of a letter written from Frankfort concerning Sir Edward Kelly’s troubles, May 15, 1591.” But this document does not suggest that Kelley’s troubles with the Bohemian authorities were of an alchemical, hermetical or mystical nature, but speaks of a political conflict between the substantial English community in Bohemia and the Bohemian authorities. It appears from this letter that Kelley was involved in the conflict as a prestigious member of the English community rather than as a persecuted alchemist. The political problem of being an Englishman in Prague at that time is reflected in some passages in this letter: “To Prag I durst not inquire much after it because it tutcht the Emperors brother neerly and was odious in it self. [...] At my first comming I was aduertisd that there were many English in the Towne vpon which I ment not to discover my self, till I had sounded out what they were, the state they bare, and what course they tooke. Worde was given me that one Mr Dyer was in Sir Edward Kellyes house, and an other Paje with one of the Lees in the Towne and two or 3 other Captains which departed, as I was informd [...]” Cf. also item 93 in the same manuscript “A letter from Mr Tho. Webbes, at Stade, to Lord Burghley; concerning Mr. Dier’s and Sir Edw. Kelley’s trouble, June 26, 1591.”

²⁰ Ashmole MS 487, October 1593. In Ashmole MS 488, however, the note “The Newes of Sir Edward Kelly his libertie” is dated the 5 December 1593.

²¹ Ashmole MS 487, 12 August 1594.

²² Wayne Shumaker, *Renaissance Curiosa* (Binghamton: Mediaeval and Renaissance Texts and Studies, 1982), 25-26. Even though I have not checked the sources, it is my opinion that these rumours are obviously just fantastic stories. In the *Dictionary of National Biography* they are summarized in the following way: "Leaving Oxford 'abruptly', Kelley appears at London as a fraudulent scrivener or attorney (Du Fresnoy, *Hist. De la Philosophie Hermétique*, i. 307). About 1580 he had his ears cropped in the pillory at Lancaster for forging some ancient title-deeds (Nash, ii, 446); or, according to another account, for coining base money. Weever, in his "Funerall Monuments" (p.46), charges him in addition with having dug up a corpse in Walton-le-Dale Park for the purpose of questioning the dead." (*DNB*, X, 231).

²³ For a full description of the manuscripts see Appendix.

²⁴ Wilkinson; *R&W*, 67.

²⁵ Dee writes about a Mr. Powell – probably the father of Griffith, as he calls the Mr. Powell whom he met in 1582, "Mr. Powell the younger" – in Hearne's *Compendious Rehearsal*: "To my foresaid library and studies, may my three Laboratories, serving for *Pyrotechnia*, be justly accounted, as Appendix practical. The furniture of which and of all the storehouses, chambers, and garrets, belonging and replenished with Chymical stuff, was (for above 20 years) of my getting together, farr and near, with great pains, cost and damages; as partly Mr. Powel, her Majestie's servant at this present, can testifie for one journey, wherein he took pains with me, into the Dukedome of Lorraine (A. 1571.) and we brought from thence one great cart lading of purposely made vessels &c.", *R&W*, 197.

²⁶ From Adam McLean's website (<http://www.levity.com/alchemy/almss5.html>, accessed July 2005). I note the occurrence of the name Christopher Taylour in the following manuscripts: Oxford, Bodleian Library, Ashmole MS 1406. Part II, 131-173: "A treatise of the Numbers one and two, and the Unity and Chaos". "Liber Christophori Taylour. 1600", Oxford, Bodleian Library, Ashmole MS 1482, fols. 136-138: "Processus operis" (An account of an alchemical process, written partly in a secret alphabet, partly in Latin, and partly in English, superscribed by the writer "Liber Christophori Taylour"), and Oxford, Bodleian Library, Ashmole MS 1492. Sixteenth and seventeenth centuries, IX. 1, 130: "A vessell of circulation, with blind head of the owne. (In the handwriting of Christopher Taylour)."

²⁷ There are several manuscripts which were owned or written by Isaac Habrecht in the Royal Library in Copenhagen. I have not had the opportunity to undertake a close examination of them, but they are, apart from the one that will be discussed later, Old Royal Coll. 1727 4°, Old Royal Coll. 1661 4° (Fragmentum Codicis chart. anonymi Sec. XV. de morbis, eorumque cura), Old Royal Coll. 1667 4° (Hohenloesch Artzeneybuch, nominibus morborum manu, ut videtur Habrechtii, in margine annotatis.), Old Royal Coll. 1688 4° (Farrago medica 1606 collecta a Isaaci Habrechtii), Old Royal Coll. 1689 4° (Farrago chemica 1606 collecta a Isaaci Habrechtii), Old Royal Coll. 1690 4° (Isaac Habrechtii Collectanea Chymica), Old Royal Coll. 1691 4° (Isaac Habrechtii Dispositio in breves et succinctas theses totius medicinæ theoretica.), Old Royal Coll. 1692 4° (Fasciculus variorum excerptiorum medicorum), Old Royal Coll. 258 fol. (Commercium Epistolicum Habrechtianum sive Epistolæ variorum Autographiæ ad Isacum Habrechtum maxime de rebus ad Alchymiam pertinentibus, ord. alphab.), and probably some more which I have not noted. This Isaac Habrecht is an interesting figure in connection with the "Filius Sendivogii", or "Hautnorthon" figure, known under the monogram "J.H.F.S.", who has been identified as an Johann Harprecht (Fortitudo) Starcke by Joachim Telle in an excellent study "Zum 'Filius Sendivogii' Johann Harprecht" (in Christoph Meinel, ed., *Die Alchimie in der europäischen Kultur- und Wissenschaftsgeschichte*, Wolfenbütteler Forschungen, 32 (Wiesbaden: Harrassowitz, 1986), 119-36. This is not the place to discuss the complicated and confused relation between the above mentioned "Filius Sendivogii", the Tübingen professors Johann Harprecht (1560-1639), his son, Johann Harprecht (1610-166?), this Isaac Habrecht (1589-1633), his father, also called Isaac (1544-1620), and the equally confusing identities of the author names "Isaac Hollandus", and "his son" "Johann Isaac Hollandus", but I hope to have the opportunity to return to this subject in some other connection.

²⁸ These crossings and cancellations seem not to have been "approved" by all hands in the manuscript, thus we read – crossed out! – on fol. 30v: "[...] I crossed these lettres [...] taking them to be but sophisticacious", on fol. 33, in the margin, with another, Italic, hand: "some Also outcrossede this."

²⁹ Cf. Old Royal Coll. 1727 4°, pp. 165-167, 175-177. My decipherings are based on the following substitution cipher: I=I, M=M, N&U=L/L=N K=P/P=C or K, A=V/V=A, D=T/T=A, E=O/O=E, F=S/S=F, G=R/R=G.

³⁰ C. J. Robinson “Hill, Nicholas”, in *DNB* X, 855–856. Cf. also Hugh Trevor-Roper, “Nicholas Hill, the English Atomist” in *Catholics, Anglicans and Puritans* (London: Martin Secker & Warburg, 1987), 1–39.

³¹ Trevor-Roper, 8.

³² As the *Dictionary of National Biography* states, but see Trevor-Roper, 19.

³³ This is the hypothesis put forward by Trevor-Roper, 19–39.

³⁴ None of which seems to have survived, but Trevor-Roper’s account of one of them is interesting in an alchemical connection: “According to Henshaw, the manuscript which he possessed was a copy taken by John Everard, a Neoplatonist who had translated the Hermetic writers, from “an imperfect copy in the hands of Edmund Earl of Mulgrave” [...]. The Earl’s manuscript was anonymous, but presumably it was he who ascribed it to Hill since he was the source of Henshaw’s information (or misinformation) about Hill’s life. [...] When Henshaw had acquired Everard’s transcript of the manuscript, about 1637, he showed it to the greatest expert on such arcane matters, his own kinsman William Backhouse of Swallowfield. This William Backhouse was a patron and himself a student of alchemy and other mysteries: he was the alchemical “father” – i.e. initiator – of the alchemical virtuoso Elias Ashmole [...]. On reading Henshaw’s manuscript, Backhouse, who knew Hill’s printed work, recognized it as being by the same writer and determined to discover more about him. [...] It is unfortunate that Backhouse – the one person, who, through Hill’s widow, could have discovered, and perhaps did discover, the true history of his life – left no record of it or indeed anything else. But Backhouse was a strange and secretive character who led a hidden life – *sache cacher* was his chosen motto – and committed nothing to paper.” (Trevor-Roper, 15).

³⁵ Thompson Cooper, “Digges, Thomas”, in: *DNB*, V, 976–978; *Biographia Britannica*, 2nd edn, 5 vols (London, 1778–93), V, 239, and Wood, I, 414–415, 636–639.

³⁶ See, for example, fols. 96^v and 110^v.

³⁷ Julian Roberts, personal communication.

³⁸ *R&W*, 11–13.

³⁹ Ashmole, *Theatrum chemicum*, 332–333.

⁴⁰ At least two other copies of this text exist in British libraries: British Library, Sloane MS 319, p.3 (around 1600) and Oxford, Bodleian Library, Ashmole MS 1394, item VI, 11.

⁴¹ Since it could be the name “Roger Kock” that is erased after two tracts in Old Royal Coll. 1723 4^o (see below), and since Roger Cook was in Prague at least from about 1609 up until 1612, this is of course a possibility. Speaking against this identification of the scribe with Roger Cook is the fact that the initials would then reasonably be R.C. and not R.K. since the larger part of the manuscript is written in English, and since Cook was definitively in England the 30 September 1600 (returning to the service of Dee, cf. *R&W*, 43), less than a year after the dating of this manuscript. I know nothing of Cook’s whereabouts following his departure from the service of Dee the 7 September 1581 to 1600, nor have I been able to find any other possible candidate for the R.K. signature.

⁴² *Private Diary*, 30.

⁴³ I am grateful to Dr Stephen Clucas for calling my attention to this and suggesting this reading, and I agree on the plausibility of this reading even though I find it very hard to confirm it after seeing the original. If this reading is correct, then the erased signature on fol. 20^v could read: “[per?] Rogerius Cooke”, that is, with an English spelling of the name. On Cook, cf. Edward Heron-Allen, “Cooke, Roger”, in *DNB*, IV, 1018–1019. According to *DNB* all traces of Cook are lost after 1584.

⁴⁴ *R&W*, 43 and *NP*, 178.

⁴⁵ I have not been able to find any information on this “Constantius Loogenhagius” (fol. 1^v) but the many references to the Netherlands is interesting in the light of two seventeenth-century tracts in Sloane MS 83 referring to a “Dr of Physicke” in the Netherlands, William Johnson, who is said to be Edward Kelley’s “alchemical son”, if we are to believe the titles “A Treatise of the Philosophers Stone. A Letter from S. Edward Kelly to his Son &c.” (fol. 1) and, on fols. 8–11 “A letter from Sir Edward Kelley to his sonne Mr. Will. Johnson, Dr. of Physicke in the Lowe Countryes.”

⁴⁶ The only trace I have found of this John Tichborn, after Mr. Adam McLean had brought it to my attention, is the signature “finis. Jo. Tichborn” after the explicit “of the nature of thinges | The Seaven bookes of Aureolus Theophrastus Paracelsus”, in British Library, Sloane MS 320, fol. 96. Extracts from this text are interestingly enough to be found in MS 1723, 145–148.

⁴⁷ *R&W*, 25. See, for example, 23, 29, and 102 in the facsimile reproduction of the Catalogue.

⁴⁸ *Mercurius Triumphans & Hebdomas Eclogarum Hermeticarum. Vnà cum commentariis Acroamaticis et Mysticis. In quibus de vnica, vera, summa, & antiquissima Philosophorum Medicina disseritur*

Libris XIII. Omnia Studio & Opera: Arioponi Cephalii Eutopiensis [etc] (Magdeburg, 1600) in-8:vo, [xx], 144 pp., with a vignette representing a dragon in a fire with the motto: "Durare Mori et non Perire". The dedication to Rudolph II is signed "M. C. M. D.", that is Martinus Copus, Medicinæ Doctor, the author (See John Ferguson: *Bibliotheca chemica. A catalogue of the alchemical, chemical and pharmaceutical books in the collection of the late James Young of Kelly and Durris*, 2 vols (Glasgow, 1906), I, 150).

⁴⁹ *Apotelesmata Philosophica, Mercurii Triumphantis, de vera, et summa Antiquissimorum Philosophorum Medicina. In quibus Elucidatio & Clavis totius Operis. Labore & studio Arioponi Cephalii Eutopiensis. Cum Grat: & Priuileg. Cæs. Maiest. ad Decennium*. (Magdeburg, 1601) in-4°, [72] pp., with the same vignette, and the motto: "Aut taceant aut discant" (Cf. Ferguson).

⁵⁰ From the early 1570s until 1581 Roger Cook was Dee's alchemical assistant, and from this period "there is evidence of continuous and considerable alchemical activity on Dee's part" (NP, 178). Edward Kelley did not enter the scene until 1582.

⁵¹ Appendix on paper. First I want to issue a warning: I am not an expert in the examination of watermarks, and I am very uncertain about the conclusions which can be drawn from the often insufficient information I present in my catalogue of the MSS, and, finally, this preliminary examination is too brief to be considered scientifically accurate. Nevertheless I will venture some general remarks which in my opinion strengthen the impression of the homogeneity of this group of manuscripts. First I note that manuscript 245 from the "R.K." group and manuscripts 240 and 247 from the "Christopher Tylour" group have a watermark of the same type of grapes (consisting of 34-42 grapes, "hanging" vertically between two chainlines and with a right-twisted branch), but in different dimensions. What speaks for their shared origin at the same manufacturer is the fact that both manuscript 240 and manuscript 247 are made up of another seemingly identical type of paper, i.e. the 64mm high one-handled pot with a four-petalled flower (other details could however be different). This very same type and dimensions also occurs in manuscript 1723, which again strengthens the hypothesis that hand II of this manuscript and the "R.K." signature in manuscript 246 are identical. The equation is this: The grapes of manuscript 245 (written by the same hand as manuscript 246) seem to stem from the same manufacturer as the grapes of manuscripts 240 and 247; the 64mm pot type of manuscripts 240 and 247 seem to stem from the same manufacturer as the 64mm pot type of manuscript 1723. Under all circumstances, the 64mm pot type occurs in the "Christopher Tylour" group as well as in the "R.K." group. The close connection of these manuscripts is also indicated by the similar watermarks of manuscript 246 and quires Kk-Ll of manuscript 240 (the 50mm one-handled pot without flower on top). I said that manuscript 247 was the most intriguing of the Copenhagen manuscripts, but at the same time the one that yielded the least amount of factual information. With regard to watermarks this manuscript nevertheless seems to be very close in origin to manuscript 240 (one watermark that is seemingly identical and one of an identical type), which in turn is very close in origin as well as provenance to manuscript 1727. Further, manuscript 247 seems very close in origin to manuscript 1723 (the John Carpe signature) because of the similar 64mm urn type. It is thus worth noting that if manuscript 1723 is written by the same hand as manuscripts 245 and 246, this also suggests a link between manuscripts 245/246 and manuscript 247 (the Arioponus Cephalus tract to the Emperour). Another curious detail is that quire V (a part of the "Lyttle Key of Raymond Lully") of the otherwise rather English-looking manuscript 240 is written on paper which, according to Briquet, was produced in Moscow 1594 (Briquet, IV, 12.721).

JULIAN ROBERTS

ADDITIONS AND CORRECTIONS TO
“JOHN DEE’S LIBRARY CATALOGUE” *

Our publication of *John Dee’s Library Catalogue* in 1990 has not, to our great relief, been followed by critical demolition. A number of reviewers and correspondents pointed out, quite correctly, that there were omissions and inaccuracies, while others found fault with aspects of our method. Our intention, some fifteen or twenty years in execution, had been to describe the purposeful growth, the extent and the final dispersal of John Dee’s library, and to provide by illustration, where possible, a means of identifying more survivors, whether manuscript or printed. The areas where our conjectures fell some way short of final proof, were the naming of those who raided Dee’s house after his departure in 1583 – and we still do not know why they did so – and the final passing of his books into the hands of John Pontois and Patrick Saunders. So far these conjectures have stood; no cache of Dee’s books, overlooked by us, had then been found, though the painstaking searches of Dr. William H. Sherman, particularly in Cambridge, notably increased the tally of survivors. His discovery of no. 1101, the *Historie* of Fernando Colombo, in the British Library, brought to light one of the most heavily and interestingly annotated of his books. Another new survivor which falls into this category is no. 282, Simler’s *Epitome*, now in the Bodleian. The intensity of Dee’s interest in British and Welsh antiquities was one of the major revelations after the publication of the *Catalogue*.¹

We suspected then that more evidence for this interest might emerge in Welsh libraries, and it still may do so, though the focus of attention is now upon Dublin. Lyndy Abraham has done something which we had toyed with and abandoned – examined Arthur Dee’s *Fasciculus chemicus* for evidence of the availability to him of any of his father’s books.² Given Arthur Dee’s sojourn in Moscow, a further question suggests itself: do any of Arthur Dee’s books remain in Moscow?

In December 1997 a survey by Mr. Ray Jordan of the Conservation Department of the Library of Trinity College Dublin brought to light a number of survivors among the books collected by Archbishop James Ussher of Armagh, and presented to the College in 1661. That Ussher had owned many of the manuscripts from Dee’s library was well known, and we recorded this fact, and that in 1626 John Bainbridge wrote to Ussher asking for the names of mathematical books that had been Dee’s.³

* An earlier version of the following list of additions and corrections to John Dee’s Library Catalogue was privately printed and issued for the Colloquium on John Dee held at Birkbeck College in the University of London in April 1995, and was introduced there by a brief paper from Julian Roberts entitled, “Life after the Library Catalogue.”

None of the survivors among Ussher's books – so far – is mathematical. At least two, however, of these survivors have proved to be of the greatest interest. The three folio volumes of Giovanni Battista Ramusio's *Navigazioni et viaggi* (no. 273) have probably gained the title of Dee's most heavily annotated work, and are now vital, along with Dr. Sherman's account of Colombo's *Historie*, to any future study of his navigational and geographical interests, and of his own involvement in the settlement of North America. The notes in his copy – if they are his, and original to him – of William Salesbury's *A dictionary in Englishe and Welshe, 1547*, (no. 1645) reveal a knowledge of, and interest in, the Welsh language much greater than that indicated in Julian Roberts's 1991 article.⁴ All the newly discovered books in Dublin had been rebound in eighteenth-century calf, with the exception of no. 387. Grateful thanks are due to Mr. Jordan for making the results of his survey available, and to Mr. Charles Benson, the Keeper of Early Printed Books in Trinity College for his help.

One biographical question remains unanswered; the nature of Dee's relationship with the London Grocer Thomas Constable, whose widow Katherine he married. The scrap of information provided by E.G.R. Taylor in her *Tudor Geographers*, (1930) is the only clue to the name of Dee's first wife. Taylor's reference takes us to a record of a 1566 lawsuit between John and Katherine Dee and Richard Payne of Lynton in Cambridgeshire over a debt of £18 incurred by Payne to Thomas Constable in 1558, and witnessed then by John Dee.⁵

Two discoveries have brought some shame upon us, since they were made in the two libraries we were supposed to know best: Deborah Harkness has found Latin versions of the mysterious "Soyga" (DM 166) in the Bodleian Library and the British Library.⁶

In offering this brief list of Additions and Corrections, we would point out that it is all too possible to be in doubt over the attribution of a book or manuscript to Dee's library. With printed books, the problem is perhaps smaller, because the 1583 catalogue of them is a more definitive record (though examination of his Simler suggests that he *did* buy books after 1583), whereas the catalogue of manuscripts of that year is a hasty work. There are, simply, manuscripts about which we cannot be sure.

ADDITIONS AND CORRECTIONS

ANNALS OF JOHN DEE'S LIFE

- 1550 (24 July) acquired no. 230.
- 1555 (28 September) acquired no. 548; (29 September) acquired no. 387.
- 1556 (26 March) acquired no. 338.
- 1558 (August 14) witnessed loan from Thomas Constable to Richard Payne of Lynton Cambs.
- 1563 (June 6) acquired no. 1620 at Venice; (July) in Rome (note in no. 273).
- 1566 described, with wife Katherine, as of Mortlake, in action against Richard Payne.
- 1575 correct date of burial of Katherine Dee.

NOTES ON BOOKS AND MANUSCRIPTS

- 22 T Platonis opera à Marsilio Ficino conversa & commentarijs illustrata f^o Basil.
Dee's copy of this, an edition by Froben of 1532, is in the library of St John's College, Cambridge, class-mark Cc.2.16. "IOHN DEE" is written on the bottom edge in front of the tail-band, and the title "Opera platonis" on the fore-edge. The "P Ssaunder<s>" is written at the head of the title-page. Dee has heavily annotated and underlined Ficino's *argumenta* to many dialogues, and the texts of some, notably, *Phaedo*, *Timaeus* and *Critias*. Bequeathed to the College by Bishop Peter Gunning in 1684.
- 23 T Etymologicum Magnum græcum f^o. ven. aldus 1549
Dee's copy is in Corpus Christi College, Oxford O.9.8., inscribed "Joannes Dee .1572." and, beside imprint, .o. (possibly .o.) and on right of title, .g. Also "Sum Christophori Gardyneri (?)" in seventeenth-century hand and a Greek motto. There are a few Greek side-notes, probably not Dee's. Bequeathed to the College by John Rosewell, 1684.
- 133 Fr. Pauli Germani de Middelburgo, de recta paschæ celebratione & de die passionis Christi, libri 19. f^o Forosempronij 1513
Dee's copy is TCD Lib., DD.d.36 (formerly DD.4.36 and M.3.5). At the head of the titlepage is "Nicolaus de nale"; then "Joannes Dee ex dono humanissimi viri Nicolai de Nale 1557 .16. Aprilis Londini In die passionis Domini"; then "Servire Deo regnare est W: Crashawe: 160<?>". At foot of page is "forosempronij 1513" (in Crashawe's hand?). Heavily annotated throughout in a variety of Dee's hands though there are few notes after lib.14. Very heavy annotation on the calendar, and Dee always draws attention to English writers, Roger Bacon, John of Salisbury, "Lincolniensis" (i.e. Robert Grosseteste) and Eschenden. Nicolas de Nale was a

Toulouse merchant, presumably resident in London, since his name appears in the Returns of Aliens in 1541, 1547 and 1564. Later Archbishop Ussher's.

- 230 J. Davis spoyle Georgij vallæ opera f^o. ven. 1501 Correctly, *De expetendis et fugiendis rebus*.
Dee's copy is TCD Lib., EE.aa.30. At head of titlepage is "Joannes Deëus 1550. 24: julij Parisijs. prætiū. 10 franch. 4s:" At foot of title is "ru." This was bought four days after Dee's arrival, and two days after the purchase of three other books. Lightly annotated throughout, with notes usually correcting or criticising Valla. On sig. a5^v is a cropped note "< >verbum ex primo libro <Proc>li in Euclidem, traduxit. <O>bscure valde, ut omnia vero hos libros correximus < >is ubique illustravimus & < >lijs, & in linguam latinam <du?>cere incepimus, anno 1549. Vltimo Augusti Lo=<vani?>". Later Archbishop Ussher's.
- 267 Fr. Bernardini Longi Expositio in prologum Averrhois in posteriora Aristotelis latine f^o. Neapoli 1551.
There is a copy (not Dee's) of this work in the Bodleian.
- 273 T Δ+ Navigationi & viaggi di diversi, raccolti da Ramusio, italicè f^o. ven. 2 volum.
Dee's copy in TCD Lib., DD.dd.40,41 (formerly DD.aa.18, DD.13.18 and Q.2.9) is of the Giunta edn of 1563-65, and was later Archbishop Ussher's. It is unsigned. After the imprint of vol. 1 is "re.2." The three volumes, bound in two, are massively annotated throughout, usually in English. There are frequent notes of travel times and distances. Dee refers several times to the voyage of Prince Madoc in 1170, to the early preaching of the Gospel in America and to the prior title of the British to the New World. In vol. 3 there are frequent, and approving, signs of interest in possible settlement and trade in Hochelaga, Canada, and "New France". On fol. 148 of vol. 3 a note refers to Dee's (previously unknown) presence in Rome in July 1563.
- 282 Joh Davis spoyle + Δ Josiæ Simleri Bibliothecæ Gesneri Epitom f^o Tig. 1574
Dee's copy was in the possession of Professor A.C. Hamilton, Queen's University, Kingston, Ontario. It was subsequently acquired by the Bodleian Library, shelf-mark Arch.H.c.7. For an account of the book and its heavy annotations, see R.J. Roberts, *Bodleian Library Record*, 14 (1994): 529-33.
- 338 Fr Jacobi Carpentarij animadversiones in Rami libros tres dialecticarum institutionum, 4^o. paris 1555

Dee's copy is TCD Lib., EE.hh.33 (formerly GG.17.33). At the head of the titlepage is "Joannes Dee 1556 .26 Martij". There are underlinings and notes throughout. Later Archbishop Ussher's.

- 387 Fr Clementis Romani Episcopi de rebus D. Petri, Epitome, græcè, 4° paris 1555
A suppositious work. H inserts "gestis" after "rebus".
Dee's copy is TCD Lib., BB.i.23 (formerly E.4.18 and C44). At head of titlepage is "Joannes Dee 1555. 29. Sep." There are no other annotations. In a contemporary calf binding, with blind-tooled shields in the centre of each cover. Later Archbishop Ussher's.
- 398 T Joh. vernerus de Elementis conicis &c 4° Norib 1522
Dr. B. Lawn informs us that this was in Thomas Rodd's catalogue, 1820, item 737, priced at £1.8.0d.
- 416 J Davis spoyle Tabulæ astronomicæ Elizabethæ Reginae 4° Ven. Petrus Liechtenstein. 1503
Dr. B. Lawn informs us that this was lot 220 in the B.H. Bright sale, 3 March 1845, sold to Rodd for 7s.
- 446 Fr Albumasaris introductorium in astronomiam 4° Ven. 1506
Dee's copy is CUL R*.4.23¹(D), bound (not by Dee?) with no. 421. (Information from Dr. W.H. Sherman.) With a few underlinings, and notes by Dee.
- 499 Jo. Davis spoyle Consentij & Cassiodori disciplinarum liberalium orbis. 4° Basileæ. 1528
The copy in TCD Lib., EE.e.26, later Archbishop Ussher's, has a few notes and underlinings, which may be Dee's.
- 548 Fr Joh. Balei de scriptoribus Brytanniæ, centuriæ quinque 4° Wesaliæ. 1549
Dee's copy is St. John's College, Cambridge, A.2.29. (Information from Dr. W.H. Sherman). It is signed "Joannes Dee 1555.28.Sept. ex dono Tristrami Suadel". There are some annotations, particularly in the early part of the book. "Suadel" is almost certainly Tristram Swadell, rector of Stepney and prebendary of St. Paul's, deprived 1560. After the imprint is p. o. Gift of Thomas Baker, ejected Fellow, with many notes, apparently his.
- 578 Fr Francesco Serdonati de' fatti d'arme de' Romani 4° Ven. 1572
The copy in TCD Lib., EE.f.32, later Archbishop Ussher's, may be Dee's, since the price written below the colophon, "pret: ijs.iiij.d." may be in his hand.

- 701 T Jordani Ruffi opusculum de Equis, lingua vulgari -/. italica 4°. Bresciæ 1493
Professor T.A. Birrell has pointed out that this is *L'Arte de cognoscere la natura de caualli*. The British Lib. copy at IA 31020 may well have been Dee's, though it only has a few underlinings.
- 715 Ovidii Metamorphosis 8°. Parisiis. Colinæus 1529
There is a copy (not Dee's) in the Bodleian.
- 812 T Ignatij Epistolæ græcè & latine 8° Parisijs 1562
The copy in TCD Lib., BB.g.36 (formerly BB.16.36 and H.2.11), later Archbishop Ussher's, may be Dee's; it is heavily annotated in Greek in a hand which may be his.
- 856 T Achillis P. Gassari Epitome historiarum & chronicorum mundi. 8°. Lugduni
Dee's copy is CUL L*.6.60, [1538]. On the titlepage is "P Saunders". (Information from Dr. W.H. Sherman.) There are extensive notes and underlinings, in particular to entries for the "British History", but also to later events.
- 1011 Fr Michaël. Neander de Methodo artium 8°. Oporin 1556
Dee's copy is TCD Lib., EE.kk.54 (formerly EE.19.54). Apart from "Joannes Dee 1556." at the head of the titlepage, there are no notes. Later Archbishop Ussher's.
- 1027 Claudius Campensis in Aristotelis De memoria & recordatione 8° parisijs 1557
Dee's copy is at BL 1030.e.1.(2). It is unsigned, but there are frequent underlinings and annotations. Dee evidently had the book in 1556, as he noted on fol. 17^v. "Author 30 annorum hoc anno 1556."
- 1101 T Historia del mondo nuovo di Fernando Colombo. 8° ven. 1571.
Dee's copy is British Lib. 615.d.7. (Information from Dr. W.H. Sherman). One of the most heavily annotated of all Dee's books, mainly in English. Another hand is also occasionally present. The Sloane press-mark g.300 appears on the title-page; a mark of ownership (?) beside the printer's device has been heavily crossed out; the letter .g. follows the imprint. The annotations reveal Dee's intense interest in Colombo's account of his father's voyages, and in particular in the customs and appearance of the inhabitants of the New World. Dee makes several notes about the voyage of Madoc ap Owen Gwynedd, "white men" (fol. 114^v) and to the

“Brytische custom of names” (fol. 125) which suggest that he was looking for evidence of Madoc.

- 1158 Secreti dell'arte profumatoria italicè 8° ven 1555
This is *Notandissimi de l'arte profumatoria: a fare ogli, acque, paste, balle, moscardini, etc.* Venezia, F. Rampazzetto, 1555. 12°. It was lot 417 in Captain H. Trotter's sale, Christie's, Feb. 10/11 1947, bought by Myers of Bond St. for £12. It had a signature and date 1558. (Information from Dr. B. Lawn.)
- 1186 Fr Illyrici paralipomena dialectices 8° Bas 1558.
Dr. B. Lawn informed us that Goldschmidt offered this in at least three other catalogues.
- 1459 Alchimicus libellus anonymi cuiusdam, lingua belgica. 8° Campis 1551.
This has been identified for us by Professor T.A. Birrell, as by S. Andree, *Kunst boecke nyeulick wten alchemistischen gront vergadert*, 1551. (Copy, not Dee's, in British Lib.)
- 1552 Fr Tractatus in dialogi forma de pythonicis.
By Ulrich Molitor (?) whose work is in the form of a dialogue. Perhaps an earlier edition than no.1035.
- 1559 T. R. David Kimchi liber radicum, sive Thesaurus linguæ sanctæ, vel dictionarium hebraicum f° ven. Daniel Bombergus
Dee's copy is Bodleian Lib. EE17. Art. Seld. It is signed “Joannes Dee 1565:” Later John Selden's with his motto. There are no notes, but corrections to the column numbers and some titling on the rear cover may be Dee's.
- 1560 T Concordantiæ hebraicæ in f°. minori. ven.
Dee's copy of an edition of 1564 is in the library of Sidney Sussex College, Cambridge, Y-3-15. It is inscribed “Concordantiæ Maiores. Joannes Dee :1565” and below the imprint “Venetijs:” with an illegible date or code (probably M.C.δ). There are apparently no other notes. Given to the College by Paul Micklethwait in 1639.
- 1568 Fr Pentateuchus Mosis, [etc.] 4°. ven.1551
Dee's copy is TCD Lib., CC.g.3 (formerly AA.7.3 and A.2.2). At the head of the titlepage is “Joannes Dee 1561: Londini” and at the foot “g.” There are a few notes and underlinings. Later Archbishop Ussher's.
- 1571 Fr. Eliæ Levitæ Grammatica hebraica 4o Isnæ
Later John Selden's.

- 1605 Jo. Daus spoyle Jonas propheta hebraicè cum versione latina et exercitatione Grammaticali Wigandi Happellij 8° Basileæ: 1561
Dee's copy is TCD Lib., CC.g.9 (formerly AA.7.9). At head of titlepage is "Joannes Dee 1562," and after date ".f." There is a single underlining. Later Archbishop Ussher's.
- 1606 Fr Joh. Isaaci defensio veritatis hebraicæ sacrarum scripturarum adversus Wilhelmi Lindani libros tres de optimo scripturas interpretandi ratione 8° colon. 1559
Dee's copy may be TCD Lib., CC.h.61 (formerly A.8.61), later Archbishop Ussher's; the letter ".a." is written after the imprint, but there are no other notes.
- 1620 T Thesei Ambrosij Grammatica Chaldaica Syriaca & Armenica. Item Appendix multarum diversarumque linguarum. 4° Papiæ. 1539
Dee's copy is in fact in the library of St. John's College, Cambridge, L.8.35. (Information from Elizabeth Quarmby-Lawrence.) It is signed "Joannes Dee 1563: Junij .6. Venetijs", and, bracketed off, "pretium 10[?] F F[?]" ; above the title is "pret.10s". There are underlinings and annotations by Dee throughout. At the end is "Perlegi festinus".
- 1645 T William Salesbury his Dictionarie in Englishe & Welshe, or Brytishe. 4° London 1547
Dee's copy is TCD Lib., EE.e.32 (formerly C.10.17). At the head of the titlepage is "John.Dee." The first half of the book (up to sig.K) has been extensively annotated and corrected. In some instances Salesbury has put words of English origin in the "Camraec" column and Dee has supplied a Welsh word. Where Salesbury has occasionally left a blank, Dee has supplied an English equivalent. He has also corrected equivalents in both languages. Later Archbishop Ussher's.⁷
- 1671 T Vocabulario de quatro linguas, gall. lat. ital & hispanic. 4° Lovanij 1558
This has been identified for us by Professor T.A. Birrell as *Vocabulario de quatro linguas*, 1558. The only copy recorded by J. Peeters-Fontainas, *Bibliographie des impressions espagnoles des Pays-Bas* (Bruges: Nieuwkoop, 1965), is in the Biblioteca Nacional, Madrid.
- M51 Roberti Gloucestrensis, Chronica, rhythmo Anglico. papyro. f°
Dr. W.H. Sherman has suggested that this is British Library, MS Harley 201, s. xv in. Against this is the fact that the latter is on vellum and is hardly a folio. However, several names from the "British History", e.g. Eldol, Gorlois, Merlinus, Malgwyn, have

been added in the margin in a hand almost certainly Dee's. (See also Watson, *D'Ewes*, A889.) In H M51 follows M52.

- D5a Cicero, Marcus Tullius. *Tusculanæ quaestiones*. Lugduni, apud Seb. Gryphum, 1541. 8°. Dee's copy is British Lib., 8461.b.13, inscribed "Iste liber pertinet ad me Johannem Dee teste Barleo, Smitheo, Odell cum multis alijs" [all deleted], in an upright hand, not wholly italic (Information from Dr W. H. Sherman). On verso of titlepage "Liber Rogeri Cook ex dono Domini Dee./ 1569." and "Liber Francisci Jones ex dono Georgij Wood 1635". On the fly-leaves are many pen-trials including "For Mr. Merritt Deane". There are notes throughout in a rather unsure italic, probably Dee's, and in other hands in secretary. There are translations into English, e.g. on p. 33 against "pusio" "a litle boy" and on p. 87 against "ballistae" "An ingin or crossbow wherwith a stone or arrow is shot". This has all the appearance of an undergraduate's book; Barley was probably Henry, scholar or fellow of Trinity (as Barkeley), BA 1546-47; Odell according to Venn was probably Fulke Woodhull, matriculated at St. John's MT 1544.
- D26 Wynman, Nicolaus. *Colymbetes, sive de arte natandi, dialogus & festivus & iucundus lectu*. Augustæ Vindelicorum, excudebat Henricus Steyner, 1538. 8°. Dee's copy is TCD Lib., DD.i.65. It is inscribed "Joannes Dee" at the head of the titlepage, and after the date ".u." There are a few underlinings. Later Archbishop Ussher's.
- DM166 Aldaraia sive Soyga. Professor Deborah Harkness, by the simple expedient of consulting the index to Thorndike and Kibre's *Catalogue of Incipits*, revealed that there were copies of a Latin text of this name in the Bodleian (MS Bodley 908) and the British Library (MS Sloane 8). Neither answers to the description of an Arabic book, since both are in Latin (partly, indeed, in Latin hexameter verse), written on paper, and both are of late sixteenth-century date and of probable English origin. It is possible that these are translations made in the 1590s, when Dee was seeking opinions on his Arabic book. He would not, we suppose, have needed to consult Uriel about the excellency of a Latin text. The Sloane manuscript is probably that sold in the Lauderdale sale of 1692, since its title (in gothic script) is "Aldaraia siue Soyga vocor" followed by (in a later hand) "Tractatus Astrologico-Magicus". ".g." follows the first title, and below it is the price, "11s".
- DM? Cambridge, Trinity College, MS. O.2.21, Geoffrey of Monmouth, *Historia regum Britanniae*, and other works.

Dr. W.H. Sherman says that the title on fol. 5 is in Dee's hand. There are three "Jupiter" marks on fol. 1, and two on fol. 2. Although it must be remembered that Dee was not alone in using the "Jupiter" mark, this is a "possible".

STEPHEN CLUCAS

RECENT WORKS ON JOHN DEE (1988-2005)

A Select Bibliography

This bibliography does not pretend to be an exhaustive record of all scholarly works on John Dee in this period. It is a select bibliography of work which has been published since Nicholas Clulee's *John Dee's Natural Philosophy: Between Science and Religion* (1988), and readers are directed to the bibliography of that work and those of William H. Sherman (1995) and Deborah E. Harkness (1999) for more comprehensive information on essays, articles and books published prior to 1988. The bibliography also includes recent PhD theses on Dee, and one or two non-academic titles dealing with Dee and his career (such as the "novelised" biographies of Postel and Wilding). An unlisted, but important resource for Dee scholars is the microfilm series of John Dee's books and manuscripts produced by Adam Matthew: *Renaissance man: the reconstructed libraries of European scholars, 1450-1700. Series 1: The books and manuscripts of John Dee, 1527-1608. Part 1: Manuscripts from the Bodleian Library, Oxford, and Part 2: John Dee's manuscripts from Corpus Christi College, Oxford* (Marlborough: Adam Matthew, 1992-3). I have not included review-articles in the bibliography.

Origins of the Magick: The Dee Diaries

The systems of magick now known as Enochian magick derive from the work of the Elizabethan scholar Dr. John Dee and seer Edward Kelly. Dee had a passion for discovering lost knowledge and spiritual truths; in particular he wanted to recover the wisdom he believed to be in the lost books of earlier times. Among these was the then-fabled Book of Enoch, which he apparently conceived as being a book describing the magick system used by that patriarch. Having come to the conclusion that worldly efforts would not lead to the wisdom he desired, he decided to apply himself to contacting divine sources. During the years from 1581 to 1585, Dee performed a long series of magickal operations to that intent. Kelly joined him in March of 1582, and was his sole assistant during the remainder of the work.

The method employed for these works was fairly standard for the time. Dee would act as the orator, directing fervent prayers to God and the archangels for 15 minutes to an hour. Then a scrying stone would be placed on a prepared table, and the angels were called to manifest a visible appearance therein. Kelly would watch the stone and report everything he saw and heard; Dee would sit at another table nearby and record everything that occurred.

Dee made multiple copies of these records. A portion of them, concerning the Angelic Calls, Tablets and *Liber Scientiae*, were acquired with Dee's library by Robert Cotton. This part was published in Casaubon's *A True and Faithful Relation*. The earlier portions concerning the Heptarchy and *Liber Loagaeth* came to light by a more roundabout means.

In the later years of his life, Dee apparently decided to conceal his magickal records in a hidden compartment of a large cedar chest he possessed. After his death the chest was purchased from his estate and passed through several owners. The hidden documents were not discovered until around 1662, and found their way into the hands of Elias Ashmole in 1672. Mr. Ashmole's collection passed eventually to the British Library.

According to Ashmole, about half of the hidden records were mistakenly destroyed by the discoverer's maid before efforts were made to preserve the rest. Despite this, the records for the 1581-1585 operations appear almost entirely intact.

The record of these operations is very detailed; so much so that it takes careful study to separate the spiritual "wheat" from the chaff. Much of the communication was important within the context of the operations, but has no direct bearing on the systems of magick being presented. Of the rest, there are long periods of communications that, in retrospect, seem to have no purpose but to hold the magicians' attention on continuing the operations. During these periods the angels would present colorful visions, portentous prophecies, and angelic gossip, but very little in the way of solid information. Additionally, the reader must deal with side-excursions into apocalyptic religion, Elizabethan politics,

Dee and Kelly's personal problems, and various irrelevant queries that Dee insisted on inserting into the work.

Chronologically, Dee and Kelly's work divides into three highly productive periods separated by months in which nothing of particular value was received. The material received in each period generally stands on its own, and is only loosely related to that in the other periods. In the strictest interpretation, only the material from the third period qualifies as "Enochian", but the term is often applied to all of the work.

Period one: The Heptarchia Mystica

The first system of magick given to Dee was the *Heptarchia Mystica*. This is a self-contained and moderately complex planetary angel magick, similar in style (but not in content) to various "Solomonic" grimoires of the day. The full record of its presentation can be found in Dee's *Mysteriorum Libri Quinti*; a working grimoire, composed of Dee's extracts from that record, is known as *De Heptarchia Mystica*.

The presentation of this magick was remarkably sequential and orderly, compared to later parts of the work. The necessary physical equipment was described in detail, followed by an angelic hierarchy of 49 "Good Angels", and further information concerning the Kings and Princes of the hierarchy, and their ministers. The major part of the information was given during 1582; significant corrections to the design of the equipment were given in the spring of the following year, after an hiatus in the work and the presentation of *Liber Loagaeth*.

Equipment: Ring, Lamen, and Holy Table

The angels claimed that the ring they designed for Dee was the same one that Solomon used to control demons. It had a plain band, to which was attached a rectangular plate. The letters PELE (Latin for "he will work wonders") were inscribed in the four corners. In the center was a circle with a horizontal line through it, with the letter "V" above and the letter "L" below.

Two different lamens were given to Dee. The first of these bears a generic resemblance to various goetic sigils, being an assortment of free-form lines and oddly placed letters. The being giving it instructed that it was to be made in gold and worn in all times and places for purpose of protection.

The following year, Dee and Kelly were told that this was a false lamen given by an "illuding spirit". They were given a 12-by-7 table formed from the names of the Heptarchic Kings and Princes; the new lamen consisted entirely of letters taken from this table and arranged in rectilinear patterns. (See Appendix E.) Unlike the first lamen, the purpose of the second was solely to "dignify" the magician, to show his worthiness to perform the Heptarchic magick.

"True" Heptarchic Lamen in English and Angelic Versions

The Holy Table or Table of Covenant was the centerpiece of the Heptarchic magick. Its purpose was to be an "instrument of conciliation"; that is, the means by which the powers it symbolizes are brought into harmony with the magician. As with the lamen, the initial version of the table was later said to be incorrect, and a new design provided.

The table was to be two cubits square (roughly 34 to 44 inches) and two cubits high. The legs ended in or rested upon hollow containers, under which small copies of the Sigil of Ameth were placed. It had a one-inch border, in which certain letters were drawn, 21 to a side. Inside the border a Star of David was drawn, and in the center of the star a 6-inch square divided into a 3-by-4 grid, containing more letters. On top of the table were placed seven planetary talismans, called the "Ensigns of Creation". In the center, a large version of the Sigil of Ameth. When in use, the table, Sigil, and talismans were to be covered with a red silk cloth. The scrying-stone was then placed on top of the cloth, directly over the Sigil.

The letters around the edge of the table, and in the central grid, are taken from the same 12-by-7 table (Appendix E) used to form the lamen. They are intended to "dignify" the table -- to consecrate it to the Heptarchic work -- in the same way the lamen dignifies the magician. There is no indication in the record that they were intended to be words conveying meaning, as Gerald Schueler has alleged.

Many magicians have assumed that the Holy Table is also necessary to operations involving the Calls and Tablets given to Dee and Kelly in 1584. It is true that they made use of the table for operations that obtained that material. However, the table is clearly designed specifically for use with the Heptarchic powers; it seems unlikely that it would be suitable for the quasi-elemental nature of the Tablet powers.

**The Holy Table of Practice, or Table of Covenant
Reconstructed according to the Angels' directions.**

Equipment: The Sigil of Ameth

The Sigil of Ameth or *Sigillum Dei* is a large wax disk, on which are inscribed various names of God and angels, within a design of heptagons and heptagrams. This sigil was to be placed in the center of the Holy Table, underneath the scrying-stone. Smaller versions were to be placed underneath the cup-like ends of the table's legs, apparently to insulate the table from earthly influences.

The Sigil is the only part of Dee's work that has a direct correspondence in earlier magickal systems; versions appear in *Liber Juratis* and in *Eodipus Aegypticus*, among other volumes. Dee was initially instructed to copy the sigil from a book in his library, but found conflicting versions and could not decide between them. When he questioned the angels, they proceeded to give him the design for a new, more detailed version. The resultant sigil is substantially different from those earlier versions, sharing only the overall geometric design with them.

While most of the names on the Sigil are not immediately recognizable, nearly all of them are derived from two sets of familiar angelic names. The first set are the angels Agrippa lists as the "seven which stand in the presence of God". The god-names in the outermost heptagon are formed by transposition of the letters of these names, following an elaborate but consistent method. The second set are the planetary Archangels, whose names are shown at the center of the Sigil. These are used to form the four groups of seven angelic names within the heptagram, called the "Sons of Light", "Daughters of Light", "Sons of the Sons", and "Daughters of the Daughters". Additionally, they are used to form the god-names written in the space between the heptagon and the heptagram. It is interesting to note that the derived names were given first, and only afterwards was the means of derivation shown. (For a picture of the Sigil, and details on the formation of its divine and angelic names, see [Appendix A: The Sigil of Ameth and its Holy Names](#).)

Equipment: The Ensigns of Creation

Immediately following the presentation of the Sigil of Ameth, the angels provided seven complex talismans called the "Ensigns of Creation". These were to be engraved on plates of purified tin, and arrayed on the surface of the holy table; either in a continuous ring around the Sigil of Ameth, or in a row directly in front of the magician. As an alternative to the plates, the angels allowed that they could be painted directly on the table. During the Spring, 1583 corrections, the angels specified that the letters on the ensigns were to be converted into the angelic alphabet, but this was apparently never done.

As with the table itself, the ensigns were intended as instruments of conciliation between the magician and the Heptarchic powers. Each ensign was associated with a specific Heptarchic King, and therefor with a specific planet and day of the week. Full-size illustrations of the Ensigns can be found in [Appendix B: The Seven Ensigns of Creation](#). The versions shown in the appendix were prepared from scans of the diaries, unaltered but cleaned up to remove the dirt and smudging from four centuries of aging.

Two later versions of the Ensigns have circulated in modern publications. The first of these was created by the pseudonymous "Dr. Rudd", a century or more after Dee's time. Rudd's version shows the names of various traditional demons written on the Ensigns. Rudd's notion was that the letters stood for the names of these demons, and the number of times the letter appeared signified the number of times the demon was to be invoked.

A version of the Ensigns was published in Pat Zalewski's *Golden Dawn Enochian Magick* which shows all the lowercase letter "B"s in the Ensigns as numeral sixes. This version seems to be a fairly recent invention, first appearing in print in the 1960's. But as can be seen from the illustrations in the appendix, the sixes and "b"s on the Ensigns are drawn in a consistently distinct manner.

Neither of these later versions has any justification in the diaries. If there is a logic behind the symbols on the Ensigns, it is not explained anywhere in the record.

The Heptarchic Hierarchy: The 49 Good Angels

The 49 Good Angels are the first "worldly" angelic powers presented in this system. Those listed on the Sigil of Ameth are apparently in some way above the worlds in which men live, as are the Ensigns. Having presented the Ensigns, the archangel Michael introduces the 49 angels by saying: *"Now you touch the world, and the doings upon the earth. Now we show you the lower world: The Governors that work and rule under God."*

Dee and Kelly were presented with seven 7-by-7 tables. Each square of each table contained a letter and a number from 1 to 49. (See Appendix C.) By gathering the letters with the same number in a certain sequence, the names of the angels were produced. The list of names, divided into groups of seven, were called the Tabula Collecta. Dee arranged these names into a circular table called the Tabula Bonorum, dividing the angels into groups of seven, with a King and a Prince heading each group.

The Tabula Bonorum

Each of the original seven tables was associated with power over a particular aspect of existence; it follows that each angel's name controls some part of each of those aspects. The powers ascribed to each table or letter are:

- Wit and wisdom
- The exaltation and government of Princes
- Prevailing in counsel, and over the nobility
- The gain and trade of merchandise. (Later changed to Water by Dee, for no clear reason.)
- The qualities of Earth, and of Water
- Knowledge of the Air and those that move in it
- The government of fire.

From this list of powers it would seem that, along at least one dimension, the Heptarchic magick is not entirely planetary in nature. The powers would fit more with the conception of a fourfold elemental world ruled by a threefold manifest spirit, as in the lowest seven sephiroth of the cabala.

Dee retroactively assigned a planetary attribute to each group of seven angels, based on the connections between the Kings and the days of the week. Later students have interpolated a system of dual attributes, based on the fact that the Prince of a given day is in a different group from the day's King.

The Kings, Princes, and their ministers

Following the presentation of the 49 angels, there is a gap in the record of about six months; apparently no operations were performed in this period. Ashmole speculates that Dee and Kelly had a disagreement over continuing the work. This seems a reasonable assumption. The pre-hiatus record ends with Kelly expressing dislike and disbelief of the spirits for suggesting he take actions not in accord with his nature. The post-hiatus record begins with the note: "After reconciliation with Kelly".

The material in this section is more confused than in those previous. The speech of the angels is more elaborate and bombastic, the visual aspect characterized by a quality of kitsch. Perhaps Kelly's continuing hostility to the angels is responsible for the change.

The powers of the Princes are presented first, followed by their sigils. Next the Heptarchic Kings appear in succession. They describe their powers, and each presents their 42 ministers. The ministers in turn present their names, in two forms: a table of six rows and seven columns, each containing a letter; and a talisman with their names written about the circumference.

The powers ascribed to the Kings appear to be more in keeping with a planetary nature than those assigned to the individual letters of their names. However, there are some instances where the powers seem inappropriate to the assigned planet, and others where the power of the Prince does not accord with that of the King.

Planet	King	King's power	Prince	Prince's power
Sun	Bobogel	Wisdom, Science	Bornogo	metals, altering nature
Mars	Babalel	Waters, battle	Befafes	seas
Jupiter	Bynepor	life of all things	Butmono	earth
Mercury	Bnaspol	earth and its contents	Blisdon	life
Saturn	Bnapsen	casting out wicked spirits	Brorges	fire
Venus	Baligon	powers of Air	Bagenol	not shown
Moon	Blumaza	not mentioned	Bralges	Air, invisible spirits

The 42 ministers assigned to each King are divided into six groups whose seven members have names formed from the same letters. Each group rules a four-hour section of the day, beginning at midnight. The first group is typically represented as expressing a purer form of the King's power than the remaining five groups.

As was the case with the lamen and holy table, the names of the ministers are derived from the table of the 49 angels. For the ministers, a different method was used to extract the names for each King's set. Also as previously, the names were given to the magicians before the method of extraction was explained. (For additional details, see Appendix D.)

A Missing Piece

Several places in the record reference is made to a "Great Globe", apparently a diagram of some sort, which is not among the papers that have been located to date. From context, it seems that it might be an additional variation on the Tabulum Bonorum, or the 7 tables from which the Bonorum was made. As Dee describes it: "...there are capital letters under the King's names and characters: and also there are other letters with numbers: ... and moreover of these letters, some are aversed and some eversed." Apparently Kelly received this diagram at some time when Dee was not present; Dee refers to it several times as having been "brought to" him by Kelly. The angels affirmed nonetheless that it was important to the use of the magick.

This table was to be used in the creation of talismans for invocations of Heptarchic angels. An example of such a talisman shows the sigil of one of the Sons of Light in its center, with the Name of an Heptarchic King in a circle around it. An outer circle of reversed and normal letters from this missing diagram forms the circumference of the talisman.

Method of Use

In the spring, 1583 sessions, the angels indicated that a session was planned in which detailed instructions would be given for the use of the Heptarchic magick. If this session took place, it is not in the surviving records; but some idea of the general technique can be gathered from comments in other parts of the record.

The magician would be seated at the holy table, wearing the ring and lamen. The Ensign of the King being invoked is placed on the table before him. He would hold a talisman of the appropriate Heptarchic King in one hand, with a talisman of the King's minister's names placed under his feet. The magician would then call upon the King by petition and prayer, followed by petitions to his Prince, and invocations of the six major ministers. They would appear in the shewstone, whereupon the magician would charge them to perform the task he desired.

Period two: Liber Loagaeth and the Angelic Alphabet

Liber Loagaeth is the most mysterious part of Dee and Kelly's work. It is also known variously as the *Book of Enoch* and as *Liber Mysteriorum Sextus et Sanctus*. No one as yet has made serious attempts to use it, or to understand its nature beyond what is recorded in the diaries. According to the angels, "loagaeth" means "speech from God"; this book is supposed to be, literally, the words by which God created all things. It is supposedly the language in which the "true names" of all things are known, giving power over them.

As described in *Liber Mysteriorum Quintis*, the book was to consist of 48 "leaves", each of which contains a 49-by-49 grid. The book as actually presented to Kelly is somewhat different. It contains 49 "Calls" in an unknown language, 95 tables of squares filled with letters and numbers, two similar tables unfilled, and four tables drawn twice as large as the others. Two "leaves" are recorded in *Liber Mysteriorum Quintis*; these are not included in the final book, and apparently serve as an introduction or prologue to the work.

On the surface, the "Calls" of Liber Loagaeth do not appear to be a language as humans understand the term. There are no translations by which this might be judged in detail, but the text lacks the repetitiveness and consistent word-placement that is characteristic of the 48 Enochian Calls given in the next year. There is no apparent grammar to the text. Donald Laycock remarks that the language is highly alliterative and repetitively rhyming, while Robert Turner calls it "glossolalic". The angels said that each element of each table could be understood in 49 different ways, so that there were that many "languages" in it, all of them being spoken at once.

The purpose of Loagaeth was said to be the ushering in of a new age on Earth, the last age before the end of all things. Instructions for using it to that effect were never given; the angels continually put it off, saying that only God could decide when the time was right.

During the presentation of the two leaves in *Liber Mysteriorum Quintis*, an angel in the scrying stone would point to the letters successively, and Kelly would read out the names of the angelic characters. Dee transcribed a version using the Roman alphabet, apparently with the intention of redrawing it in angelic characters at a later date.

The record indicates that at the start of each session a light would fly out of the scrying stone and into Kelly's head; this light was seen by both of them. Once the light entered Kelly, his consciousness was transformed so that he could comprehend the text as he read it. He was firmly ordered not to provide a translation, with the explanation that God would select the time for it to be revealed. He nevertheless provided translations of a few of the words, but insufficient to gather the meaning of the text as a whole.

When the light was withdrawn from Kelly's head, he would immediately cease to understand the text, and was no longer able to see it in the stone. On a few occasions, the light continued in him for a short time after the end of the session, and at these times Dee notes that Kelly said many marvelous (and unrecorded) things about the nature of the texts. But the instant the light withdrew, Kelly could no longer understand it, or recall what he had said even moments before. The record says that the 23rd line of the first leaf was a preface to the creation and distinction of angels, and the 24th line an invitation pleasant to good angels. Nothing else is recorded of the purpose of the book.

It soon became apparent that the method used was too slow. The angels were under some time constraint in presenting the book, and arranged that Kelly would be able to see the book at any time. He was to directly record what he saw rather than reading it to Dee. During this latter part of the work, Kelly apparently did not have the deep understanding of the book's meaning, but only a visual apperception of its letters.

The first leaf shown to Dee and Kelly contained the "angelic" alphabet displayed above the grid. The two were given the names and English equivalents of the letters, and told to memorize them before continuing. When Dee did not do so, and complained of the other demands on his time, the angels strongly rebuked him. The text of the leaves was drawn in the characters of this alphabet, and at the angels' instruction they were also applied to the lamen and holy table of the Heptarchic magick.

The Angelic Alphabet

Two versions of the alphabet were given. The first, suitable for being written quickly with a quill pen, was given with *Liber Loagaeth*. A more formal version (shown in the table above) was given later. For this later version, the angels projected an image of the letter in yellow onto a blank sheet of paper; Kelly then traced over the projection with black ink to produce a permanent record.

The angels indicated that the letters served like Hebrew, as the basis of a cabala or system of magickal symbolism and numerology. They also indicated that the letters were divided into three groups of seven. But beyond that nothing was ever given concerning their properties.

Several people have alleged that the angelic alphabet was copied from some earlier book. Laycock examined all of the possibilities, and while he recognized certain stylistic similarities with previous magickal alphabets, he concluded that none of them was sufficiently like it to count as an earlier version.

Period three: Enochiana

The third section of the work is the only portion that is properly called Enochian. This name was not actually used by Dee and Kelly; they called the system "angelic". The "Enochian" label derives from the origin-myth the angels supplied for this portion of the magick.

According to the myth, this magick was given to the patriarch Enoch by God, and was the means whereby Enoch worked his miracles. The magick was preserved past the time of Enoch's ascension, but in later generations unworthy people began to make use of it. God caused the books to be lost, and sent wicked spirits to spread false magickal systems among the people. (Amusingly, these false systems are based on the use of sigils or "characters", like most of the other magickal systems of Dee's time, or like modern "Chaos" magick.) Dee's prolonged and fervent prayers finally caused God to relent, and reveal the magick again.

It is uncertain exactly when the label was first applied to the system. Common modern usage apparently stems from its use by the Golden Dawn.

The angels were under a time constraint in delivering the Angelic magick. The work was begun on April 10, 1584, and had to be completed before August of that year. Throughout the work, there was constant interference from "evil" spirits, seeking to convince Dee and Kelly (mostly Kelly) to abandon it. Kelly also fell back into his old habits of demon-magick, prompting tension between him and the angels until he foreswore it.

Unlike the Heptarchia and *Liber Loagaeth*, the pieces of the Enochian system were presented in a seemingly haphazard way. However, the sequence of presentation serves to confirm that the angels were working from knowledge not available to Dee and Kelly. In chronological order, the sections given were:

- The Tablet of God, sometimes called the Tablet of Nalvage.
- The first four Calls, delivered backwards a letter at a time, and their translations.
- The fifth through eighteenth Calls, delivered forwards, without translations.
- The names of the 91 Parts of the Earth in *Liber Scientiae*, with the number of their indwelling ministers and the number of the Zodiacal King ruling each.
- The relation of the Parts to regions of the Earth.
- The four Elemental Tablets or Tables of Enoch.
- The translations of the Calls previously given, and the specification of the correct ordering of the Calls.
- The Call of the 30 Ayres or Aethyrs
- The names of the Aethyrs.

The translations of the fifth through eighteenth Calls were not given until six weeks after the angelic versions. The consistency of these translations -- that is, the same words

given the same meaning in different Calls -- at least serves to establish that the meanings were not invented on the spot.

The names of the Parts are derived from the Elemental Tablets, and their sigils are to be found by connecting the letters of their names on the Tablets. The sigils were shown drawn on the Tablet's grid before the letters for the Tablet were given. The sequence in which the names, sigils, and Tablets were given reflects the confirmation method used for the Heptarchic magick.

The work was completed on July 13th, 1584, with the delivery of the final portion of the Call of the Aethyrs, and the names of the Aethyrs. After that, it is as if a light went out in both Dee and Kelly; having reached some pinnacle of achievement, they fell back, exhausted, into a more prosaic realm. Indeed, from the record it seems almost as if the events of the previous three years had never occurred. Other concerns occupy all of their attention; their visionary work is unconnected with what came before, and has a half-hearted quality. There is no indication that they ever did any more with the Angelic magick.

The angels who were central to the delivery of the magick are never seen again. The magick itself only figures into the records on three more occasions: when the records are destroyed, when they are miraculously restored, and when Kelly receives the "Tabula Recensa".

The Tablet of God

The first piece of the angelic magick presented was a small table. It was unnamed in the record, but on the basis of its content, it would be appropriate to call it the "Tablet of God". No specific use for this table is given, but its size and described nature suggests that it might be a lamen to be used with the magick that follows it.

			h	c	r	u		
		i	d	z	s	a	i

s	d	a	z	s	e	a	s	
		i	a	b	r	d	i	
			l	a	n	g		

The Tablet of God

The table consists of an 6-by-6 inner portion, surrounded by four names of four letters each written in a counterclockwise direction. Each corner of the inner portion contains the letters "IAD", an angelic word for God. The inner portion is divided into four 3-by-3 tables, called "continents" by the angel Nalvage; each of these contains three angelic words, written diagonally, which describe the nature of that section in a motto. Reading the lines of the section horizontally gives the names of three groups of angels.

Continent	Name	Motto	Choirs of Angels
Upper left	Highest Life	"I am the joy of God."	1. Joy 2. Presence 3. Praising
Lower left	Life, or Second Life	The moving power of God, or God's power in motion.	1. Power 2. Motion 3. Ministering
Upper right	Life not now dignified, which will be dignified	The result of God's action	1. Action 2. Events 3. Establishing
Lower right	Life which is also Death	The discord and lamentation of God	1. Lamentation 2. Discord 3. Confusing

Zalewski switches the choirs for the lower left and upper right continents. The "mottoes" for these two continents suggest a connection with the original positions of the elemental Tablets within the Great Table (described below). The Tablet of Fire was at lower left, which fits with "power-in-motion". Earth was at upper right, and Earth is traditionally the realm where final results or events occur. The connection in the other two continents is somewhat more abstract; Air at upper left is the element closest to heaven in the structure of the world; Water at lower right is traditionally connected with death and sorrow through the watery signs of Scorpio and Pisces.

The four names surrounding this inner portion are connected with the Son aspect of divinity. These names have the same meanings as the third choirs of the continents, but the spellings are unrelated. With the four "I"s in the corners of the continents, they form a ring around the outside of the table.

Nalvage says of this Table:

- "1. Its substance is attributed to God the Father.
- "2. The first circular mover, the circumference, God the Son, the finger of the Father, and the mover of all things.
- "3. The order and knitting together of the parts in their due and perfect proportion, God the Holy Ghost. Lo, in the beginning and end of all things.""

"Substance" is used here in the philosophical senses of "essence" and "something considered as a continuous whole". The unbroken continuity of God the Father is expressed in the duality of the Son (the outer ring of the Table) and the Holy Ghost (the inner continents). The arrangement of the continents reflects (or is reflected in) the positions of the elemental tablets in the Great Table, in the same way that Binah "contains" the lower sephiroth in the cabala. Thus this table may represent the unmanifest Supernal Triad from which the manifest elements of the angelic magick have emanated.

The 48 Calls

The Calls are a series of invocations in an unknown language, which is called "Angelic" in Dee's records. Angelic has the appearance of a true language, though the existing samples are insufficient to deduce a full grammar. The language is similar to English in its positioning of subjects, verbs, and objects. It is unlike English in its lack of separate articles, possessives, and prepositions. As a general rule, the words of the language do not appear related to those of any known language, although there are occasional striking (if superficial) resemblances. E.g., Angelic "christeos", meaning "let there be" versus Greek "christos", Angelic "babalon" meaning "wicked" or "harlot" versus "Babylon".

Nineteen Calls were given to Dee and Kelly. The final Call has thirty variations, making the total of 48 Calls. The purpose of the Calls is sufficiently described by Nalvage:

"This self-same art is it, which is delivered unto you as an infallible doctrine, containing in it the waters which run through many Gates: even above the Gate of Innocency, wherein you are taught to find out the dignity and corruption of nature: also made partakers in the Secret Judgements of the Almighty to be made manifest, and to be put into execution.

"I am therefore to instruct and inform you, according to your doctrine delivered, which is contained in 49 Tables. In 49 voices, or callings: which are the Natural Keys to open those, not 49 but 48 (for One is not to be opened) Gates of Understanding; whereby you shall have knowledge to move every Gate, and to call out as many as you please, or shall be thought necessary, which can very well, righteously, and wisely open unto you the secrets of their Cities, and make you understand perfectly [that] contained in the Tables."

Colin Low has suggested that the above-mentioned Gates are connected with the "Gates of Understanding" found in some Yetziratic texts, and with the fifty Gates mentioned in Thelema's Liber AL vel Legis.

It is certain that there is some sort of relationship between the Calls and the Elemental Tablets, but the exact nature of the connection is a matter of speculation.

The 19th Call, titled the "Call of the Aethyrs", is explicitly associated with the 30 Aethyrs of *Liber Scientiae*; its wording clearly makes it an invocation for the 91 "Parts of the Earth" in that book. Following the quote above, the remaining Calls are assumed to connect with the hierarchies of the elemental Tablets, but the wording of the Calls is too poetic and ambiguous for specific associations to be made with certainty. While confirming the correct sequence of these Calls, the angel Ilemese stated that each Call has its proper Table, but does not state what these tables are.

Experiments by several magicians seem to establish that the First and Second Calls in some way define the poles within which the remaining Calls work. The First Call usually produces a generic manifestation of Spirit, a general pull towards higher levels. The record implies in a vague way that it is to be used when invoking the Elemental Kings and their ministers, the Seniors; possibly in combination with other Calls. The Second Call is stranger. It does not appear to define a "material" pole as such; rather, it defines a framework or overall form into which the powers of the system can be poured and contained.

The usual assumption by later magicians (not universally accepted) has been that the remaining Calls refer to the "Lesser Angles" within the Tablets. The Golden Dawn's method of associating these Calls with the Tablets and Lesser Angles has become the accepted standard. Donald Tyson has recently come up with an alternative method that has received some attention.

An alternative view of the Calls states that they are parallel to, but separate from the Tablets. That is, they should be used by themselves, without the divine names from the Tablets. There is certainly evidence in the text of the Calls that they represent a continuing "story" of a creative process, beginning with God in the First Call, and ending with the establishment of God's power "in the center of the Earth" in the Eighteenth Call.

Another alternative has been suggested in which the Calls are actually connected with the 49 "leaves" of *Liber Loagaeth*. This view argues that the Great Table cannot be subdivided in any way that produces 48 or 49 tablets or smaller tables, while *Loagaeth* is more clearly connected with those numbers. However, the definite connection between the 19th Call and the Aethyrs and Parts is a strong argument against this position.

(For the complete text of the Calls in Angelic and English, see [The Enochian Calls](#) published separately.)

The Tabula Recensa, 1587

The Great Table

The Great Table is a large grid of letters, 25 squares wide and 27 high. Two major versions of the Table exist. The first was produced during the work in 1584. Three years later, Kelly (working alone) received a revised Table now called the "Tabula Recensa".

The Table is a magickal "map" of the world, including all levels of existence that are not part of the transcendental, divine realm. It is divided internally according to an orderly system to produce a hierarchy of divine and angelic names ruling various aspects of existence. A separate method of division, in which it is separated into 91 dissimilar regions, produces the sigils of the "Parts of the Earth" shown in Liber Scientiae.

The first division in the Great Table splits it into four Elemental Tablets, 12 squares wide and 13 squares high. These Tablets are separated by a cross with arms one square wide, called the Cross of Union, or Black Cross (so called only because it was shaded in black ink in Dee's version). The four tablets are associated with the four traditional elements, following the same positions as the "continents" in the Tablet of God. (The Tabula Recensa changes the positions of the Tablets within the Table.)

Each Tablet has an internal division into four "Lesser Angles", separated by a "Great Cross". The Great Cross has a vertical arm two units wide, and a horizontal arm one unit high. The horizontal is called the "Line of the Holy Ghost" and contains the three highest names of God within the Tablet, formed by dividing its twelve letters into groups of three, four, and five letters. The vertical arm considered as a whole is said to represent God the Father. When considered as two columns, it represents God as Father and Son.

The eight central letters of the Great Cross are taken in a clockwise inward spiral to form the two names of the Elemental King who rules the Tablet. Each of these names uses only one of the two most central letters. Dee was told that one of these names was for beneficent works, the other for works with harmful intent. When the letters of the Great Cross are read outwards from the center along each arm, they form the seven-letter names of six "Seniors".

The Great Cross is associated with levels of manifest divinity, the mathematical or planetary regions that lie above the Earth but inside the transcendental divine realm in medieval cosmology. Cabalistically they connect with the second triad of sephiroth in the Tree of Life, and with the human soul that originates there. The King and Seniors are generally considered to be planetary in nature; the power of the Seniors was said to be "knowledge of all human affairs".

The Lesser Angles are grids five columns wide and six rows high. The central column forms a god-name of six letters; the second row from the top forms a god-name of five letters. The four rows below (ignoring the central column) form four angelic names ruled by these god-names. Today they are usually referred to by the Golden Dawn label, as "Servient" angels.

The four squares of the top row (again ignoring the central column) form four angelic names which are not ruled by the god-names from the calvary cross. Instead, a different god-name is formed by adding a letter from the Cross of Union to the first angel's name. These four angels are specifically associated with the letters INRI, written above the cross of Jesus' crucifixion. The Golden Dawn labeled them "Kerubic" angels, after the four elemental Kerubs of the Tarot cards.

The angels of the Lesser Angles are assigned governance over specific areas of knowledge, e.g., medicine, precious stones, mechanical arts, etc. These powers can be easily associated with one of the four elements; the result is that the positioning of the elements in the Tablet of God is reflected downwards in the positions of the Tablets in the Great Table, and in the positions of the Lesser Angles within each Tablet.

Type of Angel	Lesser Angles	Power
Servient	Upper left (Air)	Medicine
"	Upper right (Earth)	Metals and Stones
"	Lower left (Fire)	Transformation
"	Lower right (Water)	Living creatures

These various powers must be considered to be representative rather than inclusive. According to the angels the Great Table is in some way connected to every type of event that takes place within the Earth; therefore these angels must have much wider areas of responsibility than is suggested by the listed powers.

Liber Scientiae

Liber Scientiae, Auxilii, et Victoriae Terrestris, the "Book of Knowledge, Help, and Earthly Victory", is the third major portion of the Enochian magick. The details were given during the 1584 work, and were compiled into a book by Dee in May of the following year. In introducing this part of the work, the angel Nalvage said:

"There are 30 Calls yet to come. Those 30 are the Calls of Ninety-one Princes and Spiritual Governors, unto whom the Earth is delivered as a portion. These bring in and dispose Kings and all the governments upon the Earth, and vary the natures of things with the variation of every moment; Unto whom the providence of Eternal Judgement is already opened. These are generally governed by the 12 angels of the 12 Tribes, which are also governed by the 7 who stand before the presence of God. ..."

A following paragraph in Latin clarifies that it is the Angels of the Tribes who are the governors, and that the 91 are actually regions or territories of the magickal realm

corresponding to various earthly territories. Each Angel rules a varying number of these regions.

The 91 Parts of the Earth on the Great Table

In addition to its regular hierarchies, the Great Table contains the names and sigils of the 91 "Parts of the Earth as imposed by God" of Liber Scientiae. Where the angelic hierarchies described previously are derived from the Tablets by following uniform divisions, the names of the Parts are derived in such a way that each covers a uniquely-shaped area. The natures of the Parts are equally heterogeneous; none of them is like any other in scope, quality, or power.

From the angels' descriptions, it could be said that the regular Tablet hierarchies and the 91 Parts represent complementary views of the world that they both cover. The regular Tablet names represent the ordering of the world according to the ideal plan of God; the way in which the world connects with divine archetypes and patterns. The Parts, on the other hand, represent the transformation of the divine plan into the endlessly changing, endlessly dissimilar events of manifest existence.

In sequence, the angels gave Dee and Kelly first the number of "ministers" dwelling in each Part, the number of the Aethyr in which it was contained, and the number of the Tribal Angel King ruling the Part. Next the names of the Parts were given, and their mundane equivalents, followed by their sigils on the Great Table. After the letters and regular hierarchies of the Table were filled in, the angels presented the Call of the Aethyrs and the names of the Aethyrs. The origin of the Angel King names is obscure; they are not shown in the published portion of the diaries, but are in place in the final, book version of *Liber Scientiae*.

The sigils of the Parts are found by drawing lines between the squares of the Part's area in the Great Table, in the sequence of the letters in its name. In the presentation to Dee and Kelly, the sigils were presented before the Tablets were filled in with letters, so that when the letters were added they could check back against the names of the Parts as previously given. The correlation between the two sets was remarkably high; only a few of the names had different spellings in the Tablets. None of them were completely dissimilar.

It should be noted that there is one Part whose sigil is shown in the Great Table, but which is not listed in *Liber Scientiae*. If all the names in the book are valid, there are actually 92 Parts, not 91. Some magicians have speculated that this extra Part should replace the sixty-fifth Part, whose name is formed using the two leftover, non-contiguous squares in each Tablet.

Originally, the angels tried to give Dee and Kelly the mundane equivalents of the Parts by displaying their regions on a globe of the world. Dee cut this method off before it started, complaining that they ought to give him the regions in longitude and latitude, or by reference to the maps in his possession. There is no obvious reason why Dee became stubborn on this point; certainly he was aware that his maps didn't cover the entire world.

The angels rebuked Dee, saying that they didn't see the world in terms of arbitrary mathematical designations, nor in the conic projections of Dee's maps. But rather than return to their intended method, they chose to associate the Parts with the regions of the world listed by Ptolemy.

Robin Cousins has gone to great effort to identify the modern regions represented by the Ptolemaic names. His descriptions and maps can be found as appendices in Turner's *Elizabethan Magick*. It is apparent from Mr. Cousins' maps that there is a great deal of overlap in these regions. For example, the region of Parva Asia or Anatolia overlaps, in whole or part, no less than nine other regions. Several Parts connect with single cities rather than regions, and others are described simply as "in the north" or "in the far south".

One might suspect that the angels, balked in their intent, simply latched onto the first available method that would satisfy Dee, regardless of its correctness. After receiving the whole list, Dee began to see the difficulties in the scheme and questioned the angels. The response was less than satisfactory to him, in the end boiling down to a statement that when he called the Parts, they would show him the regions they rule. It is implied that thirty of the Parts relate to the New World. Mr. Cousins originally said he believed

that these thirty were in addition to the existing 91 Parts, making 121 Parts in all. However, he now believes that the thirty meant that additional territories were covered by the existing 91 Parts, in the way that the angels added Poland and Moscow to the territory ruled by the same Part as Sarmatia. My own reading is also that these thirty are among the given Parts, since any additions would either overlap existing ones, or require slightly less than another full Tablet as a region they would map.

The thirty Aethyrs are barely mentioned in Dee's diaries; they are certainly not given the importance that they have acquired in the minds of some modern magicians. Their function seems to be merely that of containers to hold the 91 Parts. There is no indication that they have any function separate from the Parts.

Usage

While the Enochian materials given to Dee and Kelly form a solid core for a magickal system, they are lacking in the supporting infrastructure necessary to make them a complete and useable system. Only the barest indications are given as to the nature of the various angels, the relationship of the system's structure and powers to those of other systems such as the cabala, or the mythic underpinnings for using it as an initiatory system.

The instructions for using the Enochian magick are equally spare, a few sentences in length:

"Four days (after your book is made, that is to say, written) must you only call upon those names of God, [i.e., in the Tablets] or on the God of Hosts, in those names:

"And 14 days after you shall (in this, or in some convenient place) call the Angels [of the Tablets] by petition, and by the name of God unto which they are obedient.

"The 15th day you shall clothe yourselves, in vestures made of linen, white: and so have the apparition, use, and practice of the Creatures. For, it is not a labour of years, nor many days."

The "book" mentioned is a book of supplications or prayers to god and the angels, to be devised by the magician, written neatly, and bound together. The book is only to be used for this one operation, and then destroyed. The Calls are not mentioned at all.

Apparently the magician is intended to use a "bootstrap" method of learning the magick, similar to that used in the Abramelin magick. He invokes the angels, and the angels themselves show him the best way to use it. And as in the Abramelin work, the angels emphasize that it is the fervency of the magician's prayers that will produce effective contact, not the form of the prayers.

History of Use

Given the bare-bones nature of the original Enochian material, magicians have to improvise extensively to make it into an effective general-purpose magickal system. The history of the system's use is a history of innovation. Every magician or group that has used it extensively has added their own distinct character to it, taking it in a direction at least slightly different from anyone else. It has evolved as the viewpoints of its users have evolved, and seems perfectly capable of adapting to many viewpoints without stress.

The one point on which all these users agree is that the Calls and the Tablet names are tools of remarkable potency, possibly unmatched by any other magickal system now known. Even a completely inexperienced user, with a small effort, is virtually guaranteed to get some sort of response.

Beyond this, it is difficult to gather a coherent picture of the magick. While the angels have distinct natures, they present themselves to each magician in a manner that is consonant with his own nature and "true will", and which is -- to a lesser extent -- in accord with his expectations and conscious intent. The problem of their conformity to expectations can be overcome with practice. The former limitation seems to be absolute; they will not interfere with the true will of the magician. But within that limit they will do everything they can to take the magician as far and as high as he can go.

For a variety of reasons, only a few records of Enochian workings have been preserved. Most such records have been saved because the people who performed the work were interesting to scholars for other reasons; as an obscure branch of an obscure subject, it has not rated a great deal of attention from scholars and publishers. Given this lack of information, and the limitations mentioned above, the available records have to be considered to be spotlights illuminating areas within a vast field, most of which still remains dark and unknown.

Dee & Kelly

As far as is shown in the surviving records, neither Dee nor Kelly ever made significant use of the Angelic magick. During the three years following the receipt of the magick, they apparently ignored it entirely. If they did anything with it beyond that period, the record has been lost.

Elias Ashmole

Sloane Manuscripts 3624-3628 contain the record of extensive spirit actions with the Enochian magick, begun in the 1670's and continuing for over seventeen years. Three magicians and a sryer invoked practically every angel and entity connected with the Enochian system. Some scholars believe that Elias Ashmole and William Lilly are two of the magicians involved. However, Clay Holden believes that this is not the case, based on the handwriting; the record is in a crabbed and almost unreadable hand very unlike Ashmole's elegant script.

From Clay Holden:

Ashmole appears to have been largely content to make planetary talismans to banish rats from his house, as near as I can determine from his diaries. I would dearly love to find some solid evidence to the contrary, but fear that my assumption that Ashmole was one of the hands behind these Spirit Diaries was wishful thinking.

The diaries are massive, and have not been examined closely at this time, but preliminary indications are that they do not contain any results of special significance.

Golden Dawn

The original Golden Dawn magickal society operated from the 1880's into the 1900's, when it split into various groups. Descendent organizations (of varying degrees of legitimacy) continue to operate up to the present, using much of the material developed by the founders. People using the Golden Dawn system probably constitute the largest group of Enochian magicians over this century; despite certain theoretical problems, it has proven in practice to be an effective means of accessing the angelic forces.

The Golden Dawn adepts made substantial additions to the original Enochian materials, basing them in part upon a late 18th-century manuscript titled *A Treatise on Angel Magic*. Their system for relating the Calls to the Tablets has become the standard model. Most significant is their elaborate system of attributes for the squares of the Elemental Tablets, which seeks to unite Enochian magick with cabalistic and Rosicrucian lore to give a complete symbolic representation of the magickal universe.

In this system, each division and rank in the Tablets is connected with specific types of magickal forces -- elemental, planetary, zodiacal, or sephirotic. For example, the 36 squares of the Great Cross are associated with the 36 decanates of the zodiac; the ten squares of the calvary crosses in the Lesser Angles are connected with the sephiroth of the Tree of Life.

The individual letters of the names in a given rank represent sub-forces or special manifestations of the represented type, distinguished by the addition of lesser attributes. A given square can have up to four attributes, depending on its type and its position in a given Tablet and Lesser Angle. Additionally, each letter of the angelic alphabet is given a separate attribute to one of the figures used in geomantic divination. Diagrams showing the complete listing of attributes for all the squares can be found in Aleister Crowley's *Liber LXXXIX vel Chanokh*.

Golden Dawn magicians explore the squares astrally, using a technique involving the visualization of a truncated pyramid. Each side of the visualized pyramid is colored and emblazoned with the symbols of the square's attributes. The magician recites the appropriate Calls and vibrates relevant divine and angelic names, and concentrates the invoked power in the pyramid. The power is then seen rising up the sides of the pyramid and shooting out into magickal space in the form of a beam of light. The magician enters

this beam and rises with it through the planes until he comes to a landscape or space that expresses the invoked power. This technique has proven to be highly effective in practice.

At least one Golden Dawn offshoot has applied the pyramid method to the angels of the Heptarchia.

Aleister Crowley

Aleister Crowley's work with the Enochian magick generally follows the Golden Dawn system. He is known primarily for his explorations of the 30 Aethyrs, published in *The Vision and the Voice*. This work established the idea that the Aethyrs might represent a means of initiation, and set a standard for methodical exploration that few have equaled. It also fixed Crowley's peculiar perspective on the process of transcendence in the minds of many students of the occult.

Crowley envisioned the Aethyrs as being connected with the sephiroth of the Tree of Life in groups of three. He also mentions that each Aethyr "folds up" into the next higher Aethyr in some way, so that as one progresses through the Aethyrs from the last to the first, one is also withdrawing one's being from the lower, already-experienced levels. (This is parallel to the technique he describes in Liber Yod, in which the magician achieves union with the godhead by progressively banishing all other levels and powers.)

Under this conception, the Aethyr ZAX, whose Parts have names formed from the Cross of Union, is the highest of the three attributed to Chesed. It is thus the last Aethyr one encounters before moving into the Supernal Triad and achieving transcendence. Crowley envisioned this movement as the crossing of an "Abyss" or gap, during which the magician encounters an Enochian devil named Choronzon dwelling therein.

Crowley's other contribution to Enochian magick was the adaptation of the Golden Dawn pyramid system for use with O.T.O.-style sex magick. In this technique, physical representations of the pyramids are made for the name of an angel, but inverted to form square "cups". These serve as talismans, which are charged using the end-product of the sex magick operation.

Aurum Solis

The published documents of the Aurum Solis magickal order show a unique method of using *Liber Scientiae*. Their research has focused on discovering the nature and uses of the numbered-but-unnamed "ministers" residing in each of the 91 Parts.

They used the second Angelic Call along with the Call of the Aethyrs, in order to cause the invoked forces to manifest at the "material" pole of their range; this brings the ministers, who are the lowest members of a Part's hierarchy, into the greatest state of activity. For each group of ministers they have compiled a name, an image of their appearance, and a list of their powers and the aspects of existence on which they can act. Given the large number of Parts, they have a virtual encyclopedia of useful magickal

effects. Since they have not published any magickal records using their methods, there is no way to determine how well their system works in practice.

In contrast, their use of the regular Tablet hierarchies appears to be fairly conventional, in line with the Golden Dawn methods, but not using the G.D.'s elaborate system of attributes.

The Church of Satan and the Temple of Set

Quoting Israel Regardie, from his introduction to Aleister Crowley's *The Vision and the Voice*:

One advisor ... had suggested the discontinuation of the whole project. His motive was that a California group sensationally engaged in the practice of Satanism had appropriated and published the Enochian rituals or Calls in a so-called Satanic Bible. Because of this, it was felt that there were now undesirable contacts associated with the rituals that could only lead to chaos and confusion.

The author of this debased volume had made enough changes in the various Calls to rule out any likelihood of confusion with those presented here in their original form. Wherever the word God is used, the author had substituted the name of Satan or one of the equivalent terms in its stead. The same holds true for several other pieces of similar stupidity.

As a primarily religious organization, the CoS used the Calls (as a former member put it) as "tools for psychodramatic ritual"; i.e., as something mysterious to add glamor to their services. There is no indication that the founder ever took the Calls seriously as a tool, or that they were ever used systematically by the CoS for explicitly magickal purposes.

The Church of Satan's schismatic offshoot, the Temple of Set, has abandoned the CoS versions of the Calls. Rather than rewrite the angelic language of the Calls, Michael Aquino (founder of the Temple of Set) has substantially revised the *translations* of the Calls to conform to his own philosophy and myth-system. The Calls and Mr. Aquino's "translations" are presented as the "Word of Set" in the ToS manual *The Crystal Tablet of Set*.

In some instances, Aquino's version departs substantially from the original translations; in others, the differences are small enough that one might call them justifiable poetic license. But the overall sense conveyed is dramatically different from the original. Quoting Mr. Aquino:

An "Enochian purist" might question the translation provided by the Word of Set in that it is not the English version recorded by John Dee in his diaries. My answer is simply that I approached the Keys not as a historian seeking to reprint what Dee did, but as a magician seeking to operate the same "magical machinery" that Dee did -- and to operate it with greater care and precision than he did. Hence

it is not a case of my "corrupting Dee", but rather of my uncorrupting something which predated Dee's own existence, and which was, after all, not of his [or Kelley's] authorship.

Mr. Aquino does not provide any explanation of how the "Word of Set" came to be delivered by angels espousing an emphatically Christian world-view.

Order of the Cubic Stone

From Robin Cousins:

The British graded occult group based in Wolverhampton, the Order of the Cubic Stone, (flourished 1965-91, now dormant) taught the Enochian system, strictly according to John Dee. The Golden Dawn system of Enochia was regarded as inaccurate and members were not encouraged to use its correspondences. Because membership was country-wide, most work was done individually or in small local groups (ie, if odd members lived near one another), but virtually no record of this work was held centrally. A few remaining members still practice today, but there is no overall coordination.

Benjamin Rowe

Benjamin Rowe is an active magician working exclusively with Enochian magick, known for methodical, thorough workings, and for developing unusual, non-traditional techniques and viewpoints. He has made an effort to expose his work to public scrutiny and criticism, believing that the state of the art can only be advanced through open communications. He is currently (1997) involved in a long-term project exploring all of the 91 Parts of *Liber Scientiae* in sequence.

The most noted of Rowe's technical innovations is a method by which an elemental Tablet can be transformed into a three-dimensional astral structure, an "Enochian Temple". Properly constructed, the temple acts to produce intense concentrations of the powers of the entire Tablet in a balanced form. The power creates a "gate" which can be used to explore symbols of any magickal system, to produce permanent changes in the consciousness of the magician, or to break through into extraterrestrial magickal realms. He believes other uses are possible, but has not yet explored them.

Examining the Golden Dawn system of correspondences for the Tablets, Rowe realized that their system was effectively upside down. That is, the highest ranks of the Tablets had attributes to magickal powers universally considered minor, while the major magickal powers were attributed to the lowest ranks of the Tablets. The whole seemed based on coincidences of number rather than experience. He spent several years determining the nature of the various ranks through experiment, and devised and experimentally tested a new system of correspondences that corrects the defects of the G.D. system and, he believes, accurately reflects the actual nature of the Enochian powers.

Miscellaneous Issues

Relation of Enochian to the Necronomicon

Since the Necronomicon is a literary device created by H.P. Lovecraft, any connection between the Enochian magick and the Necronomicon must also be fictional. In one of his stories, Lovecraft stated that John Dee was at one time in possession of a Latin translation of the book, which he translated into English. In their spoof Necronomicon, authors Langford, Turner, and Wilson suggested that *Liber Loagaeth* was actually a cipher version of the Evil Book, which they had managed to decode. Neither of these ideas is supported by the records.

Colin Low has perpetuated and embellished these fictional excursions in his "Necronomicon Anti-FAQ" and other writings. Some modern readers, lacking a sense of humor and irony, have taken his work seriously; as a consequence, the myth of Dee's connection with the book has taken on an air of Utter Authority among certain gullible portions of the magickal community.

Relation of Enochian to the biblical Book of Enoch

The various pseudepigraphic "Books of Enoch" were unknown in Europe at the time the magick was revealed to Dee and Kelly. Dee's work was aimed at discovering what he believed to be the contents of these books; he had no direct knowledge of their nature. The Enochian magick and the angels' origin-myth for it bear no direct relation to the actual contents of the books now known by the name.

Enochian magick and the apocalypse

There are two major threads of thought in Christian millennialism. One thread, called postmillennialism, is largely Utopian in nature. It sees the millennium as the beginning of a period of gradual perfection of conditions on Earth; the basic principle is that the world must be brought to perfection and the City of God built on Earth before the Christ will return, and it is only after the Christ returns that the world will end. Two decades after Dee, this form of millennialism was the driving force behind the religious groups spearheading the English colonization of America. Dee's own thought contains many post-mil ideals; in seeking out the Enochian magick, one of his goals was to gain a means of bringing earthly governments and societies into line with the design of God, thereby bringing the return of Christ closer.

The other thread, called premillennialism, is the more catastrophic variety. In this version, the typical scenario is that the Christ returns, and then the current "evil" societies of mankind will be destroyed in worldwide disasters, while the elect are preserved from harm. After the world is destroyed, the Christ joins with the faithful in a City built by God to rule over the Earth for a thousand years.

While there is a strong millennialist flavor to the angels' pronouncements, they are almost uniformly of the postmillennialist variety. The angels divided the world into four ages. The first of these began with the creation and ended with the Flood; the second ended with the first appearance of the Christ. The revelation of Liber Loagaeth ended the third age and ushered in the final age, in which the world would be brought to perfection prior to the return of the Christ.

The Calls and Tablets were in turn intended to be one means by which this perfection could be brought about. One particular passage establishes this clearly.

On February 11, 1584, Dee & company had arrived at the Polish manor of Albert Laskie, and had time to settle for a few days and do some magickal work. This day was the first operation of a new series of works after the hiatus. And during the work, the spirit Nalvage appeared for the first time to introduce himself and state his purpose.

The session begins with a colloquy in Latin between an evil spirit that settles by Kelly's left shoulder, and a good spirit that settles by his right shoulder. After some discussion the dexter spirit banishes the sinister. He spends a couple of paragraphs praising the Doctrine to be revealed, then says:

Nalvage:

"These [are] latter days, and the end of harvest must have also Labourers: For no Age passeth away, but through the hands of God, who maketh the end of his doings known to the World: To the end, [that] the World may consent unto him in Glory. So that this Doctrine, is the mysteries of the word of God, sealed from the beginning, now delivered unto man, for that Reformation which must be in one Unity established unto the end. [emphasized in original] The very part of that Circle, which comprehendeth the Mysteries of the Highest, in his Prophets, Apostles, and Ministers yet to come, which are alive and shall bear witness of eternal comfort.

"The fruit of our doctrine is, that God should be praised. For of ourselves we seek no glory: But we serve you to your comfort, teaching you the will of God, in the self same Christ, that was crucified; sold and died in the Patriarchs, and published to the World by his Disciples, and is now taught to you, in the remission of sins... greatest in the world, for the end of all things. The very key and entrance into the secret mysteries of God, (in respect to his determination on earth) bringing with it reward in the end of eternal glory, which is the greatest Treasure."

[paragraphs omitted]

Nalvage:

"These things are your parts, and portions sealed, as well by your own knowledge, as the fruit of your intercession, The Knowledge of Gods Creatures.

"Unto me are delivered five parts [i.e., months] of time: Wherein I will open, teach, and uncover the secrets of that speech, that holy mysterie. To the intent the CABALA of NATURE, in voyce, substance of bodie, and measure in all parts may be known. For there is nothing secret, but it shall be revealed, and the Son of GOD shall be known in POWER, and establish a Kingdom with righteousness in the earth, and then cometh the end.

"For the earth must come under subjection, and must be made pure. That death may be swallowed in his own Kingdom, and the enemy of righteousness find no habitation. The word of God endureth forever. His promises are just. His spirit is truth. His judgements inscrutable. Himself universal. He it is of whom you labour. The promises of God in this earthly noble man shall be fulfilled. Salomon used the places of honor, and was exalted."

While not so clear as later speech from this source, nonetheless some things are apparent. Nalvage is a postmillennialist. That is, he holds that the world must be brought to a state of perfection and holiness *before* the Christ can return; the City of God must be established by man, and then the end comes. The Calls and Tablets (which he begins to deliver two months later) are the tool by which this perfection of the Earth and mankind can be brought about.

Appendix A: The Sigil of Ameth and its Holy Names

The outer ring of the Sigil contains 40 pairs of letters and numbers. These were presented in sequence to Dee and Kelly; in most cases, the presentation of the letter was preceded by a Latin phrase beginning with that letter. All the letters together were accounted as the greatest name of God.

The numbers sum to 440; the Archangel Michael completed the presentation of the outer ring by displaying a number "1", surrounded by many concentric circles. Adding this 1 brings the total of the numbers presented to 441, which is the numeration of the word "Ameth", Aleph-Mem-Tav, according to Hebrew gematria.

Seven of the letters are capitalized, indicating the first letters of certain concealed angelic names. To find the names of these angels, Dee was instructed to use the numbers connected with each letter. Where the number was above the letter, he was to count that

many letters clockwise to find the next letter of the name; where the number was below the letter, he was to count counterclockwise. Each name ended when he reached one of the six letters without a number.

Thus, seven names were produced:

Thaaoth
 Galaas
 Gethog
 Horlon (the second "o" is actually a lowercase omega)
 Innon
 Aaoth
 Galethog

Dee was instructed to strike out the first "a" of the double a's in the first two names, to produce the names "Thaoth" and "Galas". When this is done, the seven names comprise forty letters, the same as the number of letters in the outer ring of the Sigil.

Of these seven names the angel Uriel said: *"every letter containing an Angel of Brightness: comprehending the 7 inward powers of God, known to none but himself: a sufficient BOND to urge all creatures to life or death, or anything else contained in this world."*

No mention is made of the remaining letters in the outer ring, not used to form these names.

Only the last of these names appears overtly in the sigil, in the arcs immediately inside the outer ring. To each letter of "Galethog", a cross was appended to produce a set of sigil-like images:

These sigils were placed, one to each arc, counterclockwise around the Sigil of Ameth. Of these sigils Uriel said: *"Those seven letters are the 7 Seats of the One and everlasting GOD. His 7 secret Angels proceeding from every letter and cross so formed: referring in substance [i.e., in essence] to the FATHER: in form, to the SON: and inwardly to the HOLY GHOST."*

The letters in the outermost heptagon, just inside the arcs, are derived from the names of the "Seven Angels who stand before the presence of God" listed in Agrippa's Three Books of Occult Philosophy. The names of these angels are written vertically in a seven-by-seven grid; in the final square is placed a cross, representing the Earth, thus:

Z	l	l	R	H	i	a
a	Z	C	a	a	c	b
p	a	u	p	n	h	r
h	d	m	h	i	a	l
k	k	a	a	e	e	e
i	i	e	e	l	l	l
e	e	l	l	M	G	✠

The heptagon is filled by reading the rows horizontally from left to right, applying one row to each segment of the heptagon, going clockwise. Following their usual procedure, the angels presented the letters of the rows first, and only afterwards showed how these rows formed the names of the Angels.

The remaining divine and angelic names in the Sigil are all derived, by various means, from the names of the traditional planetary archangels, which are written within and around the pentagram at the center of the Sigil. As with the above table, the derivation was only demonstrated after the names were presented; this served to demonstrate that the angels were working from knowledge not available to Dee and Kelly, and were therefore more than figments of the magicians' imaginations.

The names of the planetary archangels were formed into a 7-by-7 tablet, by writing them diagonally from the upper left corner in standard cabalistic order beginning with the archangel of Saturn. The final "L" of each name was replaced in the tablet by numbers, usually appended to the preceding letter:

S	A	A	I ²¹ _{8.}	E	M	E ⁸
B	T	Z	K	A	S	E ³⁰
H	E	I	D	E	N	E
D	E	I	M	O	30	A
I ²⁶	M	E	G	C	B	E
I	L	A	O	I ²¹ _{8.}	V	N
I	H	R	L	A	A	21 8.

The seven names between the outer heptagon and the heptagram are "Names of God, not known to the Angels; neither can [they] be spoken nor read of man." They are derived from this tablet by reading the rows from left to right, and are placed in clockwise sequence around the Sigil. In the Angels' view, the derivation shown here is the reverse of the truth. Rather than the planetary angels producing these god-names, "these Names, bring forth 7 angels: the 7 Angels and Governors in the heavens next to us". Thus the Sigil, from its outer ring to its center, represents a descent of power from God into the world.

Between these God-names and the Planetary Archangels in the Sigil stand four additional ranks of beings. Even though they are outside the Archangels (and therefore presumably superior to them) it seems that they are in some way the "children" of the Archangels:

"Every letter of the Angels' names, bringeth forth 7 daughters. Every daughter bringeth forth her daughter, which is 7. Every daughter-her-daughter bringeth forth a son. Every son in himself, is 7. Every son has his son, and his son is 7."

The names in these groups are derived from the tablet by taking the letters diagonally as shown in the diagrams below.

Appendix B: The Seven Ensigns of Creation

Thanks to Mr. Clay Holden and the John Dee Publication Project for these scans of the original record.

Appendix C

The Seven Tables from which the names of the 49 "Good Angels" are derived.

The arrangement of the Seven Tables.

Note that each angel's name forms an outward spiral in this arrangement. The circle surrounding the tables was described as "very bright, with nothing in it."

Thirty letters in the second and third tables below are missing in the originals, due to damage. The versions shown are reconstructed from information contained elsewhere in the records, and probably are not identical to the originals in all respects.

1 B	2 B	3 B	4 B	5 B	6 B	7 B
8 B	9 B	10 B	11 B	12 B	13 B	14 B
15 B	16 B	17 B	18 B	19 B	20 B	21 B

Patterns for the Formation of Each King’s “Ministers of the Hours”

The Ministers’ names for five of the Heptarchic Kings are formed by selecting certain letters out of six of the seven sectors of the Tabula Bonorum, beginning with the sector ruled by King Bobogel and going clockwise around the table. No names are formed from the first sector, ruled by King Baligon (aka Carmara). The green lines in the illustration above show how the first Minister for each of these Kings is formed; the same lines are applied to the next five sectors to form the names of the King’s other Ministers.

In the cases of Kings Baligon and Bnapsen different methods are used. For Baligon, the names of the seven Kings are listed in their order on the Tabula Bonorum. Ignoring the initial “B”s of their names, lines are drawn down the columns to produce the names of the Ministers. This is identical to the method used to get the letters on the border of the Holy Table of Practice, so the Ministers’ names also appear in that border.

In Bnapsen's case, only a portion of the ministers' names derives from the Tabula Bonorum. The names of the Kings are listed in sequence beginning with Bobogel; the name of the 49th and last angel, Bamnode, is substituted for Baligon. Then diagonals are drawn as shown in the illustration to obtain the partial names. Letters from some unspecified source (possibly just random letters) are used to fill out the names to a length of seven letters each.

Since Bnapsen is given power over "wicked spirits", I speculate that the letters that are not from the Tabula Bonorum introduce an element of chaos that permits the holy King to make contact with the unholy beings he controls.

Appendix E

The Twelve by Seven Table in its Two Forms

o	g	o	n	r	o	l	e	g	o	b	o
s	e	f	a	f	e	l	e	l	a	b	a
o	n	o	m	t	u	r	o	p	e	n	y
n	o	d	s	i	l	l	o	p	s	a	n
s	e	g	r	o	r	n	e	s	p	a	n
s	e	g	l	a	r	a	z	a	m	u	l
l	o	n	e	g	a	n	o	g	i	l	a

First Form

The table is formed from the names of the Heptarchic Kings and Princes, without their initial letter "B"s. Each row contains the King and Prince of a particular day, beginning with Sunday and following in sequence around the Tabula Bonorum. The names are written from right to left.

The central squares outlined in red are called "The Heart". The squares surrounding the Heart are called "The Flesh". The two columns on each end are called "The Skin".

The Heptarchic Lamén is formed from this Tablet by transposition of the letters. Letters from the Flesh are placed in the outer square of the Lamén. Letters from the Heart are placed in the corners of the inner square. Letters from the Skin fill the central diamond.

a	l	i	g	o	n	o	r	n	o	g	o
o	b	o	g	e	l	e	f	a	f	e	s
a	b	a	l	e	l	u	t	m	o	n	o
y	n	e	p	o	r	l	i	s	d	o	n
n	a	s	p	o	l	r	o	r	g	e	s
n	a	p	s	e	n	r	a	l	g	e	s
l	u	m	a	z	a	a	g	e	n	o	l

Second Form

A second version of this table uses the same names, but writes them from left to right. The names of the Kings and Princes are written in the *numerical* sequence in which they appear in the Tabulum Bonorum, rather than grouping them by the day they rule.

This version of the Table is used to form the letters found on the Holy Table of Practice. The "Heart" is extracted and rotated ninety degrees counterclockwise, to form the 3-by-4 tablet in the center of the Holy Table. The letters around the edge of the Holy Table are found by reading the letters down the columns of this table from the right side to the left. The letters are applied to the Holy Table, 21 to a side, beginning at the upper right corner and going counter clockwise.

The six columns on the lefthand side of this version also form the names of the "Ministers of the Hours" for King Baligon / Carmara.

Bibliography

Dee Manuscripts

Sloane ms. 3191. Dee's book of ceremonial magick, consisting of extracts and compilations from the angelic conversations. Contains three books: 49 *Claves Angelicae Anno 1584 Cracoviae*, *Liber Scientiae Auxillii et Victoriae Terrestris*, and *De Heptarchia Mystica*.

Sloane ms. 3188. *Mysteriorum Libri Quinti*. Contains the records of scrying sessions for the period from December 1581 to May, 1583, divided into five books. These diaries are the raw information given to Dee and Kelly concerning the Heptarchic magick, and the beginnings of *Liber Loagaeth*.

Sloane ms. 3189. *Liber Mysteriorum Sextus et Sanctus*. Contains the bulk of *Liber Loagaeth*, consisting of 49 double-sided tables of letters and numbers.

Cotton Appendix XLVI, Parts 1 & 2. Contains thirteen "books", covering the actions from May, 1583 to September 1585, plus additional material from later periods. These records are the raw information given on the Angelic Calls, the Great Table, and *Liber Scientiae*.

Other manuscripts sometimes cited are copies or extracts from the above manuscripts.

Published versions of the Dee Diaries

Casaubon, Meric., D.D., *A True and Faithful Relation of What Passed for Many Years Between Dr. John Dee and some Spirits*, Magickal Childe, 1992, New York, NY. A facsimile of the original 1659 edition, produced by Clay Holden. Contains most of the material from Cotton Appendix XLVI, with a long introduction by Casaubon that seeks to prove that Dee and Kelly contacted evil spirits. Early English typescript and speech conventions make this work difficult to read at times. Also contains a "lost" section of the diaries, found by Clay Holden.

Peterson, Joseph, ed., *Mysteriorum Libri Quinti*, Magnum Opus Hermetic Sourceworks number 20. 1985, Magnum Opus Hermetic Sourceworks, Felindenys, Wales. An edition of Sloane ms. 3188 in modern typescript, with annotations by Elias Ashmole and the editor.

James, Geoffrey, *The Enochian Evocation of Dr. John Dee*, Heptangle Books, 1989, Gillette, NJ. [Reprinted by Llewellyn, 1994 as *The Enochian Magick of Dr. John Dee*] Largely a version of Sloane ms. 3191 in modern typescript. James' translations of the Latin have come under criticism, as has his editing of some passages in English.

Turner, Robert (ed.): *The Heptarchia Mystica of John Dee*, Magnum Opus Hermetic Sourceworks 17: Edinburgh 1983, 81 p. Collation of two MS copies in: Sloane 3191 and Additional MS. 36,674.

Turner, Robert (ed.): *The Heptarchia Mystica of John Dee*, with a contributory article by Robin E. Cousins; Latin translations by Christopher Upton; illustrated by Charles H. Cattell; Wellingborough, Northamptonshire: Aquarian Press 1986, ISBN: 0-85030-470-9 (pbk). 2nd enlarged edition of: Magnum Opus Hermetic Sourceworks No. 17. The standard Heptarchic source in English, with essential commentary on the Sigillum dei Aemeth and the Holy Table.

Turner, Robert. *Elizabethan Magic: The Art and the Magus*, foreword by Colin Wilson; with contributory material by Patricia Shore Turner and Robin E. Cousins; illustrated by Charles H. Cattell and Jane O'Reilly; translations from the Latin by Christopher Upton, Shaftesbury: Element Books, 1989, ill., maps, bibliography. An excellent distillation of the essentials from Dee's original Enochian material and other magical documents of the same period. Robin Cousins' material on the geographic locations governed by the Parts of *Liber Scientiae* is a unique resource.

The Golden Dawn system of Enochian Magick

Regardie, Israel, *The Golden Dawn*, Llewellyn Publications, 1971, St. Paul, MN. Reprinted at regular intervals. Contains detailed descriptions of the Golden Dawn's elaborate system of Enochian Magick.

Zalewski, Pat. *Golden Dawn Enochian Magic*, Llewellyn Publications 1990, St. Paul, MN. Contains additional material concerning the Golden Dawn system, including the extension of the G.D. "pyramid" method to cover the angels of the Heptarchy.

Zalewski, Chris. *Enochian Chess*, Llewellyn, 1992, St. Paul, MN. The Golden Dawn method of divination derived from the Enochian material.

Hyatt, Christopher S., Ph.D. *The Enochian World of Aleister Crowley (Enochian Sex Magic)* Falcon Press, 1993 ISBN: 0-56184-029-7 Another description of the Golden Dawn system, with additions and extensions from the works of Aleister Crowley.

Other material related to Enochian and Heptarchic Magick

Crowley, Aleister. *Liber LXXXIX vel Chanoek*, published in various compilations of his short works. Crowley's brief description of the Golden Dawn system of Enochian magick. He leaves out many essentials.

Crowley, Aleister. *The Vision and the Voice*, Sangreal Foundation, 1972, Dallas, TX., and other editions. The magickal record of Crowley's explorations of the thirty Aethyrs of *Liber Scientiae*. With an introduction by Israel Regardie and extensive footnotes by Crowley.

Denning, Melita, and Phillips, Osborne. *Mysteria Magica*, Llewellyn Publications, 1992, St. Paul, MN. Volume V. Describes the Aurum Solis system for using the ministers of the 91 Parts of Liber Scientiae.

James, Geoffrey. *Enochian Evocation: The True Calls*, Gnostica Magazine, Sept. 1978, Llewellyn Publications, St. Paul, MN.

Laycock, Donald C., *The Complete Enochian Dictionary*, Askin Publishers, 1978, London, England, UK. [Reprinted by Weiser 1994] Recently reprinted in paperback.

MacLean, Adam. *A Treatise on Angel Magick*, Phanes 1990. The Golden Dawn relied almost exclusively on an eclectic mish-mash that was compiled almost two centuries after Dee's death called *A Treatise on Angel Magick*. It was this resource that cleared up Israel Regardie's confusion as to why Aleister Crowley (who used the keys as a means of pathworking) made certain numerological associations in his account of the experience. Transcript, in toto, of Harley 6482.

MacLean, Adam. *Angelic Magic*, part of his *Magnum Opus Hermetic Sourceworks Series*, a limited publication in England, contains a copy of Rudd's MSS. (8/95 rmcg): Same as "Treatise on ..." above. *Magnum Opus Hermetic Sourceworks* #15.

Rowe, Benjamin. *Enochian Temples*, Black Moon Publishing, Cincinnati, OH, 1988. A small chapbook describing Rowe's method for creating a three-dimensional astral temple from the Elemental Tablets. Related materials available in manuscript form, or via the Web.

Vinci, Leo. *Gmicalzoma! An Enochian Dictionary*, Regency Press, London & New York, 1976. Another exhaustive dictionary of Angelic words.

Hall of Shame

Schueler, Gerald. *Enochian Magick, Advanced Guide to Enochian Magick, Enochian Yoga, Enochian Tarot, Enochian Physics*, etc. All published by Llewellyn Publications, St. Paul, MN.

Schueler's first two "Enochian" works are hasty and unscholarly assemblages of material from the Golden Dawn (mostly via Aleister Crowley's inadequate presentation in *Liber LXXXIX vel Chanoek* and from his *The Vision and the Voice*), coupled with the products of Schueler's prolific imagination. Robert Turner called the existence of these volumes "lamentable", and I agree without reservation. These two books consist almost entirely of errors, misconceptions, fabrications, and flummery; readers will be far better off going to Schueler's sources than trying to extract anything useful from them.

His later books are almost entirely the products of his own imagination, and so at least have the advantage of coming from a single source. Readers have had widely varying opinions as to their usefulness. His *Enochian Tarot* is worth purchasing for the artwork by Sallie Ann Glassman, regardless of one's opinion of its design. *Enochian Physics* is distinguished by having the lowest information content of any book its size published in this century. In the chapters that are not adaptations from Aleister Crowley, the information content approaches zero.

Tyson, Donald. *Tetragrammaton: The Secret to Evoking the Angelic Powers and the Key to the Apocalypse*. 1995, Llewellyn Publications, St. Paul, MN.

Tyson combines the Enochian material with Fundamentalist millennialism and Lovecraftian horror fiction, to paint a picture of the Angelic Calls as the means by which the apocalypse will be brought about. In the process, he twists facts to suit his thesis, selectively interprets the Calls, and blithely dismisses contrary portions of the record as "not what was intended". Much of his "analysis" of the Calls is in the style perfected by Kenneth Grant. That is, grab any association that seems to support your idea, taking it out of context as necessary, and disregarding such minor things as anachronisms, logical non sequiturs, etc.

Enochian Temples: Invoking the cacodemons with the Temple

by Benjamin Rowe, Copyright 1992

The enochian system is primarily angelic in character. There are no entities in the system who actually meet the traditional definitions of elementals or demons. All the elemental forces are invoked and used through the intervention of conscious, intelligent entities who are themselves of a multiplex nature. These entities can provide elementals for the magician, but the elementals can not be directly invoked.

The closest one can come to directly invoking an elemental in this system is in the invocation of the so-called "cacodemons" (Dee's appellation) or "minimal sapient entities" (my appellation). I use this name for them because they are the least complicated beings in the system that are capable of responding to their environment and maintaining an independent existence. They are composed of two forces of opposite polarity, bound together by one additional letter from the Tablet of Union. Thus they have one force for each of the three necessary aspects, sulphur, salt, and mercury.

The following excerpt provides a description of the process of invoking these cacodemons in the Temple. It was provided in an astral contact with Atapa, Sephirotic Angel of the Fiery Lesser Angle of the Water Tablet.¹

These instructions should not be interpreted rigidly. There are numerous minor variations, particularly in the method of forming the names. The flexibility of the Enochian system is such that all of them will produce results, varying slightly with the method used.

"The threads of my garment are of course the so-called "cacodemons" of the sub-angle, made out of the forces of the kerubic and servient squares. They seem at times to be demons, but only when their force is allowed to manifest unconstrained. Like animals in your own world, they are full of emotion, but do not have any sense. Therefore, we higher types such as myself and the other angels of the crosses must be strong gods to them, leading them both gently and firmly, as one would lead a loyal but temperamental dog.

"In your work with these demons, do not be afraid to treat them roughly, for it is all that they understand, until you have trained them in a new way.

"Now when Dee made the tablets to appear in the world, he said that only the first two letters of the kerubic and servient names could be made into cacodemons. But in truth, the angelic [kerubic] squares and servient squares can all be used in such demons, provided that the square is united with one which is right next to it in the temple of the tablet. Thus, there are four possible cacodemons in every kerubic angels's domain, since in the pillars there are four pairs of squares that share an edge. [Similarly for the rows making up the altars -- B.R.]

"Now, in the invocation of the cacodemons, ye must form their names in one of two ways. The first only may ye use for the cacodemons of the Kerubic squares. This first or the second may be used with the squares of the servants.

"For all the squares, ye may take any two letters whose squares have a connecting edge in the pillar or the altar. Take ye not the diagonal forces, for they are of the same polarity, and would not be well balanced. (Thus also for letters from different rows of the altar.) Prefix these with the letter of spirit from the element's line in the Tablet of Union, and thus ye have the names of the cacodemons.

"For example, in my own quarter, the Kerubic squares are NLRX. This would give cacodemons HNL, HLR, HRX, HXN. The letter from the tablet of union always represents the balanced spirit in the entity. The second and third letters are male or female according to the polarity of their sub-energy in its attribution to IHVH. In HNL, N is (Earth of (Fire of Water)), and is thus female. L is (Air of (Fire of Water)), and thus male. So also for any Kerubic cacodemon.²

"In the servient squares, the female- or male-ness of a square is according to the kerubic letter governing its column position.

"In forming the names of the cacodemons of the servient squares, a second method can be used. This is to take the letter from the element's name in the Tablet of Union that is attributed to the element governing the row from which the names are being derived. Thus, the top servient row in my quarter, attributed to fire, would form the names thus: AXP, APC, ACN, ANX. Or, using the letter of Spirit: HXP, HPC, HCN, HNX.³

"The latter form is better for works of a spiritual or internal nature. The former are better for works intended to manifest in the outside world. A letter from the Tablet of Union must be used in every demon's name. For the forces of the two squares from the Elemental Tablet will not hold together without the light of this third. There is no harm in trying, but the forces will instantly dissipate again when the magician relaxes his will.

"Also, the second and third letters may be switched in their places, to emphasize one or the other of the demon's forces.

"Now, when invoking a cacodemon in the Temple built from the Tablet, stand in the center of the Temple, where the light of the Solar King of the Tablet comes down in a beam of radiance from above. Face the altar that contains the letters of the demon in question.⁴ Perform the invocation of Spirit using the first key, and not the second key. Invoke the elemental name from the Tablet of Union. Call upon that god to fill your temple with radiance. Also state the purpose of your invocation at this point, in a short form.

"Next, recite the call of the Element, and invoke the Holy Names of the tablet down through the level of the Seniors. Then recite the calls of the sub-element, whether or not this be the same as the call of the Element of the Working. Then invoke the names of the gods and angels of the sub-element. For the kerubic names, add the letter from the Tablet of Union, if the work be one of raising oneself in the spirit, or bringing down the spirit. Use no additional letter if the work be one of expression in the levels of matter.

"Then invoke the angel governing the line within which the demon lives, using a letter from the tablet of union or not, along the same rule as the kerubic squares. Finally, invoke the cacodemon itself.

"Its visible appearance, whether manifest in the temple or only in the vision, should reflect the attributions of the squares from which it is formed. The first letter will determine the form of the head. The second will determine the form of the arms and upper torso, and the third letter will determine the

lower torso and legs. Thus some truly odd looking entities can be seen in this process.

"For works of an internal nature, to strengthen or counter some aspect of the personality, a glyph or visual symbol embodying the desired outcome should be prepared ahead of time in the imagination, and rehearsed until it can be held in the mind with ease.

"When the demon is evoked to visible appearance in the astral temple, he appears above the altar from which his forces come. Often one of the strands of the light-fountain will straighten and he will appear out of it. He is bound to the altar both by his own origins, and by the light of the central square of the Sephirothic cross of the quarter, which is directly above his head. He may not leave this place without permission, nor may he cause any harm to the magician while so bound.

"If the magician wishes to direct the demon to the aid of his work, he will present the symbols of the work to the demon, and state his will clearly. Then he should charge the demon to put his force into the symbol of the work, and to cause that work to be accomplished through the forces he represents.

"Be advised that the demons may do their work in a manner that is offensive to "community standards of conduct". The magician should not allow himself to become emotionally involved through such offense. He must always consider himself to be superior to such creatures, and consider that it is doing his will within the limits of its abilities.

"For example, a cacodemon might choose to transfer his three aspects to the symbol of the work by spitting on it, then copulating with it, then defecating on it. Think not that it intends any disrespect by this. It barely has enough intelligence to be conscious, and there is none left over for cleverness. Think of it thus, as a particularly stupid animal, which must be dealt with firmly, but without trying to change its instinctive nature.

"No such creature has secrets of any importance. They are merely bundles of elemental forces. If they speak, the great likelihood is that they echo the unconscious will of the magician, and speak not of their own will (of which they have none).

"For a working intended to be effective outside of the person, in the manifest world, a physical talisman should be made. These can be out of papyrus, or compressed and smoothed sheepskin, or out of cedar or other wood. If made out of wood, its height should be one-quarter its diameter.

"The talisman should show on its back side the enochian sigil of the Element of the Working in the center, surrounded by four sigils showing the sub-elements of the tablet, with the sub-element of the working at the top. And all bound together by a circle around the rim of the talisman.

"On the front side should be written in Enochian or English characters the names of all the gods and angels of the hierarchy above the cacodemon.⁵ The name of the Elemental God and King should be centered, with the names of the seniors placed around the rim. The names of the Calvary Cross of the sub-element should be placed above the names of God and King, and formed into their cross. The names of the Kerubic angel, lesser angel, and cacodemon should be placed below the King-name. The symbol of the working should be placed to the left of the name of the cacodemon, or directly above it, since we are shaping him to do the work. [The Three Names and the King's name should be written twice as large as the other names. -- B.R.]

"When the demon is evoked for outward purpose, and comes to visible appearance within the temple,

then the talisman is raised in the physical hands, while its astral counterpart is raised and placed on the altar from which the demon comes. The magician initiates a vortex around the edge of the talisman, and charges the demon to become one with the vortex and follow it down into the talisman. If necessary, the force of the Sephirotic cross can be brought down from its place in the ceiling to force the demon into the talisman. When the demon does this and the vortex is absorbed into the talisman, then a gesture of sealing should be done over it, binding the demon inside it until released. Cover the physical talisman with a white cloth to protect it from dust, but leave it out in the parts of your home or workplace you use in your daily life, so that it may connect itself to the threads which are the means by which the work will be accomplished."

Footnotes

1 "Atapa" is actually a name of God for the Lesser Angle. A section preceding the part quoted here showed that the angel who was speaking considered himself to be a small portion of the god's force, hence his use of the name. His validity was established by other means than gematria.

2 This paragraph follows MacGregor Mather's attributes for the squares, which I was using at the time. Dee's records and my own later, incomplete research indicate that while the squares do alternate in polarity, the attributes to the elements do not follow Mather's system in most cases. Magicians should not feel bound to follow Mathers if results show another way to be more effective for themselves.

3 Dee's rituals suggest an alternative, which is to attribute each servient row from top to bottom to successive letters of the Tablet of Union name. In this alternate system, the Union letter for the top servient row would be "C", second row "O", third row "M", fourth row "A".

4 If two magicians are working together, the second should stand with his back to the pillar of the sub-element, facing the light in the center. Up to three additional magicians can stand at the other pillars. The magician in the center identifies himself with the Elemental King. Any others should identify themselves with the Kerubic Archangels.

5 Either of the two hierarchies mentioned earlier can be used. I find that the second gives a more "elemental" effect.

JOHN DEE

(1527—1608)

BY

CHARLOTTE, FELL-SMITH

AUTHOR OF "MARY RICH, COUNTESS OF WARWICK"

With Portrait and Illustrations

LONDON
CONSTABLE & COMPANY LTD
1909

TABLE OF CONTENTS

CHAPTER I

BIRTH AND EDUCATION

Tercentenary of Dee's death — No life of him — Persistent misunderstanding — Birth — Parentage — At Chelmsford Grammar School — St. John's College, Cambridge — Fellow of Trinity — Theatrical enterprise — In the Low Countries — M.A. of Cambridge — Louvain University — Paris — Readings in Euclid — Correspondents abroad — Return to England.

CHAPTER II

IMPRISONMENT AND AUTHORSHIP

Books dedicated to Edward VI. — Upton Rectory — Long Leadenham — Books dedicated to Duchess of Northumberland — Ferrys informs against his "magic" — In prison — Handed over to Bonner — At Philpot's trial — Efforts to found a State Library — Astrology — Horoscopes — Choice of a day for Queen Elizabeth's coronation — Introduced to her by Dudley — Sympathetic magic — Bachelor of Divinity — In Antwerp — Monas Hieroglyphica — Preface to Billingsley's Euclid — Called a conjurer.

CHAPTER III

MORTLAKE

Proposed benefices — Propædeumata Aphoristica — Alchemical secrets — Settled at Mortlake — Journey to Lorraine — Illness — The Queen's attentions — Mines and hidden treasure — Wigmore Castle — Marriage — Death of first wife — Literary correspondence — John Stow — Diary commenced — The Hexameron Brytannicum — The British Complement — Slander and falsehood — A petty navy — The sea-power of Albion — Fisheries and foreign policy.

CHAPTER IV

JANE DEE

A comet or blazing star — Second marriage — Jane Fromond — Hurried journey abroad — Berlin and Frankfort — Birth of a son — Christening — Edward Dyer — Duc d'Alencon — Michael Lock — His sons — The Queen's visit — Sir Humphrey Gilbert at Mortlake — Adrian Gilbert — John Davis — The Queen's Title Royall — Lord Treasurer Burleigh — Death of Dee's mother — The Queen's visit of condolence — Map of America — Visits to the Muscovy House — Frobisher and Hawkins — Birth of a daughter — Accident to Arthur.

CHAPTER V

THE SEARCH FOR A MEDIUM

Assistants — Roger cook — Magic and alchemy — Psychic powers — Crystal gazing — Dreams and mysteries — Vincent Murphy and a lawsuit — Jean Bodin visits England — Quarrel between Leicester and Sussex — Mary Herbert — Sir George Peckham — The stage at Paris Garden — Mr. Secretary Walsingham — The Queen at Greenwich — Barnabas Saul as medium — Edward Talbot — Sight in the stone — The table of practice — The waxen seals.

CHAPTER VI

EDWARD KELLEY

Edward Kelley — An alias — His previous history — His mysterious powder — Marriage to Joan Cooper — Jane Dee's dislike of Kelley — The diary of the actions — How Ashmole obtained the MSS. — Book of Mysteries — The four angels — Dee's thirst for hidden knowledge — A crystal is brought — Medicina.

CHAPTER VII

THE CRYSTAL GAZERS

Kelley, the skryer — A third person — Adrian Gilbert — Kelley and an "illuder" — Dee employed to reform the Calendar — The Queen and Raleigh — Hidden treasure — Burleigh's library — Dee's precious books — Kelley rebellious — Threatens to depart — Pacified by Adrian Gilbert — His wife's letters — He goes to London — Becomes clairvoyant — Sees Mary Queen of Scots executed.

CHAPTER VIII

MADIMI

Straits for lack of money — Count Albert Laski — Aspirations toward the Polish Crown — King Stephan Bathory — Dee introduced to him by Leicester — Laski at Oxford — At Mortlake — Madimi — Galvah or Finis — Laski's guardian angel — Madimi a linguist — Kelley threatens to leave — His salary of 50 pounds — Thomas Kelley — Dee's suspicions — Kelley's tempers — His love of money.

CHAPTER IX

A FOREIGN JOURNEY

Gifts from the Queen — Departure from Mortlake — Laski and the whole party sail from Gravesend — Queenborough — The Brill — Haarlem —

Amsterdam — Harlingen — Dokkum — Instructions from Gabriel — Embden — Oldenberg — Bremen — Il's levity — Visions of England — Hamburg — Lubeck.

CHAPTER X

PROMISES AND VISIONS

Promises of wealth — Dee's doubts — His books and library destroyed by the mob — Rostock — Stettin — Posen Cathedral — Severe winter weather — The table set up — Nalvage — Sir Harry Sidney — Madimi — The Queen's affection — At Lask — Cracow.

CHAPTER XI

CRACOW

Cracow — The new Style — Dee's work on the Reformation of the Calendar — Kelley's discontent — Geographical lessons — Laski and King Stephan — Kesmark — Gabriel's pleading — Kelley repentant — A vision of four castles — Ave — Dee's patience.

CHAPTER XII

FROM CRACOW TO PRAGUE

Rowland's illness — Dee sets out for Prague — Thomas Kelley — Dr. Hageck's house — Rudolph II. — Simon's study — Interview with the Emperor — Kelley's outbursts — Dr. Jacob Curtius — Dee's natural history — The Spanish Ambassador — Jane Dee ill — A passport granted — Back to Prague — Kelley's doubts.

CHAPTER XIII

A DREAM OF GOLD

To Limburg — Michael baptised in Prague Cathedral — Easter — Poverty and distress — Kelley again restive — "Parabola de Nobis Duobus" — Return to Cracow — Mr. Tebaldo — Interviews with King Stephan — His death — Dr. Annibaldus — Back at Prague — Francisco Pucci — The Book of Enoch — Claves Angelicae — Banished by Papal edict — William Count Rosenberg — Dee at Leipsic — Letter to Walsingham — A new Nuncio — Invitation to Trebona.

CHAPTER XIV

THE CASTLE OF TREBONA

Trebona Castle — Rosenberg Viceroy of Bohemia — Invitation to Russia — Projection with Kelley's powder — A gift to Jane Dee — Letter from Kelley — Jane to her husband — Joan Kelley — Dee's friends desert him for Kelley — Arthur to be the skryer — Kelley's pretended vision — A hard and impure doctrine — Dee's scruples overridden — A solemn pact — Kelley disowns blame — End of his clairvoyance — The spirits' diary closed.

CHAPTER XV

THE END OF THE PARTNERSHIP

Letters to Walsingham — A tutor for the children — Coldness and jealousy — Furnaces constructed — Rumours and reports — Book of Dunstan — Kelley's haughtiness — Accident to Michael — The great secret — Kelley steals the best workman — Break-up of the Trebona family — Dee's letter to the Queen on the Armada — Gifts to Kelley — His departure — Coaches and horses provided — Dee quits Bohemia — Arrival in Bremen.

CHAPTER XVI

THE END OF KELLEY

Kelley in favour with Rudolph — Given a title — Corresponds with Dee — Fabulous stories of gold — Burleigh begs his return to England — A token to be sent — A prescription for his gout — Letter to Kelley — Kelley's fall from favour — Flight from arrest — Capture at Sobislaus — Imprisonment — Writings on alchemy — Letters to Dee — Attempted escape — Death.

CHAPTER XVII

RETURN TO ENGLAND

Dee's life in Bremen — Letter of safe conduct from the Queen — Writes to Walsingham — Timon Coccius — Heinrich Khunrath — Departure for England — Dr. Pezel — Events in England since Dee left — Arrival at Court — Offers of friends — Madinia born — School for the children — Death of Walsingham — Richard Cavendish — Ann Frank — The Queen at Richmond — Christmas gifts.

CHAPTER XVIII

A ROYAL COMMISSION

Loss of income — Hopes of a benefice — The Court at Nonsuch — Mary Herbert — Arthur sent to Westminster School — His disposition — Birth of Frances — Dr. William Aubrey — Deferred hopes — The commissioners' visit — Compendious Rehearsall — Dee's half-hundred years — The blinded lady Fortune.

CHAPTER XIX

DEE'S LIBRARY

The library at Mortlake — Books and instruments — Richard Chancellor's quadrant — A radius Astronomicus — Mercator's globes — A watch-clock by Dibbley — Boxes of MSS. — Seals and coats of arms — Records for the Tower — Autograph works — Recorde's Ground of Artes — Catalogue of the books — Classic authors — English authors.

CHAPTER XX

ADIEU TO COURTS AND COURTING

The Queen's gift — Anne Countess of Warwick — Christmas at Tooting — Francis Nicholls — Visitors to Mortlake — the Lord Keeper — Elizabeth Kyrton — Messengers from Laski — Mr. Webbe — Bartholomew Hickman — The Queen at Greenwich — Advantages of St. Cross — Archbishop Whitgift — The whole family to see the Queen — "Adieu to Courts and Courting" — Michael's death — Chancellor of St. Paul's — Jane's supplication — A post at last — Manchester College — Birth of Margaret — Lord Derby — A move northward.

CHAPTER XXI

MANCHESTER

Collegiate Church of Manchester — The Byrons of Clayton — Cotton's servant — Titles of the college lands — Mr. Harry Savile — Survey of the town — Christopher Saxton — A surprise visit — Governess for the girls — Witchcraft in Lancashire — Dee's library in request — Disputes among the Fellows — Perambulation of the bounds — Richard Hooker — Marking boundaries — Earl and Countess of Derby — College affairs — The Queen's sea sovereignty — Letter to Sir Edward Dyer — Humphrey Davenport — Sir Julius Caesar — Welcome gifts — Journey to London.

CHAPTER XXII

COLLEGE AFFAIRS

Absence from Manchester — A special commission — Return to the north — Grammar School inspection — Dreams and sleepless nights — Trouble with the Fellows — Unsatisfactory curates — Borrowing money on plate — Crystal gazing again — Untrue visions — Return of Roger Cook — College property in Cheshire — Arthur the chapter clerk — End of the Diary.

CHAPTER XXIII

LAST DAYS

Death of Theodore — Arthur's marriage — His horoscope — Death of the Queen — James I. and his *Demonologie* — Act against witchcraft — Dee petitions Parliament and the King at Greenwich — Passionate protest — Offers to be burned — Pleads for an Act against slander — Neglected and alone — Death of Jane — The children ill — Dee in London — Katherine his mainstay — Cruel delusions — A journey to go — Failing memory — John Pontoys — The vision fades — Death — A grave at Mortlake — Garrulous reminiscences.

APPENDICES I AND II

I. DEE'S DESCENDANTS

II. BIBLIOGRAPHY

LIST OF ILLUSTRATIONS

1. PORTRAIT OF JOHN DEE.

From the original (artist unknown) in the Ashmolean Museum, Oxford. It is inscribed on the face "Johannes Dee Anglus Londinensis Aet suae 67." The portrait was acquired by Ashmole from Dr. John Dee's grandson Rowland, and was left by him to Oxford University with his collections. It has been engraved by Scheneker and W.P. Sherlock.

2. TITLE-PAGE OF DEE'S "GENERAL AND RARE MEMORIALS PERTAINING TO THE PERFECT ART OF NAVIGATION," PRINTED BY JOHN DAY, 1577.

The motto "Plura latent quam patent" surrounds the title; above, the Queen's arms, a rose branch through a loop at each end. Allegorical drawing in a square; the date 1576 in Greek in the corners. The Queen seated at the helm of a "capital," i.e., first-class, ship; arms of England on the rudder; three noblemen standing in the waist. On the vessel's side Jupiter and Europa. Signs of famine on shore: a wheat ear upside down and a skull. A Dutch ship is anchored in the river; fore more lie at its mouth; soldiers, a small boat, a man offering a purse, and in the corner a walled town. On the rock at the river's mouth stands Lady Opportunity; the angel Raphael overhead with flaming sword, and shield bearing St. George's Cross. The sun, moon, and ten stars; rays of glory proceeding from the name of Jehovah. (See Ames, *Typographical Antiquities*, ed. Herbert, vol. i., p. 661)

3. PICTURE OF AN ALCHEMIST WITH HIS ASSISTANT TENDING STILLS.

From an engraving by Robert Vaughan in Ashmole's *Theatrum Chemicum Britonum* (1652), where it illustrates the first English translation of Thomas Norton's *Ordinall of Alchemy*, a metrical treatise in Latin, which Dee transcribed in the year 1577. His copy, bound in purple velvet, and with the index made by himself, is now Ashmolean MS. 57

"IF I HAD KNOWNE THIS AND HAD DONE SOE
I HAD AVOYDED MICKLE WOE."

THOMAS NORTON *The Ordinall of Alchimy.*

4. DIAGRAM OF THE VISION OF FOUR CASTLES.

Seen and drawn by Kelley at Cracow. From Casaubon's True Relation

5. FACSIMILE PHOTOGRAPH OF DEE'S LETTER TO QUEEN ELIZABETH ON
THE DEFEAT OF THE SPANISH ARMADA.
From the original in Harleian MS. 6986, fo. 45

A PAGE FROM THE THESAURUS AMICORUM OF TIMON COCCIUS.

6. A PAGE FROM THE ALBUM OF TIMON COCCIUS, BREMEN, 1589.
Dee's contribution to his Thesaurus Amicorum. From the original in Add. MSS.
19,065

Most Gracious Sovereigne Lady, The God of Heauen and earth,
Who hath mightilie, and evidently, giuen vnto your most excellent
Royall Maies tie, this wonderfull Triumphant victorie, against
your mortall enemies) be alwaies, thanked, prayesd, and glorified:
And the same God Almighty: euer more direct and defend your
most Royall Highnes from all euill and encumbrance: and finish
and confirme in your most excellent Maies tie Royall, the blessings
long since, both decreed and offered: yet, euen vnto your most
gracious Royall bosom, and Lap. Happy are they, that can
perceyue, and so obey the pleasant call, of the mightie Ladies,
OPPORTVNITIE. And, Therefore, finding our duetie conuincit
with a most secret beck, of the said Gracious Princess Ladies
OPPORTVNITIE, NOW to embrace, and enioy your
most excellent Royall Maies ties high fauor, and gracious great
Clemencie, of CALLING me, M^r Kelsey, and our families,
hoame, into your Brytish Earthly Paradise, and Monarchie
incomparable: (and, that, about an yere since: by Master
Customer Yong, his letters,) I, and myne, (by Gods his fauor
and help, and after the most conuenient manner, we can,)
Will, from henceforth, endeuour our selues, faithfullly, loyally,
carefully, warily, and diligently, to ryd and vntangle our
selues from hence: And, so, very deuotely, and Souldie,
at your Sacred Maies ties feet, to offer our selues, and all,
wherein, we are, or may be able, to serue God, and your most
Excellent Royall Maies tie. The Lord of Hosts, be our
help, and Gyde, there: and graunt vnto your most excellent
Royall Maies tie, the Incomparable Triumphant Raigne, and Monarchie,
that euer was, since Mans creation. Amen.

8. DEE'S COAT OF ARMS.

From an illustration to his Letter and Apology, presented to the Archbishop of Canterbury 1599, second edition 1603

ARMS OF DEE AS SHOWN IN A CUT AT THE END OF HIS
"LETTER APOLOGETICALL" (1599).

CHAPTER I

BIRTH AND EDUCATION

“O Incredulities, the wit of fooles
That slovenly will spit on all thinges faire,
The coward’s castle and the sluggard’s cradle,
How easy ‘tis to be an infidel!”

— George Chapman

It seems remarkable that three hundred years should have been allowed to elapse since the death of John Dee in December, 1608, without producing any Life of an individual so conspicuous, so debatable, and so remarkably picturesque.

There is perhaps no learned author in history who has been so persistently misjudged, nay, even slandered, by his posterity, and not a voice in all the three centuries uplifted even to claim for him a fair hearing. Surely it is time that the cause of all this universal condemnation should be examined in the light of reason and science; and perhaps it will be found to exist mainly in the fact that he was too far advanced in speculative thought for his own age to understand. For more than fifty years out of the eighty-one of his life, Dee was famous, even if suspected and looked askance at as clever beyond human interpretation. Then his Queen died. With the narrow-minded Scotsman who succeeded her came a change in the fashion of men’s minds. The reign of the devil and his handmaidens — the witches and possessed persons — was set up in order to be piously overthrown, and the very bigotry of the times gave birth to independent and rational thought — to Newton, Bacon, Locke.

But Dee was already labelled once and for all. Every succeeding writer who has touched upon his career, has followed the leaders blindly, and has only cast another, and yet another, stone to the heap of obloquy piled upon his name. The fascination of his psychic projections has always led the critic to ignore his more solid achievements in the realms of history and science, while at the same time, these are the only cited to be loudly condemned. The learned Dr. Meric Casaubon, who, fifty years after Dee’s death, edited his Book of Mysteries — the absorbing recital of four out of the six or seven years of his crystal gazing — was perhaps the fairest critic he yet has had. Although he calls Dee’s spiritual revelations a “sad record,” and a “work of darkness,” he confesses that he himself, and other learned and holy men (including an archbishop), read it with avidity to the end, and were eager to see it printed. He felt certain, as he remarks in his preface, that men’s curiosity would lead them to devour what seems to him “not paralleled in that kind, by any book that hath been set out in any age to read.” And yet on no account was he publishing it to satisfy curiosity, but only “to do good and promote Religion.” For Dee, he is persuaded, was a true, sincere Christian, his Relation made in the most absolute good faith, although undoubtedly he was imposed upon and deluded by the evil spirits whom he sometimes mistook for good ones.

It may be well here to remark that this voluminous Book of Mysteries or True and Faithful Relation (fol. 1659), from which in the following pages there will be found many extracts, abounds in tedious and unintelligible pages of what Casaubon calls “sermon-like stuff,” interspersed with passages of extraordinary beauty. Some of the figures and parables, as well as the language used, are full of a

rare poetic imagery, singularly free from any coarse or sensual symbolism. Like jewels embedded in dull settings, here and there a gem of loftiest religious thought shines and sparkles. There are descriptive touches of costume and appearance that possess considerable dramatic value. As the story is unfolded in a kind of spiritual drama, the sense of a gradual moving development, and the choice of a fitting vehicle in which to clothe it, is striking. The *dramatis personae*, too, the “spiritual creatures” who, as Dee believed, influence the destinies of man, become living and real, as of course they were to the seer. In many respects these “actions” were an exact counterpart of the dealings inaugurated by psychical scientists 275 years later, if we omit the close investigation for fraud.

Casaubon’s successor in dealing with the shunned and avoided subject of John Dee was Thomas Smith, Fellow of Magdalen College, Oxford, who, in 1707, wrote the first connected Life of him, in a book of the *Lives of Learned Men*. It was based upon some of Dee’s autobiographical papers, and out of a total of a hundred pages, gave fifty to letters already printed by Casaubon.

After this no sustained account of Dee’s romantic career is to be found outside the pages of biographical dictionaries and magazine articles, or among writers upon necromancy, hermetic philosophy, and alchemy. Many of these decorate their collections with apocryphal marvels culled from the well-worn traditional stories of Dee and his companion, Edward Kelley. Thus, throughout his lifetime and since, he has continued to run the gauntlet of criticism. “Old imposturing juggler,” “fanatic,” “quack,” are mild terms: in the *Biographia Britannica* he is called “extremely credulous, extravagantly vain, and a most deluded enthusiast.” Even the writer on Dee in the *Dictionary of National Biography* says his conferences with the angels are “such a tissue of blasphemy and absurdity that they might suggest insanity.” Many more such summary verdicts might be quoted, but these will suffice for the present.

It has been said that no Life of Dee exists. And yet the materials for such a Life are so abundant that only a selection can be here used. His private diary, for instance, if properly edited, would supply much supplementary, useful, and interesting historical information.

It is the object of this work to present the facts of John Dee’s life as calmly and impartially as possible, and to let them speak for themselves. In the course of writing it, many false assertions have disentangled themselves from truth, many doubts have been resolved, and a mass of information sees the light for the first time. The subject is of course hedged about with innumerable difficulties; but in spite of the temptations to stray into a hundred bypaths, an endeavour has been strictly made to do no more than throw a little dim light on the point where the paths break off from the main road. If, at the end of the way, any who have persevered so far, feel they have followed a magnetic and interesting personality, the labour expended will not have been in vain. With a word of apology to serious historical readers for the incorrigibly romantic tendency of much of the narrative, which, in spite of the stern sentinel of a literary conscience, would continually reassert itself, the story of our astrologer’s strange life may now begin.

John Dee was the son of Rowland Dee; he was born in London, according to the horoscope of his own drawing, on July 13, 1527.

His mother was Jane, daughter of William Wild. Various Welsh writers have assigned to Dee a genealogical descent of the highest antiquity, and the pedigree which he drew up for himself in later life traces back his family history from his grandfather, Bedo Dee, to Roderick the Great, Prince of Wales. All authorities agree that Radnor was the county from whence the Dees sprang.

Rowland Dee, the father, held an appointment at Court, as gentleman server to Henry VIII., but was very indifferently treated by the King. This may partly account for the persistence with which Dee exhibited before Queen Elizabeth his claims to preferment at her hands. To be in habitual attendance at Court in those days, however, bred in men a great desire for place, and a courtier was but a mendicant on a grand scale.

The boy, John Dee, was early bred in "grammar learning," and was inured to Latin from his tender years. Perhaps he was not more than nine or ten when he was sent to Chelmsford, to the chantry school founded there seven years before the great school at Winchester came into existence. The master who presided over Dee's school hours in Essex was Peter Wilegh, whom the chantry commissioners in 1548 reported as a man "of good conversation" who had kept the school there for sixteen years. Dee has always been claimed by the Grammar School at Chelmsford as one of their most famous alumni, whose extraordinary career with its halo of mystery and marvel they perhaps feel little qualified to explore. Dee's testimony that at Chelmsford he was "metely well furnished with understanding of the Latin tongue" is an unconscious tribute to Peter Wilegh's teaching.

In November, 1542, Dee, being then fifteen years and four months old, left Chelmsford to enter at St. John's College, Cambridge, where, as he tells us in his autobiography, he soon became a most assiduous student. "In the years 1543, 1544, 1545, I was so vehemently bent to studie, that for those years I did inviolably keep this order: only to sleep four houres every night; to allow to meate and drink (and some refreshing after) two houres every day; and of the other eighteen houres all (except the tyme of going to and being at divine service) was spent in my studies and learning." Early in 1546 he graduated B.A. from St. John's College. At the close of the same year, Trinity College was founded by Henry VIII., and Dee was selected one of the original Fellows. He was also appointed under-reader in Greek to Trinity College, the principal Greek reader being then Robert Pember. The young Fellow created the first sensation of his sensational career soon after this by arranging some of the (*Eirene* — Peace) of Aristophanes, in which he apparently acted as stage manager and carpenter.

For this play he devised a clever mechanical and very spectacular effect. Trygaeus, the Attic vine-dresser, carrying a large basket of food for himself, and mounted on his gigantic beetle or scarab (which ate only dung), was seen ascending from his dwelling on the stage to enter the palace of Zeus in the clouds above. One has only to think of the scenic effects presented by Faust and Mephistopheles at Mr. Tree's theatre, for instance, to realise how crude and ineffective these attempts must have been; but thirty or forty years before Shakespeare's plays were written, so unusual an exhibition was enough to excite wild rumours of supernatural powers. We hear no more of theatrical performances, although several references in his after-life serve to show that his interest in the English drama, about to be born, lagged not far behind that of his greater contemporaries. He does mention, however, a Christmas pastime in St. John's College, which seems to have been

inspired by this same dramatic spirit. Of details we are totally ignorant; he only relates that the custom of electing a "Christmas Magistrate" was varied at his suggestion by crowning the chosen victim as Emperor. The first imperial president of the Christmas revels in St. John's College "was one Mr. Thomas Dunne, a very goodly man of person, stature and complexion, and well learned also," evidently a presence fit for a throne. Dee adds: "They which yet live and were hearers and beholders, they can testifie more than is meete here to be written of these my boyish attempts and exploites scholasticall."

He turned to sterner studies, and became a skilful astronomer, taking "thousands of observations (very many to the hour and minute) of the heavenly influences and operations actual in this elementall portion of the world." These he afterwards published in various "Ephemerides."

In May, 1547, Dee made his first journey abroad, to confer with learned men of the Dutch Universities upon the science of mathematics, to which he had already begun to devote his serious attention. He spent several months in the Low Countries, formed close friendships with Gerard Mercator, Gemma Frisius, Joannes Caspar Myricaëus, the Orientalist Antonius Gogava, and other philosophers of world-wide fame. Upon his return to Cambridge, he brought with him two great globes of Mercator's making, and an astronomer's armillary ring and staff of brass, "such as Frisius had newly devised and was in the habit of using." These he afterwards gave to the Fellows and students of Trinity College; he cites a letter of acknowledgment from John Christopherson (afterwards Bishop of Chichester), but upon search being made for the objects recently, through the kindness of the Master, it appears they are not now to be found. Dee returned to Cambridge in the year 1548 to take his degree of M.A., and soon after went abroad. "And never after that was I any more student in Cambridge." Before he left, he obtained under the seal of the Vice-Chancellor and Convocation, April 14, 1548, a testimonial to his learning and good conduct, which he proposed to take with him abroad. Many times did he prove it to be of some value.

In Midsummer Term, 1548, he entered as a student at the University of Louvain, which had been founded more than a hundred years before in this quaint old Brabantian town of mediaeval ramparts and textile industries. At Louvain, Dee continued his studies for two years, and here he soon acquired a reputation for learning quite beyond his years. It has been presumed that he here graduated doctor, to account for the title that has always been given him. "Doctor Dee" certainly possesses an alliterative value not to be neglected. At Cambridge he was only M.A.

Long after, when he had passed middle life, and when his remarkable genius in every branch of science had carried him so far beyond the dull wit of the people who surrounded him that they could only explain his manifestations by the old cry of "sorcery and magic," Dee made a passionate appeal to the Queen, his constant patron and employer, to send two emissaries of her own choosing to his house at Mortlake, and bid them examine everything they could find, that his character might be cleared from the damaging charges laid against him. He prepared for these two commissioners, to whose visit we shall revert in its proper place, an autobiographical document of the greatest value, which he calls "The Compendious Rehearsal of John Dee: his dutiful declaration and prooffe of the course and race of his studious life, for the space of half an hundred years, now (by God's favour and help) fully spent." It is from this narrative that the facts of his early life are

ascertainable. Perhaps we discern them through a faint mist of retrospective glorification for which the strange streak of vanity almost inseparable from attainments like Dee's was accountable. But there is every reason to reply upon the accuracy of the mathematician's story.

"Beyond the seas, far and nere, was a good opinion conceived of my studies philosophicall and mathematicall." People of all ranks began to flock to see this wonderful young man. He gives the names of those who came to Louvain, a few hours' journey from Brussels, where the brilliant court of Charles V. was assembled, with evident pride. Italian and Spanish nobles; the dukes of Mantua and Medina Celi; the Danish king's mathematician, Mathias Hacus; and his physician, Joannes Capito; Bohemian students, all arrived to put his reputation to the test. A distinguished Englishman, Sir William Pickering, afterwards ambassador to France, came as his pupil to study astronomy "by the light of Mercator's globes, the astrolabe, and the astronomer's ring of brass that Frisius had invented." For his recreation, the teacher "looked into the method of civil law," and mastered easily the points of jurisprudence, even "those accounted very intricate and dark." It was at Louvain, no doubt, that his interest in the subject of alchemy became strengthened and fixed. Stories were rife of course of the famous alchemist, Henricus Cornelius Agrippa, who had died there, in the service of Margaret of Austria, only a dozen years or so before. Agrippa had been secretary to the Emperor Maximilian, had lived in France, London, and Italy, and Louvain, no doubt, was bursting with his extraordinary feats of magic.

The two years soon came to an end, and a couple of days after his twenty-third birthday, young Dee left the Low Countries for Paris, where he arrived on July 20, 1550. His fame had preceded him, and within a few days, at the request of some English gentlemen and for the honour of his country, he began a course of free public lectures or readings in Euclid, "Mathematice, Physice et Pythagorice," at the College of Rheims, in Paris, a thing, he says, which had never been done before in any university in Christendom. His audience (most of them older than himself) was so large that the mathematical schools would not hold them, and many of the students were forced in their eagerness to climb up outside the windows, where, if they could not hear the lecturer, they could at least see him. He demonstrated upon every proposition, and gave dictation and exposition. A greater astonishment was created, he says, than even at his scarabaeus mounting up to the top of Trinity Hall in Cambridge. The members of the University in Paris at the time numbered over 4,000 students, who came from every part of the known world. He made many friends among the professors and graduates, friends of "all estates and professions," several of whose names he gives; among them, the learned writers and theologians of the day, Orontius, Mizaldus, Petrus Montaneus, Ranconetus (Ranconnet), Fernellius, and Francis Silvius.

The fruit of these years spent in Louvain and Paris was that Dee afterwards maintained throughout his life a lively correspondence with professors and doctors in almost every university of note upon the Continent. He names especially his correspondents in the universities of Orleans, Cologne, Heidelberg, Strasburg, Verona, Padua, Ferrara, Bologna, Urbino, Rome, and many others, whose letters lay open for the inspection of the commissioners on that later visit already alluded to.

An offer was made him to become a King's Reader in mathematics in Paris University, with a stipend of two hundred French crowns yearly, but he had made

up his mind to return to England, and nothing would tempt him to stay. He received other proposals, promising enough, to enter the service of M. Babeu, M. de Rohan, and M. de Monluc, who was starting as special ambassador to the Great Turk, but his thoughts turned back to England, and thither, in 1551, he bent his steps.

CHAPTER II

IMPRISONMENT AND AUTHORSHIP

“A man is but what he knoweth.” — Bacon

In December, 1551, Dee obtained, through the offices of Mr. (afterwards Sir) John Cheke, an introduction to Secretary Cecil and to King Edward VI. He had already written for and dedicated to the King two books (in manuscript): *De usu Globi Coelestis*, 1550, and *De nubium, solis, lunae, ac reliquorum planetarum*, etc., 1551. These perhaps had been sent to Cheke, the King's tutor, in the hope that they might prove useful lesson books. The pleasing result of the dedication was the gift of an annual royal pension of a hundred crowns. This allowance was afterwards exchanged for the rectory of Upton-upon-Severn, in Worcestershire, which Dee found an extremely bad bargain.

From the Beacon Hill above West Malvern Priory, the visitor may turn from inspection of the ancient British camp of Caractacus to admire the magnificent view; and across the level fields where the Severn winds, the tower of Upton church will be seen rising in the middle distance. Further west, if the day be clear, the more imposing towers of Tewkesbury and Cloucester may be discerned, while half a turn eastward will show Worcester Cathedral, not far away. Dee never lived in this beautiful place, although he was presented to the living on May 19, 1553. Even when the rectory of Long Leadenham, in Lincolnshire, was added to Upton, the two together were worth only about eighty pounds a year. Next year he declined an invitation to become Lecturer on Mathematical Science at Oxford, conveyed to him through “Mr. Doctor Smith” (Richard, D.C.L., 1528, the reformer), of Oriel College, and “Mr. du Bruarne,” of Christ Church. He was occupied with literary work, and in 1553 produced, among other things, a couple of works on *The Cause of Floods and Ebbs*, and *The Philosophical and Political Occasions and Names of the Heavenly Asterismes*, both written at the request of Jane, Duchess of Northumberland.

When Mary Tudor succeeded her young brother as queen in 1553, Dee was invited to calculate her nativity. He began soon after to open up a correspondence with the Princess Elizabeth, who was then living at Woodstock, and he cast her horoscope also. Before long he was arrested on the plea of an informant named George Ferrys, who alleged that one of his children had been struck blind and another killed by Dee's “magic.” Ferrys also declared that Dee was directing his enchantments against the Queen's life. Dee's lodgings in London were searched and sealed up, and he himself was sent to prison. He was examined before the Secretary of State, afterwards upon eighteen articles by the Privy Council, and at last brought into the Star Chamber for trial. There he was cleared of all suspicion of treason, and liberated by an Order in Council. August 29, 1555, but handed over to Bishop Bonner for examination in matters of religion. Bonner was apparently equally satisfied. Dee was certainly enjoined by him, at John Philpot's examination on

November 19, 1555, to put questions as a test of his orthodoxy. He quoted St. Cyprian to Philpot, who replied: "Master Dee, you are too young in divinity to teach me in the matters of my faith, though you be more learned in other things."

Dee deserves well of all writers and students for time everlasting because of his most praiseworthy efforts to found a State National Library of books and manuscripts, with copies of foreign treasures, wherever they might be. On January 15, 1556, he presented to Queen Mary "a Supplication for the recovery and preservation of ancient writers and monuments." Within a few years he had seen the monasteries dissolved and the priceless collections of these houses lamentably dispersed, some burned and others buried. He drew up a very remarkable address to the Queen dwelling on the calamity of thus distributing "the treasure of all antiquity and the everlasting seeds of continual excellency within this your Grace's realm." Many precious jewels, he knows, have already perished, but in time there may be saved and recovered the remnants of a store of theological and scientific writings which are now being scattered up and down the kingdom, some in unlearned men's hands, some walled up or buried in the ground. Dee uses powerful arguments to enforce his plea, choosing such as would make the most direct appeal to both Queen and people. She will build for herself a lasting name and monument; they will be able all in common to enjoy what is now only the privilege of a few scholars, and even these have to depend on the goodwill of private owners. He proposes first that a commission shall be appointed to inquire what valuable manuscripts exist; that those reported on shall be borrowed (on demand), a fair copy made, and if the owner will not relinquish it, the original be returned. Secondly, he points out that the commission should get to work at once, lest some owners, hearing of it, should hide away or convey away their treasures, and so, he pithily adds, "prove by a certain token that they are not sincere lovers of good learning because they will not share them with others." The expenses of the commission and of the copying, etc., he proposed should be borne by the Lord Cardinal and the Synod of the province of Canterbury, who should also be charged to oversee the manuscripts and books collected until a library "apt in all points" is made ready for their reception.

Finally, Dee suggests that to him be committed the procuring of copies of many famous manuscript volumes to be found in the great libraries abroad: the Vatican Library at Rome, St. Mark's at Venice, and in Bologna, Florence, Vienna, etc. He offers to set to work to obtain these, the expenses only of transcription and carriage to England to be charged to the State. As to printed books, they are to "be gotten in wonderfull abundance." In this generous offer of his life to be spent in transcribing crabbed manuscripts, we cannot see the restless genius of John Dee long satisfied, but at any rate he proved himself not seeking for private gain.

Thus was the germ of a great National Library first started by the Cambridge mathematician, nearly fifty years before Thomas Bodley opened his unique collection at Oxford, and close upon 200 years before there was founded in the capital the vast and indispensable book-mine known to all scholars at home and abroad as the British Museum. The Historical Manuscripts Commission, whose labours in cataloguing private collections of archives are also foreshadowed in Dee's supplication, only came into being with the appointment of Keepers of the Public Records, by an Act signalling the first and second years of Queen Victoria's reign.

It is needless to say that nothing came of Dee's very disinterested proposition. So he became the more industrious in collecting a library of his own, which soon

consisted of more than 4,000 volumes, which were always at the disposal of the friends who came often to see him.

They came also for another reason.

Astrology was a very essential part of astronomy in the sixteenth century, and the belief in the controlling power of the stars over human destinies is almost as old as man himself. The relative positions of the planets in the firmament, their situations amongst the constellations, at the hour of a man's birth, were considered by the ancients to be dominant factors and influences throughout his whole life. It is not too much to say that a belief in the truth of horoscopes cast by a skilled calculator still survives in our Western civilisation as well as in the East. Medical science today pays its due respect to astrology in the sign, little altered from the astrological figure for Jupiter, with which all prescriptions are still headed.

Dee, as one of the foremost mathematicians and astronomers of the time, and one employed by the Queen, became continually in request to calculate the nativity and cast a horoscope for men and women in all ranks of life. He has left many notes of people's births; his own children's are entered with the greatest precision, for which a biographer has to thank him.

When Elizabeth mounted with firm steps the throne that her unhappy sister had found so precarious and uneasy a heritage, Dee was very quickly sought for at Court. His first commission was entirely sui generis. He was commanded by Robert Dudley to name an auspicious day for the coronation, and his astrological calculations thereupon seem to have impressed the Queen and all her courtiers. Whether or no we believe in the future auguries of such a combination of influences as presided over the selection of the 14th of January, 1559, for the day of crowning Elizabeth in Westminster Abbey, we must acknowledge that Dee's choice of a date was succeeded by benign and happy destinies.

He was then living in London. We do not know where his lodging was, but several of the books belonging to his library have come down to us with his autograph, "Joannes Dee, Londini," and the dates of the years 1555, 1557, and 1558.

Elizabeth sent for him soon after her accession, and invited him to her service at Whitehall with all fair promises. He was introduced by Dudley, then and long afterwards her first favourite; so he was likely to stand well. "Where my brother hath given him a crown," she said to Dudley, or to Dee's other sponsor, the Earl of Pembroke, "I will give him a noble." This was the first of innumerable vague promises made, but it was long indeed before any real and tangible gift was conferred on the astrologer, although he was continually busied about one thing and another at the fancy of the Queen. The reversion of the Mastership of St. Catherine's Hospital was promised him, but "Dr. Willson politickly prevented me."

One morning the whole Court and the Privy Council were put into a terrible flutter by a simple piece of what was common enough in ancient times and in Egypt — sympathetic magic. A wax image of the Queen had been found lying in Lincoln's Inn Fields, with a great pin stuck through its breast, and it was supposed undoubtedly to portend the wasting away and death of her Majesty, or some other dreadful omen. Messenger after messenger was despatched to summon Dee, and bid him make haste. He hurried off, satisfied himself apparently of the harmless nature of the practical joke, and repaired, with Mr. Secretary Wilson as a witness of the whole proceedings and a proof of all good faith, to Richmond, where the Queen was. The Queen sat in that part of her private garden that sloped down to the river,

near the steps of the royal landing-place at Hampton Court; the Earl of Leicester (as Dudley had now become) was in attendance, gorgeous and insolent as ever; the Lords of the Privy Council had also been summoned, when Dee and Mr. Secretary expounded the inner meaning of this untoward circumstance, and satisfied and allayed all their fears. Something about the calm attributes of this seasoned and travelled scholar seemed always to give moral support to the Queen and her household; this is only the first of many occasions when he had to allay their superstitious fright. That she felt it essential to keep him within reach of herself may have been one reason for not giving him the appointments for which he, and others for him, constantly sued. Dee was not an easy person to fit into a living: he required one with no cure of souls attached; for this, he says, “a cura animarum annexa, did terrifie me to deal with them.” He is called a bachelor of divinity by Foxe in 1555, and as a matter of fact he does, both in 1558 and in 1564, add the letters S. D. T. to his name in his printed works. This degree also was not from Cambridge. At last he grew tired of waiting, and a certain restlessness in his character, not incompatible with the long patience of the true follower of science, drove him again abroad. His intention was to arrange for printing works already prepared in manuscript. To search among out-of-the-way bookmongers and book-lovers in high-walled German towns, for rare treasures wherewith to enrich his native country, was another magnet that drew his feet. In February, 1563, after he had been thus employed for more than a year, he wrote from the sign of the Golden Angel, in Antwerp, to Cecil, to ask if he was expected to return to England, or if he might remain to oversee the printing of his books, and continue his researches among Dutch books and scholars. He had intended, he says, to return before Easter, but this was now impossible, owing to printer’s delays. When we remember that a hundred years had barely elapsed since the first metal types had been cast and used in a hand press, it is not wonderful that Dee’s treatise, with its hieroglyphic and cabalistic signs, took long to print. He announces in the letter to Cecil a great bargain he has picked up, a work, “for which many a learned man hath long sought and dayley yet doth seek,” upon cipher writing, viz. *Steganographia*, by the famous Abbot Trithemius of Wurzburg. It is the earliest elaborate treatise upon shorthand and cipher, a subject in which Cecil was particularly interested. It was then in manuscript (first printed, Frankfort, 1606). Dee continues that he knows his correspondent will be well acquainted with the name of the book, for the author mentions it in his Epistles, and in both the editions of his *Polygraphia*. He urges its claims upon the future Lord Treasurer, already a statesman of ripe experience, in the following words: “A booke for your honor or a Prince, so meet, so nedefull and commodious, as in human knowledge none can be meeter or more behovefull. Of this booke, either as I now have yt, or hereafter shall have yt, fully wholl and perfect, (yf it peas you to accept my present) I give unto your Honor as the most precious juell that I have yet of other mens travailles recovered.”

He then goes on to beg the minister and Secretary of State to procure for him that “learned leisure (*dulcia illa ocia*) the fruit whereof my country and all the republic of letters shall justly ascribe to your wisdom and honorable zeal toward the advancement of good letters and wonderful, divine, and secret sciences.” Dee had copied in ten days, “by continual labour,” about half of the book: a Hungarian nobleman there has offered to finish the rest, if Dee will remain in Antwerp and direct his studies for a time.

“Of this booke the one half (with contynual labour and watch, the most part of 10 days) have I copyed oute. and now I stand at the curtesye of a nobleman of Hungary for writing furth the rest; who hath promised me leave thereto, after he shall perceyve that I may remayne by him longer (with the leave of my Prince) to pleasure him also with such pointes of science as at my handes he requireth.

“I assure you the meanes that I used to cumpas the knowledge where this man and other such are, and likewise of such booke as this, as for this present I have advertisement of, have cost me all that ever I could here with honesty borrow, besydes that which (for so short a time intended) I thought needefull to bring with me, to the value of xxlib. God knoweth my zeale to honest and true knowledg; for which my flesh, blud, and bones should make the marchandize, if the case so required.”

Dee did remain in the Low Countries; he completed his *Monas Hieroglyphica*, dated its prefatory dedication to the Emperor Maximilian II., at Antwerp, January 29, 1564, and added an address to the typographer, his “singular good friend, Gulielmo Silvio,” dated the following day. the book appeared in April, and he at once journeyed to Presburg, to present a copy to Maximilian. Its twenty-four theorems deal with the variations of the figure represented on our title-page, which may be roughly explained as the moon, the sun, the elements (the cross), and fire as represented by the waving line below. Dee says that many “universitie graduates of high degree, and other gentlemen, dispraised it because they understood it not,” but “Her Majestie graciously defended my credit in my absence beyond the seas.” On his return in June she sent for him to Court and desired him to read the book with her. Dee’s account of his regal pupil is given with much quaintness. “She vouchsafed to account herself my schollar in my book...and said whereas I had prefixed in the forefront of the book: *Qui non intelligit aut taceat, aut discat*: if I would disclose to her the secrets of that book she would *et discere et facere*. Whereupon her Majestie had a little perusion of the same with me, and then in most heroicall and princely wise did comfort and encourage me in my studies philosophicall and mathematicall.”[His escort had been required for the Marchioness of Northampton, who was returning from Antwerp to Greenwich. In return for this assistance the lady begged the Queen’s favour for her cavalier. elizabeth was always Dee’s very good friend, and she made a grant to him on December 8, 1564, of the Deanery of Gloucester, then void, but other counsels prevailed, and it was soon bestowed on some other man. No doubt the appointment would have given great offence, for the popular eye was already beginning to see in Dee no highly equipped mathematician, geographer and astronomer, but a conjuror and magisian of doubtful reputation, in fact, in the current jargon, one who “had dealings with the devil.” What there had been at this time to excite these suspicions beyond the fact that Dee was always ready to expound a comet or an eclipse, to cast a horoscope, or explain that the Queen would not immediately expire because a wax doll with a stiletto in its heart was found under a tree, it is hard to say. But that these rumours were extremely persistent is seen by the astrologer’s defence of himself in the “very fruitfull” preface which he, as the first mathematician of the day, was asked to write to Henry Billingsley’s first English translation of Euclid’s *Elements*, in February, 1570. This preface must be reckoned as

one of Dee's best achievements, although, as he says, in writing it, "he was so pinched with straightness of time that he could not pen down the matter as he would." He points out that Euclid has already appeared in Italian, German, High Dutch, French, Spanish and Portuguese dress, and now at last comes to England. [

In spite of its ex parte nature, a study of this preface alone must convince any reader that the author was no charlatan or pretender, but a true devotee of learning, gifted with a far insight into human progress. He covers in review every art and science then known, and some "until these our daies greatly missed" (his comments on music and harmony are truly remarkable), and comes back to his own predilection — arithmetic, "which next to theologie is most divine, most pure, most ample and generall, most profound, most subtile, most commodious and most necessary." He quotes Plato to show how "it lifts the heart above the heavens by invisible lines, and by its immortal beams melteth the reflection of light incomprehensible, and so procureth joy and perfection unspeakable." Speaking of the refraction of light, he foreshadows the telescope as he describes how the captain of either foot or horsemen should employ "an astronomical staffe commodiously framed for carriage and use, and may wonderfully help himself by perspective glasses; in which I trust our posterity will prove more skilfull and expert and to greater purpose than in these days can almost be credited to be possible." Then he alludes to a wonderful glass belonging to Sir William P., famous for his skill in mathematics, who will let the glass be seen. The passage seems to show that looking-glasses were not common, or that this particular one was a convex mirror.

"A man," he says, "may be curstly afraid of his own shadow, yea, so much to feare, that you being alone nere a certain glasse, and proffer with dagger or sword to foyne at the glasse, you shall suddenly be moved to give back (in maner) by reason of an image appearing in the ayre betweene you and the glasse, with like hand, sword or dagger, and with like quickness foyning at your very eye, like as you do at the glasse. Strange this is to heare of, but more mervailous to behold than these my wordes can signifie, nevertheless by demonstration optically the order and cause thereof is certified, even so the effect is consequent."

This mirror was given to Dee not long afterwards.

From optics he passes on to mechanics, and mentions having seen at Prague mills worked by water, sawing "great and long deale bordes, no man being by." He describes accurately a diving chamber supplied with air, and sums up some of the mechanical marvels of the world: — the brazen head made by Albertus Magnus, which seemed to speak; a strange "self-moving" which he saw at St. Denis in 1551; images seen in the air by means of a perspective glass; Archimedes' sphere; the dove of Archytas; and the wheel of Vulcan, spoken of by Aristotle; and comes down to recent workmanship in Nuremberg, where an artificer let fly an insect of iron, that buzzed about the guests at table, and then returned "to his master's hand agayne as though it were weary." All these things are easily achieved he says, by "skill, will industry and ability duly applied to proof." "But is any honest student, or a modest Christian philosopher, to be, for such like feats, mathematically and mechanically wrought, counted and called a conjuror? Shall the folly of idiots and the mallice of the scornfull so much prevaile that he who seeketh no worldly gaine or glory at their hands, but onely of God the Threasure of heavenly wisdom and knowledge of

pure veritie, shall he, I say, in the mean space, be robbed and spoiled of his honest name and fame? He that seeketh, by S. Paul's advertisement in the creatures' properties and wonderfull vertues, to find juste cause to glorifie the eternall and Almighty Creator by, shall that man be condemned as a companion of Hell-hounds and a caller and conjuror of wicked damned spirits?" Then he recounts his years of study, and asks, "Should I have fished with so large and costly a nett, and been so long time drawing, even with the helpe of Lady Philosophie and Queen Theologie, and at length have catched but a frog, nay a Devill?...How great is the blindness and boldness of the multitude in things above their capacitie!"[Then he refers to some who have appeared against him in print.

"O my unkind countrymen. O unnatural Countrymen, O unthankfull countrymen, O brainsicke, Rashe, spitefull and disdainfull countrymen. Why oppresse you me thus violently with your slaundering of me, contrary to veritie, and contrary to your own conscience? And I, to this hower, neither by worde, deede or thought, have bene anyway hurtfull, damageable, or injurious to you or yours! Have I so long, so dearly, so farre, so carefully, so painfully, so dangerously fought and travailed for the learning of wisdom and atteyning of vertue, and in the end am I become worse than when I began? Worse than a madman, a dangerous member in teh Commonwelath and no Member of the Church of Christ? Call you this to be learned? Call you this to be a philosopher and a lover of wisdom?"

He goes on to speak of examples before his time to whom in godliness and learning he is not worthy to be compared: — "patient Socrates," Apuleius, Joannes Picus and Trithemius, Roger Bacon, "the flower of whose worthy fame can never dye nor wither," and ends by summing up the people who can conceive nothing outside the compass of their capacity as of four sorts: — "vain prattling busybodies, fond friends, imperfectly zealous, and malicious ignorant." Of these he is inclined to think the fond friends the most damaging, for they overshoot the mark and relate marvels and wonderful feats which were never done, or had any spark of likelihood to be done, in order that other men may marvel at their hap to have such a learned friend.[The eloquent irony of this passage seems equalled only by its extraordinary universality, its knowledge of human character and its high philosophic spirit. At what a cost did a seeker after scientific truths follow his calling in the sixteenth century!

CHAPTER III

MORTLAKE

"In her princely countenance I never perceived frown toward me, or discontented regard or view on me, but at all times favourable and gracious, to the joy and comfort of my true, faithful and loyal heart." — DEE, of Queen Elizabeth.

The promised benefice did not yet come, although Dee's friends at Court were all busy on his behalf. Either now or later, he was actually mentioned as Provost of Eton, and the Queen "answered favourably." Mistress Blanche Parry and Mistress Scudamore, lady-in-waiting to Anne, Countess of Warwick, urged his claims for the

Mastership of St. Cross at Winchester, which it was thought Dr. Watson would soon vacate. But all he seems to have obtained was a fresh dispensation from Matthew Parker, Archbishop of Canterbury, to enjoy the two Midland rectories for ten years.[

He continued his literary work, and beside writing new manuscript treatises, bethought himself of an old one, which although printed had not received great attention. This was the *Propoedeumata Aphoristica* (London, 1558), dedicated to his old and dear friend and fellow-student at Louvain, Mercator, “my Gerard,” as he affectionately calls him. In January, 1568, Dee presented a copy of a new edition, with an address to the studious and sincere philosophical reader, dated December 24, 1567, from “our museum” at Mortlake, to “Mr. Secretary Cecil, now Lord Treasurer.” Two copies were given at the same time to the Earl of Pembroke, one for him to use or give away at his pleasure, the other, by Cecil’s advice, to be presented by him to the Queen. Within three days, Dee heard from Pembroke that she had graciously accepted and well liked his book. This gratifying information was rendered acceptable by a gift: — “He gave me very bountifully in his owne behalfe xxlib. to requite such my reverent regard of his honour.”[An interview with the Queen followed on February 16, at 2 o’clock, when there was talk between them in the gallery at Westminster “of the great secret for my sake to be disclosed unto her Majesty by Nicholas Grudius, sometime one of the secretaries to the Emperor Charles V.” Of this alchemical secret, no doubt concerning transmutation, Dee writes after, “What was the hinderance of the perfecting of that purpose, God best knoweth.”[He was now over forty, and had a natural desire to range himself and house his library. Before 1570 he took up his abode with his mother, in a house belonging to her at Mortlake, on the river Thames. It was an old rambling place, standing west of the church between it and the river. Dee added to it by degrees, purchasing small tenements adjoining, so that at length it comprised laboratories for his experiments, libraries and rooms for a busy hive of workers and servants. Mrs. Dee occupied a set of rooms of her own. Nothing of the old premises now remains, unless it be an ancient gateway leading from the garden towards the river. After Dee’s death the house passed through an interesting phase of existence, being adapted by Sir Francis Crane for the Royal tapestry works, where, encouraged by a handsome grant of money and orders from the parsimonious James, suits of hangings of beautiful workmanship were executed under the eye of Francis Cleyne, a “limner,” who was brought over from Flanders to undertake the designs. At the end of the eighteenth century, a large panelled room with red and white roses, carved and coloured, was still in existence. Early in the nineteenth century the house was used for a girls’ school, kept by a Mrs. Dubois.[Here Dee took up his abode. Its nearness to London and to the favourite places of Elizabeth’s residence — Greenwich, Hampton Court, Sion House, Isleworth, and Nonsuch — was at first considered a great advantage, and the journey to and from London was almost invariably made by water. The Queen desired her astrologer to be near at hand. When he fell dangerously ill at Mortlake in 1571, after a tedious journey abroad into the duchy of Lorraine on some mysterious errand, Elizabeth sent down two of her own physicians, Doctors Atslove and Balthorp, to attend him. Lady Sidney was also despatched with kind, and gracious, and “pithy” messages from the sovereign, and delicacies, “divers raretiess,” were supplied from the royal table to supplement his mother’s provision for the invalid. The Queen seems to have felt a special obligation to look after him, as she had sent him on some mission of her own,

which probably we shall not be far wrong in thinking connected with Dee's alchemistic experiments. Every Court in Europe at this time had astrologers and alchemists in its employ, and the Queen and Burleigh were as anxious as Dee that he should really attain the ever-elusive secret of transmutation. Dee had of course carried the Queen's passport for himself and a couple of servants, with horses, and had obtained permits through foreign ambassadors in London to travel freely through various countries.[Dee was now bent on rather a strange form of public service. On October 3, 1574, he wrote a very remarkable letter to Lord Burleigh of four and a half folio pages in that best printed hand of his which offers no excuse for skipping. His own paramount deserts are very naturally one of the main subjects. He has spent all his money and all his life in attaining knowledge. "Certes, by due conference with all that ever I yet met with in Europe, the poor English Bryttaine (*Il favorita di vostra Excellentia*) hath carried the Bell away. God Almighty have the glory." If he had only a sufficiency of two or three hundred pounds a year, he could pursue science with ease. Failing that, there is another way. Treasure trouve is a very casual thing, and the Queen is little enriched thereby, in spite of her royal prerogative. No one knows this better than the Lord Treasurer. Now, if her Majesty will grant him, but Letters Patent under her hand and seal, the right for life to all treasure he can find, he promises to give Burleigh one half, and of course to render to the Queen and Commonwealth the proportion that is theirs. It is not the gold, as wealth, that appeals to this man of books and stars: —

"The value of a mine is matter for King's Treasure, but a pott of two or three hundred pounds hid in the ground, wall, or tree, is but the price of a good book, or instrument for perspective astronomy, or some feat of importance."

He has spent twenty years in considering the subject; people from all parts have consulted him about dreams, visions, attractions and demonstrations of *sympathia et antipathia rerum*;" but it is not likley he would counsel them to proceed without permission from the State. Yet what a loss is here!

"Obscure persons, as hosiers or tanners, can, under color of seeking assays of metalls for the Saymaster, enioy libertie to dig after dreamish demonstrations of places. May not I then, in respect of my payns, cost, and credit in matters philosophical and mathematicall, if no better or easier turn will fall to my Lot from her Majestie's hands, may I not then be thought to mean and intend good service toward the Queen and this realm, yf I will do the best I can at my own cost and charge to discover and deliver true prooffe of a myne, vayn, or ore of gold or silver, in some place of her Grace's kingdom, for her Grace's only use?"

The Society of Royal Mines had been incorporated May 28, 1565, and the Queen had granted patents to Germans and others to dig for mines and ores. It was well known that the country abounded in hidden treasure. The valuables of the monasteries had been, in many cases, hastily buried before the last abbot was ejected at the dissolution. The subject had a special fascination for Dee, who was conscious of a "divining rod" power to discover the hiding places. He made a curious diagram of ten localities, in various counties, marked by crosses, near which he believed treasure to lie concealed. He ends his letter to Burleigh with a more practical and

much more congenial request. He has been lately at Wigmore Castle, and has seen a quantity of parchments and papers from which he has copied accounts, obligations, acquittances. Will the Treasurer give him a letter to Mr. Harley, keeper of the records there, asking permission to examine them and report as to the contents? "My fantasy is I can get from them, at my leisure, matter for chronicle or pedigree, by way of recreation." So he ends with an apology for his long letter and is "you Lordship's most bownden John Dee."

Nothing seems to have resulted from this letter at the time; later he did receive a grant of royalties from a mine.

in 1575 Dee married. He seems to have had no time for such an event before. He was now in his forty-eighth year, and did not execute the fatal folly (which, in his Court life, he had seen many times exemplified) of committing the indiscretion first and informing the Queen after. He duly laid before her his intention, and received in return a "very gracious letter of credit for my marriage." He also had congratulatory epistles from Leicester and from Christopher Hatton.

The Queen, when out riding in Richmond Park with her lords and ladies, would sometimes pass through the East Sheen Gate, down the hill towards the river, and would stop at the house between Mortlake Church and the Thames, desiring to be shown the latest invention of her astrologer, or the newest acquisition of his library. On the afternoon of one such windy day in march, 1576, she arrived at a slightly unlucky moment, for Dee's young wife, after a year of marriage, had just died, and not four hours earlier had been carried out of the house for burial in the churchyard opposite. Hearing this, Elizabeth refused to enter, but bade Dee fetch his famous glass and explain its properties to her outside in the field. Summoning Leicester to her assistance, she alighted from her horse by the church wall, was shown the wonderful convex mirror, admired the distorted image of herself, and finally rode away amused and merry, leaving the philosopher's distress at his recent bereavement assuaged for the moment by such gracious marks of royal interest and favour. And so this wraith of Dee's first wife fades away in the courtly picture, and we do not even know her name.

He turned more than ever to literary work and followed up the scholastic books dedicated to the young King Edward VI. and the studies of astrological hieroglyphs with books of another kind. To this year of historical labours, perhaps, belongs a letter from Dee to his "loving friend," Stow, the historian. Contrary to Dee's careful practice, it is undated, save for day and month, "this 5th of December." He has evidently been the means of introducing a fellow-author in influential quarters, for he says, "My friend, Mr. Dyer, did deliver your books to the two Earls, who took them thankfully, but, as he noted, there was no reward commanded of them. What shall be hereafter, God knoweth. So could not I have done." Then he adjures Stow to "hope as well as I," and turns from considering fruits to the sources of their toil. He sends a list of the varius ports, including the Cinque Ports, that have a mayor or bailey, all except Gravesend, which has a portreeve. Stow may get fuller information, "the very true plat," from Lord Cobham's secretary. He returns a manuscript of Asser's Saxon Chronicle; "it is not of the best and perfectest copy. I had done iwth it in an hour. If you have Floriacensis Wigornensis [the Chronicle of Florence of Worcester] I would gladly see him a little."

Stow, like Dee, was a Londoner and, within a year or two, of the same age. He had already published his *Annals of England*, which had then gone through four editions.

Dee now began to keep a diary of his doings, written in the pages and margins of three fat quarto almanacs, bound in sheepskin and clasped. Quotations have perhaps already shown that his style, his spelling, his use of words, is that we expect from a man of his wide culture and reading. He was of the new learning, though before Shakespeare and Bacon. He had also two or more distinct handwritings, a roman hand with neat printed letters, and a scribbling hand. In the former all his manuscript works and his letters are written; his diary is in the last. This diary was quite unnoticed until about 1835, when the almanacs were discovered at Oxford in the Ashmolean Library, having been acquired by Elias Ashmole, a devout believer in hermetic philosophy and collector of all alchemical writings. They were transcribed (very inaccurately) by J.O. Halliwell and printed by the Camden Society in 1842.

The books contain a strange medley of borrowings and lendings, births and deaths, illnesses, lawsuits, dreams and bickerings; observations of stars, eclipses and comets, above all of the weather (for Dee was a great meteorologist), of horoscopes, experiments in alchemy and topographical notes. Here are some of the earliest entries: —

“1577. Jan. 16. The Earl of Leicester, Mr. Philip Sidney, and Mr. Dyer, etc., came to my house.” This was Edward Dyer, Sidney’s friend, afterwards to be dramatically associated with Dee and Kelley in their reputed discovery of the secret of making gold. “Feb. 19th. great wynde S.W., close, cloudy. March 11. My fall upon my right knucklebone about 9 o’clock. Wyth oyle of Hypericon in 24 hours eased above all hope. God be thanked for such his goodness to his creatures! March 12. Abrahamus Ortelius me invisit Mortlakii.” This interesting visit from the great Dutch map-maker is entirely omitted in the printed diary. “May 20. I hyred the barber of Chyswick, Walter Hooper, to kepe my hedges and knots in as good order as he seed them then, and that to be done with twice cutting in the year, at the least, and he to have yearly five shillings and meat and drink.”

Then he speaks of a visitor, Alexander Simon, who comes from Persia, and has promised his “service” on his return, probably to assist with information on Eastern lore and wisdom. His friend and neighbour, William Herbert, sends him notes upon his already published *Monas*. Another work is ready for press, and he is constrained to raise money, whether for the printing or other expenses. In June he borrowed 40 pounds from one, 20 pounds from another, and 27 pounds upon “the chayn of gold.” On August 19, his new book is put to printing (one hundred copies) at John Day’s press in Aldersgate.

This was another of those works, so pithy and so alive in their remarkable application to the future, which have fallen with their author into undeserved neglect. Dee had made suggestions about supplying officers of the army with perspective glasses as part of their equipment. Now his friendship with the Gilberts, Davis, Hawkins, Frobisher, and others of the great sea-captains, drew his attention to the sister service and the sea power of “this blessed isle of Albion.” He had spent most of the previous year (1576) in writing a series of volumes to be entitled “General and Rare Memorials pertayning to the perfect art of Navigation.” The first

volume, *The British Monarchy, or Hexameron Brytannicum*, was finished in August. It was dedicated to Christopher Hatton in some verses beginning: —

“If privat wealth be leef and deere
To any wight on British soyl,
Ought public weale have any peere?
To that is due all wealth and toyle.

Whereof such lore as I of late
Have lern’d, and for security,
By godly means to Garde this state,
To you I now send carefully.”

The intention is better than the lines. Dee was no poet, and even a bad versifier, but he would not have been a true Elizabethan had he not on special occasions dropped into rhyme, like the rest of his peers.

The second volume, *The British Complement*, “larger in bulk than the English Bible,” was written in the next four months and finished in December. It was never published; its author tells us it would cost many hundreds of pounds to print, because of the tables and figures requisite, and he must first have a “comfortable and sufficient opportunity or supply thereto.” The necessary funds were never forthcoming, and the book remained in manuscript. A considerable part of it is devoted to an exposition of the “paradoxall” compass which its author had invented in 1557.

The third volume was mysterious; it was to be “utterly suppressed or delivered to Vulcan his custody.” The fourth was *Famous and Rich Discoveries*, a book, he thinks, “for British Honour and Wealth, of as great godly pleasure as worldly profit and delight.” It was a work of great historical research which never saw the light.

The prejudice against Dee was so strong, and he was so much misunderstood, some persons openly attributing his works to other writers, others accusing him of selfishly keeping all his knowledge to himself, many perverting his meaning through ignorance, and again one, a Dutch philosopher, publishing a treatise which was in substance a repetition of his, that he determined to withhold his name from the publication. The anonymity is not, however, very well maintained, for Dee used the flimsy device of a preface to the reader by an “unknown friend,” in which all the griefs and ill usages of that “harmless and courteous gentleman,” “that extraordinary studious gentleman,” the author, are freely aired. Under the thin disguise, Dee’s high opinion of his own merits peeps, nay stares, out. Slanders have been spread against him, a damaging letter counterfeited by Vincent Murphy, his name and fame injured; he has been called “the arch-conjurer of the whole kingdom.” “Oh, a damnable sklander,” he bursts out, “utterly untrue in the whole and in every worde and part thereof, as before the King of Kings will appear at the dreadful day.” It is no conceit on Dee’s part, with his European reputation, to say that he “had at God his most mercifull handes received a great Talent of knowledge and sciences, after long and painful and costly travails.” And he goes on to say that he is both warned by God and of his own disposition to enlarge the same and to communicate it to others, but now he finds himself discouraged; he cannot “sayl

against the winds eye,” or pen any more treatises for his disdainful and unthankful countrymen to use or abuse, or put his name to any writing. The unknown friend has no desire to flatter the studious gentleman, but considering all his contributions to learning, he may honestly say, without arrogancy and with great modesty, that “if in the foresaid whole course of his tyme he had found a constant and assistant Christian Alexander, Brytain should now now have been destitute of a Christian Aristotle”!

But he soon gets engrossed in his subject, which is to urge the importance of establishing “a Petty Navy Royall, of three score tall ships or more, but in no case fewer,” of 80 to 200 tons burden, to be thoroughly equipped and manned “as a cinfirt abd safeguard to the Realme.” He shows the security it would give to or merchants, the usefulness in “deciphering our coasts,” sounding channels and harbours, observing of tides. Thousands of soldiers, he says, “will thus be hardened and well broke to the rage and disturbance of the sea, so that in time of need we shall not be forced to use all fresh-water Soldyers,” but we shall have a crew of “hardy sea-soldyers” ready to hand. This is interesting as showing that the word “sailor” was not yet in use. Then he touches on the question of unemployment: “hundreds of lusty handsome men will this way be well occupied and have needful maintenance, which now are idle or want sustenance, or both.” “These skilful sea-soldyers will be more traynable to martiall exploits, more quick-eyed and nimble [he quotes Pericles for this], than the landsmen.” The Petty Navy Royall, as apart from the Grand Navy Royall, will look after pirates, will protect our valuable fisheries, and generally serve us in better stead than four such forts as “Callys or Bulleyn.” Coming to the financial side, he asserts that every natural born subject of this “British Empire” will willingly contribute towards this “perpetual benevolence for sea security” the hundredth penny of his rents and revenues, the five hundredth penny of his goods valuation, for the first seven years, and for the second seven the hundred and fiftieth penny and the seven hundred and fiftieth penny of goods valuation, the same, after fourteen years, to be commuted for ever to half the original contribution. He calculated this tax would amount to 100,000 pounds or over. If that is not sufficient, he would exact a second tax (exempting all such counties, towns, and the five ports, as have Letters Patent for such immunity) of the six hundredth penny of every one’s goods and revenues. He would have twenty victualling ports, in every part of the kingdom, “the incredible abuses of purveyors duly reformed.” He would have a stop put to carrying our gunpowder and saltpetre out of the realm. “Good God,” he cries, “who knoweth not what proviso is made and kept in other Common Weales against armour carrying out of their Limits?” He speaks of many hundred pieces of ordnance lately carried out of the kingdom, so that we must make new; and deplores the wholesale destruction of our forests and timber (which is needed for ships) to keep the iron works going. Then he foreshadows the Trinity House by asking for a “Grand Pilot generall of England.” He outlines a scheme of navy pensions, and in relation to the fisheries quotes sanitary statutes of Richard II. He devotes a chapter to the history of “that peaceable and provident Saxon, King Edgar,” his “yearly pastime of sailing round this island in summer, guarded by his fleet of 4,000 sail,” and speaks of the efficiency of Edgar’s navy and the maintenance of his forts upon the coast. Then he passes to his final argument. We must attain this “incredible political mystery” — the supermacy of our sea power. We must be “Lords of the Seas” in order that out “wits and travayles” may be employed at home

for the enriching of the kingdom, that “our commodities (with due store reserve) may be carried abroad,” and that peace and justice may reign. “For we must keep our own hands and hearts from doing or intending injury to any foreigner on sea or land.”

Enough has been said of this book, perhaps, to show that it is a remarkable contribution towards the history of the navy and the fishing industries of Britain. It may be contended that if within twelve years England could offer a crushing defeat to the greatest sea power of the world, and establish herself mistress of the seas, she was not in need of theoretical advice from a landsman on the subject, but at any rate Dee’s treatise voices the ideals of the times, the hopes that inspired all true lovers of their country and of their Queen in the sixteenth century. In the thunders of the Armada they were to be realised.

CHAPTER IV

JANE DEE

“Content I live, this is my stay,
I seek no more than may suffice;
I press to bear no haughty sway,
Look, what I lack my mind supplies:
Lo! thus I triumph like a king,
Content with that my mind doth bring.”
— Sir Edward Dyer.

That October the Queen and the whole Court were thrown into a perturbed state of mind by a strange appearance in the heavens. This was the comet which the Swedish astronomer, Kepler, declared to predict the appearance in the north of Europe of a prince who should lay waste all Germany, and should vanish in 1632. It was lucky for his prognostications that Gustavus Adolphus was really born in Finland, did embroil Central Europe in the Thirty Years’ War, and did die in 1632.

What the “blazing star,” as they called it, foreboded, no one at Court could tell; Dee was summoned forthwith to expound the phenomenon. “Her Majestie took great pleasure to hear my opinion, for the judgment of some had unduly bred great fear and doubt in many of the Court, being men of no small account. For three diverse dayes she did use me.” Dee did not forget to urge his suit to the Queen, not so much this time for preferment but for protection.

“Her Majestie promised unto me great security against any of her kingdom that would by reason of any my rare studies and philosophical exercises unduly seek my overthrow. Whereupon I again to her Majestie made a very faithful and inviolable promise of great importance. The first part whereof, God is my witness I have truely and sincerely performed; tho’ it be not yet evident, how truely, or of what incredible value. The second part, by God his great mercies and helps, may in due time be performed, if my plat for the meanes be not misused or defaced.”

Nearly two years passed before Dee married his second wife, Jane Fromond, of East Cheam, Surrey. She was a lady-in-waiting

at the Court to Lady Howard of Effingham, wife of the Lord Admiral (Charles Howard) who was afterwards in command of the fleet victorious against the “invincible” Spanish Armada. Lady Howard proved a true friend both to Jane and her elderly but learned husband throughout the rest of her life.

He paid a long visit to the Court at Windsor a couple of months before the marriage, staying there from November 22 to December 1, 1577, and records interviews with the Queen on various days, and with “Mr. Secretary Walsingham.” It may be presumed that the marriage was then arranged, for without the Queen’s consent it could never have taken place. Just before leaving, he had a conversation with Sir Christopher Hatton, the newly-made knight of that day (December 1).

The marriage took place on February 5, 1578, at one o’clock, as the bridegroom tells in his diary, but at what church he omits to say. Perhaps it took place in a Royal Chapel at Court. The young bride was twenty-two. She was a clever, well-born woman, hasty and quick-tempered, but of a steadfast and thorough faithfulness. It was no easy task to be the wife of a brilliant and erudite mathematician nearly thirty years her senior, but to the end of her days Jane proved herself a true and fitting helpmate, a most careful and devoted mother to her eight children. Little could she have foreseen at this bridal hour into what strange paths the coming years would lead her. Dee’s devotion to his Jane, his growing respect for her force of character, is faithfully reflected in his diary, where every detail of her doings and her health is studiously entered.

Before the end of the year, he had to leave home and undertake a sudden journey abroad at the command of the Queen’s ministers. Elizabeth, in spite of an iron constitution, was ill and distracted with toothache and rheumatic pains. She had come to Richmond from Greenwich on September 25, and the next day the fine weather broke up. “The first rayn that came for many a day,” says Dee, “all pasture about us was withered. Rayn in afternone like Aprile showres.” A week or two after this he was summoned to Hampton Court, and had a conference of two hours with the Queen, from nine to eleven in the morning. Dr. Bayly, the Queen’s physician, came to Mortlake on October 16 to consult with him, for his profound hermetic studies gave him all the prestige of a super-doctor. On the 22nd Jane (Dee still writes of her as “Jane Fromonds,” probably to distinguish her from his mother, Jane Dee) went to Hampton Court. She found the Queen no better, in fact a worse fit of paint than ever occurred on the 25th, lasting from nine in the evening till after midnight. On the 28th, Leicester and Walsingham decided to send Dee abroad to consult with some foreign physician about the malady. He was given his instructions at nine o’clock on November 4th; on the 7th he reached Gravesend, and sailed from Lee on the 9th. By three o’clock on the 14th, he was in Hamburg; in Berlin on December 6; and on the 11th at Frankfurt-upon-Oder. The entry on the 15th, “newes of Turnifer’s comming, 8 o’clock, by a speciall messenger,” looks as if the object of his journey was attained. There are no more details of the business.

The diary is resumed in March, 1579, with some trivial entries about his showing Mr. John Lewis and his son, the physician, how to draw aromatical oils, and a note of his cat getting a young fledgling sparrow that “had never had but one — the right — wing, naturally.”

Dee’s mother surrendered to him on June 15, 1579, the house and lands at Mortlake, with reversion to his wife Jane, and to his heirs and assigns after him, for

ever. The document was delivered to him by a surveyor from Wimbledon (in which parish Mortlake was included) under the tree by the church. The fine for the surrender — twenty shillings — was paid to the Queen, as Lady of the Manor, on October 31.

A month later, on his fifty-second birthday, July 13, 1579, Dee's eldest son, Arthur, was born. The event was coincident with another, for that same night, at ten o'clock, Jane's father, Mr. Fromond (Dee always adds an "s" to the name), was seized with a fit and rendered speechless; he died on Tuesday, the 14th, at four in the morning. Arthur was christened at three o'clock on the 16th; Edward Dyer and "Mr. Doctor Lewis, judge of the Admiralty," were his godfathers; his godmother was one of Dee's Welsh relations, "my cosen, Mistress Blanche Parry, of the Queen's Privy Chamber." She was represented by another cousin, Mistress Aubrey, from Kew. "August 9. Jane Dee churched," is almost the next thing recorded.

Dyer was already a person in considerable favour with the Queen. He was Sidney's great friend, and after the poet's death on the field of Zutphen, was legatee of half his books. Dyer was no mean poet himself, even among his greater compeers. He is the author of those immortal verses on "Contentment," beginning "My mind to me a kingdom is," which were set to music in 1588 by William Byrd. We shall meet him again in these pages.

Dee of course knew all about Elizabeth's long flirtation with the King of France's brother, Duc d'Alencon, and her diplomatic holding off from the match. He notes Mr. Stafford's arrival as an emissary from "Monsieur." The Queen kept a very tender spot in her heart for this ugly little deformed suitor, and Dee has a remarkable note of a call from her at Mortlake as she returned from Walsingham's on February 11, 1583: "Her Majesty axed me obscurely of Monsieur's state. I said he was

" (dead-alive).

Pupils now began to resort to Dee. "John Elmeston, student of Oxford, cam to me for dialling." "Mr. Lock brought Benjamin his sonne to me: his eldest sonne also, called Zacharie, cam then with him." This was Michael Lock, the traveller. Zachary was the eldest of Lock's fifteen children; Benjamin afterwards wrote on alchemy — A Picklock for Ripley's Castle.

It was a stormy October, of continuous rains and floods for three or four days and nights, and a "raging wynde at west and southerly." Six persons were drowned in the Kew ferry boat, "by reason of the vehement and high waters overwhelming the boat aupon the roap, but the negligens of the ferryman set there to help." Mrs. Dee had a strange dream that "one cam to her and touched her, saying, `Mistress Dee, you are conceived of child, whose name must be Zacharias; be of good chere, he sal do well, as this doth.'" This, meaning Arthur, had a sharp illness soon after, however, and when the next child arrived, in two years' time, it chanced to be a girl, who was named Katherine. So the dream went by contraries after all. Arthur was weaned in August, and his nurse discharged, with her wages, ten shillings, for the quarter ending at Michaelmas, paid in full. Dee is an exact accountant as well as diarist, and enters every payment with precise care.

The Queen came riding down from Richmond in her coach, to see what her astrologer was doing, on September 17, 1580, and put the household in a flutter. She took

“The higher way of Mortlake field, and when she came right against the church, she turned down toward my house. And when she was against my garden in the field, her Majestie stayed there a good while, and then came into the field at the great gate of the field, where her Majestie espied me at the door, making reverent and dutiful obeysance unto her; and with her hand, her Majestie beckoned for me to come to her, and I came to her coach side; her Majesty then very speedily pulled off her glove and gave me her hand to kiss; and to be short, her Majestie willed me to resort oftener to her Court, and by some of her Privy Chamber to give her to weete when I am there.”

One can picture the gorgeously dressed and pearl-bedecked Queen, her auburn hair glistening in the sun, beckoning majestically to her astrologer, bidding him attend and swell the troops of courtiers and admirers, demanding imperiously to be let know when he came, and to be kept informed of all he did. Dee was a handsome man, tall and slender; he wore a beard, pointed and rather long. Among the crowd of personable courtiers in their rich and most becoming suits, he would be no inconspicuous figure.

It was perhaps the publication of the first volume of the “General and Rare Memorials pertayning to the art of perfect Navigation” that brought Dee into intimate relations with the navigators of the time. Or it may have been his intimacy with them that suggested the work. the Hexameron appeared in September, 1577, and in November the diarist first records a visit from one of them: “Sir Umfrey Gilbert cam to me at Mortlake.” Gilbert was then living at Limehouse, engaged in writing discourses on naval strategy and discovery. A few months later, Dee mentions a suggestion he gave to Richard Hakluyt, the author of the fascinating histories of the voyages: “I told Mr. Daniel Rogers, Mr. Hakluyt of the Middle Temple being by, that Kyng Arthur and King Mary, both of them, did conquer Gelindia, lately called Friseland, which he so noted presently in his written copy of Monumenthensis, for he had no printed book thereof.” On August 5, one of Gilbert’s company, “Mr. Reynolds of Bridewell, tok his leave of me as he passed toward Dartmouth to go with Sir Umfrey Gilbert toward Hochelaga.” The expedition sailed from Dartmouth on September 23, Sir Humphrey having obtained his long-coveted charter to plant a colony in the New World in June. All his money was sunk in this unfortunate expedition, which only met diasaster at the hands of a Spanish fleet. Undaunted, however, Sir Humphrey set to work to collect more funds and information to pursue his end. With the first Dee could not help him much; with the last he believed he could, and in return he exacted a stake in the results: “1580, Aug. 28th. my dealing with Sir Humfrey Gilbert graunted me my request to him made by letter, for the royalties of discovery all to the north above the parallell of the 50 degree of latitude, in the presence of Stoner, Sir John Gilbert his servant or reteiner; and thereupon took me by the hand with faithful promises, in his lodging of Cooke’s house in Wichcross Streete, where we dyned, onely us three together, being Satterday.”

It was more than two years before Gilbert succeeded in getting enough other persons to embark their capital in his project, and then he set out on his final voyage, the second to Newfoundland (the first having been assisted by Raleigh, his half-brother, in 1578). We all know the end, how, after he had planted “his raw

colony of lazy landmen, prison birds and sailors," he set out in his little vessel, The Squirrel, to explore the coast and sandbanks between Cape Breton Island and Newfoundland, and then headed for England. In a storm off the Azores, the little ship foundered and was lost, its captain's last words being, "We are as near Heaven by sea as by land."

With another brother, Adrian Gilbert, Dee had much closer relations, as we shall shortly see. This younger half-brother of Sir Walter Raleigh was reputed "a great chemist in those days," which of course meant something of an alchemist. He is associated in one's mind with "Sidney's sister, Pembroke's mother," that accomplished and beautiful inspirer of the most exquisite epitaph ever penned, for he was one of the "ingenious and learned men" who filled her house at Wilton "so that it was like a college." The Countess of Pembroke spent a great deal yearly in the study of alchemy, and kept Adrian as a laborant for a time. He is described as a buffoon who cared not what he said to man or woman of any quality. Bringing John Davis, another of the breezy Devon sea captains, Adrian came to Mortlake to effect a reconciliation after some uncomfortable passages caused, as they found, by dishonest dealings on the part of William Emery, whom they now exposed. "John Davis say'd that he might curse the tyme that ever he knew Emery, and so much followed his wicked counsaile and advyse. So just is God!" Here again we suspect Dee's reputation for "magic" had been the trouble.

With the discovery of so many new coasts and islands across in the Western seas, the Queen was anxious to know what right she had to call them hers, and what earlier navigators had sailed to them before. After Frobisher's three voyages in search of the North-West Passage, she sent for the author of the Hexameron and bade him set forth her title to Greenland, Estoteland (Newfoundland) and Friseland. This document he calls "Her Majestie's commandment — Anno 1578." Either he prepared another, or did not present this to the Queen for two years.

1580. — "On Monday Oct. 3, at 11 of the clock before none, I delivered my two Rolls of the Queene's Majestie's title unto herself in the garden at Richmond, who appointed after dynner to heare fuder of the matter. Therefore betweene one and two afternone, I was sent for into her highness Pryvy Chamber, where the Lord Threasurer allso was, who having the matter slightly then in consultation, did seme to doubt much that I had or could make the argument probable for her highnes' title so as I pretended. Wheruppon I was to declare to his honor more playnely, and at his leyser, what I had sayd and could say therein, which I did on Tuesday and Wensday following, at his chamber, where he used me very honorably on his behalf."

The next day Dee fancied that Burleigh slighted him. He called to see him, and was not admitted; he stood in the ante-chamber when the great man came out, but the Lord Treasurer swept by and "did not or would not speak to me." Probably he was pondering deeply on important matters of state. Dee's hopes of preferment fell to the ground, and he was persuaded that "some new grief was conceyved." Dee was ambitious; he was not yet surfeited with fame; of wealth he had none, hardly even a competency; he was vain, and he knew that he had gifts which few of his countrymen could rival or even understand; and he was no longer young. Such

advantages as he could attain must be secured quickly, if they were to be enjoyed at all.

“On the 10th, at four o'clock in the morning my mother Jane Dee dyed at Mortlake; she made a godlye ende: God be prayesd therfore! She was 77 yere old.”

News of this event quickly travelled to the Court at Richmond, and the Queen determined to signalise her favour to Dee and her gratification at Burleigh's report of his geographical labours, which reached her on the same day as the news of his loss, by a personal visit of condolence.

“Oct. 10th. The Quene's Majestie, to my great cumfort (hora quinta), cam with her trayn from the court, and at my dore graciously calling me to her, on horsbak, exhorted me briefly to take my mother's death patiently, and withall told me that the Lord Threasurer had greatly commended my doings for her title, which he had to examyn, which title in two rolls he had brought home two hours before; and delivered to Mr. Hudson for me to receive at my coming from my mother's burial at church. Her Majestie remembered allso how at my wive's death, it was her fortune likewise to call uppon me.”

So the fancied slight was nothing. The Queen's second remarkably-timed visit was followed up by an haunch of venison from my Lord Treasurer, and an atmosphere of satisfaction reigned. One of the rolls of which Dee writes is still in existence. It has on one side of the parchment a large map of “Atlantis,” or America, drawn with the skill of a practised cartographer. At the top is his name, “Joannes Dee,” and the date, “Anno 1580.” Among his papers is a smaller map, upon which large tracts in the Polar regions are marked “Infinite yse.” Thge other side of the roll is devoted to proving the Queen's title to lands she would never see or hear of, under the four following heads: “1. The Clayme in Particular. 2. The Reason of the Clayme. 3. The Credit of the Reason. 4. The value of that Credit by Force of Law.”

Dee was also busied this summer attending at the Muscovy House and writing instructions and drawing a chart for the two captains, Charles Jackson and Arthur Pett, for their North-East voyage to “Cathay,” or China.

He had perhaps joined the Company of the Merchant Venturers, for in March, 1579, he had signed a letter with Sir Thomas Gresham, Martin Frobisher (as every one knows, he was knighted in the thick of the Armada fight), and others, to the Council of State, desiring that those Adventurers who have not paid shall be admonished to send in contributions without delay. Another very interesting remark tells how “Young Mr. Hawkins, who had byn with Sir Francis Drake, came to me to Mortlake, in June, 1581; also Hugh Smith, who had just returned from the Straits of Magellan.” In November, Dee is observing “the blasing star,” or comet, of which, with its long tail, he makes a drawing on the margin of his diary. By the 22nd it had disappeared: “Although it were a cler night, I could see it no more.”

On June 7, 1581, at half-past seven in the morning, Dee's second child and eldest daughter, Katherine, was born. She was christened on the 10th, her sponsors being Lady Katherine Crofts, wife of Sir James Crofts, Controller of the Queen's Household; Mistress Mary Scudamore, of the Privy Chamber, the Queen's cousin;

and Mr. Packington, also a court gentleman. The infant was put out to nurse, first at Barnes with Nurse Maspely, then transferred to Goodwife Bennett. On August 11

“Katherine Dee was shifted to nurse Garrett at Petersham, on Fryday, the next day after St. Lawrence day, being the 11th day of the month. My wife went on foot with her, and Ellen Cole, my mayd, George and Benjamin, in very great showers of rain.”

Nevertheless the little Katherine seemed to flourish, and there are entries of monthly payments of six shillings to her nurse, with allowance for candles and soap, up to August 8 of the following year, when “Kate is sickly,” and on the 20th is reported as “still diseased.” Four or five days after, she was taken from nurse Garret, of Petersham, and weaned at home. The mother had several times been over to see the child, sometimes on foot, attended by George or Benjamin, the servants, and once by water with “Mistress Lee in Robyn Jackes bote.” The children seemed in trouble at this time, for about seven weeks before Arthur “fell from the top of the Watergate Stayres, down to the fote from the top, and cut his forhed on the right eyebrow.” This was at the old landing-place at Mortlake. Their childish ailments are always most carefully recorded in the diary, even when the cause is a box on the ears — probably well earned — from their quick-tempered mother. Jane’s friends Mr. and Mrs. Scudamore, and their daughter, and the Queen’s dwarf, Mrs. Tomasin, all came for a night to Mortlake. Jane went back with Mistress Scudamore to the Court at Oatlands. A number of other visitors are named, including “Mr. Fosker of the wardrobe.”

CHAPTER V

THE SEARCH FOR A MEDIUM

“Truth is within ourselves; it takes no rise
From outward things, whate’er you may believe
There is an inmost centre in us all
Where truth abides in fulness; and around
Wall upon wall, the gross flesh hems it in,
This perfect clear perception, which is truth.
A baffling and perverting carnal mesh
Binds it and makes all error; and to KNOW
Rather consists in opening out a way
Whence the imprisoned splendour may escape
Than in effecting entry for a light
Supposed to be without.”

— Browning, Paracelsus.

Dee had always, working with and under him, a number of young students and assistants, who were admitted more or less to his inner counsels. If they proved apt and diligent, he would reward them with promises of alchemical secrets, “whereby they might honestly live”; once he promised 100 pounds, “to be paid as soon of my own clere hability, I myght spare so much.” This was a very safe

provision. Generous as he was, lavish to a fault, money never stuck near him, nor was it of the least value in his eyes, except as a means of advancing science and enriching others.

Naturally, jealousies arose among the assistants. They would suddenly depart from his service, and spread ignorant and perverted reports of his experiments. Roger Cook, who had been with his master fourteen years, took umbrage "on finding himself barred from view of my philosophical dealing with Mr. Henrick." He had imagined himself the chosen confidant, for to him Dee had revealed, December 28, 1579, what he considered a great alchemical secret "of the action of the elixir of salt, one upon a hundred." Roger was now twenty-eight, "of a melancholik nature, and had been pycking and devising occasions of just cause to depart on the sudden," for he was jealous of a newer apprentice. "On September 7th, 1581, Roger went for altogether from me." But it was not "altogether," for Roger returned when Dee was old and infirm and poor, and remained serving him almost to the end. There was always something patriarchal in Dee's care for the members of his large household, evidenced abundantly in his diary. No doubt their loyalty to him was often severely tried by harsh and cruel outside rumours, but as they knew and loved his real nature they only drew closer towards him.

A new phase of his character is now forced upon us. He has appeared hitherto as the man of learning, astronomer and mathematician, a brilliant lecturer and demonstrator, diligent in probing the chemical and alchemical secrets of which his vast reading, his foreign correspondence, and his unique library gave him cognisance. Interested in geographical discovery and history, a bibliographical and mathematical writer, his genuine contributions to science had been considerable. He had written upon navigation and history, logic, travel, geometry, astrology, heraldry, genealogy, and many other subjects. He had essayed to found a National Library, and was contemplating a great work upon the reformation of the Calendar. But these purely legitimate efforts of his genius were discounted in the eyes of his contemporaries by the absurd suspicions with which his name had been associated ever since his college days. After his arrest and trial by Bonner, he never really succeeded in shaking off this savour of something magical. The popular idea of Dee in league with evil powers was, of course, the natural result of ignorance and dull understanding. To a public reared in superstition, untrained in reasoning, unacquainted with the simple laws of gravitation, the power to raise heavy bodies in the air at will, to see pictures in a simple crystal globe, or converse with projections of the air, to forecast a man's life by geometric or planetary calculations, and to discern the influence of one chemical or mineral substance upon another, seemed diabolically clever and quite beyond human agency. Even to study Nature and her secrets was to lay oneself open to the suspicion of being a magician. We must remember that in the early years of Queen Elizabeth's reign it was thought necessary to pass an Act of Parliament decreeing that all who practised sorcery causing death should suffer death; if only injury was caused, imprisonment and the pillory would be the punishment. Any conjuration of an evil spirit was to be punished by death as a felon, without benefit of clergy or sanctuary. Any discovery of hidden treasure by magical means was punishable by death for a second offence.

But if "magic" was tottering on its throne, the reign of alchemy was still uncontested. Belief in it was universal, its great votaries in the past were of all nations. St. Dunstan of Glastonbury, Roger Bacon, Raymond Lully, Canon George

Ripley of Bridlington, Albertus Magnus, Cornelius Agrippa, Arnold de Villa Nova and Paracelsus, all their writings, and hundreds of others, Dee had in his library and constantly upon his tongue. Alchemy was not only a science, it was a religion and a romance. It was even then enduring the birth-throes and sickly infancy of modern chemistry, and the alchemists' long search for the secret of making gold has been called one of its crises. Long after this it was still an article of faith, that such a man as Robert Boyle did not deny. We cannot forget that even that great chemist, Sir Humphry Davy, revered the possibility, and refused to say that the alchemist's belief in the power to make gold was erroneous. How unlike Dante's keen irony of the dark and groping men who seek for "peltro," or tin whitened with mercury. But alchemy was bursting with many other secrets beyond the manufacture of gold. The spiritual element abounding in all minerals, and the symbolism underlying every actual substance, were deeply imbedded in it. It was a science of ideals. It ever led its followers on to scale illimitable heights of knowledge, for in order to surpass all material and rational nature, and attain the crowning end, did not God delegate His own powers to the sage? So the art of healing was thought the noblest, the most Godlike task, and no means of attaining hermetic wisdom were untried. The psychical world became every bit as real to these religious mystics as the physical and rational, which they understood so vaguely. Even the strange shapes which escaped from the retorts of the old alchemists were known to them as "souls." Their successors called them spirits. Paracelsus named them as mercury, and it was left to his pupil, Van Helmont, the true founder of all modern chemistry, to give the name of gas.

It is easy to see how Dee, the astrologer, grew into close touch with those psychic phenomena which, though they have become extremely familiar to us, as yet continue to baffle our most scientific researches. When he first became conscious of his psychic powers, and how far he himself was mediumistic, is harder to discern. It is on May 25, 1581, that he makes in his diary the momentous entry: — "I had sight in Chrystallo offered me, and I saw." We may take it that he "saw" through a medium, for he never afterwards seems to have been able to skry without one. Perhaps his first crystal had then been given him, although, as we have seen, he already owned several curious mirrors, one said to be of Mexican obsidian such as was used for toilet purposes by that ancient race. He had made a study of optics, and in his catalogue of the manuscripts of his library are many famous writings on the spectrum, perspective and burning glasses, etc. Then came the trouble with Roger, "his incredible doggedness and ungratefulness against me to my face, almost ready to lay violent hands on me." Dee hears strange rappings and knockings in his chamber. A gentleman came from Lewisham to consult him about a dream many times repeated. Dee prays with him, and "his dream is confirmed and better instruction given." A mysterious fire breaks out for the second time in "the maydens" chamber at night. The knocking is heard again, this time accompanied with a voice repeated ten times. No words apparently, but a sound like "the schrich of an owl, but more longly drawn and more softly, as it were in my chamber." He has a strange "dream of being naked and my skyn all over wrought with work like some kinde of tuft mockado, with crosses blew and red; and on my left arm, about the arm in a wreath, these words I read: — 'Sine me nihil potestis facere.' And another the same night of Mr. Secretary Walsingham, Mr. Candish and myself." Then he was ten days from home, at "Snedgreene, with John Browne, to hear and

see the manner of the doings.” Evidently some remarkable manifestation. he was becoming more interested in psychic problems, but he was not able to proceed without a medium, and the right one had not yet appeared.

Meanwhile, he fills his diary with all manner of interesting news. Vincent Murphy, the “cosener” who had defamed him, and against whom in September, 1580, he had instituted a troublesome law-suit, was condemned by a jury at the Guildhall to pay 100 pounds damages. “With much adoe, I had judgment against him.” Five or six months later, he agreed with Mr. Godolphin to release the cosener. Jean Bodin, the famous French writer on witches, and publicist, had come to England with “Monsieur,” and Dee was introduced to him by Castelnau, the French ambassador, in the “Chamber of Presence at Westminster.” Letters came from Doctor Andreas Hess, the occult philosopher, sent through Dee’s friend, Richard Hesketh, agent at Antwerp. There are also letters from Rome. John Leonard Haller, of Hallerstein by Worms, came to him to say he had received instructions for his journey into “Quinsay [or Northern china], which journey I moved him unto, and instructed him plentifully for observing the variation of the compass in all places as he passed.” He notes, as if it were a common occurrence, a “fowl falling out” between two earls at Court, Leicester and Sussex [the Lord Chamberlain], tells how they “called each other traitor, whereupon both were commanded to keepe to their chambers at Greenwich, where the Court was.” It sounds like a schoolboys’ quarrel, but the royal schoolmistress would have them both know that they were in disgrace for a time. In July, there was an eclipse of the moon, but it was “cloudy, so as I could not perceive it.” In August, about half-past eight on the night of the 26th, “a strange Meteore in forme of a white clowde crossing galaxium, lay north and south over our zenith. This clowde was at length from the S.E. to the S.W., sharp at both ends, and in the West it was forked for a while. It was about sixty degrees high, it lasted an hour, all the skye cleare about and fair star-shyne.”

Dee made a journey into Huntingdonshire, by St. Neots, to Mr. Hickman’s at Shugborough, in the county of Warwick. Young Bartholomew Hickman was afterwards to become the companion and servant of his old age, and manifested some slight mediumistic powers. On the way home, a month or two later, Dee rode into Sussex to Chailey, probably to the glass works there. The Queen and “Monsieur” were at Whitehall.

A pretty little scene was enacted at Mortlake at the New Year, when “Arthur Dee and Mary Herbert, they being but 3 years old, the eldest of them, did make as it were a shew of childish marriage, of calling each other husband and wife.” Then Dee essays a harmless little play upon words. “The first day Mary Herbert came to her father’s house at Mortlake, the second day she came to her father’s house at East Shene.” Mrs. Dee went the same day to see the baby Katherine at Nurse Garret’s, and Mistress Herbert went with her. So the two families were in great unity.

Sir George Peckham, who sailed with Sir Humphrey Gilbert, came to consult Dee about exploration in North America, and promised a share in his patent of the new lands. He also sent down his sea-master, Mr. Clement, and another gentleman, Mr. Ingram, to see the mathematician. For Sir John Killigrew, Dee devised “a way of protestation to save him harmless for compounding for the Spaniard who was robbed: he promised me fish against Lent.” Haller came again to get instructions how to transfer his money to Nuremberg, and to get letters of introduction to

Constantinople. By him, Dee sent letters to correspondents in Venice, where the German explorer was to winter.

Mr. Newbury, who had been in India, came early in the New Year. Dee recounts how the stage in that well-known old London place of amusement, the Paris Garden, on Bankside, Southwark, fell down suddenly while it was crammed with people beholding the bear-baiting. "Many people were killed thereby, more hurt, and all amazed. The godly expound it as a due plague of God for the wickedness there used, and the Sabbath day so profanely spent." Sunday was the great day for the bear-fights.

"1583. — Jan. 23. Mr. Secretarie Walsingham cam to my howse, where by good luk he found Mr. Awdrian Gilbert, and so talk was begonne of Northwest Straights discovery.

"Jan. 24. Mr. Awdrian Gilbert and John Davis went by appointment to Mr. Secretary, to Mr. Beale his house, where only we four were secret, and we made Mr. Secretarie privie of the N.W. passage, and all charts and rutters were agreed uppon in generall.

"Feb. 3. Mr. Savile, Mor. Powil the younger, travaylors, Mr. Ottomeen his sonne cam to be acquaynted with me.

"Feb. 4. Mr. Edmunds of the Privie Chamber, Mr. Lee, Sir Harry Lee, his brother, who had byn in Moschovia, cam to be acquaynted with me.

"Feb. 11. The Queene lying at Richmond went to Mr. Secretarie Walsingham to dynner; she coming by my dore graciously called me to her, and so I went by her horse side as far as where Mr. Hudson dwelt.

"Feb. 18. Lady Walsingham cam suddenly to my house very freely, and shortly after that she was gone, cam Syr Francis himself, and Mr. Dyer.

"March 6. I and Mr. Adrian Gilbert and John Davis did mete with Mr. Alderman Barnes, Mr. Townson and Mr. Yong and Mr. Hudson, about the N.W. passage.

"March 17. Mr. John Davys went to Chelsey with Mr. Adrian Gilbert to Mr. Radforths, and so, the 18th day from thence, to Devonshyre.

"April 18. The Queene went from Richmond toward Greenwich, and at her going on horsbak, being new up, she called for me by Mr. Rawly his putting her in mynde, and she sayd 'quod defertur non aufertur,' and gave me her right hand to kisse."

While these every-day events were going on and being chronicled, Dee was also occupying himself with the search for a medium. He first tried one named Barnabas Saul (he seems to have been a licensed preacher), who professed himself an occultist. Saul gives news of buried treasure — great chests of precious books hidden somewhere near Oundle in Northamptonshire, but the disappointed book-lover finds the hoard an illusion. Then Saul, who slept in a chamber over the hall at Mortlake, is visited at midnight by "a spiritual creature." The first real seance that Dee records, "Actio Saulina," took place on December 21, 1581. The skryer was bidden to look into the "great crystalline globe," and a message was transmitted by the angel Annael through the percipient to the effect that many things should be declared to Dee, not by the present worker, "but by him that is assigned to the stone." After New Year's tide, on any day but the Sabbath, the stone was to be set in the sun,

the brighter the day the better, and sight should be given. The sitters might “deal both kneeling and sitting.” When we consider how very real to a devout person in the Middle Ages apparitions of the devil and of evil spirits were, there seems nothing at all extraordinary in Dee’s belief that good spirits also might be permitted to come to his call, for purposes of good. A month or two after this, Saul was indicted on some charge and tried in Westminster Hall, but, thanks to Mr. Serjeant Walmesley and a couple of clever lawyers, he was acquitted. There was an end of his clairvoyance, however: “he confessed he neyther herd or saw any spirituall crature any more.” If the accusation against him had been that of sorcery, he was wise to risk no further appearances in Westminster Hall. He seems to have spread abroad many false reports about Dee, who reproached him bitterly when he called at Mortlake a few months later. Dee had, however, gained psychical experience by these early and tentative experiments. The field was now open for a maturer applicant. When he arrived, he was to change the whole current of Dee’s life and outlook, to become at once a helper and a stumbling-block, a servant and a master, loving as a son, treacherous as only a jealous foe. It was a strange fate that sent Edward Kelley to Dee at this moment, when everything was ripe for his appearance. And it was characteristic of the man that he was ushered into Dee’s life under a feigned name. On March 8, two days after Saul had confessed he saw and heard no more of the spirits, Dee writes in his diary, “Mr. Clerkson and his frende cam to my howse.” He makes the visit very emphatic by repeating the information: “Barnabas went home abowt 2 or 3 o’clock, he lay not at my howse now; he went, I say, on Thursday, and Mr. Clerkson came.” At nine o’clock the same night, there was a wonderful exhibition of the aurora in the northern and eastern heavens, which Dee describes minutely in Latin in the diary. The next day, March 9, he mentions Clerkson’s friend by name as “Mr. Talbot,” and shows how that individual appears to have begun ingratiating himself with his new patron by telling him what a bad man his predecessor was. Barnabas had said that Dee would mock at the new medium; Barnabas had “cosened” both Clerkson and Dee. This, Talbot professed to have been told by “a spiritual creature.” The pair proceeded at once to business. On the 10th, they sat downto gaze into “my stone in a frame given me of a friend,” with very remarkable results. Information was vouchsafed that they should jointly together have knowledge of the angels, if the will of God, viz., conjunction of mind and prayer between them, be performed. They were bidden to “abuse not this excellency nor overshadow it with vanity, but stick firmly, absolutely and perfectly in the love of God for his honour, together.” There were forty-nine good angels, all their names beginning with B, who were to be answerable to their call. The first entry that Dee makes in his Book of Mysteries concerning Talbot is as follows: —

“One Mr. Edward Talbot cam to my howse, and he being willing and desyrours to see or shew something in spirituall practise, wold have had me to have done something therein. And I truely excused myself therein: as not, in the vulgarly accountd magik, neyther studied or exercised. But confessed myself long tyme to have byn desyrours to have help in my philosophicall studies through the cumpany and information of the blessed Angels of God. And thereuppon, I brought furth to him my stonein the frame (which was given me of a frende), and I sayd unto him that I was credibly informed that to it (after a sort) were answerable Aliqui Angeli boni. And also that I was once willed by a skryer to call for the good Angel Annael

to appere in that stone in my owne sight. And therefore I desyred him to call him, and (if he would) Anachor and Anilos likewise, accounted good angels, for I was not prepared thereto.

“He [Talbot] settled himself to the Action, and on his knees at my desk, setting the stone before him, fell to prayer and entreaty, etc. In the mean space, I in my Oratory did pray and make motion to God and his good creatures for the furthering of this Action. And within one quarter of an hour (or less) he had sight of one in the stone.”

The one to appear was Uriel, the Spirit of Light. On the 14th, the angel Michael appeared, and gave Dee a ring with a seal. Only on two other occasions does a tangible object pass between them. Dee was overjoyed at the success of his new “speculator” or “skryer”; the sittings were daily conducted until March 21, when the medium was overcome with faintness and giddiness, and Michael, who was conversing with him, bade them rest and wait for a quarter of an hour. The next day, Talbot departed from Mortlake, being bidden by Michael to go fetch some books of Lord Monteagle’s which were at Lancaster, or thereby, and which would else perish.

He returned before long, and all through April, instructions were being given at the sittings for the future revelations. elaborate preparations were needed, and they were described in minute detail.

By April 29, a square table, “the table of practice,” was complete. It was made of sweet wood, and was about two cubits high (“by two cubits I mean our usual yard”), with four legs. On its sides certain characters, as revealed, were to be written with sacred yellow oil, such as is used in churches. Each leg was to be set upon a seal of wax made in the same pattern as the larger seal, “Sigilla AEmeth,” which was to be placed upon the centre of the table, this seal to be made of perfect, that is, clean purified wax, 9 inches in diameter, 27 inches or more in circumference. It was to be an inch and half a quarter of an inch thick, and upon the under-side was to be a figure as below.

It was a mystical sign, similar to those in use in the East, and also used by contemporary astrologers

[INSERT ILLUSTRATION]

The four letters in the centre are the initials of the Hebrew words, “Thou art great for ever, O Lord,” which were considered a charm in the Middle Ages.

The upper side of the seal was engraved with an elaborate figure obtained in the following manner. First, a table of forty-nine squares was drawn and filled up with the seven names of God — “names not known to the angels, neither can they be spoken or read of man. These names bring forth seven angels, the governors of the heavens next unto us. Every letter of the angels’ names bringeth forth seven daughters. Every daughter bringeth forth seven daughters. Every daughter her daughter bringeth forth a son. Every son hath his son.”

The seal “was not to be looked upon without great reverence and devotion.”

It is extremely curious and interesting to relate that two of these tablets of wax, “Sigillum Dei,” and one of the smaller seals for the feet of the table, with a crystal globe, all formerly belonging to Dee, are still preserved in the British

Museum, having come there from Sir Thomas Cotton's library, where the table of practice was also long preserved.

The spirits were kind enough to say: "We have no respect of cullours," but the table was to be set upon a square of red silk as changeable (i.e., shot) as may be, two yards square, and a red silk cover, with "knops or tassels" at the four corners, was to be laid over the seal, and to hang below the edge of the table. The crystal glove in its frame was then to be set upon the centre of the cover, resting on the seal with the silk between.

The skryer seated himself in "the green chair" at the table, Dee at his desk to write down the conversations. These were noted by him then and there at the time, and he is careful to particularise any remark or addition told him by the Ckryer afterwards. Once a spirit tells him: "There is time enough, and we may take leisure." Whereupon Dee conversed directly with the visitant; sometimes apparently only Talbot hears and repeats to him what is said. A golden curtain was usually first seen in the stone, and occasionally there was a long pause before it was withdrawn. Once Dee writes: "He taketh the darkness and wrappeth it up, and casteth it into the middle of the earthen globe." The spirits generally appeared in the stone, but sometimes they stept down into a dazzling beam of light from it, and moved about the room. On some occasions a voice only is heard. At the close of the action, the "black cloth of silence is drawn," and they leave off for the present.

There are very few comments or general impressions of the actions left by Dee, but on one occasion he does use expressions that show his analytical powers to have been actively at work to account for the phenomena. He brought his reason to bear upon the means of communication with the unseen world in a remarkable manner. In speaking to the angels one day he said: "I do think you have no organs or Instruments apt for voyce, but are meere spirituall and nothing corporall, but have the power and property from God to insinuate your message or meaning to ear or eye [so that] man's imagination shall be that they hear and see you sensibly."

As Plotinus says, "Not everything which is in the soul is now sensible, but it arrives to us when it proceeds as far as sense."

The minute descriptions of the figures seen are of course characteristic of clairvoyant or mediumistic visions. In the case of Bobogel, the account of his "sage and grave" attire — the common dress of a serious gentleman of the time — may be quoted.

"They that now come in are jolly fellows, all trymmed after the manner of Nobilities now-a-dayes, with gylt rapiers and curled haire, and they bragged up and downe. Bobogel standeth in a black velvet coat, and his hose, close round hose of velvet upperstocks, over layd with gold lace. He hath a velvet hat cap with a black feather in it, with a cape on one of his shoulders; his purse hanging at his neck, and so put under his girdell. His beard long. He had pantoffolls and pynsons. Seven others are apparelled like Bobogel, sagely and gravely."

CHAPTER VI

EDWARD KELLEY

"Kelley did all his feats upon

The Devil's looking-glass, a stone
Where, playing with him at bo-peep,
He solv'd all problems ne'er so deep."

— Butler, *Hudibras*

It is now time to inquire who this Talbot, this seer and medium, was. Where did he come from, and what was his previous history?

That he came to the Mortlake philosopher under a feigned name is perhaps not so damning an accusation as might at first sight appear. There was in his case, certainly, every reason why he should change his identity, if possible, but an alias in those days was so common a thing that perhaps more stress has been laid upon Kelley's than is strictly fair.

The whole of Kelley's story is so wildly and romantically coloured, it is so incredible, and so full of marvels, that it is extremely difficult to know what to believe. There is no disentangling the sober facts of his life from the romance attributed to him; indeed, there are no sober facts, as the reader will see when the accepted traditions of this extraordinary man's career are laid down.

From March 8 to November, 1582, Edward Talbot, the skryer, came and went in the Mortlake establishment, gazed in the crystal, and ingratiated himself into his employer's liking. Then he disappeared, and Edward Kelley took his place. There had been a quarrel of some kind, precursor of many others, and Dee opens his fourth Book of Mysteries, on November 15, "after the reconciliation with Kelley." Henceforth "E.K." is his name.

Kelley was born at Worcester, on August 1, 1555, as appears by the horoscope drawn for him by the astrologer. He began life as an apothecary's apprentice, and showed some aptitude for his calling. It has been stated that, under the name of Talbot, he studied for a short time at Oxford, but left abruptly under a cloud. A few years later, he was exposed in the pillory in Lancaster for having either forged ancient title deeds or coined base money. Both feats are accounted to him. The next incident in his career is a charge of having dug up a newly buried "caitiff's" corpse in Walton-le-Dale churchyard, Lancashire, for the purpose of questioning the dead, or "an evil spirit speaking through his organs," respecting the future of "a noble young gentleman," then a minor. After this savoury episode, Kelley is reported to have been wandering in Wales (it is suggested that he was hiding from justice), when he stumbled accidentally upon an old alchemical manuscript and two caskets or phials containing a mysterious red and white powder. Another version of this discovery is that Dee and Kelley together found the powder at Glastonbury. This we may dismiss. Wherever he procured it, Kelley undoubtedly owned a small quantity of some substance which he regarded as of priceless value, inasmuch as, if properly understood and manipulated, it could be used for transmuting baser metals into gold.

The reputation of the learned doctor of Mortlake, who was known all over the Continent, was a favourite at Court, and in touch with every adventure by sea or land, had of course reached Kelley. Dee's parsonage of Upton-on-Severn, near Worcester, did not trouble him much with responsibility, but it must have been on one occasional visit to it that he received from the Dean of Worcester Cathedral a Latin volume, in which he inscribed the gift thus: "Joannes Dee, 1565, Februarii 21. Wigorniae, ex dono decani ecclesiae magistri Beddar."

With the powder that he did not know how to use, and the alchemical manuscript which he could not decipher, and which yet might contain the invaluable secret (if indeed there is any truth in the story of his find), Kelley, the adventurer, sought out some means of introduction to the man so likely to help him. He had dabbled in alchemy, and came to Mortlake with something of a reputation, for Dee speaks of him as “that lerned man.” It is utterly unlikely that Dee had heard anything of Kelley’s exploits in the north. Such doings would scarcely penetrate the solmen recesses of the laboratory on the Thames side. So Kelley arrived, and was recieved in all good faith. He told Dee that the last seer, Barnabas, had “cosened” him, and seems to have at once impressed himself favourably upon the astrologer, who at the moment was without a reliable assistant. The sittings began, as we have seen, in March, and were successful immediately. In May the message comes that “none shall enter into the knowledge of these mysteries but this worker,” and Kelley’s position is secured.

Kelley was now about twenty-seven years old, and unmarried. He was bidden by the spirits on April 20 to take a wife, “which thing to do,” he told Dee, “I have no natural inclination, neither with a safe conscience may I do it.” but Michael had made him swear on his sword to follow his counsel, so he married reluctantly, not long after, Joan, or Johanna, Cooper, of Chipping Norton, who was eight years his junior, and about nineteen.

There was little love on his side apparently, but the girl seems at any rate to have essayed to do her duty as a wife. She was apparently a complete stranger to the Dees, although soon to become part of their household. What were Jane’s feelings at the thought of this invasion of her domestic peace we can only guess from an entry in Dee’s diary made two days after one of these first sittings. Dee does not write much about his wife in his diary, save only entries relating to her health, and this one he has carefully erased, as if he thought some disloyalty to her was involved in it. It is, however, possible to make it out almost entirely. “1582, 6 May. Jane in a merveyulous rage at 8 of the cloke at night, and all that night, and next morning till 8 of the cloke, melancholike and ch[?ided me] terribly for....” Something illegible follows, and then this: “that come to me only honest and lerned men.” Finally, “by Mr. Clerkson his help was [?pacified].” What can this mean save that she had taken a violent dislike to, and disapproval of, Kelley; that she mistrusted his honesty and wished they might have no more to do with him; that it was only by his friend Clerkson’s help that she was at last quieted? Her woman’s intuition was scarcely at fault; however kindly she came to treat her husband’s medium afterwards, however charitable she showed herself, she was right in suspecting no good to come to Dee through association with Kelley.

The accounts of the actions with the spirits which took place under Kelley’s control were minutely written down by Dee, as we have seen, mostly during the time of the sittings. The papers had a romantic history. The last thirteen books, which were in Sir Thomas Cotton’s library, were printed by Dr. Meric Casaubon about fifty years after Dee’s death, under the title of *A True and Faithful Relation of what passed for many Yeers between Dr. John Dee, a Mathematician of Great Fame in Q. Elizabeth and K. James their Reigns, and some Spirits: Tending (had it succeeded) To a General Alteration of most States and Kingdomes in the World...With a Preface confirming the reality (as to the Point of Spirits) of this Relation; and shewing the several good Uses that a sober Christian may make of all*

(folio 1659). Casaubon in his learned preface maintains stoutly that the visions were no distempered fancy, that Dee acted throughout with all sincerity, but that he was deluded. His book sold with great rapidity; it excited so much controversy, and incurred such disapproval from Owen, Pye, and the other Puritan divines, that it came near being suppressed; only the excellent demand for it prevented its confiscation, for not a copy could be found. The True Relation contains the record of all actions after the beginning of June, 1583. The earlier conversations, from the first with Barnabas, and Talbot's appearance on the scene, are still to be found in manuscript, they having in some way parted company from those of which Cotton had possession.

These earlier papers were acquired by the antiquary, Elias Ashmole, in a rather romantic way. Ashmole had been visiting William Lilly, the astrologer, at Horsham, in August, 1672, when on his return his servant brought him a large bundle of Dee's autograph MSS. which a few days before he had received from one of the warders of the Tower. The warder called on Ashmole at the Excise Office, and offered to give them in exchange for one of Ashmole's own printed works. The Windsor Herald cheerfully agreed, and sent him a volume "fairly bound and gilt on the back," of which of his works we know not.

Now for the history of the papers. Mrs. Wale, the warder's wife, had brought them with her dower from her lamented first husband, Mr. Jones, confectioner, of the Plow, Lombard Street. While courting, these young people had picked up among the "joyners in Adle Street" a large chest whose "very good lock and hinges of extraordinary neat work" took their fancy. It had belonged, said the shopman, to Mr. John Woodall, surgeon, father of Thomas Woodall, surgeon to King Charles II. and Ashmole's friend. He had bought it probably at the sale of Dee's effects in 1609, after his death. The Joneses owned the chest for twenty years without a suspicion of its contents. Then, on moving it one day, they heard a rattle inside. Jones prized open the space below the till, and discovered a large secret drawer stuffed full of papers, and a rosary of olive-wood beads with a cross, which had caused the rattle. The papers proved to be the conferences with angels from December 22, 1581, down to the time of the printed volume; the original manuscripts of the (unprinted) books entitled, "48 Claves Angelicae," "De Heptarchia Mystica," and "Liber Scientiae Auxiliis et Victoriae Terrestris." We may imagine Ashmole's excitement when he found he had in his hand the earlier chapters of the very remarkable book that was still in every one's mouth, published only thirteen years before.

We may now briefly examine this remarkable and voluminous Book of Mysteries. In view of the fact that it is perhaps the earliest record of mediumistic transactions, the first attempt to relate consecutive psychic transmissions, in fact a sort of sixteenth century Proceedings of a Society for Psychical Research, it seems to warrant investigation at some length.

The first book (still in manuscript) opens with a Latin invocation to the Almighty, and an attribution of all wisdom and philosophy to their divine original source. It ends "O beata et super benedicta omnipotens Trinitas, concedas mihi (Joanni Dee) petitionem hanc modo tali, qui tibi maxime placebit, Amen." Then comes a table of the four angels — Michael, Gabriel, Raphael, and Uriel, their particular attributes, and their descent from Annael. A long prayer in English follows, which gives a remarkable insight into Dee's attitude of mind. Unfeigned humility towards God, a certain unconsciousness of self and of his own particular

acquirements, are mingled with a calm assumption of authority and power to enter into the heart of knowledge. This was perhaps the chief characteristic of the exalted mysticism so prevalent at the time in a small section of alchemists, especially on the Continent. Dee was its representative in England, having, of course, imbibed much of it during his residence abroad. Paracelsus had been dead but forty years. His disciples everywhere were seeking three secrets which were to fulfil his teaching — the secret of transmutation, the elixir of life, and the philosophic stone, key to all wisdom. Bruno was still alive, developing his theories of God as the great unity behind the world and humanity. Copernicus was not long dead, and his new theories of the solar system were gradually becoming accepted. Galileo was still a student at Pisa, his inventions as yet slumbering in his brain. Montaigne was writing his gentle satires on humanity. Everywhere and in every sphere new thought was beginning to stir.

Dee did not scruple to claim in his prayer gifts like those bestowed upon the prophets. He deprecates any kind of traffic with unauthorised or unreliable spirits, and acknowledges again the only Source of wisdom. But since he has so long and faithfully followed learning, he does think it of importance that he should know more. The blessed angels, for instance, could impart to him things of at least as much consequence as when the prophet told Saul, the son of Kish, where to find a lost ass or two! A spirit afterwards told him that ignorance was the nakedness wherewith he was first tormented, and “the first plague that fell unto man was the want of science.”

He had reached that state of mind when he seemed unable to discern any boundary line between finite and infinite. His hope and his confidence were alike fixed on nothing less than wresting all the secrets of the universe from the abyss of knowledge, or, at any rate, as many of them as God willed. He explains how from his youth up he has prayed for pure and sound wisdom and understanding,

“such as might be brought, under the talent of my capacitie, to God’s honour and glory and the benefit of his servants, my brethren and sisters. And forasmuch as for many yeres, in many places, far and nere, in many books and sundry languages, I have wrought and studied, and with sundry men conferred, and with my owne reasonable discourse laboured, whereby to fynde or get some yinking, glimpse, or beame, of such the aforesaid radical truths:...And seeing I have read in they books and records how Enoch enjoyed thy favor and conversation, with Moses thou wast familiar, And also that to Abraham, Isaac, and Jacob, Josua, Gedeon, Esdras, Daniel, Tobias, and sundry other, the good angels were sent, by thy disposition, to instruct them, informe them, help them, yea in worldly and domesticall affairs; yea and sometimes to satisfy theyr desires, doubts and questions of thy secrets; and furthermore, considering the Shewstone which the high priests did use by thy owne ordering, wherein they had light and judgments in their great doubts, and considering also that thou (O God) didst not refuse to instruct the prophets (then called seers), to give answers to common people of things oeconomicall, as Samuel for Saul, seeking for his father’s asses, being gone astray: and as other things, vulgar true predictions, whereby to win credit unto their weightier affairs. And thinking within myself the lack of thy wisdom to me to be of more importance than the value of an Ass or two could be to Cis (Saul his father): And remembering what good counsaile thy apostle James giveth, saying Si quies autem vestrum etc. And

that Solomon the wise, did so, even immediately by thyselfe, attayne to his wonderfull sidome: Therefore, Seeing I was sufficiently taught and confirmed that this wisdome could not be come by at mans hand, or by human powre, but onely from thee (O God) mediately or immediately. And having allwayes a great regarde and care to beware of the filthy abuse of such as willingly and wittingly did invoke and consult (in divers sorte) Spirituall Creatures of the damned sort: Angels of darknes, forgers and patrons of lies and untruths; I did fly unto thee by hartly prayer, full oft, and in sundry manners: sometymes crying unto thee *Mittas Lucem tuam et veritatem, tuam quoe me ducant, etc.*”

Then he goes on to say that his slight experience with two different persons has convinced him of God’s wish to enlighten him through His angels. He has heard of a man accounted a good seer and skryer, a master of arts and preachger of the Word, and through his means he has seen spiritual apparitions “either in the christalline receptab\cle, or in open ayre.” He hopes to have help from this person until “some after man or meanes are sent him from on high.” But Saul — for it is Saul he means — is not devout, sincere and honest. Evil spirits have come to him, much to Dee’s terror “but that thou didst pitch thy holy tent to my defence and comfort.” He has quoted to Saul Roger Bacon’s warning to wicked devil-callers; but the man cannot brook rebuke, and is angry at being further debarred from the mysteries “which were the only things I desired, through thy grace.” He begs, most humbly and deprecatingly for leave to note down the actions, and asks that Annael may come to his help.

Barnabas having proved so unreliable, he rejoiced at having found another skryer. The one accessory wanting, when all the table and seals were comlete, was a “shewstone.” Dee seems already to have owned several. He had used a crystal before this time, but a new one was desirable. One evening, towards sunset, a little child angel appears standing in the sunbeams from the western window of the study, holding in its hand a thing “most bright, most clere and clorius, of the bigness of an egg.” Michael with his fiery sword appeared and bade Dee “Go forward, take it up, and let no mortall hand touch it but thine own.”

Michael tells them, too, that he and Kelley are to be joined in the holy work, united as if one man. But one is to be master, the other minister; one the hand, the other the finger. They are to be contented with their calling, for vessels are not all of one bigness, yet all can be full. Dee is reminded that all his knowledge is “more wonderful than profitable, unless thou art led to a true use of the same.”

Another spirit, *Medicus Dei*, or *Medicina*, says, “Great are the purposes of him whose medecine I carry,” and on one of the early march days utters some remarkable words on the precious doctrine of the universality of the Light: —

“Your voices are but shadows of the voices that understand all things. The things you look on because you see them not indeed, you also do name amiss...

“We are fully understanding. We open the eyes from the sun in the morning to the sun at night. Distance is nothing withus, unless it be the distance which separateth the wicked from His mercy. Secrets there arenone, but that are buried in the shaddow of man’s sould....Iniquitie shall not range where the fire of his piercing judgment and election doth light.”

Calvin had been dead but twenty years, but with his scheme of election and eternal reprobation Dee had no affinity. His mind was far more in harmony with the ancient hermetic teaching that medicine, healing, was the true road to all philosophy.

CHAPTER VII

THE CRYSTAL GAZERS

“To follow knowledge like a sinking star
Beyond the utmost bound of human thought.”

— Tennyson, *Ulysses*

It is a curious picture to call up, that of the strangely assorted pair seated in the inner room at Mortlake, acting out this spiritual drama. Dee had asked for instructions about the room for the sittings: “May my little farthest chamber serve, if the bed be taken down?” The table, covered with its cloth stood in the centre upon the seals. Kelley, perhaps with the black cap he is credited with having always worn, pulled close over his cropped ears, was seated at it. Dee at his desk sat writing in the great folio book. He was now fifty-six years old; his beard was long, but perhaps not yet “as white as milk,” as Aubrey describes it. He did not apparently ever see the visions himself. Once he reproachfully said, “You know I cannot see or skry.” He conversed with the spirits and sometimes heard what they said; but to the eye and ear of his body they were invisible; hence his dependence upon a skryer.

The sole object of his ambition was the attainment of legitimate wisdom. When conversing with the angels, how near within his grasp it seemed! Michael’s exposition seemed almost to promise it to him: —

“‘Wilt thou have witt and wisdom? Here it is.’

“Michael points each time to a figure of seven squares shown within a circle of light.

“‘The exaltation and government of princes is in my hand.

“‘In counsayle and Nobilitie, I prevayle.

“‘The Gayne and Trade of Merchandise is in my hand. Lo! here it is.

“‘The Qualitie of the Earth and Waters is my knowledge, and I know them. And here it is.

“‘The motion of the Ayre and those that move in it, are all known to me. Lo! here they are.

“‘I signifie wisdom. In fire is my government. I was in the beginning and shall be to the end.

“‘Mark these mysteries. For this knowne, the state of the whole earth is knowne, and all that is thereon. Mighty is God, yea, mighty is he who hath composed for ever. Give diligent eye. Be wise, merry and pleasant in the Lord.’“

Quite early in the actions, it was told them that a third person was necessary to the complete work. Adrian Gilbert was the first selected, and permission was given for him to be made “privie of the mysteries, but not to be a practiser.”

Gilbert was making ready for a voyage to the North-West. Dee and the spirits seem to think it may be a kind of missionary enterprise, and Dee asks for (but does

not actually obtain) a geographical description of the country he is going to. The answer is that Dee knows about it, as indeed he did, sufficiently well, as we have seen, to draw very good charts of North America and the Frozen Seas. An angel named Me tells him he must counsel A.G. and be his father. "Who made the sun of nothing? Who set Nature to thrust up her shoulder amongst trees and herbs like a gentle fire? How great is his power in those in whom he kindleth a soul of understanding."

In Dee's absence in London, at the Muscovy House, on Maundy Thursday (March 28), Kelley tried to summon Medicina again, but was only visited by an "illuder." Next day Dee asks for "the veritie of his doings," and is told that darkness has presumed to put itself in place of light. Kelley will not be overthrown, but he is to brag not. "When I yoked your feathers together, I joined them not for a while." The illuder is made to confess deception and is consumed by fire, and Dee turns to his skryer with "Master Kelley, is your doubt of the spirit taken away?"

Dee had been requested to prepare a calculation for the reformation of the Calendar, or at any rate to give his opinion on the scheme propounded by Pope Gregory. His calculations were approved by all the English mathematicians of the time, but the Queen, advised by the bishops, did not see her way to adopt them in effect. Dee tells his angel friends how "grieved" he is that "Her Majestie will not reform the Kalendar in the best terms of veritie." He desires counsel what to do.

Easter Day passed, and the crystal gazing still went on. The sittings were often long. On April 3, Dee ventured to tell his visitor that "it will be dark soon, and our company will expect our coming down to supper. If without offence we might now leave off, it might seem good to do so." Three days after, he again offered a slight remonstrance, asking why they had not been warned of Mistress Frances Howard's coming, a gentlewoman of Her Majestie's Privy Chamber. She had caused interruption of their exercise for a full hour, or two. Was this to be forgiven her because of her great charity, and goodness in procuring the Queen's alms for many needy people?

The Queen was then at Richmond, and Dee was several times at Court. He seems to have been there to bid her adieu when she left for Greenwich on the 18th: — "At her going on horseback, being new up, she called for me, by Mr. Rawly his putting her in mynde, and she sayd, 'quod defertur non aufertur,' and gave me her right hande to kisse."

Dee was now puzzling over some mysterious papers brought him by Kelley, whether those he is reported to have found in Wales of Glastonbury we can scarcely decide, but they seem to concern ten places in England where treasure was supposed to be hid. There is a curious drawing of them in the MS. diary: "After coming from the Court, I thought I would try to discover the ciphers of the paper E.K. brought me as willed to do, found at Huets Cross, with a book of magic and alchemy, to which a spiritual creature led them." Dee was by no means the easy dupe of Kelley that he has been called. Two or three months after he first knew him he writes in his diary of his "abominable lyes"; and he here makes a very telling remark, an aside, so to speak: "Of this K., I doubt yet."

Kelley's hot, uncontrollable nature and his overbearing ways had already begun to appear. There was an outbreak at supper one night because Charles Sled had "done him an injurie in speeche at my table." Probably some story of his early

career had been raked up. A voice next morning says to him appropriately: "Serve God and take hold of nettles."

The manuscript in crabbed signs puzzled the astrologer desperately, and he was unhappy at the delay. An angel tells him they are to be "rocks in faith." "While sorrow be measured thou shalt bind up thy fardell." He is not to seek to know the mysteries till the very hour he is called. "Can you bow to Nature and not honour the workman?"

A new spirit visits them, Il, "a merie creature, apparelled like a Vyce in a [morality] play. He skipped here and there." Dee asks where is his Arabic book of tables that he has lent and lost. Il says it is in Scotland and is nothing worth. Then Dee asks about the Lord Treasurer's books, for he had not seen Burleigh's library, and had all the rival collector's jealousy over his own treasures. He was never quite sure that Burleigh was his friend; there seemed always a suspicion in his mind where the Lord Treasurer was concerned. The feeling was reflected in a curious dream that he had soon after the beginning of his partnership with Kelley: "I dreamed on Saturday night that I was deade, and afterwards my bowels wer taken out. I walked and talked with divers, and among other with the Lord Thresorer, who was cum to my howse to burn my bookes when I was dead. I thought he looked sourely on me." Now, Il tells him that Burleigh has no books "belonging to Soyga," and explains that name as in "the language of Paradise, before Babel's aery tower." Dee takes up a lexicon to look for the word, but Il points to another book on "the mysteries of Greek, Latin and Hebrew." Then Il becomes very practical, and says: "Your chimney will speak against you anon," and Dee remembers that he had hidden there "in a cap-case" the records of his doings with Saul and the others. Il advises Kelley to communicate to his employer the book and the powder, and all the rest of the roll. "True friends are not to hide anything each from the other."

This was perhaps the cause of the "great and eager pangs" that now took place between Dee and Kelley. The medium pretends to fear they are dealing with evil spirits. He bursts into a passion, declares he is a cumber to the house, and dwells there as in a prison. He had better be far away in the open country, where he can walk abroad, and not be troubled with slanderous tongues. He is wasting his time there, and must follow some study whereby he may live. As for these spirit mysteries, Adam and Enoch knew them before the Flood. Dee responds gravely to this tirade: He will wait God's time, and he will not believe a stone will be given them and no bread. As to Kelley's necessities, are not his own far greater? At the present moment, he owes 300 pounds, and does not know how to pay it. He has spent forty years, and travelled thousands of miles, in incredible forcing of his wit in study, to learn, or bowel out, some good thing, yet he would willingly go up and down England in a blanket, begging his bread, for a year or more, if at the end he might be sure of attaining to godly wisdom, whereby to do God service for His glory. He was resolved either willingly to leave this work, to enjoy the fountain of all wisdom, or to pass his days on earth in the enjoyment of its blessings and mysteries.

Another violent scene occurred before long; this time the mistress of the house was the one offended. Dee says: "By A[drian] G[ilbert] and Providence, E.K.'s vehement passions were pacified. He came back again to my house, and my wife was willing and quiet in mind and friendly to E.K. in word and countenance. A new pacification in all parts confirmed and all upon the confidence of God his service faithfully performed." Kelley's wife had not yet joined him at Mortlake, but

he had occasional letters from her. One found him in a tender religious mood, about to “pray in his bedchamber, on a little prayer book which Mr. Adrian Gilbert had left here, ad it lay on the table during the action.” It was Seven Sobbes of a Sorrowful Soul for Sinne, in English metre, “made by Mr. William Harris.” When he opened it, he found some automatic script in the end, or, as he calls it, a counterfeit of his own hand. He took it to Dee, who saw in it the work of a wicked spirit trying to shake their confidence. The next evening, both prayed against their enemy, Kelley on his knees before the green chair standing at the chimney. Uriel appeared and said temptation was requisite. “If it were not, how should men know God to be merciful?” He speaks to Kelley: — “Thou, O yongling, but old sinner, why dost thou suffer thy blindness to increase? Why not yield thy Limbs to the service and fulfilling of an eternal veritie? Pluck up thy heart, and follow the way that leadeth to the knowledge of the end.” He explains how the trouble is caused by Belmagel, “the firebrand who hath followed thy soul from the beginning.”

The whole of this spring, the pair of partners had been busily engaged in preparing the various things — the table, the wax seals, the ring and lamin — required for use. Most complicated diagrams of letters and figures had also been dictated to them, and Kelley, whose mathematical training had been slight, was sometimes very exhausted. Once fire shoots out of the crystal into his eyes, and when it is taken back, he can read no more. As Dee remarks one day to a spirit, apologising for his many questions: “For my parte I could finde it in my heart to contynue whole days and nights in this manner of doing, even tyll my body should be ready to synk down for weariness before I could give over, but I feare I have caused weariness to my friends here.” A journey is foretold, but first of all Kelley is to go to the places of hidden treasure, and bring earth, that it may be tested. He may be away ten days. He bought a “pretty dun mare” for the journey, of “good man “Penticost,” for which he paid three pounds ready money in angels. A day or two after, he took boat to London to buy a saddle, bridle, and “boote-hose.”

At supper the night before he started, in a clairvoyant state, he had an extraordinary prophetic sight of the execution of Mary Queen of Scots, a beautiful woman having her head cut off by a tall black man. He also speaks of seeing the sea, covered with many ships. Uriel warns them that foreign Powers are providing ships “against the welfare of England, which shall shortly be put in practice.” It is hardly necessary to remind the reader that the Queen of Scots’ execution and the defeat of the Spanish Armada took place in two following years, 1587, 1588, four years after this vision.

CHAPTER VIII

MADIMI

“Therefore for spirits I am so far from denying their existence that I could easily believe that not only whole countries but particular persons have their tutelary and guardian angels. It is not a new opinion, but an old one of Pythagoras and Plato. There is no heresy in it, and if not manifestly defined in Scripture, yet it is an opinion of good and wholesome use in the cours and actions of a man’s life, and would serve as an hypothesis to solve many doubts whereof common philosophy affordeth no solution.”

Dee's costly apparatus and experiments, his large establishment and generous treatment of his servants and assistants, his entertainment of great folk, were all heavy drains upon his resources. He spent lavish amounts upon books and manuscripts for his library; he contributed as able to some of the Adventurers' funds. He borrowed freely, and he had sometimes to run long bills. Beside the rent of the two livings (about eighty pounds a year) he had no fixed income. The Queen was ever promising him benefices which either never fell vacant, or when they did, had to be bestowed elsewhere. At the time he first fell in with Kelley, he knew not where to turn for money. Almost at this very moment, however, a rich patron appeared unexpectedly on the horizon and changed Dee's outlook for several years.

On March 18, 1583, Mr. North came to Mortlake bringing a "salutation" from Albert or Adelbert Laski, Count Palatine of Siradia, a Polish Prince then about to arrive on a visit to the Queen. He wished to make Dee's acquaintance, to see his library, and discuss magic, of which he had made a study. Laski was one of the most powerful of the Polish nobles reconverted to Catholicism. He had taken a very prominent part in the patriotic movement of a few years before in Poland, when almost every European sovereign had made a bid for the Polish crown. Elizabeth's old suitor, the Duc d'Alencon, had actually worn it a month or two before escaping in the night to his brother of France. Laski was a dashing adventurer of heroic courage, quite unscrupulous as to cost; and although he had favoured the claims of the Emperor of Austria, he had, openly at least, agreed in the people's victorious choice of Stephan Bathory. When that Transylvanian Prince had been elected King in 1576, Laski had taken a prominent part in affairs. He was popular and ambitious, not without aspiration towards the Polish crown himself. Burleigh, in writing of him to Hatton, called him "a personage of great estimation, few in the Empire of the greatest exceed him in sovereignty and power." He is described by contemporary writers as a most learned man, handsome in stature and lineaments, richly clothed, "of very comely and decent apparel," and of graceful behaviour. He wore his beard very long, not clipped close like the English courtiers. He arrived in London by Harwich on May Day, and proceeded to Winchester House, Southwark, where he made his headquarters during his stay. There seemed some doubt about how he was to be received, whether he was actually in favour or in disgrace with King Stephan. Burleigh desired Hatton to get some Essex nobleman — Lord Rich or Lord Darcy — to meet him at Harwich with proper state, "if he is the very Count Palatine of the House of Laski." Hatton replied that he must wait to hear more from Leicester, for in his letter to the Queen the visitor has called her "the refuge of the disconsolate and afflicted," so perhaps he is out of favour after all.

Dee first saw Laski on May 13, at half-past seven in the evening, in the Earl of Leicester's apartments at the Court at Greenwich, when he was introduced by Leicester himself.

Five days after the first meeting, Laski "came to me at Mortlake withonly two men. He cam at afternone and tarried supper, and [till] after sone set." Near a month elapsed before his next visit, when he made a sort of royal progress down the Thames from Oxford to Mortlake.

“June 15 about 5 of the clock, came the Polonian Prince, Lord Albert Lasky, down from Bissham, where he had lodged the night before, being returned from Oxford, whither he had gone of purpose to see the university, where he was very honorably used and entertained. He had in his company Lord Russell, Sir Philip Sydney and other gentlemen: he was rowed by the Queene’s men, he had the barge covered with the Queene’s cloth, the Queene’s trumpeters, etc. He came of purpose to do me honor, for which God be praised!”

The visit was repeated on the 19th, when the distinguished foreigner was hospitably entertained for the night. The Queen was then at Greenwich, but on July 30 she and her court proceeded in great splendour up the river to Sion House. She passed by Dee’s door, and probably paused as usual for a greeting. Next morning Leicester rode over to Mortlake, and put the household in commotion by announcing that Lasky and others would come to dine at Mortlake on the next day but one. These festivities were a great tax on the astrologer’s means, and he confessed sincerely that he was “not able to prepare them a convenient dinner, unless I should sell some of my plate or some of my pewter for it. Whereupon her Majestie sent unto me very royally, within one hour after, forty angels of gold [20 pounds] from Sion, whither her Majestie was now come from Greenwich.” Leicester’s secretary, Mr. Lloyd, was despatched post-haste with the gift, prompted, as Dee adds, “through the Earle his speech to the Queene.” One imagine Leicester’s somewhat peremptory suggestion and the Queen’s impulsive acquiescence. In minor matters she was woman enough to relish being sometimes dictated to. The secretary also brought what was hardly less acceptable to Dee, viz., “Mr. Rawligh his letter unto me of her Majestie’s good disposition unto me.” Raleigh was then in great favour with the Queen.

In the intervals between these visits of the Prince, the spirits had been consulted about Lasky’s prospects. They had at once interested themselves in him, and Madimi, one of the most fascinating of these psychical projections, had vouchsafed some kind of genealogical information, connecting him with the Lacys and Richard, Duke of York. She was the first of the female angels who appeared to Dee, as it seemed in answer to his arguments reproving Trithemius, who had asserted that no good spirits ever took the shape of women. Madimi, who suddenly appeared on May 28, was “like a pretty girle of 7 or 9 years, attired in a gown of Sey, changeable green and red, with a train”; her hair was “rowled up before and hanging down very long behind.” She came into the study and played by herself; “she seemed to go in and out behind my books;...the books seemed to give place sufficiently, one heap with the other, while she passed between them.” She announced that her elder sister would come presently, and corrected Dee’s pronunciation of her name. “My sister is not so short as you make her: Esemeli not Esemeli.” Madimi was a very clever and accomplished little fairy. She learned Greek, Arabic, and Syrian on purpose to be useful to Dee. On June 14 Dee asked the spirit Galvah, or Finis, what she had to say about the “Polandish Lord Albertus Lasky.” The reply came, “Ask me these things to-morrow.” But when the next day came, Kelley, the seer, “spent all that afternoon (almost) in angling, when I was very desirous to have had his company and helping hand in this action.” So at the next sitting Galvah administers to Kelley a sharply pointed reproof: “You, sir, were best to hunt and fish after Verity.” Dee adds that “she spake so to E.K. because he spent

too much time in Fishing and Angling.” Then he asked if Laski should return to Poland in August, if his relation with the Prince should bring him credit, and how should he “use himself therein to God’s liking, his country’s honour, and his own credit.” Galvah replied oracularly: “He shall want no direction in anything he desireth.” “Whom God hath armed, no man can prevaile against.” Again, on June 19, Dee asked if it would be best for the Prince to take the first opportunity of going homeward.

“It shall be answered soon,” replied Galvah.

“May he be present at the action?”

“Those that are of this house are not to be denied the Banquets therein.”

“May I request you to cause some sensible apparition to appear to him, to comfort him and establish his minde more abundantly in the godly intent of God his service?”

“If he follow us, let him be governed by us. But whatsoever is of flesh is not of us.”

“You perceive how he understandeth of the Lord Treasurer his grudge against him. And perhaps some others also are of like malicious nature. What danger may follow hereof, or encombrance?”

“The sum of his life is already appointed; one jot cannot be diminished. But he that is Almighty can augment at his pleasure. Let him rejoice in poverty, be sorry for his enemies, and do the works of justice.”

Then the “cloud of invisibility” — a drop scene between the acts — came over Galvah, and she disappeared.

Next day Laski was present at the action. An angel named Jubanladec appeared, and said he was appointed the Prince’s “good governour or Angel,” “the keeper and defender of this man present.” He bade him “look to the steps of his youth, measure the length of his body, live better and see himself inwardly.” Excellent advice, which might have been continued had not a man named Tanfield, attached to the Prince, arrived suddenly at Mortlake, with a message from the Court, and, contrary to all good manners, burst into the study. Laski had gone out another way through the oratory to meet him. The angel was annoyed, and prophesied rather unkindly that in five months the rash interrupter should be devoured by fishes of the sea. Was he drowned then or ever? Then the thread was resumed.

“What do ye seek after? Do ye hunt after the swiftness of the winds? Or are you imagining a form unto the coulds? Or go ye forth to hear the braying of an Asse, which passeth away with the swiftness of the air? Seek for true wisdom, for it beholdeth the highest and appeareth unto the lowest.”

Then Laski’s guardian angel becomes extremely practical and interesting: “Cecil hateth him [Laski] to the heart, and desireth he were gone hence. Many others do privily sting at him.”

Dee endeavours to keep him to the point.

“For his return, what is your advice? Perhaps he wanteth necessary provision, and money.”

“He shall be helpen, perhaps miraculously. Let him go so soon as he can conveniently.”

“I say again, perhaps he wanteth money; but the Treasures of the Lord are not sent to them whom he favoureth.”

“His help shall be strange. The Queen loveth him faithfully and hath fallen out with Cecil about him. Leicester flattereth him. His doings are looked into narrowly. But I alwayes inwardly direct him. I will minister such comfort to him as shall be necessary in the midst of all his doings.”

Mingled with these sayings were some propheticall utterances about Laski overcoming the Saracens and Paynims with a bloody cross shown in his hand, and about Dee’s passing to his country and aiding him to establish his kingdom. Then the familiar spirit sank through the table like a spark of fire, “seeming to make haste to his charge, I mean the Lord Laski.”

On Wednesday, the 26th, Laski again being present, the good angel Il appeared with a besom in his hand. The Prince’s pedigree was then barely begun, but on June 29 the clever little Madimi promised to finish the book exactly as Dee would have written it. It was no matter where the book was left, she told him, locked up or lying about. “Your locks are no hindrance to us.”

“You have eased my heart of a thousand pound weight,” ejaculated Dee, fervently. “Now I shall have leisure to follow my sute, and to do all Mr. Gilbert’s businesse.”

Madimi was much too learned a scholar for Kelley, who on this same day grew very angry with her for speaking to him in Greek, of which he knew nothing, not even the alphabet. As an alternative she gave him Arabic. “Unless you speak some language which I understand, I will expresse no more of this Gibberish,” he said, rudely.

Poor Dee! His skryer was a constant anxiety to him. Like every medium since known, he would sometimes apply himself and sometimes not, was often honest and yet frequently a cheat.

Dee writes: —

“My heart did throb oftentimes this day, and I thought E.K. did intend to absent himself from me, and now upon this warning, I was confirmed, and more assured that it was so. Whereupon seeing him make such haste to ride to Islington, I asked him why he so hasted to ride thither. And I said if it were to ride to Mr. harry Lee, I would go thither also, to be acquainted with him; seeing now I had so good leisure, being eased of the book writing [through Madimi’s good offices]. Then he said that one told him the other day that the Duke did but flatter him, and told him other things, both against the Duke and me. I answered for the Duke and myself, and also said that if the forty pound annuity which Mr. Lee did offer him was the chief cause of his mind feeling that way (contrary to some of his former promises to me), that then I would assure him of fifty pounds yearly, and would do my best by following of my sute [with the Queen] to bring it to passe as soon as possibly I could, and thereupon did make him promise upon the Bible. Then E.K. again, upon the same Bible, did swear unto me constant friendship and never to

forsake me: And moreover said that unless this had so faln out, he would have gone beyond the Seas, taking ship at Newcastle, within eight days next. And so we did plight our faith to one another, taking each other by the hands upon these points of brotherly and friendly fidelity during life, which Covenant I beseech God to turn to his honour, glorie and service, and the comfort of our brethren (his children) here on earth.”

This reconciliation was not for long, in spite of the promised salary, and soon another scene occurred. On June 5 Dee write that from nine in the morning Kelley was “in a marvellous great disquietness of mind, fury and rage,” because his brother Thomas Kelley brought him word, first, that a commission was out to attach and apprehend him as a felon for coining money; second, that his wife, whom he had left at Mistress Freeman’s house at Blockley, having heard from Mr. Hussey that he was a cosener, had gone home to her mother, Mrs. Cooper, at Chipping Norton. Dee is “touched with a great pang of compassion,” grieved that any Christian should use such speeches and be of so revenging a mind, even more than he is distressed that his own credit shall be endangered for embracing the company of such a disorderly person, especially if he be arreseted at Mortlake, “which will be no small grief and disgrace.” But he so generously resolves to stand by his friend. Kelley, it seems, had been met coming from Islington with his scroll, book and powder, and had been threatened to “be pulled in pieces” if he brought them to Dee. A drawing in the margin of the MS. shows the book to have had a cross on the cover, one clasp, and deep metal bands across its two sides. Presumably these were some of the treasures reported to have been found at Glastonbury.

A day or two after, June 18, Kelley again simulated great fear and distress at seeing evil spirits. He protested he would skry no more, and was so excited that he brought on himself the wise rebuke from Galvah: “He that is angry cannot see well.” He seems to have wished to show Laski some reprobate spirits in Dee’s study, but the older man wisely kept the crystal and teh “table of communion” under his own control. It was, perhaps, partly cunning that made Kelley, although he really possessed extraordinary mediumistic powers, so sceptical. “I am Thomas Didymus,” he says to the spirits. “How can ye persuade me ye are no deluders?”

Three days after this, Dee was writing letters to Adrian Gilbert, in Devonshire, when Madimi suddenly appeared to Kelley, who was seated in the green chair.

Dee said, “How is the mind of Mr. Secretary toward me? Methinketh it is alienated marvellously.”

Dee had long been on neighbourly terms with Sir Francis and Lady Walsingham. If any cause existed for supposing both Burleigh’s and Walsingham’s attitude toward him was changed, it may have been that the Lord Treasurer, the great finanacier of the time, resented his constant applications for a salary from the exchequer, while Walsingham, with his intimate knowledge of foreign affairs, perhaps misdoubted this intimacy between Dee and the scheming Polish Prince. Curiously enough, it was through this very intimacy with Laski that both Burleigh and Walsingham came later to regard the alchemists in the light of a valuable national asset.

Madimi replied —

"The Lord Treasurer and he are joyned together, and they hate thee. I heard them when they both said, thou wouldst go mad shortly. Whatever they can do against thee, assure thyself of. They will shortly lay a bait for thee, but eschew them."

D. — "Lord have mercy upon me, what bait, I beseech you, and by whom?"

M. — "They have determined to search thy house, but they stay untill the Duke be gone."

D. — "What would they search it for?"

M. — "They hate the Duke, both, unto death."

Then with a sharp caution to Kelley to deal uprightly with Dee, and a protestation from him of his "faithful mind" to his master, she goes on to reveal the suspicions attached to Laski: —

M. — "Look unto the kind of people about the Duke in the manner of their diligence."

D. — "What mean you by that? His own people? Or who?"

M. — "The espies."

D. — "Which be those?"

M. — "All. There is not one true."

D. — "You mean the Englishmen."

M. — "You are very grosse if you understand not my sayings."

D. — "Lord! what is thy counsel to prevent all?"

M. — "The speech is general. The wicked shall not prevail."

D. — "But will they enter to search my house or no?"

M. — "Immediately after the Duke his going, they will."

D. — "To what intent? What do they hope to find?"

M. — "They suspect the Duke is inwardly a traitor."

Dee replies with sincerity, "They can by no means charge me, no not so much as with a traitorous thought."

M. — "Though thy thoughts be good, they cannot comprehend the doings of the wicked. In summe, they hate thee. Trust them not. They shall go about shortly to offer thee friendship. But be thou a worm in a heap of straw."

D. — "I pray you expound that parable."

M. — "A heap of straw being never so great, is no weight upon a worm. Notwithstanding every straw hindereth the worm's passage. See them and be not seen of them; dost thou understand it?"

It now seemed certain that Dee and his skryer were to embark their fortunes with Laski. Dee begs for particular instructions when they had better take ship, what shall be done with all the furniture prepared and standing in the chamber of practice? Is it best for the Pole to resort hither oft, or to stay quiet at his house in London?

Madimi retorts —

"Thou hast no faith. He is your friend greatly and intendeth to do much for you. He is prepared to do thee good, and thou art prepared to do him service. Those

who are not faithful shall die a most miserable death, and shall drink of sleep everlasting.”

A couple of days after, on July 4, Dee returning from Court, found Kelley making preparation to go away for five days, having fixed to meet some companions in Mortlake, others in Brentford. Doubtless he found all this mystical and angelic society somewhat of a bore, and was yearning for an outburst a little more to his taste. Dee, who had seen Laski in London, knew that he intended to come down to Mortlake within a day or two, “who also,” he says, “delighted in E.K. his company.” So he wrote a short note in very polite Latin to the “Nobilissimi Princeps,” bidding him put off his visit, as “our Edward” was about to take a journey, and would not be home for five days, or so he says: “Quid sit ipsa veritas.”

He showed Kelley the letter. Kelley took great offence at these words, suspecting some secret understanding between the two against him. Dee gently referred to Kelley’s own words that his return might be within, or at the end of, five days. Kelley, angry and suspicious, seized the letter and tore it up.

Soon after, Kelley beholds “a spiritual creature” by his right shoulder, telling him to go clean away, for if he stays there he will be hanged. If he goes with the Prince, he will cut off his head, and (to Dee)

“You mean not to keep promise with me. And therefore if I might have a thousand pound to tarry, yea, a kingdom, I cannot. Therefore I release you of your promise of 50 pounds yearly stipend to me, and you need not doubt but God will defend you and prosper you, and can of the very stones raise up children unto Abraham. And again, I cannot abide my wife, I love her not, nay, I abhor her, and here in the house I am misliked because I favour her no better.”

Dee endeavoured to calm this turbulent young man, spoke of his confidence in him in his dealings with their spiritual friends, but such doings and sayings as these, he points out, are not meet and fitting.

Kelley flung out of the room in a passion, mounted his mare, and rode off furiously towards Brentford, clattering out of the house with such commotion that Jane came running up to her husband’s study to know what was the matter. It was about seven o’clock in the evening.

“‘Jane,’ I said, ‘this man is marvellously out of quiet against his wife, for her friends their bitter reports against him behind his back, and her silence thereat, etc. He is gone,’ said I, ‘but I beseech the Almighty God to guide him and defend him from danger and shame. I doubt not but God will be merciful to him, and bring him at length to such order as he shall be a faithful servant unto God.’”

Then a remarkable thing happened. By ten o’clock that night (the long midsummer twilight barely over), the prodigal returned, and mounted softly up the study stairs, “unbooted, for he was come in a boat from Brentford. When I saw him, I was very glad inwardly. But I remained writing of those records as I had yet to write, of last Tuesday’s action.

“‘I have lent my mare,’ he said, ‘and so am returned.’

“‘It is well done,’ said I.

"Thereupon he sate down in the chair by my table where he was wont to sit. He took up in his hand the books which I had brought from London, of the Lord Laskie, written to him in his commendations." Evidently books sent to Kelley by way of compliment.

Almost immediately, Madimi, who seemed to have a special wardship over books, appeared. She patted the parchment cover of one and would have taken it out of Kelley's hand. Dee heard the strokes, he says. He took a paper and, greeting his visitor, noted the conversation.

D. — "Mistresse Madimi, you are welcome in God for good, as I hope. What is the cause of your coming now?"

M. — "To see how you do."

D. — I know you see me often, but I see you onely by faith and imagination."

M. (who is always more personal than the other spirits) —

"That sight is perfecter than his," pointing to Kelley.

D. (with emotion) — "O Madimi, shall I have any more of these grievous pangs?"

M. (oracularly) — "Curst wives and great Devils are sore companions."

D. — "In respect of the Lord Treasurer, Mr. Secretary and Mr. Rawly, I pray you, what worldly comfort is there to be looked for? Besides that I do principally put my trust in God."

M. — "Madder will staine, wicked men will offend, and are easie to be offended."

D. — "And being offended, will do wickedly, to the persecution of them that mean simply."

M. — "Or else they were not to be called wicked."

D. — "As concerning Alb. Laski, his pedigree, you said your sister would tell all."

M. — "I told you more than all your Dog painters and Cat painters can do."

Kelley interrupts Dee's questions about Laski's pedigree and parentage, impatiently, with

K. — "Will you, Madimi, lend me a hundred pounds for a fortnight?"

M. — "I have swept all my money out of doors."

D. — As for money, we shall have that which is necessary when God seeth time."

Then Madimi, becoming serious, addresses to Kelley a beautiful exposition of the unity of all things: "Love is the spirit of God uniting and knitting things together in a laudable proportion." She turns sharply to him, with

"What dost thou hunt after? Speak, man, what doest thou hunt after?...Thou lovest not God. Lo, behold, thou breakest his commandments: thy bragging words are confounded...If thou hast none of these [faith, hope, love] thou hast hate. Dost thou love Silver and Gold? The one is a Thief; the other is a Murderer. Wilt thou seek honour? So did Cain. But thou hast a just God that

loveth thee, just and virtuous men that delight in thee. Therefore be thou virtuous.”

Next follows a remarkable scene. Madimi summons Barma and his fourteen evil companions, who have assumed possession of Kelley, with the words “Venite Tenebrae fugite spirito meo,” and orders them to return to the Prince of Darkness: “Depart unto the last cry. Go you thither....The hand of the Lord is like a strong oak. When it falleth it cutteth in sunder many bushes. The light of His eyes shall expel darkness.”

Kelley sees the whole crew sink down through the floor of the chamber: “A thing like a wind came and pluckt them by the feet away.” He professes his deliverance: “Methinketh I am lighter than I was, and I seem to be empty and to be returned from a great amazing. For this fortnight, I do not well remember what I have done or said.”

“Thou art eased of a great burden. Love God. Love thy friends. Love thy wife.”

And with this parting injunction, and a psalm of thanksgiving from Dee, the story of Kelley’s wild attack of temper, or as it was regarded in the sixteenth century, his possession, for the present ends. Nor is there any record of further dealings with spirits for more than two months.

CHAPTER IX

A FOREIGN JOURNEY

“Friends are everywhere to him that behave himself well, and a prophet is not esteemed in his country.”

— Robert Burton

There is a hiatus in the *Liber Mysteriorum* after this tempestuous scene with Kelley. We can, however, slightly fill it up from Dee’s other diary. It seems as if the skryer went away, leaving behind at Mortlake the poor slighted wife, who must have joined him there, for Dee notes on July 7 payment of wages to a servant he dismissed, “in the presens of Goodman Hilton and Mistress Kelley in my study.”

On the 30th, as we have seen, the Queen came in grand procession, heralded with music and song, down the river to Sion. The next day, Leicester’s secretary brought letters and gifts. On August 1, John Halton, a London minister, called; also a Worcestershire man, “a wicked spy came to my howse, whom I used as an honest man, and found nothing wrong, as I thought. He was sent to E.K.”

This entry is characteristic of the philosopher who, in spite of all his learning, was, as regards men, of so confiding and innocent a nature that he ended by being infinitely more deceived by another Worcestershire man — Kelley, for whom he entertained to the last a most faithful friendship.

Then we come on a very entertaining remark in the diary: “Aug. 18. A great tempest of wynde at midnight. Maxima era E. K. cum uxore ejus.” Kelley had

returned, and his wife was treated to another of his outbreaks, by comparison with which the gale outside was slight.

This is the last entry in the diary before Dee's departure for Poland with Laski.

The Prince proposed to take the whole party from Mortlake back with him to the Continent. He was reputed to be deeply in debt, and seems to have entertained wild hopes that they, aided by the spirits, would provide him with gold, and secure to him the crown of Poland. Kelley foresaw an easy and luxurious life, plenty of change and variety suited to his restless, impetuous nature. He hadn't as yet been out of England. There were very obvious reasons that he should quit the country now if he would escape a prison. Dee had been a great traveller, as we know, and these were not the attractions to a man of his years. He went in obedience to a supposed call, in the hope of furthering his own knowledge and the Prince's good. The notion of providing for himself and his family lay doubtless at the back of his mind also, but he had all a genius's disregard for thrift and economy, and though very precise and practical about small details, as his diary proves, his mind refused to contemplate these larger considerations of ways and means.

He disposed of the house at Mortlake to his brother-in-law, Nicholas Fromond, but in such a loose and casual way that before his return he found himself compelled to make a new agreement with him. He took no steps about appointing a receiver of the rents of his two livings, and when he came back the whole six years were owing, nor did he ever obtain the money. He says he intended at the most to be absent one year and eight months. It was more than six years before he again set foot in England.

So, unprepared, he left Mortlake about three in the afternoon of Saturday, September 21, 1583. He met the Prince by appointment on the river, and travelled up after dark to London. A certain secrecy was observed about the journey. Laski, as we have seen, was under some suspicion of Walsingham and Burleigh, whose business it had become to learn news from every Court in Europe. He was suspected of plots against the King of Poland.

In the dead of night, Dee and Laski went by wherries to Greenwich, "to my friend Goodman Fern, the Potter, his house, where we refreshed ourselves." Probably a man whom Dee had employed to make retorts and other vessels for his chemical work. Perhaps they met there the rest of the party, but on the whole it seems more probable that all started together from Mortlake. The exit of such a company from the riverside house must have been quite an event. At Gravesend, a "great Tylte-boat" rowed up to Fern's house, on the quay, and took them out to the two vessels arranged to convey them abroad. These ships, which Dee had hired, were lying seven or eight miles down stream — a Danish double fly-boat, in which Laski, Dee, Kelley, Mrs. Dee and Mrs. Kelley and the three children, Arthur, Katherine and Rowland Dee, embarked at sunrise on Sunday morning; and a boyer, "a pretty ship," which conveyed the Prince's men, some servants of Dee, and a couple of horses. They sailed at once, but the wind coming from N.W., they anchored on the Spits. The fly-boat dragged her anchor, and the wind suddenly changing to N.E., they were in danger of grounding. However, next morning they made Queenborough Haven, and landed in small fishing boats. On the landing, the boat in which the party were seated was nearly upset. Water came in up to their knees, an oar was lost, and they were in considerable peril, but Kelley seems to have risen to the occasion by baling water out of the bottom with a great gauntlet. Dee

thinks he saved their lives. Dee, poor man, was dropped from the captain's back on landing into ooze and mud, so that he was "foule arrayed" on reaching "Queenborough town, up the crooked creek." "God be praised for ever that all that danger was ended with so small grief or hurt," is his cheerful comment.

After three nights ashore, they again embarked, and at daybreak on the 27th sailed out into the Channel. On the 29th they landed at Brill. Here Laski's guardian angel, Jubanladec, seems to have granted them an interview. They only paused for two or three days, and hurried on, travelling forward each day by the sluggish Dutch canals, having exchanged their vessel for a hoy of Amsterdam at Rotterdam. They passed through Tergowd and Haarlem to Amsterdam; here they stayed three days, and Dee despatched Edmond Hilton with his heavy goods by sea to Dantzic. By Enkhuisen they sailed up the Zuyder Zee to Harlingen, then took the canals again in little "scuts," or small boats, to Leewarden, thence to Dokkum, in West Friesland, in some still smaller craft. On the Sunday spent at Dokkum, Gabriel appeared in the crystal, and delivered to them the most searching and exalted code of ideals for the conduct of their lives. Everything was laid bare before his relentless and unerring eyes. They were bidden to live in brotherly charity, the imperfections of each to be by the other "perfectly shadowed in charity."

"Bear your own infirmities, and so the infirmities of others, with quiet and hidden minde...The Cross of Christ is the comparison in mildness over thy brethren...He that forsaketh the world for the love of God in Christ shall have his reward, but he that forsaketh himself shall be crowned with a diadem of glory. Bridle the flesh. Riotousness is the sleep of death and the slumber to destruction. Feed the soul, but bridle the flesh, for it is insolent. Look to your servants. Make them clean. Let your friendship be for the service of God. All friendship else is vain and of no account. Persevere to the end. Many men begin, but few end. He that leaveth off is a damned soul."

From Dokkum the travellers put out to sea again, beyond the islands, and sailed up the Western Ems to Embden. They arrived after dusk, and found the city gates shut, so they lay all night on shipboard. Next morning, the 18th October, Laski took up his quarters at "The White Swan," on the quay, for he was to remain there to see the Landgrave, and obtain money. The others "lay at 'The Three Golden Keys,' by the English House," and left early next morning by a small boat to sail up the river Ems to Leer, and thence by a little tributary to Stickhuysen and Apen — "a very simple village," and so on to Oldenburg. A night there, and then on by Delmenhorst to Bremen, where they lodged at "an old widow, her house, at the signe of the Crown."

Here Il, the jaunty spirit who was like a Vice in a morality play, again appeared to them, clad in a white satin jerkin, ragged below the girdle. The curtain lifted, and his first words were theatrically light.

"Room for a player! Jesus! who would have thought I should have met you here?"

D. (solemnly). — "By the mercies of God we are here. And by your will and propriety and the power of God, you are here."

Il. "Tush, doubt not of me, for I am Il."

Kelley (with rebuke). — "My thinketh that the gravity of this action requireth a more grave gesture, and more grave speeches."

Il. — "If I must bear with thee for speaking foolishly, which art but flesh and speakest of thy own wisdom, how much more oughtest thou to be contented with my gesture, which is appointed of Him which regardeth not the outward form, but the fulfilling of His will and the keeping of His commandments, etc., etc."

Kelley. — "I do not understand your words. I do only repeat your sayings."

Il. — "It is the part of a servant to do his duty, of him that watcheth to look that he seeth...Do that which is appointed, for he that doeth more is not a true servant."

Il turns from Kelley to Dee. "Sir, here is money, but I have it very hardly. Bear with me, for I can help thee with no more. Come on, Andras; where are you, Andras?" he calls.

Andras, in a bare and shabby gown, "like a London 'prentice," appears, but empty-handed.

Il. — "This is one of those that forgetteth his businesse so soon as it is told him."

Andras. — "Sir, I went half-way."

Il. — "And how then? Speak on. Speak on."

Andras. — "Then, being somewhat weary, I stayed, the rather because I met my friends. The third day, I came thither, but I found them not at home. His family told me he had gone forth."

Il. — "And you returned a coxcomb. Well, thus it is. I placed thee above my servants, and did what I could to promote thee. But I am rewarded with loytring and have brought up an idle person. Go thy way, the officer shall deliver thee to prison, and there thou shalt be rewarded. For such as do that they are commanded deserve freedom; but unto those that loytre and are idle, vengeance and hunger belongeth."

Then Dee questions Il about Laski, and whether he is having any success in his efforts to obtain money, about Laski's brother-in-law, Vincent Seve, whose errand in England is not yet completed, and whether they shall all arrive safe at Cracow, or the place appointed.

Kelley has a sight of Master Vincent in a black satin doublet, "cut with cross cuts," a ruff and a long cloak, edged with black or blue. Then Il goes off into a mystical rhapsody, at the end of which he suddenly falls "all in pieces as small as ashes."

Next day, Kelley sees Master Vincent again, walking down by Charing Cross, accompanied by "a tall man with a cutberd, a sword and skie-coloured cloack." He passes on towards Westminster and overtakes a gentleman on horseback with five followers in short cape-cloaks and long moustaches. The rider is a lean-visaged man in a short cloak and with a gold rapier. His horse wears a velvet foot cloth. (It sounds like a vision of Raleigh.)

They are merry. Vincent laughs heartily and shows two broad front teeth. He has a little stick in his crooked fingers. The scar on his left hand is plainly seen. He has very high straight close boots. They arrive at Westminster Church (the Abbey). Many people are coming out. A number of boats lie in the river, and in the gardens at Whitehall a man is grafting fruit trees. The lean-visaged man on horseback

alights, and goes down towards, and up, the steps of Westminster Hall, Vincent with him. His companion walks outside and accosts a waterman. The waterman asks if that is the Polish bishop? The servant wants to know what business it is of his. A messenger comes down the steps of the Hall and says to Vincent's man that his master shall be despatched to-morrow. The servant saith he is glad of it. "Then all that shew is vanished away."

There are one or two allusions here to an emissary from Denmark who has brought a bag of amber. Il also says he has much business in Denmark. Frederick, the King of Denmark, was in frequent correspondence with Queen Elizabeth at this time.

At Bremen, where they stayed a week, Dee says that Kelley, when skrying by himself, was given a kind of rambling prophetic verse of thirty-two lines, which he prints, foretelling the downfall of England, Spain, France and Poland. In fact, a general debacle of nations. It is very bad prophecy and still worse poetry, but evidently inspired by the highly diplomatic foreign relations of Elizabeth and her two ministers.

On leaving Bremen, the party travelled by Osterholz to Harburg, on the left bank of the Elbe. They crossed the river and went on by coach to Hamburg. Laski had then rejoined them, but stayed behind in Hamburg, at "the English house," probably the consul's. Dee and the rest reached Lubeck on November 7.

CHAPTER X

PROMISES AND VISIONS

"Search while thou wilt; and let thy reason go
To ransom truth, e'en to th'abyss below;
Rally the scattered causes; and that line
Which nature twists be able to untwine.
It is thy Maker's will; for unto none
But unto reason can He e'er be known."

— Sir Thomas Browne

The dealings which Kelley had in Lubeck with the spirits seem to throw a light on all his relations with Dee. Kelley is gaining confidence; he sees that he is already able to dupe his employer considerably. He has only to manipulate the conversations a little to show up often his so-called sincerity. He can pretend he is aghast at Il's levity, and he seems to have been cunning enough when the spirits very often blamed him.

Buthis dreams of advancement in wealth and fame were no nearer accomplishment. He had seen through Dee's ambition. It was very different from his own, but he thought he could use it to his own advantage. Dee was now flattered without stint.

So at the sitting in November 15 he sees eleven noblemen in rich sables. One, wearing a regal cap trimmed with sable, is seated on a chair beset with precious stones. "He is a goodlier man than the Lord A.L." He addresses Dee with glittering promises. He is the King or the Emperor, and is represented in the margin of the diary by a crown. He says to Dee: —

“Pluck up thy heart and be merry, pine not thy Soul away with inward groanings, for I will open unto thee the secrets of Nature and the riches of the world, and withal give thee such direction that shall deliver thee from many infirmities both of body and mind, ease thee of they tedious labours and settle thee where thou shalt have comfort.

“Thanks be given unto the Highest now and ever.

“Why doest thou [hesitate] within thy thought? Hast thou not need of comfort?”

“Yes, God knows, for I am half confounded.”

“Then first determine within thyself to rest thee for this winter. Secondly, open thy mind to desire such things as may advance thy credit and enrich thy family, reap unto thee many friends and lift thee up to honour. For I will stir up the mindes of learned men, the profoundest in the world, that they shall visit thee. And I will disclose unto you such things as shall be wonderful and of exceeding profit. Moreover I will put to my hands and help your proceedings, that the world may talk of your wisdom hereafter. Therefore wander not farther into unknown places: contagious, the very seats of death for thee and thy children and such as are thy friends. If thou enquire of me where and how, I answer, everywhere, or how thou wilt. Thou shalt forthwith become rich, and thou shalt be able to enrich kings and help such as are needy. Wast thou not born to use the commodity of this world? were not all things made for man’s use?”

Here are the old dreams of the philosopher’s stone, the elixir of life, the transmutation of metals and all the works of alchemy, for which both these travellers were adventuring their lives in a foreign land. Dee does not seem exactly dazzled by these allurements. He only begs leave to ask questions, and seeks to keep the speaker to the point. “Are they to stay there and not to go on with Laski? Where are they to spend the winter?”

“Where you will,” comes the answer. “Are you so unwise as to go with him now? Let him go before, and provide for himself and the better for you. In the Summer, when it is more fair, you can follow. The weather now will be hard and the travel unfit for children. Heap not up thy wife’s sorrow.”

“I desire to live in quiet that my spirit may the better attend to the service of God.”

“Well, you are contented?”

Dee asks again, are they to part from Laski? Will it not be prejudicial to their arrangement, they having entered into a kind of covenant with him? “Are you not content?” the visitor repeats.

Then he did impart some remarkable information to Dee, in which there was certainly a grain of telepathically conveyed truth.

“Your brother is clapped up in prison. How like you that? Your house-keeper I mean.”

This evidently refers to Nicholas Fromond.

“They examine him. They say that thou hast hid divers secret things. As for thy books, thou mayst go look at them at leisure. It may be that thy house may be burnt for a remembrance of thee, too. Well, if they do, so it is. I have given thee my counsel, and desired to do thee good. The choice is thine.”

There is no evidence that Fromond was imprisoned, but he was a poor protector of his brother-in-law's valuable effects. He was powerless against a mob who broke into Dee's house not long after his departure from Mortlake, made havoc of his priceless books and instruments, and wrought irreparable damage. It was not nearly two months since Dee had left Mortlake, and, moving from place to place, it was unlikely that he had heard any news from thence. No date has ever been assigned to this action of the mob. It is quite conceivable that it actually took place on this day, November 15, and that by Kelley's clairvoyant or telepathic power the news was communicated across the sea and continent to Dee.

The poor astrologer was torn with doubts and misgivings. He fell upon his knees, uttering a piercing supplication to the “Author of all truth and direction of such as put their trust in him.”

“I most humbly beseech thee consider these promises thus to me propounded. If they be true and from thee, confirm them. If they be illusions and not from thee, disprove them. For hardly in my judgment they do or can agree with our former precepts and order taken by thee.”

And again, in an agony:

“O Lord, I doubt of these promises of ease, wealth, and honour: I suspect the whole apparition of the eleven to be an illusion. O confirm my judgment or disprove it.”

So he seeks for a revelation of guidance, writes letters to Laski, and waits. Soon he perceives these temptations to have come from “a very foolish devil.” He decides that they will continue to throw in their lot with Laski, who rejoined them in Lubeck. He left again to visit the Duke of Mecklenburg, they meanwhile going by Wismar to Rostock and Stettin, which place they reached at ten o'clock on Christmas morning. Laski joined them in a fortnight. They passed on by Stayard to Posen, where Dee adds an antiquarian note that the cathedral church was founded in 1025, and that the tomb of Wenceslaus, the Christian king, is of one huge stone. It was here that Dee began to enter curious notes about Kelley in the *Liber Peregrinationis*, written in Greek characters, but the words are Latin words, or more frequently English. The supposition is that Kelley was unacquainted even with the Greek alphabet. Dee kept his other foreign diary, written in an *Ephemerides Coelestium* (printed in Venice, 1582), secret from his partner, for Kelley had obtained possession of an earlier one kept in England and had written in it unfavourable comments, as well as erased things, about himself. Dee had the last word, and has added above Kelley's “shameful lye,” “This is Mr. Talbot's, his own writing in my booke, very unduely as he came by it.” The various diaries sound, perhaps, confusing to the reader, but are really quite simple. By the private diary is meant the scraps in the Bodleian Almanacs, edited by Halliwell for the Camden

Society, in which he seldom alludes to psychic affairs. The Book of Mysteries is the diary in which he relates all the history of the crystal gazing. The printed version (True Relation) begins with Laski's visit to Mortlake on May 28, 1583.

Winter had now set in with unwonted rigour, and one is amazed at the celerity with which this great caravanserai of people and goods pushed on from place to place. From Stettin to Posen, for instance, is more than 200 miles, and it was accomplished within four days and apparently with only one stop. Then southwards into the watery district between the Oder and the Warthe, where the country was so icebound that they had to employ five-and-twenty men to cut the ice for their coaches for a distance as long as two English miles. On February 3 they reached Lask, on the Prince's own property, and at last were comfortably housed in the Provost's "fair house by the Church." Here Dee was ill with ague, but the table was set up, and a new spirit called Nalvage appeared in the globe. Nalvage's "pysiognomy was like the picture of King Edward the Sixth. His hair hangeth down a quarter of the length of the cap, somewhat curling, yellow." Dee, of course, had seen the young King when he presented his books, so this is a first-hand reminiscence. Nalvage stood upon a round table of mother-of-pearl, and revealed to them many cabalistic mysteries, tables of letters and names. There was a terrible vision of Mrs. Dee lying dead, with her face all battered in, and of the maid Mary being pulled out of a pool of water half drowned. But it seems to portend no more than did another piece of ill news conveyed at the same time: "Sir Harry Sidney died upon Wednesday last. A privy enemy of yours." Dee says, "I ever took him for one of my chief friends," and adds, with unconscious humour:

"Note. At Prague, Aug. 24, I understood that Sir H. Sidney was not dead in February nor March, no, not in May last. Therefore this must be considered. Doctor Hagek, his son, told me."

This note makes us realise for a moment how slowly news travelled from England to the Continent in this year of grace 1584.

The informant, Madimi, "a little wench in white," told Dee that she had been in England at his house, and all there were well. The Queen said she was sorry she had lost her philosopher. But the Lord Treasurer answered, "He will come home shortly a begging to you." "Truly," adds Madimi, "none can turn the Queen's heart from you." Then, recurring to Mortlake, she says: "I could not come into your study. The Queen hath caused it to be sealed." This no doubt after the breaking in of the rioters. Dee was counselled to go and live at Cracow. He would like to be led step by step, and begs to know what house "is in God's determination for me and mine." Madimi answers, "As wise as I am, I cannot yet tell what to say." Dee demurs to the expense, and reproaches her for not telling them sooner. Needless cost would have been saved, and he does not know if Laski will have enough money for yet another move. He had rather Kesmark had been redeemed before Laski went to Cracow. Perhaps then his credit with the people would be greater.

Laski had heavily mortgaged his estates in Poland; he was in debt, and he had apparently raised a loan on his Kesmark property for a large sum of money. The bond was to expire on St. George's Day, April 23 next, and without the Emperor's help Dee did not see how it could be met. Kelley recurs to the Danish treasure he had found in England, hidden in ten places, which they would fain have

transported to Poland now, very speedily, for Laski's use. Dee is anxious to know from Madimi whether his rents are being duly received in England by his deputy or not, "whether Her Majesty or the Council do intend to send for me again or no." They ask instructions from Gabriel about Kelley's red powder, and how they shall use it. Dee seeks for information about the Prince's wife, whom they have not yet seen, but they doubt she is not their sound friend. He begs for medicine for his ague. And again, shall he take the pedestal, being made in Lask for the holy table, on to Cracow when they go, "rather than make a new one there, both to save time and to have our doings the more secret"? This pedestal was for the crystal to rest in upon the table. Three iron hasps and padlocks were also made at Lask for the table. If any answer to these questions was vouchsafed by the spirits, it was in the usual enigmas.

Part of Dee's baggage, a chest left at Toon on their way out, not having arrived, they did not immediately obey the injunction to move on to Cracow, but after about five weeks in Lask, they again journeyed forward.

CHAPTER XI

CRACOW

"Sir, to a wise man all the world's his soil:
It is not Italy, nor France, nor Europe
That must bound me if my fates call me forth.
Yet, I protest it is no salt desire
Of seeing countries, shifting a religion;
Nor any disaffection to the State
Where I was bred, and unto which I owe
My dearest plots, hath brought me out: much less
That idle, antique, stale, grey-headed project
Of knowing men's minds and manners."

— Jonson, Volpone, or The Fox

At the close of the sixteenth century, Cracow was at the height of its fame and prosperity. It was still the capital of Poland, and the residence of her kings, as well as the seat of the university founded two hundred years before by Casimir the Great. The Gothic cathedral erected under the same king, the burial place of Polish monarchs, was already adorned with sculptures and bronzes, the work of Renaissance artists from Florence and Siena. The visitor of today will find himself surrounded by churches and other buildings dating from the twelfth, fourteenth, and sixteenth centuries. Amid the ramparts of the Austrian fortress can still be traced here and there the older fortifications.

The city lies in the centre of a vast plain, almost at the confluence of two rivers, the Vistula and Rudowa. Across this plain from the north-west the travellers came, and reached Cracow in the afternoon of March 13, 1584.

"We were lodged in the suburbs by the church, where we remained a seven night, and then we (I and my wife) removed to the house in St. Stephen Street, which I had hired for a year for 80 gylvers of 30 groschen. And Master Edward Kelley came to us on Friday in the Easter week by the new Gregorian Kalendar,

being the 27 day of March by the old Kalendar, but the sixth day of April by the new Kalendar, Easter Day being the first day of April in Poland, by the new Gregorian institution.”

From the time of arriving in Poland Dee is careful to enter the dates in both old and new styles. The New Style was then extremely new, it having been introduced by Pope Gregory XIII. only a couple of years before, and universally adopted by all Roman Catholic countries. England, in all the fervour of her recently established Protestantism, would have none of it, but still desired not to lag behind in needful reforms. Dee, as already stated, had been commissioned before he left England to make calculations by which the calendar could be suitably adopted in this country. The Roman Church had assumed the chronology adopted by the Council of Nice to be strictly correct. But Dee desired to ascertain the actual position of the earth in relation to the sun at the birth of Christ, as a basis on which to rectify the calendar. The result of his calculations would have omitted eleven instead of ten days.

Dee's book (which was never printed, but remains in manuscript among the Ashmolean MSS.) was entitled “A Playne discourse and humble advise for our gracious Queene Elizabeth, her most Excellent Majestie, to peruse and consider as concerning the needful Reformation of the Vulgar Kalendar for the civile yeres and daies accompting or verifying, according to the tyme truely spent.” It was finished and delivered to Burleigh on February 26, 1583. To him it was inscribed with these rather playful verses: —

“Το οτι, and Το διοτι
I shew the thing and reason why,
At large, in briefe, in middle wise
I humbly give a playne advise;
For want of tyme, the tyme untrew
If I have must, command anew
Your honour may, so shall you see
That love of truth doth govern me.”

Burleigh proposed that skilful men in science, as Mr. Digges, be called from the universities to peruse the work and confer. But the Council of State consulted Archbishop Grindal and three of the bishops who recommended the rejection of Dee's scheme, chiefly on the ground that it emanated from Rome, and so their opposition delayed this desirable public reform in England for 170 years. Dee agreed to grant the ten days for the sake of conformity with the rest of the world, if his calculation that eleven were strictly accurate was publicly announced. It will be remembered that in 1742, when the change was made, eleven days were omitted from the calendar.

The household at Cracow now consisted of Mrs. Dee, Arthur, Katherine, Rowland and his nurse, and the maid Mary, Mrs. Kelley and her husband, a servant named John Crocker and a boy. It was augmented before long.

The actions with the spirits soon recommenced. Kelley began very unfairly by trying sittings alone, for he was importunate to know how the Prince was going

to treat them as regards money. But he seems only to have drawn reproof and much excellent counsel on himself from Nalvage.

The next few weeks were taken up with instructions from Gabriel and Nalvage, consisting of letters, numbers and words in a strange Eastern or angelic language, to which Dee probably had some key, though they appear unintelligible. The partners were bidden to keep the Sabbath, and Dee resolves to go always to church. Kelley seems to have turned restive once again. On April 17 he declared he would sit no more to receive these A.B.C. messages unless they were better explained. "There is your boy, John," he said; "he can well enough give you these simple signs. You need me no longer. I will be gone." As Casaubon remarks, "he was ever and anon upon projects to break with Dee."

Two days after, Dee heard him come upstairs to his own study, and called him in. Dee's study was an inner room through one that opened on to the stairs, at the foot of which was a door. He explained that he had now a distinct clue to the meaning of the tables of letters on which he had long been puzzling; dwelt on how essential it was to miss not a single letter, or else the words would err. He asked him, in fact, to resume his skrying, and encouraged him by saying that he knew he "would come to like better this due and methodical manner of our friends' proceeding," if only he would continue. Kelley scornfully replied that their teachers were mere deluders, and no good or sufficient teachers. In two years they had not made them able to understand, or do anything. "In two years," he said boastingly, "I could have learned all the seven liberal arts and sciences, if I had first learned Logick." He protested he would have no more to do with the spirits in any manner or way, wished himself in England, and vowed if the books were his he would burn them all. "These spiritual creatures are not bound to me. Take John for your skryer."

Dee pathetically recapitulated his long desire for wisdom, his faith that more knowledge will be granted him. Kelley went out leaving Dee buried in prayer.

In two days, Kelley was again submissive to the spirits, who bade him not mistrust. "Let him that is a servant and is commanded to go, go. And let not the earth rise up and strive against the plowman." So they go on again with their cabalistic letters and signs. In the beginning of May, Dee notes: "E.K. is very well persuaded of these actions now, thanked be the Highest."

Later in the month he says: "There happened a great storm or temptation to E.K. of doubting and mistaking our instructors and their doings, and of contemning and condemning anything that I knew or could do. I bare all things patiently for God his sake." Kelley at the same time says: "I am contented to see and to make true report of what they will show, but my heart standeth against them."

That night after the sitting, he again swore he would not go on skrying. The morning after, Dee knocked at his study door, and bade him come, for Nalvage had left off the previous day in the middle of an interesting geographical lesson about unknown parts of the earth, and had told them to be ready to continue it next morning. Kelley was obdurate, and Dee retired to prayer. In half an hour, the skryer burst in with a volume of Cornelius Agrippa's in his hand, where he said all the countries they were told about yesterday were described and written down. "What is the use," he said, "in going on with this farce, if they tell us nothing new?" Dee replied that he was glad to see Kelley had such a book of his own; that Nalvage in giving those ninety-one new names of countries, all of seven letters, was answering

his particular request; that he had verified the lands in the charts of Gerardus Mercator and Pomponius Mela, which he had at hand and produced, "and now," he said triumphantly, "we know exactly what angels govern which countries, in case we are ever called to practise there." Nalvage had described the natives of the countries and the products, suggesting that in Greenland a vein of gold might be found. "Your wilful phantasie," Dee ended to Kelley, "perverts your reason; and whereas you find fault with our instructors, I, who much more narrowly peruse their words, know that they give direct answers to my questions, except indeed when you misreport them, or I make a mistake in hearing or writing." So three days were lost, as Dee bemoans in the margin, and then Kelley was again induced to resume his skrying.

On the 25th, Laski arrived and left again for Kesmark. He now intended to redeem his property there. But King Stephan and his Chancellor were both set against him, and he wished Dee to go with him to the Emperor of Austria, Rudolph II.

Instructions were now given that they must be ready to go with Laski to the Emperor, must make themselves apt and meet, for until no remembrance of wickedness is left among them they cannot forward the Lord's expeditions. Gabriel tells Kelley at some length of his many faults. Dee did not hear this, but considerably does not ask for a repetition of the catalogue. He only bids Kelley listen well. Gabriel says if any will be God's minister, he must sweep his house clean, without spot. He must not let his life be a scandal to the will of the Lord.

"God finds thee, as he passes by in his Angel, fit in matter, but, my brother, God knows, far unfit in life. O consider the Dignity of thy creation. See how God beareth with thy infirmity fromtime to time. Consider how thou art now at a Turning where there lieth two wayes. One shall be to thy comfort, the other to perpetual woe."

Gabriel's dart, like a flame of fire, is upright in his hand. He pleads with Kelley in such adorable gentleness and with such tender and ecstatic weeping, that both his hearers cannot withhold their tears. Gabriel's words so moved Kelley that he professed absolute repentance for all his dealings with wicked spirits, vowed he would burn whatsoever he has of their trash and experiments, and write a book setting forth their horrible untruth, and blasphemous doctrine against Christ and the Holy Ghost. It is curious that among the other errors he renounced was the Eastern doctrine that a fixed number of souls and bodies have always been in the world, and that a man's soul goes from one body to another, viz., into the new-born child. In the light of after-events, it is significant that another belief abjured is that to the chosen there is no sin.

Dee was overjoyed, and full of thanksgiving. He believed utterly in Kelley's conversion, all the more because of his former lapses. If anything were wanting to prove it, it was to be found in the humble and patient spirit in which this impracticable, volcanic skryer of his now sat on patiently for two hours and a half before the stone without either cloud, veil, or voice appearing. This to Kelley was "no light pang." Nay, he argues that servants must wait as long as their Master pleases, and the time is better spent than in any human doings. He opens his wayward heart to Dee, the man without guile, and avows that he had fully intended at his last outburst, ten days before, to have gone away secretly with those with whom he had so long dealt had they not threatened him with beggary — a thing,

adds Dee, that he most hated and feared. Therefore, till this time he had been a hypocrite. Now, in his new-found elation, he cares not for poverty; life eternal is more than riches and wealth. He that can be hired with money to forsake the devil is no Christian. He will doubt no more, but believe. Dee adds that he omits many others of his godly sayings, thinking these sufficient to write down. He had no suspicion of any ill faith. His love for Kelley was truly unbounded in its long-suffering. He offered a fervent thanksgiving for the conversion, and for Satan's defeat, and prayed for them both for "continual zeal, love of truth, purity of life, charitable humility and constant patience to the end."

The same atmosphere continued next day, June 11. Kelley protests he could sit for seven years awaiting a vision. They do wait nearly four hours. Evidently Kelley converted is not going to be so good a medium as Kelley unregenerate. Dee explains the non-appearance as retribution for the three days wasted before. But they are all rather depressed, especially the Prince.

Then a vision appears of the castle of Grono, in Littau, where the King of Poland then was. Stephan's arms are seen over the gate. A man like an Italian is beheld, carrying an iron chest within which are an image in black wax, a dead hand, and so on. The promise is that Laski shall be King of Poland.

Early next morning Kelley, lying awake in bed, had a vision which he or Dee afterwards embodied in the curious diagram facing [?].

It may be taken as a sample of the kind of intricate complications of theurgy which often absorbed the pair for days together.

The vision was expounded by Ave, something in the following manner: —

A VISION.

East and West, North and South, stand four sumptuous and belligerent Castles, out of which sound Trumpets thrice. From every Castle, a Cloth, the sign of Majesty, is cast. In the East it is red, like new-smitten blood. In the South, lily-white. In the West, green, garlick-bladed like the skins of many dragons. In the North, hair-coloured, black like bilberry juice. Four trumpeters issue from the Castles, with trumpets pyramidal, of six cones, wreathed. Three Ensign bearers, with the names of God on their banners, follow them. Seniors, Kings, Princes as train bearers, Angels in four phalanxes like crosses, all in their order, march to the central Court, and range themselves about the ensigns.

IT VANISHETH.

The dazzling, shifting formation seems to proceed in a glorious pageant of colour, and then to rest, frozen into a minutely exact phantasticon of harmony.

Now for the meaning of the allegory. The Castles are Watch towers provided against the Devil, the Watchman in each is a mighty angel. The ensigns publish the redemption of mankind. The Angels of the Aires, which come out of the Crosses, are to subvert whole countries, without armies, in this war waged against the Powers of Darkness.

Many weeks were taken up with tables of letters for the games, angels, seniors, etc.

Kelley is again sometimes very much tempted to doubt the good faith of the angelic visitants, more especially as he sadly fears that good angels will not provide them with the needful money that the Prince requires for the success of his cause. One day, Dee wrote in his diary: "E.K. had the Megrom sore." Kelley read this, and "A great temptation fell on E.K., upon E.K. taking these words to be a scoff, which were words of compassion and friendship." After this Dee resorts more frequently to the use of his Greek characters.

The Dees were still living near the church of St. Stephen, where Kelley was a frequent visitor. Laski lodged with the Franciscans in their convent. The revelations were now of tables of letters again, intended, Dee things, that they may learn the names of angels and distinguish the bad from the good. (The bad angels' names are said to be all of three letters.) He hopes Ave is about to reveal the healing medicines; the property of fire; the knowledge, finding, and use of metals; the virtues of stones, and the understanding of arts mechanical. But Ave says it is the wicked spirits who give money coined, although there are good angels who can find metals, gather them and use them. Then Madimi appears, after a long absence, and addressing Dee as "my gentle brother," tells him that Ave is a good creature and they might have made more of him. She wants to know why they have not gone to the Emperor Rudolph. The old excuse of poverty is pleaded.

That evening, June 26, at seven o'clock, Dee sat in his study considering the day's action, when Kelley entered and asked if he understood it. He, it seems, had burst out again, had raged and abused Michael and Gabriel, called Ave a devil, made "horrible speeches." There had been a most terrible storm of thunder and rain, and Kelley always appeared sensitive to these electric disturbances. Now he is penitent once more, acknowledges his words were "not decent," and begs forgiveness of God and Dee. The talk lasted long, and several calls to supper were unheeded; then, just as they were leaving the room, Kelley felt something warm and heavy on his shoulder, and behold! it was Ave come to acknowledge his repentance. Dee hands him his Psalter book, and with three prayers devoutly said, all is smooth again, and they go down to supper.

Dee's patience and humility seemed unending. In conversing with the spirits he is always, as it were, face to face with God. His replies are made direct to the Majesty of the Divine. When Kelley is blamed he assumes equal blame.

Ave. — "Which of you have sought the Lord for the Lord his sake?"

D. — "That God can judge. We vaunt nothing of our doings, nor challenge anything by the perfection of our doings. We challenge nothing, Lord, upon any merits, but fly unto thy mercy, and that we crave and call for. Curiosity is far from our intents."

CHAPTER XII

FROM CRACOW TO PRAGUE

"Since all men from their birth employ sense prior to intellect, and are necessarily first conversant with sensible things: some, proceeding no farther, pass through life considering these as first and last; and apprehending what is painful to be evil, what is pleasant good, they deem it sufficient to shun the one and pursue

the other. Some pretending to greater reason than the rest, esteem this wisdom; like earth-bound birds, though they have wings they are unable to fly. The secret souls of others would recall them from pleasure to worthier pursuits, but they cannot soar: they choose the lower way, and strive in vain. Thirdly, there are those — divine men — whose eyes pierce through clouds and darkness to the supernal vision, where they abide as in their own lawful country.”

— Plotinus

All this time, Dee is so absolutely absorbed with his spiritual visions that we know very little about his outer existence. For three years after he left England, he neglected to enter anything in his ordinary diary, and the *Liber Mysticus* contains nothing of everyday affairs.

In this July, 1584, however, at Cracow, he does enter an important piece of information about his boy Rowland, the baby then about a year and a half old.

“1584. Remember that on Saturday the fourteenth day of July by the Gregorian Calendar, and the fourth day of July by the old Calendar, Rowlande my childe (who was born Anno 1583, January 28 by the old calendar) was extreemely sick about noon or mid-day, and by one of the clock was ready to give up the ghost, or rather lay for dead, and his eyes set and sunck in his head.

“I made a vow if the Lord did foresee him to be his true servant, and so would grant him life, and confirm him his health at this danger, and from this danger, I would during my life on Saturdays eat but one meal.”

Although we never find this vow referred to again, there is no doubt that Dee devoutly kept his bargain. Rowland did grow up and had other remarkable escapades.

Still the journey to Prague to the Emperor Rudolph was postponed, and it was not until the first day of August that the trio set off. Dee and Kelley were ready to go sooner, but Laski had not sufficiently recovered his finances. The party had been augmented by the arrival of Kelley's brother, Thomas, and Edmond Hilton, son of Dee's old friend, Goodman Hilton, who had sometimes lent him money, and who in 1579 had requested leave for his two sons to resort to Dee's house. Thomas Kelley accompanied the Prince and his pair of crystal gazers. The women were left behind under Edmond Hilton's charge.

Five or six days after arriving in Prague, on the day of the Assumption of the Blessed Virgin Mary, August 15, Dee was settled in the house of Dr. Hageck, by Bethlem in Old Prague (Altstadt), kindly lent him for his use. The house was not far from the old Rathhaus, the great clock tower of which, dated 1474, and the Council Chamber, still exist. It was also near the Carolinum or University, founded by Charles IV. in 1383, in whose hall John Huss a hundred and fifty years before had held his disputations. When Dee and his party arrived in the city Tycho Brahe was still alive, though not yet a resident in Prague. Prague was the city of alchemists. The sombre, melancholy Emporer himself relieved his more seriuous studies by experiments in alchemics and physics. A mania for collecting rare and valuable objects provided him with a still lighter pastime. He painted, read much, and worked in iron, was a good linguist, and a regular dilettante. Unmarried, and with

all the weaknesses of the Habsburgs, for nearly thirty years out of his long life and far too protracted reign he was quite mad. Not many years after his reception of Dee he ceased to make any pretence of public appearance.

The excellent little study or “stove” (from “stube,” German for study) in Dr. Hageck’s house had been since 1518 the abode of some student of alchemy, skilful of the holy stone. The name of the alchemist, “Simon,” was written up in letters of gold and silver in several places in the room. Dee’s eyes also fell daily on many cabalistic hieroglyphs, as well as on drawings or carvings of birds, fishes, flowers, fruits, leaves and six vessels, all the work, he presumed, of Simon baccalaureus Pragensis. Over the door were the lines:

“Immortale Decus par gloriaque illi debentur
Cujus ab ingenio est discolor hic paries,”

and on the south wall of the study was a long quotation from some philosophical work ending with

“Ars nostra est Ludus puero cum labor mulierum. Scitote omnes filii artis hujus, quod nemo potest colligere fructus nostri Elixiris, nisi per introitum nostri lapidis Elementati, et si aliam viam quaerit, viam nunquam intrabit nec attinget. Rubigo est opus, quod sit ex solo auro, dum intraverit in suam humiditatem.”

In these congenial surroundings skrying was at once resumed. Madimi (now grown into a woman) was the first visitor, and Dee hastened to inquire for his wife and child at Cracow. He notes that his first letter from her arrived on the 21st. She joined him before long. He was told to write to the Emperor Rudolph. He did so on August 17, and he relates in the epistle the favourable attention he has received from Charles V. and his brother Ferdinand, Rudolph’s father, the Emperor Maximilian II., who accepted the dedication of his book *Monas Hieroglyphica*, and others of the imperial house. He signs the letter, “Humillimus et fidelissimus clientulus Joannes Dee.”

After waiting a week he sent the letter by Laski’s secretary to the Spanish ambassador, Don Guglielmo de Sancto Clemente, who was to present it to Rudolph. With it he also sent a copy of his *Monas*. The same night he heard by Emerich Sontag, the secretary, that the Emperor had graciously accepted the book, and within three or four days would appoint a time for giving him an audience.

He received letters from England on August 27, which were dated April 15 and 16. His brother-in-law, Nicholas Fromond, told him that Mr. Gilbert, Mr. Sled, and his bookseller had used him very ill. Doubtless he was expecting some money from the sale of his books. Mrs. Dee was much upset at her brother’s defections, and poor Dee was worried all round, for, as he writes in the margin of his diary, “Satan is very busy with E.K. about this time.” Kelley seems to have been making friends with young Simon Hageck, son of “our host,” as Dee calls him. To furnish his own study he has bought a clock of Mrs. Hageck for five ducats, which was so good a bargain that she requested “a quart of wine” (probably a quarter hogshead) thrown in. She herself does not seem to have benefited much by the largess, for Kelley and Laski’s man Alexander proceeded to get drunk on it, and fell to fighting and quarrelling. Dee, who had stayed writing in his study instead of going to supper,

was warned by the city watchman to keep better peace in his house. Looking from his window to account for the caution, he saw Laski's man sitting on a great stone, and called him to come in. When he had heard the tale he went off to Hageck's to "understand the very truth," and there found Kelley lying in a drunken sleep on a form. This was a relief. He was better pleased to think that angry words had been spoken "when wine, not wit, had rule," and persuaded Laski's man to stay in his lodgings that night instead of raging forth into the street. Already a scandal had been made which he foresaw would do him much harm. Next morning Kelley had a madder fit than ever.

"Much ado. Emerich and his brother (Thomas Kelley) and I had to stop or hold him from going on Alexander with his weapon. At length we let him go, in his doublet and hose without a cap or hat on his head, and into the street he hasted with his brother's rapier drawn, and challenged Alexander to fight. But Alexander said 'Nolo, Domine Kelleie, Nolo.' Hereupon E.K. took up a stone and threw after him as after a dog, and so came into the house again in a most furious rage for that he might not fight with Alexander. The rage and fury was so great in words and gestures as might plainly prove that the wicked enemy sought either E.K. his own destroying of himself, or of me, or of his brother. This may suffice to notify the mighty temptation and vehement working of the subtle spiritual enemy, Satan, wherewith God suffered E.K. to be tempted and almost overcome: to my great grief, discomfort, and most great discredit, if it should come to the Emperor's understanding. I was in great doubt how God would take this offence, and devised with myself how I might with honesty be cleared from the shame and danger that might arise if these two should fight. At the least, it would cross all good hope here with the Emperor for a time, till God redressed it."

By this time Dee had become skilled and tactful in dealing with his turbulent squire, and he soon brought him to quietness by yielding to his humour and saying little. At mid-day came Dee's messenger from Cracow, bringing letters from and tidings by word of mouth of his dear wife Jane, "to my great comfort." Much he was in need of comfort, and when a letter from the Emperor arrived the same day, desiring to see him, Kelley's enormities began to assume less desperate proportions.

Dee started at once to the Castle, the Palace of Prague, and waited in the guard-chamber, sending Emericus to the Lord Chamberlain, Octavius Spinola, to announce his coming.

"Spinola came to me very courteously and led me by the skirt of the gown, through the dining chamber to the Privie chamber, where the Emperor sat at a table, with a great chest and standish of silver before him, and my Monad and Letters by him."

Rudolph thanked Dee politely for the book (which was dedicated to his father), adding that it was "too hard for his capacity" to understand; but he encouraged the English philosopher to say on all that was in his mind. Dee recounted his life history at some length, and told how for forty years he had sought, without finding, true wisdom in books and men; how God had sent him His Light, Uriel, who for two years and a half, with other spirits, had taught him, had finished

his books for him, and had brought him a stone of more value than any earthly kingdom. This angelic friend had given him a message to deliver to Rudolph. He was to bid him forsake his sins and turn to the Lord. Dee was to show him the Holy Vision.

“This my commission is from God. I feign nothing, neither am I a hypocrite, an ambitious man, or doting or dreaming in this cause. If I speak otherwise than I have just cause, I forsake my salvation,” said he.

Rudolph was probably very much bored by this mystical rhapsody. He excused himself from seeing the vision at this time, and said he would hear more later. He promised friendship and patronage, and Dee, who says he had told him almost more than he intended of his purposes, “to the intent they might get some root or better stick in his minde,” was fain to take his leave. In a few days he was informed, through the Spanish ambassador, that one Doctor Curtius, of the Privy Council, “a wise, learned, and faithful councillor,” was to be sent to listen to him on the Emperor’s behalf. Uriel, whose head had been bound of late in a black silk mourning scarf because of Kelley’s misdoings, now reappeared in a wheel of fire, and announced favour to Rudolph.

“If he live righteously and follow me truly, I will hold up his house with pillars of hyacinth, and his chambers shall be full of modesty and comfort. I will bring the East wind over him as a Lady of Comfort, and she shall sit upon his castles with Triumph, and she shall sleep with joy.”

To Dee, he says, has been given “the spirit of choice.” Dee petitions that his understanding of that dark saying may be opened: “Dwell thou in me, O Lord, for I am frail and without thee very blind.”

The conference between Dee and Curtius on September 15 lasted for six hours. It took place at the Austrian’s house, whither Dee was permitted, it seems, to take the magic stone and the books of the dealings. Dee in all good faith promised that many excellent things should happen to Rudolph, if only he would listen to the voice of Uriel. Dee’s sincerity, credulous though it appears, was as yet unshaken. He lived in a transcendental atmosphere, and trembled, as he believed, on the brink of a great revelation. The very heavens seemed opening to him, and soon, he thought, he would probe knowledge to its heart.

Kelley, on the other hand, was under no delusion. He had worked the spirit mystery for long enough without profit; already he was beginning to more than suspect that the game was played out; that their dreams of Laski as King of Poland, dispensing wealth and favour to his two helpers, were never to be realised; that the Emperor’s favour would be equally chimerical and vain; and that some more profitable occupation had better be sought. At the back of his mind lay always the hope of the golden secret. Somehow and somewhere this last aspiration of the alchemist must be realised.

At the very time when the two learned doctors were holding their confabulation, Kelley, says Dee, was visited at their lodgings with a wicked spirit who told him that Dee’s companion would use him like a serpent, “compassing his

destruction with both head and taylor; and that our practices would never come to any fruitful end."

This was a true prophecy indeed, but many things were yet to come to pass.

Uriel now instructs Dee to write to the Emperor and tell him that he can make the philosopher's stone: in other words, that he can transmute base metal into gold. In the next breath Uriel foretells that Rudolph shall be succeeded by his brother Ernest, for when he sees and possesses gold (which is the thing he desireth, and those that counsel him do also most desire), he shall perish, and his end shall be terrible. Dee shall be brought safely home to England. Uriel used a curious simile, that Dee "shall ascend the hills as the spiders do." Dee, with his knowledge of many sciences, has never shown himself a naturalist, but he here gives us an interesting scrap of natural history. He writes in the margin: "Perhaps spiders flying in the air, are carried by strings of their own spinning or making, or else I know not how."

Dee's suit with the Emperor did not much progress. His ministers were naturally envious of this foreigner, and many whispers, as well as louder allegations against the two Englishmen, were abroad, although, as San Clemente told him, the Emperor himself was favourable. The Spanish ambassador was friendly enough, and Dee dined several times at his table. He professed to be descended from Raymond Lully, and, of course, like every educated person of the fifteenth and sixteenth centuries, was a believer in the virtues of the philosopher's stone. He bade them not regard the Dutchmen's ill tongues, "who can hardly brook any stranger." Dee wrote again to the Emperor a letter of elaborate compliment and praise of *vestroae sacrae Coesarae Majestatis*, in which he offered to come and show him the philosopher's stone and the magic crystal.

Still nothing came of it, and these needy adventurers in a foreign land began to get into deadly straits. "Now were we all brought to great penury: not able without the Lord Laski's, or some heavenly help, to sustain our state any longer." Dee returned from a dinner at the Spanish ambassador's to find Kelley resolved to throw up the whole business and start for England the next day, going first to Cracow to pick up his wife. If she will not go he must set off without her, but go he will. He will sell his clothes and go to Hamburg, and so to England. It is all very well for the spirits to promise spiritual covenants and blessings; but as Kelley said to Uriel, "When will you give us meat, drink and cloathing?"

At this time the women and children did join the party from Cracow, although Dee does not record it in his diary. But on September 27 Dr. Curtius called to see him at his lodging in Dr. Hageck's house by Bethlem, and he says "saluted my wife and little Katherine, my daughter." Dee laid before him some of the slanders that he knew were going about. He had been called at Clemente's table a bankrupt alchemist, a conjuror and necromantist, who had sold his own goods and given the proceeds to Laski, whom he had beguiled, and now he was going to fawn upon the Emperor. Curtius was at last induced to spread before the Emperor his report of the conference he had held (by command) with Dee. "Rudolph," said Curtius, "thinks the things you have told him almost either incredible or impossible. He wants you to show him the books." Then the talk became the learned gossip of a couple of bookish and erudite scholars. Dee produced some rare editions which the others had never seen. Curtius offered the loan of one of his own works, *De Superficierum Divisionibus*, printed at Pesaro. After this, with mutual courtesies

offered on both parts, "after the manner of the world," Curtius took his horse, and returned homeward.

Jane Dee was ailing at this time, and Dee was much distressed. Gabriel, when consulted, told him that the true medicine is trust in the God of Hosts and in His Son Christ. "The Lamb of Life is the true medecine of comfort and consolation." He did, however, condescend to give a remarkable precription for her use, concocted of a pint of wheat, a live pheasant cock, eleven ounces of white amber, and an ounce of red wine, all distilled together. Dee, though no Christian Scientist, was willing enough to administer the strange decoction, but says he knows not where or how to get a cock pheasant. In the spring of the next year, Jane's fourth child, Michael, was born. He was always rather sickly, and died when nine years old. Theodore, her fifth child, was only thirteen when he too died, but all the six other children grew up.

Curtius and Dee became good friends. The Austrian showed his English acquaintance several of his inventions connected with the quadrant and with astronomical tables, and Dee confided to him the secret of a battering glass he had contrived for taking observations on a dark night. The glass was left at Cracow with his books and other goods, but he would gladly go and fetch it to show the Emperor. This led to Dee's request for a passport to enable him to travel, with servants, wife and children, where he would in the Emperor's dominions at any time within a year. He drew it up himself on October 8, 1584, and the Emperor granted it without demur. Dee soon started for Cracow to bring the rest of his goods to Prague, but the diary for the month of November is missing, and the following book opens on December 10, when he had set out from Cracow to return to Prague. "Master Kelley" was with him, John Crocker, and Rowland and his nurse, who had been left behind when Mrs. Dee and the two elder children joined her husband in Prague. As before, more than a week was occupied with the journey, which was made in a coach, with horses bought of "Master Frizer." In Prague a new lodging was found in a house belonging to two sisters, of whom one was married to Mr. Christopher Christian, the registrar of Old Prague. Dee hired the whole house from him at a rent of 70 "dollars" or thalers a year, to be paid quarterly.

"On Saturday afternoon, January 12, 1585, I removed clean from Doctor Hageck, his house by Bedlem, and came with all my household to the House which I had hired of the two sisters (married) not far from the Market Place in old Prage."

He announced his return to the Spanish ambassador and to Dr. Curtius, and continued his interviews with "the schoolmaster" daily.

Some of the sittings recorded at this time are really of the nature of school lessons, which to a man of Dee's acquirements must have seemed rather elementary, yet he humbled himself as a child to learn. One day geographical and ethnographical information is imparted about America, or, as Dee calls it, "Atlantis"; Cathay; the Bactrian desert; and Phalagon, a country of which Dee says he never heard. Another day, minerals and their properties form the subject of the lesson.

Much was said about the doubting, incredulous spirit of Kelley, which Dee always feels is the hindrance to further knowledge. At length he is given permission to choose another skryer if he will: "Take whomsoever thou wilt in

whose face the Lord shall seem to dwell, and place him with this Seer, and let him stand seven times by him. I will take the spirit from him and will give it unto the same that standeth by, and he shall fulfill my word that I have begun.”

But Dee was strangely reluctant to part with Kelley. He loved him like a son, he yearned over his soul, and he entertained more lively hopes than ever of his real conversion, for Kelley had at last consented to partake of the sacrament with his older friend. Dee uttered aloud a solemn prayer: —

“O God, thouh has coupled us two together in they election, and what the Lord hath joyned, no fleshly fancy of mine shall willingly separate. But if it be thy will, seeing he is so hard to give credit to thy holy messengers, without some proof in work first past, as for example this doctrine of the philosopher’s stone, that so he may come to be allowed, though he imitate Thomas Didymus in his hard and slow belief. And because he is to receive the pledge of thy mercies, and mystery of the heavenly food, we would gladly hear of that holy sacrament some discourse for our better instruction, and his better encouragement to the mystery receiving.”

Then was delivered a remarkable homily expounding Protestant Christian belief upon several points: the Creation, the fall of Adam (because he wanted the beauty and excellency of God’s spirit for which he was created); of the sacrament of Christ’s body, “the holy sign of peace between God and man”; and the mystery and wonder of the rite as shown to the disciples, not, as the wicked do, “tying the power and majesty of God and His omnipotence to the tail or end of reason, to be haled as she will....It is a holy miracle, and thou must believe, as the Disciples did, that thou partakest of the true Body of Christ sub forma panis. But receiving ceasing, the Sacrament ceaseth also.” This in answer to Dee’s interposed question. The Hussite doctrine of the permanence of the sacred element in the common food when blessed was of course much in men’s minds in Prague. So with an injunction to “share this doctrine with your wives,” this exposition ends.

CHAPTER XIII

A DREAM OF GOLD

“Now, Epicure,
Heighten thyself, talk to her all in gold,
Rain her as many showers as Jove did drips
Unto his Danaid, shew the gold a miser
Compared with Mammon. What! the stone will do’t.
She shall feel gold, taste gold, hear gold, sleep gold.”

— Jonson, *The Alchemist*

On February 27, 1585, Dee and Kelley, with Thomas Kelley, rode with great secrecy to Limburg, six miles from Prague, in obedience to Madimi, who however told them on arriving that Rudolph know of their departure. Dee suspected Laski’s man, Sontag, of treachery. Michael appeared to them there, and instructed Dee to name his new-born child Michael. The infant was baptised by the Court chaplain in Prague Cathedral (which is dedicated to the very unpopular Saint Vitus) on March

18, the Spanish ambassador being godfather and the Lady Dietrichstein, wife of the Emperor's major-domo, godmother.

Kelley was still murmuring under the mystical dealings of the angels. "Let them give me somewhat profitable to my body, or some wisdom to my mind's behoof, and then I will believe in them," he says. Then he protests he will confess all to the priest, and if the holy father does not allow their doings or counsel to be genuine, neither will he.

The remarkable answer that Dee gives again shows us how in advance he was of his times in matters spiritual as well as scientific. "The authority of good angels or messengers from God is greater," says he, "than the authority of the Pope, or priests."

So the weeks went on. Kelley postponed the day of taking the sacrament. At Easter will be a fit time. He will wait till then. He is tired of skrying: "I pray you to deal with another. Here is John, a boy in the house. You may use him." Thus, for the third time, a boy is suggested.

It is a curious piece of psychology, or crystallogomancy, that Kelley, who possessed the mediumistic powers, was always so reluctant to use them, while Dee, who as Madimi told him, had clearer sight than his skryer, was entirely unable to open up communication with the unseen.

Money was scarcer than ever. "My wife being in great perplexity, requested E.K. and me that the annexed petition might be propounded to God and his good angels, to give answer or counsel in the cause." Jane's petition set out simply that they had no provision for meat and drink for their family, that it "would discredit the actions wherewith they are vowed and linked unto the heavenly majesty" to lay the ornaments of their house or coverings of their bodies in pawn to the Jews, and that the city was full of malicious slanders. Aid and direction are implored how or by whom they are to be aided and relieved. The spirits, while reminding her grandiloquently that she is only a woman, full of infirmities, frail in soul, and not fit to enter the synagogue, yet favourably listen, and bid her be faithful and obedient as she is yoked, promising that she and her children shall be cared for. Meanwhile her husband is to gird himself together and hasten to see Laski and King Stephan.

This injunction seems not to have been obeyed for some time, for Dee was now very busy inditing letters to Queen Elizabeth and to other of his friends in England. He was reminded of it later when something went wrong, and another crisis arrived with Kelley. On March 27, a Wednesday, Dee was busy in his study, when the skryer burst in, demanding unceremoniously a copy of a certain magic circle of letters which he professed to have had revealed to him by spirits at Oxford. He wished to show it to a Jesuit priest with whom he had made friends. He protested he would quit the company of the spirits with whom they had recently dealt and return to his former associates — the evil set. Dee said he had no leisure to look for the paper now, he was writing letters of importance, and in a week's time or when able, he would see it was found. This of course was irritating. Kelley stormed and raged, said the old man should not stir his foot from the room till it had been produced, and was about to lock up the door when Dee caught him by the shoulders, "calling aloud to my folks. They came in all, and my wife, and so afterwards by degrees his fury assuaged, and my folks, my wife and his, went away, and after he had sitten two or three hours with me, he saw on my head, as I sat

writing, Michael stand with a sword, who willed him to speak, which he did forbear to do above a quarter of an hour.”

Kelley, like a spoilt child, demanded of Michael if he should have his circle of letters. The angel addressed him then in a passage of exceeding beauty, seeming to scorch and wither the promptings of the skryer’s evil nature, while wrestling at the same time with all the powers of darkness for his soul: —

“O Jehovah, whose look is more terrible to thy angels than all the fires thou hast created,...wilt thou suffer one man to be carried away, to the dishonouring and treading under foot of thee and thy light, of thee and thy truth? Can one man be dearer unto thee than the whole world was? Shall the heavens be thrown headlong down, and he go uncorrected?”

He intimates to the partners that their work and calling is greater than honour, money, pride and jewels. As it is great, so must their temptation be great.

“Therefore God has framed one of you as a stiffe-made Ashe, to bind up the continuance of his work, and to be free from yielding unto Satan.”

As for the other, Michael promises Kelley that no evil spirit shall visibly show himself unto him any more as long as he is in the flesh.

“Whosoever therefore appeareth hereafter is of good.”

Thus begins to yawn before the pair the most dangerous pitfall of all. Pride and confidence in the perfect intuition of God’s will has led many a good and holy man astray. Soon even the stiff-made ash is to arrive at the pitch of believing that their teachers cannot err, and then comes a terrible downfall. Michael in an exquisite little parable bids them cleave fast together. And again it is clear why the elder man, the seeker after hidden knowledge, the pure-minded and gentle-hearted old mathematician and astrologer, though torn in pieces with his partner’s wild outbursts, his notorious cupidity, impatience, and evil living, yearned over him and his rebellious youth as a mother over her child. Like Michael, he seems involved in a prolonged struggle for the rescue of his soul from the demons in whose power he devoutly believed.

“PARABOLA DE NOBIS DUOBUS.

“A wood grew up, and the trees were young, and lo! there arose a great Tempest from the North, and the Seas threw out the air that had subtilly stolen himself into them. And the winds were great. And behold there was one Tree which was older than the rest, and had grown longer than that which shot up by him. This Tree could not be moved with the wind, but the Tree that was young was moved to and from with the wind, and strook himself oftentimes upon the stiff-set tree. The Forrester came and beheld, and said within himself, ‘The force of this wind is great. See this young Tree beateth himself in pieces against the greater. I will go home, and will bring my ground instruments, and will eradicate him, and I will place him farther off. Then if the winds come, he shall have room to move.’

But when he came home, the Lord of the Wood seeing him in a readiness with his Mattock and his spade, asked him of his goings, which told the thing in order unto his Master. But lo! his Master rebuked him, and he said thus: `When the winds are not, they increase, they are not hurtful one to the other. Suffer them therefore. When the young Tree taketh roots, and shall look up unto some years, his roots shall link themselves with and under the roots of the greater. Then, though the winds come, they shall not be hurtful one to another, but shall stand so much the more fast, by how much the more they are wrapped together; yea, when the old tree withereth, he shall be a strength unto him, and shall add unto his age as much as he hath added unto his youth.'

“And he ceased to dig.

“Be not you therefore haled in sunder, neither be you offended one at another. Peradventure Reason would set you aside. But God will not. Behold, if you break the yoke that you are in and runne astray, he that erreth shall perish, even so shall he that standeth also be desolate. Love therefore one another, and comfort one another, for he that comforteth his brother comforteth himself....Let youth yield to ripe years...You have vowed that one of you do nothing without the other's counsel, but you shall not be two counsellors. Let the Doer occupie the superiority. The Seer, let him see and look after the doings of that he seeth, for you are but one body in this work.”

In April, Dee and Kelley returned to Cracow. As they were nearing the city they saw a great whirlwind wreathing up the dust and shooting forward in a southerly direction. They found their house let under them to a “forced-in tenant,” but as Dee had brought his keys, he effected an entrance, and secured at least a bedstead. By the aid of his lawyer, Mr. Tebaldo, “an ancient practitioner in Polish causes,” he obtained a decree against his landlord that without six months' notice he could not be ejected. They took up their abode in the College of Nyepolonize. Laski now joined them in Cracow, and took Dee on May 23 to an audience of King Stephan. Stephan was seated by the south window of his principal audience and banqueting chamber, looking out upon the beautiful new gardens that he was then making. Polite speeches of greeting in Latin passed between the two, but there was scant time for more before the Vice-Chancellor and Chief Secretary, with others, came in, bringing Bills for the King to read and sign. Stephan had small time to spare for visionary alchemists. His very glorious reign was crowded with great achievements. Though a strong Catholic himself, he respected the liberties of his Protestant subjects, won back the Russian provinces for Poland, reformed the universities and established the Jesuits in educational seminaries, and protected the Jews. He died very suddenly about a year after Dee's third interview with him. Dee has the following very valuable note of his death, entered in the diary a few weeks after his arrival at Trebona Castle in 1586: “December 11, Stephan Poloniensis obiit: natus anno 1530, die 13 Januarii, hora quarta mane min 25, in Transylvania. Obiit hora secunda post medium noctem, ut intellexi ex literis Dni Lasky, receptis die 29 per Alexandrum.”

Dee also visited Dr. Hannibal (Annibaldus), the famous divine, and discussed with him his commentaries on Latin authors- -Hermes Trismegistus and Mandellus. He partook of the Communion at the Bernardine convent where the Doctor was a professor. Three times within Easter week did he communicate, “that

in all manner of wayes I might have a clean and quiet conscience.” On “Easter Monday, very devoutly, in St. Stephan’s Church, E.K. received the Communion, to my unspeakable gladness and content, being a thing so long and earnestly required and urged of him by our spiritual good friends.” As Dee wrote to Walsingham, “Saul had become a Paul.”

It was a very short interlude. For Laski had not yet paid him the “money long since due,” and Kelley once more vows he will leave, for the “actions are unsuccessful and are to be cut off.” Laski was again admitted to the sittings, and King Stephan granted them another interview. Laski urged the King to take the two alchemists into his service and give them “a yearly maintenance.” In obedience to his instructors, Dee promises to make the philosopher’s stone, if the King will bear the charge. He does not profess that he can, but he believes the angels will teach him the secret. Stephan was not so sanguine. In the King’s private chamber, a sitting was held, with the crystal set before him, but he remained unconvinced. He gave no encouragement, and in August the pair, hopeless of patronage from Poland, returned to Prague, where Jane and Joan Kelley, the children and the servants, had been left under Edmond Hilton’s care.

An anglicised Italian pervert, Francisco Pucci, now appeared upon the scenes and was admitted to the sittings at the shew-stone. Pucci had been a Lyons merchant, but had “laid aside his trade to study sacred letters,” and become a theological disputant of the current type. Professing himself a Protestant, he came to Oxford to study, graduated M.A. in 1574, and in London, Basle, Antwerp, and other places, became an open and notorious writer and champion against the Church which he had abjured. He had followed Socinus to Cracow, and had noisily opposed the Jesuits there. Soon after he recanted, became a Romish priest and secretary to a cardinal in Rome, where he died in 1606, and was buried in the Church of San Onofrio on the Janiculum.

On his information it appears that three copies of Dee’s manuscripts were burned in Prague, April 10, 1586. These were the Book of Enoch, the Forty-eight Keys of the Angels (*Claves Angelicae*) and the *Liber Scientioe Auxilii et Victoriae Terrestris*, works which had been written down from the spirit revelations since the partnership with Kelley had commenced. The books burned were not of course the originals, the two first of which still exist. Of the Book of Enoch there are three copies, one made by Kelley, a remarkable tribute to the mechanical skill in draughtsmanship, the extraordinary application and ability, of this very versatile personage. It contains hundreds of diagrams of figures, round or rectangular in shape, composed of an infinite number of minute squares each containing a letter or figure. These letters occur in every possible combination and order, some reading straight across the page, others diagonally, and so on. Dee gives an extraordinary story of the restoration on April 30 of the books said to have been burned, by a man like a gardener, invisible to himself, to Joan Kelley, and to all in the garden at the time, save Kelley. The gardener placed them under an almond tree in Carpio’s vineyard, on a sloping bank between the banqueting house and the “cliff side.” Trickery of Kelley’s, no doubt.

The feeling against these foreign adventurers grew strong in the city. Sixtus V., who had succeeded as Pope, issued a Papal edict, dated May 29, 1586, banishing Dee and Kelley from Prague within six days. It seemed to trouble them very little, for Dee was already away on a visit to a new patron, William Ursinus, Count

Rosenberg, at his country seat on the Moldau. From thence he went to see some glass works at Volkanau, about twelve miles north of the city; then he proceeded to Leipsic in time for the fair on May 11. There he met Lawrence Overton, an English merchant to whom Jane Dee had given kind attention and hospitality when he had fallen ill in her house a year before. Overton had returned from England, where he had seen Edmond Hilton, sent in November with letters to the Queen, Sir Francis Walsingham, and others. Hilton was expected back shortly. Overton was on the point of returning to England, and by him another letter to the Secretary was despatched.

Dee's letters to Walsingham, with their veiled allusions to secret affairs, form one of the grounds upon which the supposition has been based that he was employed by the Queen's minister as a secret spy and diplomatic agent abroad, and that his cabalistic diagrams contained a cipher. An elaborate theory was constructed to support this contention.

From this letter it is evident that Dee wishes his friends in England to believe that he and his partner have already found the hidden secret, but he wraps his words in due mystery, and it is impossible to say exactly when Kelley first professed to have made, and when he induced his partner to believe that he actually had made, the gold on which his heart was set. That Dee's heart was equally fixed on the discovery is indisputable, but from what a different cause!

“To ye Rt. Hon^{ble}. Sr. Fr. Walsingham Knt, her most excellent Maties.
Principal Secretary my singular good Fr^d. and Patron with speed.

“Right Honorable Sir,

“Albeit I have almost in vain come a hundred miles (from Prague to this Leipsic Mart) hoping either to meet my servant there with answer to my former letters, sent in November last to her Majesty (when also I wrote unto your honour and others). And so with speed from this Leipsick to have sent again most speedily, as occasion should have served. and now I find neither servant neither letter from him, neither word of mouth, yet all this notwithstanding; and whatsoever the hindrance or delay hereof may be (whether the keeping back of my letters from her Majesty, or the manifold and important most weighty affairs public hindring or delaying her Majesty's most gracious discreet and wise resolution herein. Or what other occasion else hath and doth cause this long and wonderful delay of answer receiving); all this notwithstanding, I thought good before I set up my coach to write, and most humbly to salute your honour very faithfully, dutifully and sincerely, with great and the same good will that my Letter some years since written to your Honour (but then a stumbling block unto your Honour and others for the strangeness of the phrases therein) doth pretend. So it is, right Honorable, that the merciful providence of the Highest, declared in his great and abundant graces upon me, and mine, is so wonderful and mighty, that very few, unless they be present witnesses, can believe the same. Therefore how hard they are to be believed there, where all my life and doings were construed to a contrary sense, and processe of death contrived and decreed against the Innocent, who cannot easily judge?

“I am forced to be brief. That which England suspected, was also here, for these two years almost, secretly in doubt, in question, in consultation, Imperial and Royal, by Honourable Espies; fawning about me and by others discoursed upon,

pryed and peered into. And at length both the chief Romish power and Imperial dignity are brought to that point resolutely that partly they are sorry of their so late reclaiming their erroneous judgment against us and of us, and seek means to deal with us so as we might favour both the one and the other; and partly to Rome is sent, for as great authority and power as can be devised; and likewise here all other means and wayes contrived, how by force or for feare they may make us glad to follow their humours. But all in vain, for force human we fear not, as plainly and often I have to the Princes declared. And otherwise than in pure verity and godlinesse we will not favour any (my words may seem very marvellous in your Honours ears, but mark the end, we have had, and shall have, to deal with no babes). I have full oft, and upon many of their requests and questions, referred myself to her Majesties answer thus in vain expected. Nuncius Apostolicus Germanicus Malaspina, after his year's suit to be acquainted with me, at length had such his answer that he is gone to Rome with a flea in his eare, that disquieteth him and terrifieth the whole state Romish and Jesuitical. Secretly they threaten us violent death, and openly they fawn upon us. We know the Sting of Envy and the fury of fear in tyrannical minds, what desperate attempts they have and do often undertake. But the God of Heaven and Earth is our Light, Leader and Defender. To the World's end, his mercies upon us will breed his praises Honour and glory. Thus much, very rhapsodically yet faithfully, tanquam dictum sapienti, I thought good to commit to the safe and speedy conveyance of a young merchant here called Lawrence Overton, which if it come to your Honours hand before my Servant have left his despatch, I may by your honor be advertised. Your Honour is sufficient from her Majesty to deal and proceed with me, if it be thought food. But if you make a Council Table Case of it, Quot homines, tot sententioe. And my Commission from above is not so large: Qui potest capere, capiat."

The almost apostolical flavour which Dee permits himself to impart to some of this letter, owing to the greatness of his believed mission, shows to what a height of "rhapsodical" fervours his spirit had now attained. It is still more emphasised in the concluding passage, which begins, however, very practically, with an anxious thought cast back to his English possessions. His desire that Thomas Digges, the eminent mathematician to whom his calculations for the reformed calendar had been submitted, should be sent over to inspect their doings, was curious, but it shows that he, at any rate, wished to deal openly and conceal nothing. He ends thus:

"Sir, I trust I shall have Justice, for my house library, goods and Revenues, etc. Do not you disdain, neither fear to bear favour unto your poor innocent neighbour. If you send unto me Master Thomas Digges, in her Majestie's behalf, his faithfulness to her Majesty and my well liking of the man, shall bring forth some piece of good service. But her Majesty had been better to have spent or given away in alms, a Million of gold, than to have lost some opportunities past. No human reason can limit or determine God his marvellous means of proceeding with us. He hath made of Saul (E.K.) a Paul, but yet now and then visited with a pang of human frailty. The Almighty bless her Majestie both in this World and eternally; and inspire your heart iwth some conceiving of his merciful purposes, yet not utterly cut off from her Majesty to enjoy.

From Leipsic this 14 of May, 1586,
at Peter Hans Swarts house.

Your Honours faithful welwisher to use and command for the
honour of God and her Majesties best service,

“John Dee.”

On being ejected from Prague, Dee removed his family and goods to Erfurt, but in spite of the influence of Dr. Curtius, and of a friend of Rosenberg, he was not allowed to hire a house there, for the Italian was before him. Pucci called on Dee after supper, and held out hopes that he might obtain permission for their return to Prague, for the new Nuncio, the Bishop of Piacenza, was inclined to a more favourable view than Malaspina. Pucci protested that they were only to be examined and if found heretical to be sent to Rome. He brought an invitation for their return, if they would promise not to exercise magical arts. Dee, who was starting early next morning to look at a house at Saalfeld, wherein to settle his exiled family, bade Kelley copy it and rode off. On the ride he thought it over. Pucci he had never liked, neither had Jane. “His household behaviour was not acceptable to our wives and family. He had blabbed our secrets without our leave. He was unquiet in disputation.” Dee summed up the man as a spy, the letter as a bait, and set to work to devise a way of being rid of him “by quiet and honest meanes.” He was absent two or three days, but the Italian was still there when he returned, urging them to go to Rome. Dee rebuked him for curiosity and interference, and accused him of conspiring against them; he, a mere probationer and not yet owned of the spirits (who in fact had said he was “leprous” and should be “cut off”), to presume an equal authority with them in their revelations!

Dee wrote a dignified letter to the Nuncio, and despatched it by the Italian, who was to receive from John Carpio, a wealthy neighbour and friend of theirs in Prague, a sum of fifty dollars for his expenses. The travellers went on to Cassel and to Gotha, but it was not long before a permanent asylum offered for the exiles. Their new patron, Count Rosenberg, was a friend worth having, for he was all-powerful with Rudolph; he was Viceroy of Bohemia and a Knight of the Golden Fleece. His influence and protection were now to be at the Englishmen’s disposal. On August 8, Rosenberg obtained from the Emperor a partial revocation of the decree against them, since they were permitted by it to reside freely in any of his lordship’s towns, cities or castles. They settled on September 14, 1586, at Tribau or Trebona, in Southern Bohemia, and here for about two years their wanderings came to an end.

Dee resumed the writing of his private diary, in which he had made no entry for three years, the last event recorded there being the departure of the family from Mortlake just three years before, on September 21, 1583. He opened a new volume, an Ephemerides Coelestium, calculated for the years 1581-1620, by Joh. Antonius Maginus, printed in Venice, 1582. The first entry made in it was Michael’s birth at Prague on February 12, 1586; the next was their arrival at Trebona (for it will be more convenient to follow Dee’s latinised version of the name).

CHAPTER XIV

THE CASTLE OF TREBONA

“Welcome the sour cup of prosperity!
Affliction may one day smile again: and until then,
Sit down, sorrow.”

— Shakespeare, *Love’s Labour Lost*

Tribau, or Wittingau, the Trebona or our story, is a small village lying in the beautiful undulating scenery of the Ludnitz, a small tributary of the river Moldau. It is a few miles from Neuhaus and Weseli, not many from the town of Budweis, on the Upper Moldau, in Southern Bohemia.

In 1586 it consisted of little beside the castle, a Rathhaus, quarters for a small garrison, and a cluster of dwellings where Dee tells a fire broke out on Whit Sunday, 1585, and destroyed several houses. The castle was one of Rosenberg’s many residences in Bohemia, and apparently a favourite one. the Viceroy was now just over fifty (he was born on March 10, 1535); he married about this time, and his wife constantly accompanied him on his visits to Trebona. They had also another castle at Neuhaus, beside a residence with beautiful gardens bordering the Moldau opposite Prague. They were frequently on the wing, flitting from Krumau to Vienna and from Vienna back to Prague. He welcomed the English travellers himself at Trebona, assigned them their rooms, and promised them all that heart could desire.

The actions, which had long been interrupted, were now resumed in “a goodly chapel next my chamber,” where all the “appurtenances” were set up, with the “angelicall stone” in its frame of gold upon the table. Rosenberg had been already admitted to the sittings, in obedience to directions received on October 14. When the communications were made in English, Dee translated them into Latin for his benefit. But experiments with Kelley’s powder were now all-engrossing, and even the spirits pass for a time into the background. Kelley went off to Prague for three weeks and was followed by Rosenberg. Dee remained with his wife and children; after their hardships, poverty, dangerous and wandering life, poor Jane must have been thankful for so luxurious a shelter. Visitors for Dee constantly arrived. Among them was Dr. Victor Reinhold, the astronomer. Pucci also came for a fortnight.

In December Dee received a very flattering invitation from the Emperor of Russia (Feodor Ivanowich) to go and take up his residence at Moscow in the Court. Dee’s fame as a learned astrologer and mathematician had spread to Russia; still more was his reputation as an alchemist bruited abroad: perhaps he was already credited with having actually made gold by projection or transmutation.

The first intimation of the Emperor’s wish was conveyed by Thomas Simkinson, an Englishman, of Hull, commissioned by Edward Garland to go to Brunswick or Cassel, or wherever Dee might be found, and beg him to remain there until Garland could come from Russia. He might tell Dee that the Emperor, having certain knowledge of his learning and wisdom, is marvellous desirous for him to come to his country, and had given Garland a sealed letter of invitation, promising a sum of 2,000 pounds yearly and free diet from the royal kitchen if he will come. His charges of removing shall be paid, and he shall travel royally with 500 hourses

to convey him through the land. If he thinks the salary offered too little, Garland, when he arrives, will assure him that if he asks as much more, he shall have it. The "Lord Protector," too, Prince Boris, took Garland in his arms on his departure and promised 1,000 roubles from his own purse beside the Emperor's allowance.

Simkinson reached Trebona on September 18, and at once declared his flattering errand. "On December 8 at noon, Garland came to me from the Emperor of Moschovia, according to the articles before sent unto me by Thomas Simkinson." On December 17, at Trebona, Edward Garland drew up a paper repeating all the former promises in the Emperor's name, and signed it, with Kelley, his brother Francis Garland, and others, as witnesses.

There is no doubt that the Emperor thought he was inviting to his Court the man who could fill his coffers and bring glory and prestige to his name. Hakluyt hints at it when he says the offer was made partly for his counsel about discoveries to the North-East, partly for some other weighty occasions. Dee was no self-seeker, or Court flatterer, although this was the fifth sovereign he says he might have served. The offer seems never to have tempted him from his loyalty to his own Queen. He bade Garland at once dismiss six out of the eight Russian servants he had brought to attend them on their journey, and turned to matters more important.

"On 19th December, to the great gratification of Master Edward Garland and Francis, his brother, which Edward had been sent to me with a message from the Emperor of Muschovia, that I should come to him, E.K. made projection with his powder in the proportion of one minim (upon an ounce and a quarter of mercury) and produced nearly an ounce of best gold; which gold we afterwards distributed from the crucible, and gave one to Edward."

It is quite significant that Kelley made the gold, Kelley showed it, and Dee is content to give him all the credit. The pangs and heartburnings and jealousies have yet to come. Now he only felt that at last he was victorious in his long quest. He was on the crest of the wave. His hour had come.

How the wonderful trick was done, Kelley could best describe.

Kelley was now constantly riding to Prague, or making longer expeditions to Poland, for he still had hopes of getting more money from Laski. By March his hope seems to have been realised, for Dee notes that Kelley paid him about 500 ducats in two or more sums (about 233 pounds). This plenitude of money of course encouraged the idea abroad that they were actually making it. When he returned from Prague on January 18, Kelley brought a handsome present from Rosenberg to Jane Dee, in the shape of a beautiful jewelled chain, the value of which was "esteemed at 300 duckettes," says Dee, "200 the juell stones and 100 the gold." In three days Kelley had posted off again to Prague, to join Rosenberg at his house in the scity. This time he took with him his brother Thomas, Francis Garland, and a Bohemian servant, Ferdinand Hernyck. No doubt he was pursuing his experiments for the "multiplying" of gold in the city, away from Dee.

Kelley's letter to Dee announcing this arrival of his in Prague is the only communication between this strange pair of partners that seems to have survived. It shows that erratic and wayward creature in a gentle and even affectionate light, and although its pious protestations are obviously overdone, it pictures for us quite

vividly the relations between the two, and partly accounts for the strength of the tie that bound Dee to his intractable pupil, soon to become his master. For while Dee laboured laboriously and scientifically with his alchemical compounds, Kelley at one bound overleaped the chasm and by some process best known to himself professed to have arrived at the goal.

To Dee's single-hearted nature such success was magnificent, wonderful. He began forthwith to treat his quondam skryer with added respect; the expression "Dominus Kelley" creeps once into the diary; and Kelley grew arrogant and overbearing. For the moment, however, he is all for friendship and respect.

"Prage. 1587. 25 Januarii." [This in Dee's hand.] (addressed) "To the Right Worshipful and his assured friend Mr. John Dee Esquire, give these. Magnifico Domino, Domino Dee.

"Sir. My hearty commendations unto you, desiring your health as my own; my Lord was exceeding glad of your Letters, and said, 'Now I see he loveth me,' and truly as far as I perceive he loveth us heartily. This Sunday in the Name of the Blessed Trinity I begin my journey [to Poland], wherein I commend me unto your prayers, desiring the Almighty to send his fortitude with me. I commend me unto Mrs. Dee a thousand times, and unto your little babes: wishing myself rather amongst you than elsewhere. I will by God's grace about twenty days hence return in the mean season all comfort and joy be amongst you.

"Your assured and immoveable friend

"E. KELLEY."

When this letter reached Trebona, Dee had gone riding with two horsemen of the city of Neuhaus, hoping to meet Rosenberg, who he thought would return that way from Vienna to Prague. Mrs. Dee at once despatched the servant Ludovic to meet his master. So Dee received Kelley's affectionate letter "in the highway, without Platz," a village about half-way to Neuhaus. Ludovic carried also a little note from Jane to her husband. It is the only letter of hers we have, but it confirms all that we suspect. We know her to have been a well-educated, well-read woman; the writing is strong and clear; and did not Francis Pucci describe her as a learned woman, "lectissima femina"? She must also have been an extraordinarily capable one to have controlled and managed her large household of children, assistants, apprentices, servants and miscellaneous visitors, often in the absence of her husband, and in a foreign land, constantly moving on from place to place in this nomadic life they led. Dee has a charming name for her. Somewhere in a letter he speaks of "my payneful Jane." Full of pains she must indeed have been, the model wife for an elderly, incomprehensible husband, using her intellectual powers to accommodate her family, while the learned man pursued his angelic visions and his alchemical experiments unhampered. Above all things she must have been a peacemaker, hot and hasty although she sometimes was. Here is the letter to the husband who had only left her that morning: —

"Swethart. I commend me unto you, hoping in God that you ar in good health as I, and my children, with all my household, am here, I prayse God for it. I have non other matter to write unto you at this time."

There is a capable and managing sound about “my” children and “my” household, which leads one to wonder what this practical housewife thought of all the angelic promises which were never kept or performed. At the outset of the mysterious Kelley doings she was, we know, in her impetuous way, annoyed, angry, probably contemptuous, but by this time she perhaps had grown either to believe in them or tolerantly to acquiesce. She was only thirty- two, yet she had lived through many strange experiences and was soon to be put to the strongest test possible to a woman.

By April Kelley was once more settled as part of the household, and on the 4th the crystal gazing was resumed. He professed to hear instructions to Rosenberg, who was present, to build a commonwealth, render tribute to Rudolph, and he shall be Duke of Brandenburg. To himself things are said he is not reluctant to hear. We have seen how almost immediately after his marriage he took a violent dislike to his wife. In the four years, it seems, he had reproached her for giving him no child. To him generation was the root principle of alchemy, and the phase of it in which he centred his attention. It is always the marriage of the red man, copper, and the white woman, mercury, that is to tinge the whole world with gold. Now a voice tells him why he is barren. Not because of his reckless, disordered life, but because she was of his own choosing — the wrong woman! Therefore he is to be seedless and fruitless for ever. Had it not been for the Dees’ kindness to her, and especially Jane’s, poor neglected Joan Kelley would have had but a sorry time. She was only twenty-four; lively and docile, she seemed to please everyone but her husband. Pucci, with perhaps a little flattery, calls her “*rarum exemplum juvenilis sanctitatis, castitatis, atque omnium virtutem.*” If she had not all the virtues, she at least had several. Her brother, Edmund Cooper, and another friend so loved her that they came over from England a year later on purpose to see if she and her husband could not be more reconciled.

Kelley had been more unsettled than ever, discontented with his wife, with his calling, its results, and above all with his position and his poverty. What was a pittance of fifty pounds a year to a man in constant intercourse with princes and nobles, with credulous fools possessed with dreams of gold? The same qualities that attracted Dee were equally magnetic with others. Laski loved him; Edward Dyer deserted his old friend Dee for this newcomer, a nobody. He had made himself invaluable to Rosenberg, who seems to have had implicit faith in his powers. Rosenberg induces the Emperor to employ him. Had he not already found the secret of projection? Was he not the possessor of the magic powder which waited only for the opportunity to be transformed into countless heaps of ducats? Only money was wanting, and that he could certainly get. But he must first be released from this galling position of medium. He told Dee that all through this Lent he had prayed once a day at least that he might “no more have dealing to skry.” At Easter-time he did receive a promise to be set free from the crystal gazing, as he desired, but his wish for freedom was not exactly approved by the angelic ministers.

“Is it a burthen unto thee to be comforted from above? O foolish man! By how much the heavens excel the earth, by so much doth the gift that is given thee excel all earthly treasure. Notwithstanding, thou shalt not at any time hereafter be constrained to see the judgment of the Highest, or to hear the voices of heaven, for thou art a stumbling block to many....And the power which is given thee of seeing

shall be diminished in thee, and shall dwell upon the first begotten son of him that sitteth by thee.”

The selection of a child as Kelley’s successor seems not to have been altogether unexpected. It had been hinted in Prague a year before that a boy would serve for the office; but that the choice would fall upon Dee’s own son must have come as a dreadful surprise, at any rate to his mother. No doubt the old man regarded it as a mark of special heavenly honour.

It is more likely that Jane, with her practical mind, regarded the change of medium with anything but satisfaction. Arthur was now seven and three quarters of a year old, a clever child, already well grounded in Latin, but far too tender in years and disposition to be made the subject of any psychological experiments. Fortunately for him, his skrying was a dismal failure, although it seems to have bent his childish mind towards the occultism he followed in after-life. Distinguished physician as he afterwards become, both at home and in the service of the Emperor of Russia, he was a true son of his father, and maintained to the end of his life a belief in alchemy and transmutation which nothing could shake.

Kelley was desired to initiate the child.

“I thereupon thinking that E.K. would, should or best could, instruct and direct the childe in that exercise, did alwayes await that E.K. would of himself call the boy to that exercise with him; and so much the rather because he said that he was very glad now that he should have a Witness of the things shewed and declared by spiritual creatures: And that he would be more willing to do what should be so enjoined to him to do, than if only he himself did see. But when E.K. said to me that I should exercise the child and not he, and that he would not, I thereupon appointed with myself to bring the childe to the place, and to offer him, and present him to the service of Seeing and Skrying from God and by God’s assignment.”

Then Dee drew up a petition to put in the child’s mouth that he might be “a true and perfect seer, Hearer, Declarer and Witness of such things as might be revealed to him either immediately or mediately by the angels.” Three times a day for three days he was to offer this prayer thrice over, while seated at the stone. The poor child happily beheld in the magic crystal nothing more than dots and pricks, letters and lines, and “a young man in a white leathern doublet and a grey cloke, like hans of Gloats, his cloak,” of all which even his father could make little. On the fourth day came Kelley, to see how Arthur and his skrying progressed. But still the child saw nothing. Then Kelley applied himself to skry as usual. Looking from the gallery window, he had already without any crystal seen Il and Madimi, also Uriel, who justifies their words. What they command he hesitates to say. Next day he is again the percipient; the result is the same. At length, with feigned reluctance, he tells Dee of a vision of strange and subversive portent. It is so repugnant to him that he can hardly impart it. Madimi, throwing aside all her garments, mysteriously bids them participate in all things one with another. Kelley affects not to understand, but after more hesitation expounds to Dee that the sharing is to be in everything, even of their wives. All things are to be in common between them.

Dee, to whom Madimi is invisible, though he hears her voice, fiercely rebukes her: “Such words are unmeet for any godly creature to use. Are the

commandments of God to be broken?" This participation, he insists to Kelley, can be meant only in a Christian and godly sense. Kelley construes the injunction very differently, but he affects a chaste horror and swears for the hundredth time that he will deal no more with the spirits.

Then Madimi, with scathing irony, addresses them both as "fools, and of little understanding." Not content to be hearers, would they be "Lords, Gods, judgers of the heavens"? She turns away. "Your own reason riseth up against my wisdom. Behold, you are free. Do that which most pleaseth you."

It is a comfort to learn that the child Arthur had all this time fallen down "in a swoond." He was indeed very ill for some time afterwards, and small wonder.

Dee protested and argued with Kelley and with Madimi. He was consumed with grief and amazement that good angels could propound "so hard and unpure a doctrine." Had he not offered his very soul "as a pawn to discharge E.K. his crediting of them to the good and faithful ministers of Almighty God"? Was it not his life's work to withdraw Kelley from any kind of association with the bad spirits who had frequented him before he came to Mortlake?

Until two in the morning of this April 18, 1587, the pair sat up arguing, talking, praying. Kelley held forth about a little spirit, Ben, who had that day appeared to him in his laboratory alone, and had shown him how to distil oil from spirit of wine "over a retort in two silver dishes whelmed one upon another, with a hole through the middle and a sponge between them, in which the oil would remain." Ben had foretold Elizabeth's death in July (she lived for sixteen years), the death of the King of Spain and the Pope; in fact, a general moribundity of sovereigns. Francis Garland was a spy sent by Burleigh to see what they were doing; Rosenberg would be shortly poisoned; famine and bloodshed would cover the land. Many other dire calamities would happen if they were not conformable to the voice; chief of all, the virtue should be taken from Kelley's precious powder; it would be rendered unprofitable, and he would become a beggar. It was Ben, he says, who had brought him his powder.

Dee replied that he had found so much halting and untruth in Kelley's reports of actions when he was not present, that he would believe nothing save what by better trial he found to be true. But at last his resistance seemed to be overridden, and in the chill of the early morning he went to bed, heavy at heart in spite of his delusion. His poor wife was lying awake, wondering what turn their ill-starred fortunes were next to take.

"`Jane,' I said, `I can see that there is no other remedy, but as hath been said of our cross-matching, so it must needs be done.'"

Poor Mrs. Dee, shocked and horrified, fell a-weeping and trembling for a full quarter of an hour, then burst into a fury of anger. At last she implored her husband never to leave her. "I trust," said she, "that though I give myself thus to be used, that God will turn me into a stone before he would suffer me in my obedience to receive any shame or inconvenience." She would eat neither fish nor flesh, she vowed, until this action, so contrary to the wholesome law of God, and so different from former actions, which had often comforted her; was confirmed. Both the indignant women demanded a repetition of the action.

In obedience to Raphael's counsel, a solemn pact or covenant was humbly drawn up by Dee on the 21st, and signed by these four strange partners in delusion. It promised blind obedience, with secrecy upon pain of death to any of the four. It deprecated all intention of impurity and guilt. Its subscribers promise to captivate and tread under foot all human timorous doubting that the true original power and authority of sins releasing or discharging is from the Creator. True Christian charity spiritual, perfect friendship and matrimonial liberty between the four is vowed, and they beseech that this "last mystical admonishment" be not imputed to them for rashness, presumption, or wanton lust.

Dee's hand is unmistakable in the document. He regarded the new development apparently only as a symbol of further spiritual union, and a means of obtaining a closer entrance into the secrets of all knowledge. It was no matter to him, he says, if the women were imperfectly obedient. "If it offend not God, it offended not mee, and I pray God it did not offend him."

Kelley drew up a paper the day after Dee's, washing his hands of the whole matter, protesting that he did not believe so damnable a doctrine would be commanded, recounting his warnings to his worshipful Master Dee, and so on. On May 6 Dee spread his covenant, a document of the most truly devout character, before the holy south table in the chapel of the castle, with many prayers for divine guidance. The next day Kelley obtained the paper, cut it in pieces and destroyed it, made away with one of the crystals (which was found again under Mrs. Dee's pillow), and threatened to depart elsewhere with John Carpio. Coldness and jealousy fell between the pair.

So ended the whole extraordinary episode of the Talbot- Kelley spiritualistic revelations. Madimi appeared for the last time on May 23. Then the *Liber Mysteriorum* is closed. For twenty years there are no more records of angels' visits. And the few pages that remain are written in a halting hand in Dee's stricken old age, when he was seldom visited by his unseen friends, badly though he needed their comfort. No other medium like Kelley was ever found. One can only wonder whether, after so rude an awakening, even Dee would have implicitly trusted anyone again. These five years with the skryer had filled him to the brim with a consciousness of some power beyond his wit to control, a power amazing in its ingenuity to torture him. He had asked Madimi piteously if he should suffer any more of these pangs. He knew now that he would. Yet, in spite of all, these marvellous doings had brought him hours of exquisite happiness, moments when he had seemed lost in the unity of the combined wisdom of the ages, which to him meant — God.

CHAPTER XV

THE END OF THE PARTNERSHIP

"If all you boast of your great art be true,
Sure willing poverty lives most in you."

— Ben Jonson, Epigram to Alchymists.

Dee now resumed diligently his writing in the other diary, which becomes a strange medley of daily affairs small and great. He sent Francis Garland to England

with another letter to Walsingham, dated June 17, begging him to continue his opinion of Dee's fidelity towards Her Majesty and the realm. It would be useless as yet to render any account of commodity to them or their country reaped by this peregrination, "but I trust more will be glad of our coming home than were sorry of our going abroad." He has not heard from Mr. Justice Young since May twelvemonth, but hopes his pitiful case of the books and other injuries endured have, by Walsingham's favour, had some redress. There is no news of importance but the Polish King's election, "the mysteries whereof, by the time this bearer reaches England, will be known to you." "Remember me to your good lady and to your daughter Lady Sidney." Money was now plentiful enough, and on September 1 Dee covenanted with John Basset (who had arrived at Trebona on August 20) "to teach the children the Latin tongue, and I do give him seven ducats by the quarter, and the term to begyne this day; and so I gave him presently seven ducketts of Hungary in gold, before my wife. God speede his work." Arthur, who was just over eight, was getting on with his "grammar"; Katherine was six. Thus was another element introduced into the oddly assorted household, and on September 4 Dee writes: "Basset his hurly burly with T. Kelley." Payments to Basset were entered regularly each quarter until August following, when the tutor, whose real name seems to have been Edward Whitlock, went off to Budweis on pretence of buying "cullors" — perhaps for painting, and never returned.

Various visitors came to Trebona, among them Pucci, bringing Christian Francke, the author of some books written against the Jesuits. Rosenberg returned to Trebona, and finding a constraint existing in the relations of the household, set himself to reconcile them. "July 19th. a certayn kind of recommendation between our wives. Next day some relenting of E.K., also by my Lord's entreaty." Rosenberg came and went frequently, so did his wife. Lord Biberstein, a friend of theirs, came to make Dee's acquaintance.

Alchemical experiments were being prosecuted with vigour. It was Dee's turn to make something prized, even if it were not gold. "Sept. 28th. I delivered to Mr. Ed. Kelley (earnestly requiring it as his part) the half of all the animall which was made. It is to weigh 20 ounces; he wayed it himself in my chamber. He bought his weights purposely for it. My Lord had spoken to me before for some, but Mr. Kelley had not spoken." Secrecy being necessary, he is evidently using a word of hidden meaning.

Kelley was constantly riding to Prague, and in October, while he was away, "John Carpio [who had joined them at Trebona] did begyn to make furnaces over the gate. He used of my rownd bricks, and for the yern pot was contented now to use the lesser bricks, 60 to make a furnace." Experiments on a large scale were about to be begun, and when Kelley returned a week later, *terribilis expostulatio*, etc., is the entry under his name. Edmond Hilton returned from England, and a month later Francis Garland, bringing letters from Edward Dyer. He brought also letters from Court advising their return home. People in the neighbourhood were beginning to talk about the strange doings of the foreigners in the Castle, and the Captain Critzin of the Guard disdained to come to a wedding supper in the Rathhaus because Dee and Kelley were to be present. The household grew larger and larger. Thomas Kelley was married in June. In December, "Mr. John Carpio went towards Prague to marry the maiden he had trubbled; for the Emperor's Majestie, by my Lord Rosenberg's means, had so ordered the matter." He was absent till February 16, and

in April brought his wife. Dee turned back to his books of tables, figures and symbols. “The 30 and 31 day I began to frame myself toward the practice of the Heptagonos of my 4th boke. God prosper my purpose.” Kelley, on the other hand, was absorbed in alchemical studies. Perhaps the secret he had once professed to have captured had again eluded him.

“Dec. 12 afternone somewhat. Mr. Ed. Keley his lamp overthrow, the spirit of wyne being spent to[o] nere, and the glas being not stayed with buks abowt it, as it was wont to be; and the same glas so flitting on one side, the spirit ws spilled out, and burnt all that was on the table where it stood, lynnen and written books — as the bok of Zacharius withthe Alkanor that I translated out of French for some by spirituall could not [?]; Rowlaschy his third boke of waters philosophicall; the boke called Angelicum opus, all in pictures of the work from the beginning to the end; the copy of the man of Budwise Conclusions for the Transmutation of metalls, and 40 leaves in 40, intituled, Extractiones Dunstani, which he himself extracted and noted out of Dunstan his boke, and the very bok of Dunstan was but cast on the bed hard by from the table.”

The “very bok of Dunstan” was no doubt a copy of the manuscript *Tractatus...de lapide philosophorum*, which was formerly ascribed to the Saint of Glastonbury. It was the constant companion of these two alchemists, held in awe and great esteem, as we see by Dee’s words above.

In his new liberation from crystal gazing, Kelley became a changed and haughty being. He was established in his own apartments, and when he felt weary his former master was now summoned imperiously to come and amuse him! He sends the old man a message by his brother Tomas, saying, “You study too much, it is too late in the day to go to Cromlaw, as you intended, he wishes you to come to pass the tyme with him at play.” Dee mildly consents: “I went after dynner and payd, he and I against Mr. F. Garland and Mr. Rob., tyll supper tyme in his dyning rome, and after supper he came and the others, and we played there two or three houres and frendely departed. This was then after the great and wonderful unkindness used toward me in taking my man.” A week or two later Kelley sent for Dee late in the evening to come to his laboratory over the gate, to see how he distilled sericon, “according as in time past and of late he heard of me out of Riplay. God lend his heart to all charity and vertue.”

It is evident that Kelley was jealously and secretly working at his experiments apart from Dee. He had learned much alchemy from his master and his master’s wonderful library inthe four years, but there was still knowledge stored in chambers of Dee’s brain of which he could not pick the lock. To enter those inner recesses had been doubtless Kelley’s aim when he represented the spirits as bidding them share everything with each other. But he, on his part, had no intention of sharing anything that he discovered.

The year 1588 began badly, for the child Michael, on New Year’s Day,

“going childyshly with a sharp stick of eight inches long and a little wax cadell light on the top of it [evidently the child was keeping Christmastide in good old German fashion], did fall uppon the playn bords in Marie’s chamber, and the sharp point of the stik entred through the lid of his left ey toward the corner next the nose, and so

persed through, insomuch that great abundance of blud came out under the lid, in the very corner of the sayd ey. The hole on the outside is not bygger than a pin's hed; it was anoynted with St. John's oyle. The boy slept well. God spede the rest of the cure. The next day after, it apperid that the first towch of the stikes point was at the very myddle of the apple of the ey, and so (by God's mercy and favor) glanced tothe place where it entred; with the strength of his hed and the fire of his fulness. I may make some shew of it to the prayse of God for his mercies and protection."

Dee of course was as skilled in medicine as any doctor of the time. He rendered medical assistance when Thomas Kelley's wife, Lydia, miscarried with twin boys. He notes his own symptoms carefully: "June 19, I had a grudging of the ague. June 22, I did evidently receive the ague and layd down. Jan. 17. The humming in my ears began." Another time "I was very sik uppon two or three sage leaves eten in the morning; better suddenly at night. When I cast them up, I was well."

The coldness between the two became unbearable to Dee, the peacemaker, of whom Aubrey relates that if ever any of his neighbours fell out, "he would not let them alone until he had made them friends." In April, he wrote to Kelley and his wife "2 charitable letters, requiring at theyre hands mutual charity." The same day he made friends with Captain Critzin, and on Sunday, when Jane ws churched after Theodore's birth, received the Communion with her. He hears of some fresh treachery of Pucci, and of Rosenberg's displeasure, but all is forgotten on May 10, when Kelley "did open the great secret to me, God be thanked!" A few days after, "Mistris Kelley received the sacrament, and to me and my wife gave her hand in charity, and we rushed not fromher." The reconciliation does not seem to have been altogether comlete. Every visitor throughout that summer, Edmund Cooper, Joan Kelley's brother; Mr. Thomas Southwell, his friend; Edward Dyer, Francis Garland, and Count Rosenberg, all seem to have tried to patch up the quarrel, but things only grew worse.

The "great secret" opened by Kelley was no doubt the professed secret of the gold. Dee must very soon have found out the true value of this "secret," but apparently he continued to believe that Kelley had honestly transmuted base metal, and was keeping the method to himself. Nothing was less likely than that he would share his knowledge, even with the master who had taught him all he knew. The first essential in alchemy was secrecy. It is characteristic of Dee that he seems to have been more pained at Kelley's want of confidence in him, than chagrined at not knowing the secret. Of jealousy that Kelley was, or seemed to be, the successful alchemist, there is no trace. But Kelley was gradually undermining all Dee's influence and friendship with Rosenberg, who was their one powerful friend. The Viceroy of Bohemia had much influence with the Emperor. He was costantly at the Castle or with Kelley in Prague. Kelley had stolen the old man's best workman, and was now turning all his friends against him. Rosenberg and Kelley were always working in secret, while he was left outside in the cold. "September 15th, the Lord Chancellor cam to Trebona and went away on the 17th. The rancor and dissiumlation now evident to me, God deliver me! I was not sent for." The pathos of the situation is irresistible. The man of a Continental reputation, whom five emperors had honoured, must stand aside and see his upstart pupil made much of and set onthe high-road to fortune. But Fate was more just than she seemed, and

Dee, who clung to the honest and true way, had in the end the better lot. Not in ease or success, truly; but who would not rather leave behind him the reputation of a sincere man deluded than that of a deceiver, even though not unmasked? Till then Dee says he had been “chief governor of our philosophical proceedings, but little by little I became hindered and crossed by fine and subtle devices, laid first by the Bohemians, somewhat by Italians, and lastly by my own countrymen.”

The strange partnership had now run its tempestuous course to the end, and the heterogeneous colony of English men and women at Trebona was about to break up, never all to meet again. The first to depart was Mistress Kelley, thankful, no doubt, to disentangle herself from the web of pretences, deception and bickerings. On October 17, “Mistress Kelley and the rest rode towards Pouchartz in the morning.” She was on her way to England, and only once thereafter does this young woman’s name enter into our story.[On November 23, Francis Garland and Mr. Dyer’s servant, Edward Rowley, who had come back a week or two earlier, left for England. Dee sent by them a most important letter to the Queen, also letters to Dyer, Mr. Young, and to Edmond Hilton. News from England travelled slowly, and Dee had not long since heard of the glorious defeat of the Spanish Armada of the previous May. The victorious captains, Frobisher, Drake, Hawkins, were all well known to him, and with the Admiral in chief command, Lord Howard of Effingham, he was very familiar at Court, for his wife had been Jane’s early patron and friend. Patriot that Dee was, yearning to get back to England, he now wrote to the Queen a letter of congratulation (dated November 1-, 1588) upon the splendid victory of her navy. It was couched in the graceful and fantastic terms of homage of the day, and is a literary production well befitting a man of his reputation. The letter is reproduced from the original. It is printed by Ellis in *Letters of Eminent Men*.

[REPRODUCTION OF LETTER GOES HERE]

He speaks in it of his proposed return, and begs for a safe conduct through all the domains of princes and potentates which lay between him and home. “Happy are they that can perceive and so obey the pleasant call of the mightie Lady Opportunitie.” The answer, of course, took long to come, but he began to make his preparations slowly. He gave to Kelley the wonderful convex glass which the Queen had so often admired. A fortnight after, Kelley gave it to Rosenberg, and the Count presented it to the Emperor. Dee says the Emperor had long esteemed it, but he has not told us when he showed it to Rudolph. He had described the mirror in his Preface to Billingsley’s *Euclid* (see ante, p. 25).

On February 4 he also made over to Kelley “the powder, the books, the glass, and the bone, for Rosenberg, and he thereupon gave me discharge in writing of his own hand subscribed and sealed.” Rosenberg was away, and did not trouble to return to bid him good-bye. Instead he wrote to Kelley to take his leave of Dee for him, and said that he would send instructions to his man Menschik to “dispatch him,” perhaps with some settlement of a financial character.

On the afternoon of February 16, 1588, Kelley rode away to Prague, taking most of the assistants with him: John Carpio, F. Garland, Simkinson. Dee never saw him again.

Three new coaches had been ordered in Budweis, and when they were ready, Dee dispatched Edmond Hilton (who had returned from England in December) to Prague to buy a dozen coach and saddle horses. Money was plentiful at this time, the practice of economy was impossible to Dee, so he set off to travel homewards in state, as became a man to whom an emperor had offered a princely salary. It was very unnecessary, even absurd, but it was characteristic of Dee and his exalted ideas, not so much of himself, as of his peculiar mission. The journey cost, as he reckoned up afterwards, more than 600 pounds. The horses — twelve young Hungarian coach horses and three Wallachees for the saddle- -cost 120 pounds, and cheap they were at that. The three new coaches, with harness, saddles and bridles, cost 60 pounds; and the hiring of two or three waggons for his goods, books, furniture, vessels, etc., ran into 110 pounds. Then he had an escort of twenty-four soldiers from Diepholt to Oldenburg, as permitted by the Emperor's passport; and from Oldenburg to Bremen, the Duke of that province sent six musqueteers to protect him. It was a dangerous time to ride abroad, as he says, not long before the outbreak of the Thirty Years' War. A party of eighteen horsemen had lain in wait for his caravan for five days, but a warning came through a Scot in the garrison of Oldenburg, and Robert, the Landgrave of Hesse, extended his powerful protection.

The train of coaches and waggons, with the travellers and their baggage, left Trebona on March 11. The Castle had been their home for a year and a half, and we can fancy Jane, at any rate, dreading to take up once more the old wandering life. For it was to be a year and three-quarters more before they set foot in England. On the 18th they were in Nuremburg, where they stayed two nights; on March 26 they reached Frankfurt-am-Main, and on April 19, five weeks after leaving Trebona, they were in Bremen, their present destination.

CHAPTER XVI

THE END OF KELLEY

“All you that faine philosophers would be,
And day and night in Geber's kitchen broyle,
Wasting the chips of ancient Hermes' tree,
Weening to turn them to a precious oyle,
The more you worke the more you loose and spoile.
To you, I say, how learned soe'er you be,
Go burn your Bookes and come and learne of me.”
— Sir Edward Kelley, Metrical Treatise on Alchemy.

Before continuing the story of Dee's life in Bremen and his return to England, the end of Kelley's extraordinary meteoric career, which six more years extinguished, must be briefly traced.

Dee expected Kelley to join him at Stade. He confidently thought they would return to England together, obedient to the Queen's summons. But Kelley was now a great man with Rudolph, who had given him an estate and a title, and established him at his Court in Prague as a citizen and councillor of state. Apparently he succeeded in keeping up the deception of making gold. The news of his promotion was conveyed by Dee to Walsingham, at Barn Elms, in a letter dated August 22, 1589,

to which we shall again return. He speaks of Kelley as “my great friend, yet in Boemia,” and surmises that Walsingham may have heard direct from him, who is “now in most favourable manner created a Baron of the Kingdom of Boemia.”

The actual title conferred was *eques auratus*, a synonym for “miles” which took its origin in the fact that a knight’s armour was gilded. In English it was of course “Sir.” The title must have been conferred on Kelley very soon after Dee left Trebona in March; for by the end of June he is called Sir Edward by a couple of Englishmen, Robert Tatton and George Leycester, who with Edmond Hilton were at Trebona then, and came on to Dee at Bremen. Kelley commissioned them to take down particulars of the treachery of one Parkins, a Jesuit in Prague, who was plotting with the King of Spain and the Pope against England. He wished of course to score “his faithful discoverie of this treason.” He also desired Burleigh and others in England to know what great honour had been done him, and he obtained in February, 1590, a confirmation of the grant of his title to send him over, lest there should be any doubt in English minds. The document, curiously enough, is countersigned by Dr. Jacob Curtius, the acquaintance of three years before.

Constant letters passed between the two former fellow-workers through the year 1590, the messenger being either Thomas Kelley or Francis Garland. All manner of wild stories were current in England, and have been gathered up and repeated by every writer upon Dee and Kelley. The sober Anthony Wood relates that gold was so plentiful in Trebona before Dee left that the young Arthur played with gold quoits made by projection, while a youthful Count Rosenberg (he seems a quite fictitious person) was throwing about silver playthings procured by the like means. Burleigh had written for a specimen of their wonderful art, and it said that the Queen was actually the recipient of a warming-pan, from the copper or brass lid of which a piece had been cut, transmuted into gold, and replaced. Elias Ashmole goes further in the story to say that “without Sir Edward’s touching or handling it, or melting the metal, onely warming it in the Fire, the Elixir being put thereon, it was transmuted into pure gold.” He adds that he has heard from a credible person (who has seen them) that Kelley made rings of gold wire twisted twice round the finger, which he gave away, to the value of 4,000 pounds: at the marriage of Rosenberg’s servant before alluded to. Ashmole adds: “This was highly generous, but to say the truth, openly Profuse beyond the modest limits of a sober philosopher.” Sir Thomas Browne says he heard from Arthur Dee, his friend, conclusive evidence of the manufacture of gold. The reader may smile at these fairy tales, but what is to be said of a staid and sober minister like Burleigh being ready to credit the truth of Kelley’s exploits, whether convinced by the warming-pan, or by other means? In a long letter to Edward Dyer, in 1591, who was then acting as the Queen’s agent in Germany, he urges him to use every means in his power to induce “Sir Edward Kelley to come over to his native country and honour her Majesty with the fruits of such knowledge as God has given him.” Dyer had been Dee’s friend for a great many years, as we know, and was Arthur’s godfather, but he transferred all his attentions to Kelley as soon as that clever trickster began making gold. Dee only says he “did injure me unkindlie.” Kelley and Dyer became inseparable, and Dyer wrote home to Burleigh wonderful reports of Kelley’s miracles. Ignoring all that had passed, Burleigh is ready to welcome the quondam coiner, forger, or what not, with open arms back to the service of his Queen. “If his knowledge is as certain as you make it, what would you have me think could stay him from flying to the

service of his own sovereign?" If he is afraid of old reports, actions, disgrace, being brought up against him (and we know Kelley's record was none of the cleanest), let him be assured that he shall have his Queen's protection "against all impediments that shall arise." Burleigh becomes almost poetical as he speaks of the patronage of "such a Princess, who never yet was stained with any breach of Promise to them that deserved her favour. If I did not know to whom I write, who has had long experience of her rare vertues,...I could use many arguments to move any man never to mistrust her." He implores Dyer to induce Kelley to come. If he does not come, it can only be because by cunning or legerdemain he has deceived them and cannot do what he promises, or else he is an unnatural disloyal man and subject. In case Kelley will not come, he asks if Dyer cannot send a very small portion of his powder to make a demonstration to the Queen's own sight. What the Treasurer would like most of all is that Kelley should "send her Majesty as a token a good round sum of money, say enough to defray the charges of the navy for this summer," for the ships of Spain were gathering courage after their defeat. "But wishers and woulders were never good householders," he ends. The Queen is at his house at Theobalds, and will be some time longer. He would not be content the time were tripled, so he "had but one corn of Sir Edward Kelley's powder." Burleigh and Kelley were also in direct correspondence. Beside urging his return, the Lord Treasurer, who seemed to consider Kelley as the storehouse of the elixir of life as well as of the philosopher's stone, begs for a prescription with the proof of manufactured gold. In a brief note of February 18, 1591, Kelley says he will shortly send the good thing desired for your health." He has received the salutations sent through Mr. Dyer, and "at his return you shall know how I thank you." This, the only original letter of Kelley's to be traced, characteristically promises what he never meant to do. Burleigh replied in May, again begging him to send "something of your operation to strengthen me afore next winter against my old enemy the gout." He once more strongly urges Kelley's return. How can he hesitate to bestow the gifts that God has given him rather upon his own Prince and Countrie than upon strangers?

Kelley of course did not return, but apparently wrote again, urging powerful reasons of excuse. Burleigh's faith in him began to shake. He sent a last imperative recall, some of which may be quoted from the rough draft written in his own hand. It shows once more what sort of men the great Queen had to serve her, and what a Queen she was to serve.

Beginning "Good Sir Edward Kelley," Burleigh acknowledges Kelley's letters by Dyer. "Without particular knowledge of your impediments, I may not give any such censures as others soe unconsiderately, yea uncharitably, may doe. You confess a desire to return to your native countrie; your minde draws to your sovereign. This is commendable, yet many say if you come not, it is because you cannot perform what has been reported of you. Malicious persons say you are an imposter, like some in other countries have been proved. You fear severe punishment. Now, good knight, though I write thus plainly to you, yet such is my credit in Mr. Dyer, such my allowance of your loyal profession, such opinion do I firmly conceive of your wisdom and love expressed in your letters, such my perswasion of your habillitie to performe what Mr. Dyer has reported (by reason of the estimation, honor and credit I see that you have gotton by yr behaviour), that I rest only

unsatisfied in your delaye of coming; and I am expressly commanded by Her Majestie to require you to have regard to her honour, and according to the tenor of her former letters, to assure yrself singularly favoured in respect of the benefit you may bring to Her Majestie....

“Be assured of worldly reward. You can make yr Queen so happie for her, surely as no subject she hath can do the like. Good Knight, let me end my letter conjuring you, in God’s holy name not to keep God’s gift from yr natural countrie, but rather help make Her Majestie a glorious and victorious power against the mallice of hers and God’s enemies. Let honor and glory move yr naturall hart to become honorable in yr own countrie rather than in a strange one, and leave a monument of yr name with posterity. Let no other country bereave us of this felicitie: that only, yea only by you, I say, is to be expected. Let no time be lost; we are all mortall: you that should be author, this noble Queen yt should be receiver thereof.”

Then he politely acknowledges some gift Kelley has sent. Instead of an ingot of gold, it seems more like a geological specimen for a museum, and certainly does not excite the Lord Treasurer’s immense gratitude.

“All this in answer to your by Dyer. I thank you for the montayn or rock sent safely from Staden. I will place it in my house, where I bestow other things of workmanship, and it shall be memoryall of yr kindness, wishing I might receive some small receipt from you yt might comfor my spyritts in myn age, rather than my coffers with any welth, for I esteeme helth above welth.”

But Kelley knew better than to face the astute Englishmen at home. In Prague he felt secure, and all too bitterly he learned his mistake. A couple of independent letters from two English merchants to Burleigh and to Edward Wootton give the exciting story of his fall from favour.

He had been established in a house of his own close to the Palace; his wife and brother had rejoined him; Edward Dyer made it his headquarters. One day, the last of April, perhaps even before Burleigh’s letter was dispatched, he was suddenly arrested by the fitful Rudolph’s command, and thrown into prison. A large force of the imperial guard, accompanied by the City Provost and one of the Secretaries of State, burst uninvited into his house to take him whilst at dinner. But a friend at Court had whispered a word, and the evening before he had ridden off with one attendant towards Rosenberg. The intruders had to be content with haling off brother Thomas to prison, “pinacled like a thief.” They searched the house thoroughly, broke open doors, and thrust their halberds into the beds or any place where “Sir Edward” might possibly lie hid. Satisfied he was not there, they sealed up certain of the rooms, laid some of the servants in chains — one was afterwards “racked” — and departed, leaving a guard over “Lady Kelley” and Mr. Dyer, forbidding them to stir from the house. Returning with their news to the Emperor, Rudolph “cursed in the Dutch manner,” and gave orders to search the town and the highways.

Kelley had ridden off many miles towards his patron, the all-powerful Rosenberg, but being weary and fasting, halted at the inn at Sobislaus, fed, and threw himself on a couch to sleep. By three days after, May 2, the soldiers had tracked him

down; and roughly seizing him, they cut open his doublet with a knife to search for concealed valuables or papers, vowing they cared not whether they took him dead or alive to the Emperor. Kelley appealed to his all-powerful friend, Rosenberg. "In Bohemia," says the merchant in his letter, "it is a rule that his Majesty dares do nothing without the Earl's consent, he being Burgrave of Prague, the immediate person and officer under the Crown." Rudolph was already sinking into the melancholy and madness in which he ended his days. However, Rosenberg's protection did not avail. Kelley was taken to the Castle of Purglitz, three miles from Prague, and there he was closely confined for more than two years.

And now for the cause of Rudolph's displeasure, and the reason of the arrest.

First, it is surmised to be debt, but the merchant adds that although Kelley is known to owe a large sum to two Cologne merchants who trade in jewels, he owes nothing to the Emperor, nor ever had put him to any charge, save for coals and house room.

Next it is thought he was in league with a professed gold-maker from Venice, executed by the Duke of Bavaria at Munich, on April 25. (Of him, too, Burleigh has written in his letter to Dyer.) Thirdly, the Emperor's fear that Kelley would depart for England is adduced. Dyer had brought autograph letters from the Queen recalling him. A doctor's son in the town, who had served Sir Philip Sidney in England, and knew her hand, had reported this. It was of course an invention; and the merchant opines Dyer is of too rare a discretion to permit secret letters to be seen or even heard of; it is more likely that Kelley has some time or other vaunted at table that the Queen had sent for him. "He is a man who taketh, as I hear, a pleasure that Princes desire him." Fourthly, it is the doing of the powerful family of the Poppels, second family in the kingdom, and great enemies of the Rosenbergs, who have been "the setters up and principal maintainers of Sir Edward Kelley hitherto." The fifth report is that Kelley had distilled an oil or medicine for the Emperor's heart disease, which was poison. Lastly, the writer comes to what he takes for the true reason of Rudolph's anger.

An Italian, named Scoto, having cast imputations on Kelley's powers of projection, the Emperor sent for him to come and make proof of his art at Court. Kelley of course excused himself, saying he was sick. Three times he was summoned, and then the guard was despatched to bring him. The accusation was Laesus Mejestatis, and the city wonders what will be the end. The Emperor dare not openly execute him, for fear of Rosenberg and the strong feeling in the State for a change of ruler. Yet he may easily be put to death secretly in that castle where he is confined, "and Rosenberg not know otherwise than that he liveth, or is dead by disease. Almost grown now to be a common Practice in the Empire, and in the Palatine especially, noted that way."

This dark hint is almost a prophecy of Kelley's fate; but the doom was not yet quite prepared. On December 5, 1593, Dee received news of his having been set at liberty on the previous October 4, just two and a half years after his arrest. Not a word of him in Dee's diary in the meantime, until March 12 of that year, when the old man records that he dreamt much of Kelley two nights running, "as if he wer in my house, familiar, with his wife and brother."

Kelley characteristically says he was "utterly incapable of remaining idle even in prison, and employed his time in writing alchemical treatises," from which it seems he was allowed books and papers, for his writings are mere compilations

from ancient chief masters of the art. In *The Stone of the Philosophers*, dedicated to Rudolph, he speaks of two imprisonments, tells him grandiloquently that he has for two or three years (1588-91) used great labour and expense to discover for him that which might afford profit and pleasure; and adds, with great bombast, "If my teaching displeases you, you are still wandering astray from the true scope and aim of this matter, utterly wasting your money, time, labour and hope." Truth is more desirable than anything else, and posterity will discover that he is to be counted among those who have suffered for it. Kelley as a sufferer for truth is highly entertaining, but he goes on to make a still more distasteful allusion. "It always way, and always will be, the way of mankind to release Barabbas and crucify Christ."

Beside this treatise Kelley certainly produced an earlier writing of some sort on the subject, which Dee discussed with the Archbishop of Canterbury on July 13, 1590. It had apparently incurred his displeasure. Mr. Waite attributes two other short papers to Kelley, *The Humid Path* and *The Theatre of Terrestrial Astronomy*. A couple of rather quaint alchemical poems — one of thirty-nine stanzas, from which the heading of this chapter is taken — are doubtless by him, perhaps written also in captivity.

During the next year letters were two or three times exchanged between Kelley and Dee, and in March, 1595, Francis Garland, who had then not long returned from Prague, "came to visit me and had much talk with me of E.K." Kelley was apparently then restored to the Emperor's favour, for on August 12, Dee says he "receyved Sir Edward Kelley's letters of the Emperor, inviting me to his servyce again." Did Kelley think there might be further hints to be got from his old alchemical master? Then under date of November 25, 1595, Dee enters this curt note: "the news that Sir Edward Kelley was slayne." Never thereafter does he mention this adventurer's name.

The prevalent story is that Kelley was again imprisoned in one of Rudolph's castles, and that, attempting to escape by a turret window, he fell from a great height and broke both legs, receiving other injuries, from which he shortly died. It is even said with some amount of credibility, that the Queen wrote imperatively to Dyer to secure his release, and that everything was prepared in readiness to convey him secretly to England, and that he was escaping for that purpose when the accident happened. This story has hardly been tracked home to its source. It may be true. On the other hand, the end may have come in the more swift and secret manner suggested by the English merchant. In either case, the spirit warning of eleven years before, that he should die a violent death, was fulfilled. Into his forty years as much adventure, folly, trickery and deceit, fortune, fame, favour, riches and poverty, had been crowded as could supply material for many a volume of romance.

Some of the incidents were indeed used a few years after his death by more than one dramatist. Dee had only quitted the world about a year and a half when Kelley's pretensions, Dee's learning, and the whole paraphernalia of alchemy, were severely satirised by Ben Jonson in *The Alchemist* (1610), a play which reflects all the crudest superstitions of the time. The credulous knight, Sir Epicure Mammon, describes Subtle, the alchemist, as

"A divine instructor can extract
The soul of all things by his art; call all
The virtues and the miracles of the sun

Into a temperate furnce; teach dull nature
What her own forces are.
A man the Emperor
Has courted above Kelley; sent his medals
And chains to invite him.”

In Butler’s *Hudibras*, first published in 1663, but written ten or fifteen years earlier, Dee and Kelley are again cited, though the satire is chiefly directed against Sidrophel, i.e., William Lilly. The devil is said to have appeared “in divers shapes to Kelley;” and in the description of Sidrophel, these lines occur:

“He had been long toward mathematics,
Optics, philosophy and statics,
Magic, horoscopy, astrology,
and was old dog at physiology;...
He had read Dee’s Prefaces before
The Devil and Euclid, o’er and o’er;
And all the intrigues ‘twixt him and Kelley,
Lescus, and the Emperor, would tell ye.”

One may wonder how much these scurrilous references had to do with fixing Dee’s reputation in the eyes of his immediate posterity.

CHAPTER XVII

RETURN TO ENGLAND

“If I have done my dutiful service any way to her Majesties well liking and gracious accepting, I am greatly bound to thank Allmighty God, and during my life to frame the best of my little skill to do my bounden duty to her most excellent Majestie.”

— Dee, *Compendius Rehearsall*

Upon Dee’s arrival in Bremen on April 19, 1598, a house was at once hired, and the family moved in on May 13. He put out his three saddle horses to grass in the town meadow till Michaelmas, for nine ducats, and presented the twelve Hungarian coach horses to the Landgrave of Hesse, to whose kindness he had been indebted for protection as he passed through his territories. In June, Thomas Kelley, his wife Lydia; Francis Garland, and Dyer’s man, Edward Rowley, left for England. At the same time Edmond Hilton returned to Prague. An agreement or bond had been entered into between the late partners that the proceeds of the wonderful discovery should be shared. Hilton was back on July 30, with news of Kelley: perhaps not good news, for three nights after, towards daybreak, Dee’s sleep was disturbed by a “terrible” dream, which visited him not for the first time, that “Mr. Kelley would by force bereave me of my books.” Hilton left almost immediately for England with a letter from Dee to Walsingham to disclose the treason of the Jesuit, Parkins. This letter has been already referred to [p. 201 in original], but it contains other interesting matter, all conveyed in Dee’s beautiful neat hand. He has already

written to acknowledge the Queen's gracious letter of safe conduct, received from Walsingham, but Hilton and the two English gentlemen, Tatton and Leycester, are still detained at Stade, waiting for a wind. After speaking of the designs of the Jesuit, he goes on to give the Secretary an important summary of the state of affairs in the Low Countries, where the struggle for independence was well advanced. "The Provinces all incline to a desire to endure one fortune and become one whole united. They acknowledge Her Majestie's Wars to be just but uncompassable. Their minds are getting alienated from us, only fayr means and great wisdom will win them over." He has taken counsel of "the one of all the inhabitants the most sharp-witted, the greatest understander of all occurrences generall of secret purposes; the best languaged one (as knowing Hebrew, Greek, Latin, French, Italian, Dutch, etc.); and one employed in the councils; one who was courageous in the first bickerings with Spaniards at Antwerp; who has observed all the beginnings and proceedings of errors, political and military, committed on all hands. Now and then he visiteth me, and I have asked him to pen his opinion on what can be done to recover and reform the States, but as yet he has not found leisure." Then he begs the Secretary's leniency if he has offended in writing of matters not pertaining to him, "and of which no doubt your honour has already had all necessary advertisement from properly authorised persons." He will write no more of public affairs, his coming thither was no public but his private cause, the beginning of his "nere return-making into my most derely beloved Native Country."

At the same time (August 20), Dee wrote to his friend, Mr. Justice Young, that the messengers had been delayed twenty-five days waiting for a wind; that he feared the Low Countries were bent on shaking off the Queen's authority if they could; and that he feared he sould have "to endure this Breamish habitation this winter, as I do not hear a word of the approach of Sir Ed. Kelley, or of Mr. Dyer's return."

In Bremen, Dee mingled with all the learned and distinguished men of the time. A memento of this period is to be found in an album, the *Thesaurus Amicorum*, of Timon Coccious (or Koch), a young Bremen student who died while at Leyden University three or four years after. The album of white vellum, faded and yellowed with age, with its edges still shining with the mellow lustre of old gold, was the receptacle of autographs, wise and pithy sayings, original or quoted, all inscribed after the beginning of July, 1589. Sayings from Plautus and Seneca, Juvenal, Pythagoras and Homer, follow and press close upon the wisdom of Boethius, from *De Consolatione*, and the divine poetry of Dante. The first to write in the book was Bruno, Count Mansfeldt, Helmstad, July 1. He is followed by Dr. Cristoph Pezel, then Professor of Divinity and superintendent of the churches at Bremen, and on the seventh page is Dee's beautiful signature and his motto — in the light of posterity's unchallenged view of him, full of irony — "Nothing useful if not honest."

Mr. Hart, minister of the English colony at Stade, who had escaped from the Spanish service in Flanders with Sir William Stanley, and the Deputy Governor of Stade, both came from the port town near by to see Dee. Dr. Heinrich Khunrath was the chief writer of the advanced school of alchemists who passed from the pursuit of material gold to the discovery of incorruptible spiritual treasures hidden in the palaces of truth to which they provided a spiritual key; and it is a pregnant fact that all of his books were published after this conference with Dee. Daniel Vander Muelen was another visitor, and from Mr. Southwell Dee had news that Edward

Dyer was sent on a mission to Denmark. Two or three weeks later, he met Dyer unexpectedly in the town. News came of Rosenberg, and several of Dee's men left him to return to Kelley. He was warned to leave his house in Bremen.

By November, Dee resolved to wait no longer for Kelley, but to start for England. He still hoped, however, to meet that individual ere he embarked. On November 19, his whole party took ship by the Vineyard. A crowd of townspeople and students collected to bid him good speed, and to see the homeward bound travellers off; quite a little scene took place, which must have pleased and flattered Dee immensely, for there was no lack of a man's full share of vanity in him. Pezel had composed some verses on his departure, had got them printed the night before, and as the party were leaving Bremen for the seaport, a few miles away, the Professor distributed copies as a parting surprise. The travellers arrived in the Thames at Gravesend on December 2, and on landing the next day went straight to the house of Mr. Justice Thomas Young, at Stratford. We may imagine Jane's relief at getting her children safely back to England, with the addition of Michael, born at Prague, nearly four years, and little Theodore, born at Trebona, nearly two years before.

Since Dee's departure from England six years ago, great events had happened. The "invincible" Armada of Philip had been beaten in a six days' running fight up the Channel. The Queen's hated rival, Mary Queen of Scotland, had been put to death; Leicester's short dictatorship of the Netherlands had begun and come to an end. Leicester had been dead about a year. New favourites had arisen in the Queen's favour. But even more significant than these public affairs had been the upward movement in literature, the birth of dramatic art, a passionate outburst of poetic fervour, the growth of a taste for well-disciplined prose. Many splendid fruits of this movement had not yet seen the light, Sidney's *Arcadia* and the first part of Spenser's *Faerie Queen* were to be issued within a few months; the first play of Shakespeare was publicly performed within little more than a year of Dee's return. But Lyly and Marlowe had already, during his absence, given *Campaspe*, *Tamburlaine* and *Doctor Faustus*, to be performed by actors in the first stationary home of the earlier nomadic players, the theatres of Shoreditch, immediately to be followed by those of Bankside. Bacon was perhaps even then meditating his *Essays*, published some half a dozen years later; Hooker issued the first books of his monumental *Laws of Ecclesiastical Polity* within four years; and Nash, Peele, Green, and a horde of other writers, were contributing to establish the English literary renaissance. One can scarcely help wondering how much the fabulous stories of Dee and Kelley, which must have reached Marlowe's ears, contributed to his splendid dramatisation of the Faust legend (first printed in Frankfurt in 1587). But after all, even the story of Dee's angels and Kelley's gold, pales before the lurid glow of the stories of the earlier alchemists, Agrippa and Paracelsus.

Dee landed in England a disappointed and a partly disillusioned man, clinging to a belief which was yet useless, unprofitable to him. He could prove nothing of Kelley's exploits. But he lost no time in repairing to Court, and on December 19 he was graciously received by the Queen at Richmond.

On Christmas Day he first slept in his own house at Mortlake, and beheld for himself his ruined and rifled library, with its precious books and instruments missing. He himself was in dire straits. He had little left him save his wife and children, and some still faithful friends. He took the house over as a tenant from

his brother-in-law, Fromond, and settled down in the old quarters. Adrian Gilbert was the first visitor, generously offering “as much as I could require at his hands, both for my goods carried away, and for the mynes.” Very soon Thomas Kelley arrived and followed suit by offering the loan of ten pounds in gold; he afterwards “sent it me in Hungary new duckettes, by John Croker the same evening. He put me in good hope of Sir Edward Kelley his returning.”

A second daughter was born, and christened at Mortlake, on March 5. The name given her was Madinia, suggested by the busy little spirit who had been so helpful at her first coming. The child was christened at Mortlake on the 5th, Sir George Carew as godfather, Lady Cobham and Lady Walsingham, godmothers. Letters came from Kelley by Garland in March, and replies were despatched by Thomas Kelley in April. Dee is careful to give his former skryer his full title: — “Sir Edward Kelley, Knight, at the Emperor’s Court at Prague.” “Francis Garland was by, and Mr. Thomas Kelley, his wife. God send them well thither and hither again.”

On Lady Day, the children begin to go to school with Mr. Lee at Mortlake. “I gave him his house rent and forty shillings yerely for my three sons and my daughter. The house rent was allmost 4s. yerely, of Mr. Fisher his new house.” Arthur was now ten, Katherine nine, Rowland seven and Michael five. The youngest boy, Theodore, born at Trebona February 28, 1588, was rather more than two. Dee notes that he was “wened” on August 14, 1589. Katherine was not long under the Mortlake schoolmaster, for on May 21 “my dowghter was put to Mistress Brayce at Braynford [Brentford], hir mother and Arthur went with her after dynner.” On April 15, he writes of his neighbour and friend, the Vice-Chancellor: “Good Sir Francis Walsingham died at night hora undecima.” Burleigh was the only one of the old friends left. He records an interesting visit from “the two gentlemen, the unckle, Mr. Richard Candish, and his nephew, the most famous Mr. Thomas Candish, who had sayled round abowt the world.” Cavendish was a Suffolk man. His wonderful voyage occupied two years and nearly two months. He died at sea within a couple of years from Dee’s note. The uncle Cavendish interested himself with the Queen and the Archbishop to obtain for Dee the Provostship of Eton. This, too, fell to the ground, and Cavendish considerably sent him a hogshead of claret. He also lent or gave money to Dee and his wife, in all 302 pounds: in “ryalls and angels.” Dee gave him in return one of his most valued treasures — an alchemical work: —

“A copy of my Paracelsus, twelve lettres, written in French with my own hand, and he promised me before my wife never to disclose to any that he hath it; and that if he dye before me he will restore it agayne to me; but if I dy befor him that he shall deliver it to one of my sonnes, most fit among them to have it. Theoddor had a sore fall on his mowth at mid-day.”

Dee’s income was now almost a negligible quantity. The parsonages had paid him no rent since he left England. He went two or three times to Lambeth, and talked boldly to Archbishop Whitgift of his right to them.

He began to interst himself in his immediate neighbourhood with the idea of stopping the “Bacchus Feast,” at Brentford, a rowdy celebration which had excited his indignation and of which he gave the Bishop of London a warning.

In August a domestic tragedy occurred: one of the women servants became melancholy and went out of her mind. Lunacy being a disease beyond even Dee's medical knowledge, and for 300 years after, being treated more or less as demoniacal possession, it is no wonder that the remedies he tried were ineffectual. It seems another instance of the false views of Dee's character that have been repeated over and over again, that the editor of his Manchester diary urges as proof of Dee's magic and evil experiments that "some of the inmates of his house became suicides when in his service."

"Aug. 2. Nurs her great affliction of mynde. Aug. 22. Ann my nurse had long byn tempted by a wycked spirit, but this day it was evident how she was possessed of him. God is, and hath byn, and shall be her protector and deliverer. Amen.

"25th. Ann Frank was sorrowful, well comforted, and stayed in Gods mercyes acknowledging.

"26th. At night I anoynted (in the name of Jesus) Ann Frank, her brest, with the holy oyle.

"30th. In the morning she required to be anoynted, and I did very devoutly prepare myself and pray for vertue and powr, and Christ his blessing of the oyle to the expulsion of the wycked, an then twyse anoynted, the wycked one did resist a while.

"Sept. 8. Nurse Ann Frank wold have drowned herself in my well, but by divine Providence I cam to take her up befor she was overcome of the water."

After this Dee had the woman carefully watched.

"Sept. 29. Nurse Ann Frank most miserably did cut her own throte, afternone abowt four of the klok, pretending to be in prayer before her keeper, and suddenly and very quickly rising from prayer, and going toward her chamber as the mayden her keper thoght, but indede straight way down the stayrs into the hall of the other howse behind the doore did that horrible act. And the mayden who wayted on her at the stayr fote followed her and missed to fynde her in three or fowr places, tyll at length she hard her ratle in her owne blud."

In november the Queen came to Richmond and sent for Dee. She offered gaily to send him something to "kepe Christmas with." This promise was repeated to his friend, Richard Cavendish, a week or so later: "she told him she wold send me an hundred angells to kepe my Christmas withall. Next day, December 4, the Queen's Majestie called for me at my dore, circa 3 1/2 a meridie, as she passed by, and I met her at the East Shene Gate, where she graciously putting down her mask did say with mery chere, 'I thank thee, Dee. There was never promise made but it was broken or kept.'"

The thanks were obviously ironical for the reminder of the promise; the rest of the speech was rather cruelly jocose, for, as Dee adds, she had promised to send the money that day. However, on the 6th, an earnest of the gift arrived, in the shape of 50 pounds. On the 14th, she again called for Dee as she rode by his door, "to take ayre," and he met her at the park gate as before. He does not indicate the subject of the conversation, but it was probably a request on his part for some kind of royal

permission to continue his experiments in alchemy or transmutation, for on the 16th he tells of a visit from Richard Cavendish, who has received from the Queen, “warrant by word of mouth to assure me to do what I wold in philosophie and alchemie, and non shold chek, controll, or molest me.” Coupled with this message, she sent another promise to make up the 100 pounds.

Dee’s mind was now bent, he says, to deal with his “alchemical exercises,” and the only distractions he appears to have had were the constant visitors and small disasters of the children. The boy Rowland fell into the Thames on August 5, over head and ears, about noon or soon after. Their favourite place of play seems to have been on the river bank, and accidents there were of no infrequent occurrence. Arthur, when a child, had fallen from the top of the Water-gate Stairs to the bottom, and had cut his forehead badly. Theodore also had a nasty fall.

CHAPTER XVIII

A ROYAL COMMISSION

“A wise man never goes the people’s way:
But, as the planets still move contrary
To the world’s motion, so doth he, to opinion.
He will examine, if those accidents
Which common fame calls injuries, happen to him
Deservedly or no? Come they deservedly,
They are no wrongs then, but his punishments:
If undeservedly and he not guilty,
The doer of them, first, should blush, not he.”

Jonson, *The New Inn*

Dee had now abandoned all hope of recovering the two Midland parsonages, the small income of which was all that lay between him and utter dependence upon charity. His thoughts were now set on the mastership of St. Cross, at Winchester, a benefice which he had already, some twenty years before, petitioned the Queen to grant. Dr. Bennett, the present master, who had then obtained it, might now, he thought, fitly be made a bishop. The Countess of Warwick secured from the Queen a promise that Dee should have it, “if it were a living fit for me.” The Archbishop of Canterbury affirmed that it was most fit for Dee and Dee for it. The Lord Treasurer protested, “I will do what I can with her Majestie to pleasure you therein, Mr. Dee.” Lady Warwick, faithful to his cause, repeated her request the following year, and still there was no news of Bennett attaining a mitre. Dee went to Court at Nonsuch in August, and a day or two after his return dined, at Burleigh’s invitation, with the Lord Treasurer and his two sons, Sir Robert and Sir Thomas Cecil, at Mr. Maynard’s, at Mortlake. Burleigh also sent him venison and invited him again to meet Lord Cobham.

All promised their influence in obtaining for him the coveted Mastership. But it was another castle in the air. His friends were extremely good to him. In May, 1591, he says:

“Sir Thomas Jones, Knight (unaxed) offered me his castell of Emlyn in Wales to dwell in so long as he had any interest in it, whose lease dureth yet twelve yeres, freely with commodities adjoining unto it; and also to have as much mow land for rent as myght pleasure me sufficiently. The 27th day he confirmed the same his offer agayn before Mr. John Harbert, Master of the Requestes, in his hall at Mortlake, which his offers I did accept of and he was glad thereof.”

He could never have entertained the idea of going to live in Wales, but no doubt it was policy to accept all offers. Herbert was an old friend and neighbour. His daughter Mary and Arthur had played at a childish marriage years before. They seem to have been playfellows still, after the Dees' long absence, for in this June an accident happened to Arthur “at Mr. Herbert's, about sun setting.” He was “wounded in his hed by his wanton throwing of a brik-bat upright, and not well avoyding the fall of it again. The half-brick weighed 2 1/2 lb.” On May 3 of the following year, Arthur aged thirteen, became a Westminster scholar. “Wensday at ten of the clock Arthur was put to Westminster Schole, under Mr. Grant and Mr. Camden.” He came back home in two or three weeks, perhaps only for a few days, and Dee in returning him to lessons wrote a characteristic letter to his friend, William Camden, the antiquary. It shows how carefully the father had studied the child's health, abilities, and the quick temper, inherited from his mother. There is a tender touch in that mother's forethought to furnish the boy with means towards a special cleanliness which the provision for ablutions at Westminster did not contemplate. The “little chest with lock and key” for the firstborn son to take to school is always a family event of magnitude.

“22 May 1592.

“Worshipfull Sir. I have here returned your scholer unto your jurisdiction, beseching you to shew your charitable affection towards him: he had more and in better order then he will recover speedily. Of your great skylle and faithfull industrie in your function, it is most certayne to your great credit and merit. Of the wonderfull Diversitie of Childrens Dispositions, much you can say by experience: but of myne (this Arthure) I am to request you to conceyve at my hands, that he is of an exceding great and haute mynd naturally, ready to revendge rashly. The naturall inclination is to me evydent: as who hath [Sol] in horoscopo, and [Mars] in corde Leonis. Dictum sapienti sat esto: for vera curatura you may alter this naturall courage to true fortitude and not to frayle rash fancies: Socrates did overcome by grace Divine and his industrie, his untowardness, signified by the Art physiognomicall — you know the historie. This spirituall grammaticall concords of good manners I have great care that all my imps may be instructed in, to the more apt and skilfull serving of our Creator. Syr, my wife hath delivered unto him some more apparayle and furniture in a little chest with lock and key, yea, and with some towales to wype his face on after the morning and other washings of hands and face: willing him to buy him a stone basen and a pott, or a potter, to have allways clene and wholsom water in for his use.

“The boy liketh abundance of meate well: but very bashfully he sayd that there proportion of Drinke is somewhat to[o] little. I pray you by discretion listen to the voyce and opinion of the rest of the counsells within him, for now & in the

summer seasons, the proportion of Drink naturally doth increase above winters appetite thereof.

“Thus I am bold to cumber your wurship with these my speedy ragged lynes. And therein I besече you of one thing more, that his writing, both of roman and secretary hand decay not, but rather be amended: for a fayre writing is often tymes a good grace to matter very simple.

“Wherefore know that today they have at the right Wurshipfull Mr. Deans [Dr. Nowell’s] very honorable guests, and that this night it is intended that they will sup and lodge all night at Fullham. God bless your wurship and prosper you in all & ever your true and faithful wellwisher.

“John Dee.

“To the Worshipfull my singular friende Mr. Camden these be delivered.”

On New Years’ Day, 1592, “at the sunrising exactly,” Dee’s third daughter was born. She was christened Frances on the afternoon of the 9th, and sent off with her nurse to Barn Elms the same day. In August her father notes, “Remember that all things is payd to our nurse at Barnes for the girle Francys Dee from hir birth untill the ende of her eighth month, lacking 12s., and on Sunday the 27th of this August we gave the nurse ten shillings. The eighth month ended the twelfth of this month.” The child stayed on with her nurse till February 14 of the next year, when she was fetched home, “the woman very unquiett and unthankfull.”

Two entries, “March 9, the Pryvy Seale at night,” and March 16, “the great Seale,” refer to a promise given by the Queen to Dee’s cousin, Dr. William Aubrey, of Kew, now Vicar General and one of the Masters of Requests, about five rectories in the Welsh diocese of St. Davids, which Dee was to have when they fell vacant. They were only worth 74 pounds 11s. 2d. in all, and Dee says he never received a penny from them.

Things were so desperate that at last, on November 9, 1592, he drew up a supplicattion which his friend, Lady Warwick presented the same day to the Queen at Hampton Court. This document, which Dee says Elizabeth took in her own hand to read herself, instead of handing it to a secretary, begged for a personal audit of, and investigation into, the state of his affairs. It is probably a unique petition, and in reading it we are scarcely astonished at the confidence with which the old astrologer, now grown old in the Queen’s service, claims her consideration and provision. He appears to regard it as little less than a national reproach that a man of science like himself should be left in beggary. And so indeed it was. For thirty- four years had the Queen, true to the Tudor motto — to use everyone as a servant, to owe no gratitude, only acceptance or approval — spent promises upon him, but she had never given him a chance of providing for himself.

“Forasmuch as the intolerable extremitie of the injuries and indignities which your most excellent Majestie’s faithfull and dutifull servant, John Dee, hath for some years last past endured, and still endureth, is so great and manifold as cannot in friefe be unto your Majestie expressed, neither without good prooffe and testimonie have credit with your Majesties, and because also without speedy and good redress therein performed, it is to be doubted that great and incredible

inconveniences and griefs may ensue thereof in sundry sortes, (which yet may easily be prevented) your Majestie's foresaid most humble and most zealously faithfull servant beseecheth your Majestie to assign twoe or more meet and worthy persons, nobly and vertuously minded, who may and will charitably, indifferently, advisedly, and exactly, see, hear and perceive at the house of your Majestie's said servant in Mortlake, what just and needful occasion he hath thus to make most humble supplication unto your Majestie; and so of things there seen, heard, and perceived, to make true and full report and description unto your Majesty. And thus your Majestie's foresaid most dutiful servant beseecheth the Almighty God most mercifully, prosperously and alwayes to bless and preserve your most excellent Majesty royal. Amen.

"A. 1592. Nov. 9."

The result of this unusual request was that two commissioners were at once appointed by the Queen. Within a fortnight Sir John Wolley, Secretary for the Latin Tongue to Queen Elizabeth, and one of her Privy Council, and Sir Thomas Gorges, Knight, of the Queen's Wardrobe, were seated in Dee's "late library room" at Mortlake, prepared to listen to his manifesto.

We may be sure he had long been preparing for this day. He seated the two gentlemen at a table in the middle of the room, placing near them a couple of other tables spread, one with letters and records of his "studious life for the space of a halfe hundred years, now by God's favour fully spent," the other, with all his own books, printed and manuscript, a complete author's collection of original works. At the suggestio of the commissioners he had occupied the space of thirteen days in praparing the autobiography which he called "The Compendious Rehearsall of John Dee, his dutifull declaration, etc.," so freely quoted in these pages. "It was in some order of method most briefly and speedily contribed against this day;" and in every respect, save that of chronological order, it is a pattern document. It gives the impression of having been written down in fragments, each incident or recital being complete in itself and most carefully dated, on a separate sheet of paper, and then the sheets shuffled and picked out by chance to follow each other for putting together. The story leaps from college day sin 1547 to travels in 1571, on to Christmas gifts in 1590, back to the Queen's visit in 1575, thence to his improsonment and appearance before the Star Chamber in 1555, and his reformation of the Calendar in 1582. He passes very lightly over his late travels abroad, merely ading that he "was very ungodly dealt withall, when I meant all truth sincerity, fidelity and piety towards God, my Queen and Country." The catalogue of his works is valuable, but it is unnecessary to print it in the present volume. He concludes his list of eight printed and thirty-six manuscript works ("some perfectly finished and some unfinished yet") with the very latest, the Compendious Rehearsall itself, adding that there were many other books, pamphlets and discourses not set down. He explains that the list is given neither "as they were written nor by order of yeares," but hastily as they came next to hand "out of diverse chests and baggs wherein they lay." He ends the chapter with a remarkable proof of the fecundity of his still active brain, in spite of his sixty-five years.

“The most part of all these here specified lye here before you on the table on your left hand; but by other books and writings of another sort (if God grant me health and life thereto of some ten or twelve years), I may hereafter make plain and without doubt this sentence to be true, Plura latent, quam patent.” What other works he did accomplish in the sixteen years yet to run of his long life, he described in an Appendix to the Rehearsal, written about two years afterwards, and printed by Hearne, and by the Chetham Society at the end of the autobiographical narrative, to which he had already added a short chapter giving an account of the result of the Commissioners’ visit, calling it “The Sequel of the Premisses.”

To return to the day of the visit, November 22, 1592. The Queen’s Secretary and the Gentleman of her Wardrobe arrived at Mortlake probably in the morning, and stayed to dinner. Having seated them at the tables in the library, Dee read to them, or related with the manuscript at hand, the story of the “halfe hundred” years spent in the attainment of “good learning,” which he reckoned from his leaving Chelmsford Grammar School for Cambridge. It was, of course, drawn up with the skill of a practised author, divided into fourteen chapters, each with an attractive and pithy title. “Her Majesties specially Gracious and very Bountifull favours towards me used etc.,” is by far the longest; the shortest is the twelfth: “The Resolution for Generall, very easy, and speedy Remedy in this Rare and Lamentable Case.” The remedy he suggests is to make him either Master of St. Cross; Warden of Manchester; Provost of Eton; or Master of Sherborne, one of which posts had been already promised him four times in three years. The tenth chapter is “The hard making of provision for some hundred pounds [?a year] for the maintenance of me, my wife, our children and family for these three last years, and that but with a meane dyet and simple apparel: I having not one Peny of certaine Fee, revenue, stipend or Pension, either left me, or restored unto me, or of any yet bestowed on me.” He shows how at his return three years before, he found himself penniless; cut off for ever from his two parsonages; disappointed as yet of the large yearly allowance promised him for his life from Bohemia. Probably on parting from the then affluent Kelley, some bond was entered into by him or by Rosenberg to transmit to him a share of the enormous profits they expected from the multiplication of the gold. “To save us from hunger starving,” he had had to appeal to friends, and he records gratefully that some who had been unfriendly before he left came to his aid on his return. They “put to” their helping hands in many ways, and alredy he had received from them a sum of 500 pounds and more. Yet he has had to pawn his plate little by little until all was gone. “After the same manner went my wife’s jewels of gold, rings, bracelets, chaines and other our rarities, under the thraldom of the userer’s grips, till non plus was written upon the boxes at home.” He has borrowed upon sureties, upon his personal bill of hand, upon his word, upon his promise, and he has run up accounts, so that now he is in debt for 333 pounds, beyond the 500 pounds. “The true accounts of all these gifts, loans, and debts upon score, talley, or book, is here before your Honours;” how the usurer devoureth him and how he is “daily put to shame, may be seen.” Other necessary expenses amounted to 267 pounds, so that he has spent but 566 pounds in three years for housekeeping,” and that with great parsimony, and with gifts from good friends of “wine, whole brawnes, sheep, wheat, pepper, nutmegg, ginger, sugar, etc., and other things for the apparel of me, my wife and our children.” He has mortgaged his house for 400 pounds, and now will have to sell it for half it cost to

pay his debts, he and his family to become wanderers and homeless vagabonds, furnished only with bottles and wallets. What shall he do, he pitifully begs, that he may prevent his name being handed down to posterity as a warning to lovers and students of truth not to follow in his steps and be given to such disgraceful shifts and indignities? He ends with a passage of true eloquence:

“Therefore, seeing the blinded Lady, Fortune, doth not govern in this commonwealth, but justitia and prudentia, and that in better order than in Tully’s Republica, or Books of Offices, they are laid forth to be followed and performed: most reverently and earnestly (yea, in manner with bloody teares of heart), I and my wife, our seaven children and our servants (seaventeene of us in all), doe this day make our petition unto your Honours that upon all godly, charitable and just respects had of all that you have this day seene, heard, and perceived, you will make such report unto her most excellent Majestie (with humble request for speedy reliefe), that we be not constrained to do or suffer otherwise than becometh Christian and true faithfull obedient subjects to do or suffer. And all for want of due mainteynance.”

CHAPTER XIX

DEE’S LIBRARY

The commerce of books accosteth and secondeth all my course, and everywhere assisteth me. It comforts me in age, and solaces me in solitarinesse. It easeth me of the burden of a wearysome sloth, and at all times rids me of tedious companies. It abateth the edge of fretting sorrow and...is the best munition I have found in this human peregrination. — Montaigne, *Essays* (Florio)

The account of the library at Mortlake as it was when Dee left it in 1583, forms one of the most valuable parts of the *Compendious Rehearsall*. Comparing it with the catalogue which he made before leaving with Laski, we can see at a glance of what intrinsic value was this collection of precious books which so often haunted its owner in his dreams. Two original copies of the Catalogue of manuscripts remain, one of which is dated September 6, 1583, a fortnight before he sailed from England, and there is a third, made by Ashmole from one of these.

The library contained, however, not only books and manuscripts, to the number of four thousand, bound and unbound, but scientific instruments collected from several parts of Europe. The books alone Dee valued at 2,000 pounds in the current value of the day, for many of them were unique autographia of famous and rare authors. As a further proof of this estimate, he cited to the two Commissioners a great volume in Greek, two others in French, and a third in High Dutch, which together cost him, and his friends for him, 533 pounds, as the endorsements upon them will show.

The instruments included a valuable quadrant, used and he says made, by his friend, Richard Chancellor, the navigator to Russia and the White Seas. It measured five feet in semi-diameter, and Dee relates that Chancellor and he together made observations of the sun’s height at meridian with it, before this exploring seaman sailed on his last voyage (in which he and his crew perished) in

1556. Many years after, the quadrant was repaired and re-engraved by Mr. Bromfield, the Lieutenant of Ordnance who had given it to Dee, at a cost of 20 pounds. On Dee's return to Mortlake, he found it barbarously hacked to pieces with hammers.

There was also a ten foot radius Astronomicus, (some early form of telescope), its staff and cross divided with equal markings, like Chancellor's quadrant. It swung in a frame, and could be easily directed to any point in the heavens, or used for mensuration on the earth.

A couple of globes of Gerard Mercator's best make were among the most valuable contents of the library, especially as upon the celestial globe Dee had marked his own observations of comets, their place and path in the heavens. There were other objects which Mercator had constructed specially for Dee, viz., three theorics, two with horizon and meridian lines in copper. A number of compasses of many kinds were among the objects, for Dee had invented, as we have seen, what he calls a "Paradoxall Cumpass." There was also a great piece of load-stone, or "magnes-stone," of extraordinary virtue. It had been sold for five shillings, but "being divided up and parted with piece-meal it made more than 20 pounds."

"There was also an excellent watch-clock, made by one Dibley, a notable workman, long since dead, by which clock the tyme might sensibly be measured inteh seconds of an houre, that is, not to faile the 360th. part of an houre. The use of this clock was very great, more than vulgar."

Then in the three laboratories, the chambers and garrets, were stores of "chemical stuff," which he had been twenty years getting together. Also a great cart-load of special vessels for chemical use, some earthen, some of glass, metal and mixed stuff, which he had brought from Lorraine when Mr. Powell and he had gone over in 1571. Of these, only a few broken bits remained. He describes other things left in his other or "open" library, and in particular a "great bladder with about four pounds weight of a very sweetish thing, like a brownish gum in it, artificially prepared by thirty tymes purifying it; whosoever came by it hath more than I could well afford him for one hundred crownes, as may be proved by witnesses yet living."

As regards the manuscript treasures of the library, he mentions specially a great case or frame of boxes, full of rare evidences of lands in Ireland which had been in the hands of some of the ancient Irish Princes. Agreements for submission and tributes, with seals appended, and many other valuable records of the descent of these manors to such families as the Mortimers, the de Burghs, the Clares, etc. How he came by these, save in the way of a collector, does not appear. His interest in Welsh ancestry would account for his amassing Welsh records, of which he says there were many deeds of gift from Welsh princes and nobles, of land devoted by them to the foundation and enriching of religious houses. Norman deeds also dating back to the Conquest. These were all methodically stored away in separate boxes, each marked on the front — "the fore part of the boxes" — with chalk, explaining its contents. When he returned from his six years wandering abroad, and looked in the poor boxes, he found the name outside was all that was left. The deeds had been "imbezzled away, every one of them, which is a loss of great value in sundry respects, as antiquaries can testify for their part, and noble heralds can tell

for their skill, and as her Majesties officers, for her interest and titles Royall, may think in their consideration.”

Near this great chest of boxes stood another box, very much less in size, measuring only two feet by one and a half, which was filled with nothing but seals of coats of arms; many of these were named, and had already proved invaluable to students of heraldry and genealogy, as well as to the Queen’s Heralds who had carefully examined them, also a number of other antiquaries as Camden, Stow and others. The Clerks of the Records in the Tower had sat whole days in the library at Mortlake, “gathering rareties to their liking out of them.” Dee was no blind collector, hoarding things because they were of value to himself. He was a true altruist, gaining his knowledge to share with others.

“Unto the Tower I had vowed these my hardly gotten muniments (gotten as in manner out of a dunghill, in the corner of a church, wherein very many were utterly spoiled by rotting, through the rain continually, for many years before, falling on them through the decayed roof of that church, lying desolate and waste at this hour).

“But truly well deserve they the imprisonment of the Tower, that will now still keep them, if any publique warning by her Majestie or her right honorable Councill were given for restitution of them to the Office in the Tower.”

Dee’s own works were of course in the library although not included in his catalogue. He drew up a list of them for his Apology to the Archbishop in 1595, by which it appears that before he left England eight had been published. The unprinted books and treatises, some, he owns, not perfectly finished, numbered forty-six. To these others were added before he died; two that may be especially named were upon the Three Oracular Sentences of the Ancients: *Nosce te ipsum*, *Homo Homini Deus*, and *Homo Homini Lupus*, (1592); and a “Treatise upon the Queen’s Sovereignty over the Seas,” a fitting subject indeed for an author who had personally known most of the great navigators, and who had already written so intelligently upon the navy and the coast fisheries of “Albion.” The book was undertaken at the request of “an honorable friend in Court.” It had, of course, a long Latin title — *Thalattocratia Brytannica*, etc. It was finished at Manchester and dated September 20, 1597. Another work projected, and perhaps partly finished, was to be called *De Horizonte Aeternitatis*, to consist of three treatises in answer to Andreas Libavius, who had published a book written in misapprehension of something in Dee’s *Monas*.

We spare the reader the long list of titles of Dee’s own books, poured out in an almost continuous stream since *The Art of Logicke*, in English, printed 1547, during his college days. The only idle years as regards literary output, from then up to his departure for life abroad in 1583, seem to have been 1563, 1564, and 1566-9.

The most important of his printed contributions to knowledge are mentioned in these pages. One more may be alluded to here — his edition, in 1582, of Robert Recorde’s arithmetical work, *The Ground of Artes*, etc. Dee had probably known this accomplished physician, antiquary and mathematician at Cambridge, where Recorde was a tutor before 1545. Recorde was afterwards Comptroller of the Mint at Bristol, and Surveyor of Mines and Money to King Henry VIII., but he died a youngish and impoverished man, in the King’s Bench Prison, Southwark, in 1558.

He introduced algebra into this country; was something of an astrologer and a good mathematician. His choice of titles for his books was ingenious. In *The Whetstone of Witte* (1557), the signs for plus, minus and equality were first used in this country. In his *Castle of Knowledge*, a beautiful and dignified hymn of his own composition appears. *The Ground of Artes*, his first work (1540), went through eleven editions before Dee augmented it and added some of his apologetic doggerel rhymes.

That which my friend hath well begun
For very love to common weale
Need not all whole to be new done
But new increase I do reveale.

Something herein I once redrest,
And now again for thy behoofe
Of seale, I doe, and at request,
Both mend and add, fit for all prooffe.

Of numbers use, the endlesse might
No wit nor language can expresse,
Apply and try, both day and night,
And then this truth thou wilt confesse.

I. Dee.

From original and autograph works we may now turn to the miscellaneous contents of Dee's library — a truly vast and precious collection for one private gentleman of precarious fortune to won in the sixteenth century. Printed books were by no means easy to obtain, and manuscript copies entailed a great expenditure of skill, industry, time and cost. The text was often ignorantly or corruptly rendered by an imperfect scribe or copyist, and the scholar and collector could not rest satisfied without several versions of one work.

The cataloguer of the 200 most important manuscripts — Dee himself — enters with exactitude the size and substance of each volume. The bulk of course were in quarto, although a few folios and octavos are mentioned. Most of them were written upon parchment, but a certain number were on paper. Bindings were not noticed, chiefly because as yet few were bound. Two of Roger Bacon's tracts, however, on the multiplication of species, and on perspective, the owner describes as together "in paste-bords with strings." These identical tracts, in Dee's own hand, and now being edited by Mr. Robert Steele, from the originals in the Mazarine Library, *Bibliothèque Nationale*, Paris. From Dee they passed to Sir Richard Eden, afterwards to the Kenelm Digby Library. Treatises on kindred subjects often followed straight upon each other on the same parchment, and sometimes as many as twenty composed a single manuscript, included under a list of titles numbered as one. In some cases the treatise is described as a fragment. Once he writes "the second tract is cut out and to be answered for."

The owner's tastes and pursuits point, of course, to a large representation among his books, of works in philosophy, alchemy, astrology and medicine, with a substantial proportion dealing with metallurgy, geometry, optics, physics, Ptolomaic and Copernican astronomy, and every branch of science already known in a crude

form to Dee's famous predecessors. There are also historical chronicles; works of devotion and ethics; with a fair sprinkling of authors upon poetry, music, and the gentler arts.

Taking first the classics: Dee names the Meno, Phaedo and Timaeus of Plato; writings of Aristotle, Socrates and Hippocrates, of Cicero, Cato and Archimedes. A copy of Pliny's *Mundi Historia*, Lib. ii., Frankfort, 1543, now in the British Museum, bears Dee's signature, Louvain, January, 1550, and many of his notes. Of Euclid he had many copies, and Augustine was his guide and confessor. A vast number of Arabic and Persian writers were comprehended in the list. He was particularly rich in manuscripts of the early and mediaeval writers upon alchemy and the philosopher's stone: Hermes Trismegistus, Geber, Albertus Magnus, John Sacrobosco, Raymond Lully, Philip Alstade, and Arnold de Villa Nova. Other sciences are represented by Guido Bonatus, Anselmus de Boot (Boetius), Alhazen, John of Saxony, Jacob Alkind, and Petrus Peregrinus and a score of learned writers. Dee's own perfect and clean copy of the rare printed Epistle of Peregrinus, upon the Magnet (Augsburg, 1558), is now in the British Museum. It bears his name, "Joannes Dee, 1564," in faded ink, with many and copious notes written by its owner mostly in his large copy-book hand, with a few in the scribbling writing which he used for speed, and some marginal sketches.

Several of the manuscripts named in Dee's list are to be found among the Cotton MSS. at the Museum; in Trinity College, Dublin; and at Oxford and Cambridge.

Of English authors, who are very numerous in the list, the most eagerly sought after, judging by the number of works included by one author, were Roger Bacon and Robert Grosseteste, Bishop of Lincoln. Bacon's writings were owned by Dee in fragments. Some had been already collected and printed in Nuremburg and Paris. The only other writer as often repeated in the catalogue is Boethius, whose *Consolation of Philosophy* had tempted King Alfred into literary translation some seven hundred years before. Dee notes that he gave a manuscript of it in Greek to the Library of Cracow, on July 27, 1584. Some of the ethical and philosophical works of St. Isidore, the canonised Bishop of Seville, were duplicated. Thomas Aquinas; Duns Scotus; Richard of Wallingford, Abbot of St. Albans; Robert of Holcot, the Bible Commentator; Robert of Gloucester; William of Woodford, the Franciscan opponent of Wycliffe; Richard Rolle (de Hampole), the hermit and ethical writer, are among his other English authors. A finely illuminated history of the last years of King Richard II., by a French gentleman who was in his suite, once the property of Dee, is now in the Lambeth Library. His manuscript *Life of Edward the Confessor*, by Ethelred, Abbot of Rievaulx, is another treasure that has survived the wreck of time. It is now among the Harleian MSS. at the British Museum, with his name and the date 1575 inscribed.

Of the three or four thousand printed volumes even Dee's industry has left no catalogue. Many of them he mentions in his diaries, as Holinshed's and Stow's *Chronicles*; the Arabic book that was lost; the collection of writings upon demonology and witchcraft, which were to be so useful to his Lancashire neighbours in after life. The books of the alchemist of Louvain, Cornelius Agrippa, he once speaks of as lying open in the window of his study, and therefore in constant use in the "actions," whether theurgic or alchemistic.

He refers no doubt to Agrippa's *de Occulta Philosophia* (Cologne? 1533), a work enormously read in all countries in the sixteenth and seventeenth centuries, and translated into many languages. Another book by the alchemist of Queen Margaret of the Netherlands had an even greater popularity in England, France, Germany and Italy. This was *On the Nobility and Excellence of the Female Sex* (*de nobilitate et procellentia foeminei sexus*) which in the translation by Henry Care in 1670 becomes magnified into *Female Pre-eminence; or, the Dignity and Excellency of that Sex above the Male*. It is dedicated to Queen Catharine of Braganza.

These are a very few of the authors and writings contained in the manuscript catalogue. Such as they are, however, they give us a faint glimpse into that realm of learning and romance wherein Dee, shut into his library at Mortlake, roamed a free citizen of the world and dwelled where he would.

CHAPTER XX

ADIEU TO COURTS AND COURTING

Let me weep
My youth and its brave hopes, all dead and gone,
In tears which burn! Would I were sure to win
Some startling secret in their stead, a tincture
Of force to flush old age with youth, or breed
Gold, or imprison moonbeams till they change
To opal shafts! — only that hurling it
Indignant back, I might convince myself
My aims remained supreme and pure as ever.
— Browning, *Paracelsus*.

The immediate result of the Commissioners' visit to Mortlake was a gift of a hundred marks from the Queen. The Countess of Warwick sent off "her gentleman, Mr. Jones, very speedily," to tell Dee that Sir Thomas Gorges "had very honorably dealt for" him in the matter, and that the gift was granted. The money was brought next day (December 2) by Sir Thomas himself. He brought also a letter "full of courtesie and kindness and a token of six old angells of gold," from Lady Howard to Jane. Dee seems to have become intimate with Lady Warwick through his early friendship with John Dudley, Earl of Warwick, who died, aged twenty-four, in 1554. In his Preface to Euclid, Dee has left an etched portrait of his own age. "No two besides himself," says Dee, "can so well say what roots vertue had fastened in his brest, what rules of godly and honorable life he had framed to himself, what vices noteable he took great care to eschew, what prowesses he purposed and meant to achieve."

Dee's "few lynes of thankfulness" to the Queen for her gift were probably written at once, but only delivered by Lady Warwick on February 15, at Hampton Court, on the eve of a move to Somerset House.

On the strength of this dole, Dee was able to settle some pressing debts, and to hire a coach and go off with his wife and Arthur and Kate, to spend Christmas and New Year's Day at Tooting, "at Mr. R. Luresey his howse." The Lord Treasurer, he reports, lay dangerously sick at the time. On the 2nd they returned. On the 7th,

welcome letters, perhaps containing money, arrived from Count Laski in Livonia, to which Dee replied on the 20th, sending his letter by a Danish ship called the John of Dansk.

His reputation as an astronomer and mathematician now procured for Dee a pupil, from whom he was to receive in exchange a considerable gift or loan.

“March 17, 1593. At six after none received from Mr. Francis Nicholls 15 pounds, part of one hundred pounds, the rest whereof, 85 pounds, is to be receyved from Mr. Nicholls within a fortnight after the annunciation of Our Lady next; and after that in the beginning of June 100 pounds, and in Julie the third hundred pounds, and I am to teach him the conclusion of fixing and teyming of the moon.”

A rather unwise purchase seems to have been made this may; Dee bought the “next mansion house, with the plat and all the appertenances abowt it,” of Mr. Mark Pierpoint, of Mortlake. It is true the whole mansion only cost 32 pounds, but it entailed other purchases and soon had to be mortgaged. Possession was not obtained till the autumn. A “hovel” in the yard was bought from Goodman Welder in July for a new angel and five new shillings. The bargain with Pierpoint was concluded in the street, when “before Jane my wife, I gave him a saffron noble in earnest for a drink penney.”

Crowds of visitors came to Mortlake to dine. Mr. Beale (who was a borrower of books from Dee — his own Famous and Rich Discoveries, and the Chronica Hollandiae Magnae), and his wife; Francis Blount, uncle of Sir Charles, who had been in Constantinople; Mistress Banister; Mr. Redhead, one of the Queen’s gentlemen ushers, and his wife; the mother of John Pontoys, about whom we shall hear more; Mr. Gubbens, book-binder, and Mrs. Gubbens, and many others. Hospitable as ever, Dee had offered shelter for two months to Antony Ashley, Clerk of the Council, his wife and family, “who used me worshipfully and bountifully for our friendship. They had my mother’s chamber, the mayde’s chamber, and all the other house.”

Not only books were lent, but instruments also. “On Thursday, Mr. Saunders of Ewell, sent home my great sea cumpass, but without a needle. It came in the night by water.”

In August he is much in train with the Lord Keeper, Sir John Eckford, at Kew. On the 8th he dined there, again on the 17th, this time taking Mrs. Dee and Katherine, who at twelve was sufficiently grown up to dine out. On the 28th he was all day with the Lord Keeper. The entries we have here, “Mr. Web and the philosopher came as I was with the Lord Keeper,” and “Mr. Web and the philosopher cam again,” pique one’s curiosity.

At the end of the month, Dee notes the departure from his service “uppon no due cause known to me,” of Elizabeth Kyrton, a servant who had been with him twelve years, had passed through the vicissitudes of travel-life in Bohemia, as Rowland’s nurse; left in charge of him, as we have seen, in Cracow when the others went on to Prague. She had served five years on apprenticeship and seven for wages: five at four and two at five nobles a year. Of her wages there was now four pounds four shillings due. Dee in paying her, presented a new half-angel; Jane Dee gave her another; Arthur half-a-crown for him and his brother (Rowland), and Katherine the like sum for herself and Madinia. Elizabeth’s going seems to have

upset the domestic arrangements for a month or so later Dee makes an unusual entry about his wife: "Jane most desperately angry in respect of her maydes." Margery Thornton, Elizabeth's successor, left next day, and Dorothy Legg came for 30s. yearly.

A messenger from Laski arrived, Mr. Cornelio Camaiere, and stayed a week. These constant communications do not by any means support the contention that Laski parted with Dee in anger, ruined by his costly experiments. It is more probable that Laski was urging him to return and continue Kelley's work.

The Countess of Cumberland, Lord Willoughby and his sister, the Countess of Kent, came to visit Dee. Willoughby dined and next day sent him 20 pounds. Dee was annoyed by "Mr. Gray, the Lady Cumberland's preacher, his wrangling and denying and despising alchemicall philosopher." A New Year's gift of 20 angels, in a new red velvet purse, came to Jane Dee from the Lord Keeper.

Michael Peiser, doctor to the Duke of Brandenburg, visited Dee, also Walter Van der Laen, "an astronomer of great promise." Mr. John Aske sent as a present two little doubtle gilt bowls, weighing thirteen ounces and a half. "Sir Thomas Willes offer philosophical cam to my hands, by Mr. Morrice Kiffen." The children, Madinia and Theodore, were not very well. Several visits were paid to Mr. Webbe, who had been in the Marshalsea prison since the days before Christmas. His chests and boxes were sealed up. It is possible he was the Mr. Webbe who was employed by the Queen to visit and report on Dyer and Kelley at Prague. He may even have been suspected of bringing some of Kelley's manufactured gold to Dee. Bartholomew Hickman and his brother were a good deal to and fro; Bartholomew was first brought to Dee as a lad by his uncle, in 1578, with an introduction from Sir Christopher Hatton. Now, his daughter Jane was taken into service. Dee gave him a nag that the Lord Keeper had presented, and he rode frequently "homeward," to Shugborough in Warwickshire. In December 1594, Dee "preferred" him to Lord Willoughby's service at the Barbican, and there is a whole history about his livery, which was ordered from a Fleet Street tailor, Mr. Jonson.

Dee's health was now often affected in one way or another. The first mention of trouble in the kidneys was in 1592, when, at Court at Greenwich, a midnight seizure was eased by a glyster, applied by Dr. Giffard. There were other slight attacks, and in March 1594, he had a

"Great fit of stone in my left kidney: but I drunk a draught of white wyne and salet oyle, and after that, crabs' eyes in powder with the bone in the carp's head, and about four of the clock I did eat tosted cake buttered, and with sugar and nutmeg on it, and drunk two great draughts of ale with it; and I voyded within an hour much water and a stone as big as an Alexander seed. God be thanked! Five shillings to Robert Web part of his wages."

This servant was discharged on June 23 with forty shillings for a full satisfaction of all things. "On July 1, I gave Robert yet more, a French crown for a far well."

A year and a half passed after the visit of the Commissioners, and beside the immediate result of a donation of a hundred marks, nothing had accrued to better Dee's position. He determined then to redouble his efforts and bring something to

pass. He certainly had enlisted the aid of powerful friends, although no doubt there were still many suspicious enemies.

On May 3, 1594, the Queen sent for him to come to her in the privy garden at Greenwich, between six and seven o'clock in the evening. She received him alone save for the presence of her two ladies, Lady Warwick, Dee's very good friend, and Lady Cecil. Dee presented her with a writing which he calls "the heavenly admonition," which he says she took with grateful thanks. On the 18th, he writes "Her Majestie sent me agayne the copy of the letter of E.K. with thanks by the Lady Warwick." He had received letters from Kelley four or five weeks earlier, on March 28, and he probably had copied out for her certain passages, doubtless referring to the fabulous transmutation of metals. Did he still hold out hopes that he might be able to achieve a like success? On the 21st, "Sir John Wolley moved my sute to her Majesty. She granted after a sort, but referred all to the Lord of Canterbury." "On the 25th. Dr. Aubrey moved my sute to her Majesty, and answered as before." His suit was promotion to the Mastership of St. Cross, the post which had so long been the goal of his hopes, but which he was never destined to attain. He had set out at length in his Rehearsall for the Commissioners, sundry good reasons why he desired it, "rather than any other living, see, or dignity of like value in any other place." First, he gave as a reason his longing to retire to a quiet spot away from the multitude and hoards of friends and acquaintances, chance visitors, and distinguished strangers, who positively "haunted" his house at Mortlake. There, he could deny himself to no one without offence or breach of friendship. It was fatally easy and cheap for every curious person from London, or from the Court, to find his way down to that big rambling place by the riverside, with whose stills and furnaces, and wonderful doings, rumour was so rife. So much for privacy, next for economy. Fuel, coals, bricks, and all things necessary for his purpose, will be cheaper at Winchester than near London; the glass-houses of Sussex are not far away, and he will be able to give personal supervision to the making of special vessels. At Mortlake there are too many eyes and tongues. The south coast is within easy reach, and it will be possible to communicate with his friends abroad, to get over things and workers necessary, and "have the more commodious place for the secret arrival of special men to come unto me there at St. Crosses; some of which men would be loath to be seen or heard of publicly in Court or City." Is it possible that he is still thinking of Kelley, who, though then (1592) an Emperor's favourite and the bearer of a title, could easily in England be identified with Talbot the coiner, forger, and necromancer of former days?

Then Dee sets out in his Rehearsall the capacity of the dwelling at St. Cross, which is roomy enough to entertain rare and excellent men from all parts of the world, as well as any of his fellow-countrymen. This will be for the honour and credit of England. There is room also for lodging his staff of mechanical assistants; for a printing house to be set up for "reproducing good, rare, and antient bookes in Greek and Latin," and "some of my own, to be printed with my own ordering and oversight." Then he lays stress upon the desirable surroundings, a chapel where divine service is held every day, for bringing up his children and family devoutly. He ends with the advantages of Winchester School, close at hand, not only for his four sons "to become Grammarians in," but for his obtaining help from the "good Greek and Latin Grammarians and fair writers in that school, for copying out books for her Majesty."

He is teeming with all these projects and activities in spite of his sixty-five years. He was a born librarian; and still had a national library of books and manuscripts at heart as much as when, nearly forty years before, he had tried in vain to induce Queen Mary to found one.

Dee's eloquent persuasions so far prevailed with the Queen that a draft was prepared before the end of May, granting to Lord Cobham the next advowson of "Holyrood," or St. Cross, at Winchester, in the Queen's gift, to present to John Dee, M.A., on the death or resignation of Dr. Robert Bennett, the present incumbent.

Having drawn up this very full account of his doings and writings, to present to the Commissioners, Dee was naturally anxious that the appeal should be as widespread and far-reaching as possible. Archbishop Whitgift had shown himself favourably inclined, and Dee determined to approach him with a copy of that part of the Rehearsall in which he recited the titles of the books he had written. He prepared a Letter containing a brief Discourse apologeticall with a plaine Demonstration and fervent protestation for the lawful sincere and very faithful and christian course of the philosophicall studies and exercises of a certaine studious gentleman, an ancient servant to her most excellent Majesty Royall, addressed to the Archbishop; he probably presented it himself during this summer of 1595. It is a protest and an appeal, and emphatically states that from his youth he has used good honest lawful and Christian means to attain such knowledge as shall honour God, his country and his Queen. It ends with a prayer that he may be found of the Archbishop, and undoubtedly acknowledged by the wise and just, to have been a zealous and faithful student in the school of Verity and an ancient Graduate in the school of Charity.

On June 3, Dee and Jane, accompanied by all their seven children, four boys and three girls, their ages ranging from Arthur, the Westminster boy of fifteen, to Frances, the baby of two and a half, presented themselves before the Queen at Sion House, Isleworth. Jane was permitted to kiss her hand. Evidently this was an expression of thanks for the official preliminaries of the grant of St. Cross. The Archbishop was present, and Dee humbly requested him to come to his "cottage." The invitation was repeated on the 6th, when Dee supped with the Primate. Things were not, however, settled so quickly. Dr. Robert Bennett had to be provided with a better position before he would resign; some hitch occurred, and on June 29, after a visit to the Archbishop, at Croydon, the poor man writes distractedly of his broken hopes: —

"After I had hard the Archbishop his answers and discourses, and after that he had byn the last Sonday at Tybalds with the Quene and Lord Threasorer, I take myself confounded for all suing or hoping for anything that ever was. And so adiew to court and courting tyll God direct me otherwise! The Archbishop gave me a payre of sufferings [sic] to drinke. God be my help as he is my refuge. Amen."

Everything fell through, and things began to look darker than ever. Michael, who had been a delicate child, fell ill in July. On the 6th, he "becam distempered in his head and bak and arms." Dee himself was unwell, complaining of headache and internal pains, but he does not forget to note that he paid "Letice my servant 5s., part of her wages, with part whereof she is to buy a smok and nekercher." Michael's illness was short: "July 13th, in ortu solis, Michael Dee did give up the ghost, after

he said `O Lord, have mercy upon me!’“ His father omits any reference to the child’s burial.

The summer passed with very little to record in the diary beyond a visit on Aug. 25, from Ferard, the herbalist of quaint and fragrant memory; another on the 30th, from “Monsieur Walter Mallet, who took his leave to go to Tholose. He had the fix oyle of saltpetre.” Dee sends letters in September to Kelley, and in October determines on another appeal to royal favour. But Elizabeth was getting old and hard to move; Burleigh also was failing. Dee wrote in his wife’s name to Lady Scudamore, her old friend and Katherine’s godmother, begging her to intercede with the Queen that either he might appear and declare his case before the Council, or else have a licence under the Great Seal to go where he would. St. Cross was farther off than ever; England cold and inhospitable; and he prepared to say a final good-bye to courts and courting at home, and betake himself to Germany, or Austria, or some other land. Francis Garland arrived on December 2 from Prague, “just as I came five years ago to a day from Bremen to England.” Little profit indeed had he reaped in that five years.

On the 7th, “Jane delivered her supplication with her own hand to the Queen, as she passed out of the privy garden at Somerset House, to go to dinner with Sir Thomas Heneage at the Savoy.” Elizabeth handed the letter to the Lord Admiral, but took it again from him, and kept it on her cushion. The next day, the Lord Admiral and Lord Buckhurst reminded her of the matter; presently she told the Archbishop that she wished Dee to have Dr. Day’s place of Chancellor at St. Paul’s. “8th Dec. The Chancellorship presented. The Archbishop of Canterbury willing,” he writes; but this was apparently another castle in the air, for Dr. William Day was not appointed Bishop of Winchester till a year later, November 23, 1595, and although Dee’s name appears as Chancellor under the date of December 8, 1594, he seems never to have held office.

His friends, however, were not idle. In a month’s time, January 3, Archbishop Whitgift was recommending Elizabeth to grant him the Wardenship of Christ’s College, Manchester, in her own gift. Dr. William Chadderton, who was then Warden and Bishop of Chester, was to be promoted to the see of Lincoln, and here was an opening for Dee. On February 5, Sir John Wolley endeavoured to get her to sign the patent for his appointment, “but she deferred it.” Dee was up and down to London from Mortlake, and on February 10, at two in the afternoon, he “took a cut-purse taking his purse out of his pocket in the Temple.” On April 18, the Queen did sign the bill, when it was offered her by Dee’s friend and neighbour at Mortlake, John Herbert, Master of the Requests. On May 25, 26, 27, it passed the Signet, the Privy Seal, and the Great Seal; and, as a climax to his entry in the diary, Dee adds, “3 pounds 12s. borrowed of my brother Arnold,” doubtless to pay the fees.

The Earl of Derby gave him letters of introduction, and he was soon in correspondence with Oliver Carter, one of the Fellows; with Thomas Williams, another; and with Mr. Goodier, lessee of the tithes belonging to the Warden and Fellows. Carter and Williams were already at law with each other, and soon were both to be at loggerheads with Dee and his laudable desires to set the tangled affairs of the college straight. Carter was one of the moderators of the monthly lecture in Manchester, had great influence, and seems to have been unprepared to welcome a Warden of Dee’s reputation.

“July 31st. The Countess of Warwick did this evening thank her Majestie in my name, and for me, for her gift of the Wardenship of Manchester. She toke it graciously and was sorry that it was so far from hense, but that some better thing neer hand shall be fownd for me; if opportunitie of time would serve, her Majestie wold speak with me herself. I had a bill made by Mr. Wood, one of the clerks of the signet, for the first frutes forgiving by her Majestie.”

So at length there was something tangible in prospect. Things had to be settled up at Mortlake and preparations made for the journey northward. We may be sure that Dee's gratification at receiving a post of some sort, after a lifetime of waiting, was mixed with regret at quitting the place that had been his home for so long. His “yong coosen, John Aubrey, came in May to recreate himself for a while,” and stayed nearly a month.

On August 14, Jane's youngest child, a girl, was born. She was baptised at Mortlake as Margaret Dee on the afternoon of August 27; godfather, the Lord Keeper; godmothers, the Countesses of Cumberland and Essex, all three represented by deputy. The Countess of Essex was Walsingham's only daughter and heir. She had been Sidney's widow, and was now married to Essex.

Dee was now entertained often by Lord Derby at Russell House, once to meet some German guests. On October 9 he dined with Sir Walter Raleigh at Durham Place. This palace in the Strand had seen many vicissitudes before it had been given to Raleigh by the Queen. Originally the residence of the northern bishops, it had been seized by an earlier king. Lady Jane Grey had been wedded there. Her too ambitious father-in-law had gone thence to the Tower and the scaffold. Catholic plots against Elizabeth had been hatched by Spaniards in this, her own house, and now the great seaman, fresh from far Guiana, was housed in a little turret, overlooking the river and the ships.

Dee was anxious to reclaim, before going to his new home, an Arabic book lent to some friend in Oxford. He had written to Mr. Harding and Mr. Abbott several times for its return about a year and a half before. Now, on October 20, he sent his man Richard Walkden to Oxford to find and bring it. The man returned from a fruitless errand, but on November 19 “my Arabic book was restored by God's favour.” His gratitude expressed itself in a practical manner to the trusted Richard:

“I delivered unto Richard Walkedyne my man, Mr. Robert Thomas his fustian dublet, for 10 shillings of his wages. I gave him more when he was to ride down with my wife: 10s., whereof 6s. 4d. was due to him that he had layd out for me. The other 3s. 6d. was of his wages.”

A portion of goods and furniture had already been despatched towards Manchester by a carrier named Percivall, and on the 26th Jane and her children all set off by coach towards Coventry, a usual half-way halting place on the high-road to Lancashire. A last piece of business was transacted on December 23 with John Norton, stationer, to whom Dee owed money, perhaps for printing: “I payd him ten pownds in hand and was bound in a recognisance before Doctor Hone for the payment of the rest, 10 pounds yearly, at Christmas, and Midsummer 5 pounds, tyll 53 pounds 14s. 8d. more were paid.” The same day he received 30 pounds in part payment of 100 pounds for the house at Mortlake, which he had lent to Mr. Paget.

CHAPTER XXI

MANCHESTER

“He hath, my lord, wrung from me my slow leave,
By laboursome petition; and, at last,
Upon his will I sealed my hard consent.”

— Shakespeare, Hamlet

The Collegiate Church, now the Cathedral of Manchester, was founded about 1420 in this already ancient town by Thomas de la Warre, baron and priest, rector or parson of St. Mary's, Manchester, and lord of the manor. The flourishing town of woollen industries, introduced by the Flemings a hundred or more years earlier, demanded a new and more capacious church; and De la Warre, the last of his noble house, determined to provide buildings in which a Warden, priests or Fellows, and choristers, should be continually resident, as well as to found a new church. He gained the consent of his parishioners to the appropriation of estates belonging to the existing rectory, as an income for the college, and supplemented it from his own lands in the district. He also obtained a charter of foundation from Henry V., dated May 9. The college was dissolved by Edward VI. and refounded by Henry VIII.; but by the time of Elizabeth its lands had been plundered, sold or leased, she herself becoming a sharer in the profits of spoliation until there was hardly any clear property left. At the instance of Dean Nowell, an inquiry was instituted, with the result that the college was granted a new charter in 1578, as Christ's College, to consist of a Warden, four Fellows, and two chaplains, with choristers. Nowell and Oliver Carter were two of the first Fellows. The second Warden was Dr. Chadderton, who had been Leicester's chaplain, and was Bishop of Chester. Under him the Catholics were relentlessly persecuted, Manchester prisons were filled, and the famous Marprelate printing press was discovered and seized. Chadderton's promotion to the see of Lincoln in 1595 made an opening for our persistent place-beggar to be disposed of at last.

Dee arrived in Manchester on Monday afternoon, February 15, 1596, and took up his abode in the college. On the following Saturday he was installed in the Wardenship, between nine and eleven o'clock, as he tells us. He has unfortunately left no account of the ceremony. His first business was to become acquainted with the tenants of the college lands, and the owners of tithes which constituted its revenue. On April 2, he says Sir John Byron and his son, Mr. John Byron, dined with him at the college. This family, although Newstead had been acquired some forty or fifty years previously, were still often resident on their Lancashire estates. Clayton, near Manchester, was in fact then their chief residence. A little later in the month, Dee records the courts kept for the manor of Newton, in Manchester parish, of which the Warden and Fellows were lords. The Dean and Canons, the present representatives of Warden and Fellows, still hold a court leet twice a year for this manor.

There is an interesting letter from Dee to Robert Bruce Cotton, the antiquary, dated in May this year, throwing light on his relations with the people in his employ — copyists, assistants or apprentices. He had brought with him from

Mortlake Antony Cowley, who had formerly been in Cotton's service. Dee was anxious to know if he had departed from the employ of his late master with his good will.

"Truely, for my part, I will receyve none to my simple service (man or woman) unleast they come from theyr Masters or Mistresses with theyr well liking of suche their departure from them. Therefore, I wold, by this bearer, gladly receyve your answer herein, by word of mouth or by your letter. And so shall I be free from all offence giving to your worship, or any els in this cause: as I am most free from coveting, desyring or longing after my neighbour's wife or any servant of his. If I might have a thousand pounds to sollicite or procure any mans servant to forsake his master or mistress, and to come to me or any other, I wold not do it, God knowes."

In about three weeks Dee received a reply to this considerate letter, evidently not entirely satisfactory, for on June 3 he paid Antony Cowley 20s. and discharged him. Next day "Antony went forth early from my house, I know not whither."

Dee now began to direct his whole attention to his charge: the college and the college lands. A royal commission was appointed to sit and examine its internal affairs. On June 18 "the commission for the college was sent to London to be engrossed in the Duchy office." Dee was a layman; he had always stipulated he should have no cure of souls attached to whatever benefice he might hold. For the daily services at Manchester he employed a succession of curates (mostly unsatisfactory), to whom he paid "wages 50s. for three months." He was far more interested in the temporal than the spiritual welfare of his college, and indeed his desire for such an appointment seems rather to have been solely prompted by the selfish, if necessary, wish for an income and means to pursue his own studies in peace. He was to find neither in Manchester.

In June he received a visit from Mr. Harry Savile, the antiquary, of the Bank, Halifax, and by him he sent a request to Christopher Saxton, of Dunningley, near Halifax, to come and arrange a survey of the town of Manchester, and consult about the parish boundaries. Saxton was a well-known character of the time, the holder of a patent from the Queen, whose arms appear upon the maps he made of the three counties of Chester, York and Lancaster. They were the first maps of Britain made from actual survey, and had been issued as an atlas in 1579, most of the maps having been engraved in 1577. His visits to Dee lasted over three weeks; notes are entered of his measuring the township and visiting Hough Hall, the seat of Nicholas Mosely, the Lancashire clothier who, two or three years later, became Lord Mayor of London and was knighted by Queen Elizabeth. The boys, Arthur and Rowland; the two faithful assistants, Crocker and Walkden accompanied Dee and Mr. Saxton on the peregrination. Harry Savile seems to have made one of the party also. Unfortunately, Saxton's Manchester survey is not now known to be in existence.

A surprise visit was paid to the Warden on June 26 by his landlord, the Earl of Derby, and a large party of ladies and gentlemen, including Lady Gerard, wife of the Master of the Rolls; her daughter Frances, and her husband, Sir Richard Molyneux, of Sefton, a former member for the county of Lancaster. Their son-in-law, Mr. Richard Hoghton, of Hoghton Towers, and others, also accompanied the Earl. The

Warden says: "They came suddenly upon me after three of the clock. I made them a skoler's collation, and it was taken in good part. I browght his honor and the ladyes to Ardwick Green toward Lyme, to Mr. Legh his howse, 12 myles off." Mrs. Legh was Lady Gerard's second daughter, so it was altogether a family party that descended so unexpectedly on the Warden, and no doubt ate merrily of his "scholar's collation." The only absence from Manchester recorded by the Warden (except the two years in London) was on August 13 this year, when he says that he "rid toward York and Halifax, returning from York on the 20th."

On September 1, Mary Goodwyn came "to govern and teach" the two younger children, Madinia, aged six, and Margaret, one year old. There was a field or two let with the College House, and the Warden now turned farmer, getting a small drove of seventeen head of cattle up from his kinsfolk in Wales to graze the pasture. They were brought up by the "courteous Griffith David, nephew to Mr. Thomas Griffith, and were a present." Dee had to visit Sir John Byron about the college tenants.

"Who pretended that we have part of Faylesworth Common within our Newton Heath, which cannot be proved, I am sure. We wer agreed that James Traves (being his bayly) and Franis Nutthall, his servant for him, shold with me understand all circumstances, and so duly to proceed."

The close of the year was marked by an episode which might have gone far towards clearing Dee's character from the aspersions still being cast upon him. Nowhere was superstition and belief in witchcraft more prevalent than in Lancashire, and in November and December of this year he seems to have been applied to for advice as regards a woman and seven children, said to have become demoniacally possessed through the influence of one Hartley, a "conjurer." Dee's curate, Matthew Palmer, happened to go in as Hartley was praying over the woman in a fit. He demanded what he was doing.

"`Praying.'

"`Thou pray! thou canst not pray,' quoth he. `What prayer canst thou say?'

"`None,' saith he, `but the Lord's Prayer.'

"`Say it,' quoth he, the which as I remember, he could not say."

Dee "utterly refused to meddle with the affair, and advised the father to consult with godlye preachers and appoint a private fast." Perhaps he remembered that when he asked, long before, if he had done well concerning Isabel Lister, vexed of a wicked spirit, the angel's reply had been "Friend, it is not of thy charge." He sent for Hartley, and "so sharply rebuked him that the children had more ease for three weeks after." The devils were finally exorcised by a godly preacher, John Darrell, or, as we suspect, by the children's release from Hartley's attentions, who was hanged soon after. Dee's library, a good part of which he must have moved to Manchester, was constantly in request at this time. It was rich in books on demonology and possession, and Lancashire justices of the peace who had to deal with these cases of witchcraft brought before them seem to have resorted to such works, for and against the persecution and annihilation of witches, as the *De Praestigiis Daemonum* (Basle, 1566) of John Wier, the *Fustis Daemonum* and the *Flagellum Daemonum* of the monk Hierom Menghi (Frankfort 1582, Boulogne 1586). All these Dee records lending to Mr. Edmund Hopwood, of Hopwood, a deputy- lieutenant and ecclesiastical commissioner, as well as a J.P. Wier or Weier was very likely known

to Dee at Louvain. He was one of the earliest apologists for these unfortunate folk, and pleaded that, their brains being disordered by melancholy, they merited pity, not punishment. His book contains the first account of "The Pied Piper of Hamelin," from the archives of the town of Hamelin. A Spanish grammar was lent to Mr. Barlow for his son. Mr. Matthew Heton was the borrower of theological works, including the *Concordantiae Bibliorum* (1555) of Robert Stephens, the illustrious printer of the New Testament; and a Calvinistic treatise, *De Coena Domini*, written by Dr. Pezel, who had, we remember, commemorated Dee's departure from Bremen in 1589 by verses. Dee lent Heton books, but Heton lent Dee ten pounds on a bill of hand. To John Cholmeley "I lent my Latyn booke in 8vo, *De Morbis Infantum*."

The disputes over tithes and lands belonging to the college naturally affected the Warden's income, and Dee found himself compelled to borrow small sums as before. Finally he was reduced to raise money on his plate, and especially on the handsome double gilt tankard, with a cover, which was the christening gift of the Countess of Hertford to her god-daughter Frances. It weighed 22 ounces, and Dee tells how he delivered it to Charles Leigh, one of the college "singing men," to lay in pawn in his own name with Robert Welsham, the goldsmith, "till within two days after May-day next. My daughter Katherine and John Crocker [the old servant], and I myself [John Dee], were at the delivery of it and waying of it, in my dyning chamber. It was wrapped in a new handkercher cloth." All that was obtained on the tankard was 4 pounds of the current value.

In the spring of 1597, Dee records, on May 4, the last of the Rogation days of the year, a very interesting topographical event, viz., the perambulation of the bounds of old Manchester by himself, the curate, and the clerk.

Away in the south-eastern corner of England, in the little village of Bourne, near Canterbury, about this very time, Richard Hooker, the saintly scholar, was performing a similar perambulation, of which Izaak Walton has left us the immortal picture. A homily was prepared for the service, a psalm sung, and the malediction pronounced, "Cursed be he that removes his neighbour's landmark." Izaak Walton tells us that Hooker, to look at, was an

"Obscure harmless man in poor clothes, his loins girt in a coarse gown or canonical coat; of a mean stature and stooping, yet more lowly in the thoughts of his soul; his body worn out, not with age, but study and holy mortification. Yet he would by no means omit the customary procession; persuading all, both rich and poor: if they desired the preservation of loe and their parish rights and liberties, to accompany him in his perambulation; and most did so. In which perambulation, he would express more pleasant discourse than at other times, and would then always drop some loving and facetious observations, to be remembered against the next year, especially by the boys and young people; still inclining them, and all his present parishioners, to meekness and mutual kindnesses and love, because love thinks no evil, but covers a multitude of sins."

The Warden of Manchester has not left us such an impression of the ancient antiquarian custom performed as a holy rite of devotion, but as an exact topographer and mathematician he has given a highly valuable record: —

1597. "May 4. I with Sir Robert Barber, curate, and Robert Tilsley, clerk of Manchester parish church, with diverse of the town of diverse ages, went in

Perambulation to the bownds of Manchester parish: began at the Leeless Birche against Prestwicke parish, and so had vew of thre corner stake, and then down tyll Mr. Standysh new enclosure on Thelmore, wher we stayed, and vewed the stake yet standing in the back of the dich; [it] being from the corner eleven measures of Mr. Standley's stik, then in his hand, and 2 fote more; which stik I did measure afterward, and it did conteyn in length: feet 5, ynch 3. The total mesure: fete 69, ynches 9. At which place Teblow, servant to Mr. Ashton of Chaderton, did meet us. The survey geometricall of the very circuits of Manchester parish wer ended in this, being the sixth day of my work folks doings."

In the Chetham Library is a holograph letter from Dee to the rector of Prestwich, William Langley, dated two days before this perambulation, informing him of the project for making a chart of the parish bounds, and inviting him,

"As one side of our parish in Thielmore doth border upon some parts of your parish of Prestwicke, to request some one or two of the auncient of your parish to be also beholders of our bounds, notifying toward your parish in that place. My neighbours do intend to come on Wensday next, in the morning about 9 or 10 of the klok, to that part that is by Goodman Smehears't's house, and so toward the birche tree that is called the Leeless Byrche, and thereabouts, for a little space; to beggyn the vew of the bownds and meres of Manchester parish: by the order of an enjoyned work by the higher powres, for avoyding of undue encroaching of any neighbourly parish one on the other. You understand me sufficiently well, I dowt not. Pardon my boldness so bluntly to borde you with so homely a sute.

"Your wurships sincere

"Wellwisher in Christe,

"John Dee, Warden."

John Crocker and several other men were occupied for some weeks in marking the boundaries of the manor; they met with extraordinary opposition from the landowners, and on June 14 Dee alludes to a riot that took place at Newton, Captain Bradley and others endeavouring to hinder the college employees in their labour. What with opposition abroad and difficulties with his curate at home, Dee was finding the coveted appointment no bed of roses. He records another of his characteristic dreams — the dreams of a bibliophile, to whom books are treasures as dear almost as his children: —

"This night I had the vision and shew of many bokes in my dreame, and among the rest was one great volume, thik, in large quarto, new printed, on the first page whereof as a title in great letters was printed Notus in Judaea Deus. Many other books methought I saw, new printed, of very strange arguments. I lent Mr. Edmund Hopwood of Hopwood my Malleus Maleficarum to use till New Year's tyde next, a short thik old boke, with two clasps, printed anno 1517."

It was now early August. So Hopwood, who was bent on mastering the subject of witchcraft, was to have about four months to study The Hammer for Witches, a book first issued in 1489, after the Bull against sorcery of Pope Innocent VIII., by the three sorcery inquisitors. It was translated into German,

Hexenhammer, and formed the text-book of procedure against witches in Germany. Its authors give emphasis to their learned observation that witch-craft is more natural to women than men, because of the inherent wickedness of their hearts! In mediaeval times there appeared, alas! no safe and inconspicuous path for ordinary women. The entire sex consisted apparently of either angels or devils.

On a Sunday in August, Dee entertained the Earl and Countess of Derby at a “banket at my loding at the College, hora 4 1/2.” They had newly taken up their residence at Alport Park, which had been the college property before the dissolution of the monasteries. It is now in the heart of the city, somewhere near the Midland Railway works.

There was scant time for literary labours amid so much entertaining topographical work and litigation; but in September Dee sent to his former friend, now Sir Edward Dyer, a treatise he had some time written on “The Queen’s Title Royal and Sea Sovereignty in St. Georges Channel and all the Ocean adjoining to England, Scotland and Ireland.” He quotes in it so freely from his British Monarchy (see ante, p. 39) that he encloses a copy of that work, written twenty years before, in case his correspondent does not possess one handy. The letter gives such a graphic picture of the state into which the college affairs had fallen, and of the characteristic energy with which Dee set about to try and reform them, that it must be quoted at some length. When the accompanying volume and manuscript have been fully discussed, the writer passes on to the

“intricate, cumbersome, and lamentable affairs of estate of this defaced and disordered college, whereunto not only I am assigned for my portion of mayntenance, for me and all myne, but also, by college oath, bownde to see unto the right and dignitie thereof. Which hat bred unto me already, both wonderfull care of mynde and no little payne taking, ever since my entrance, and daylie doth and will brede me more and more. And hath browght me likewise in great debt, by reason of the pore Revenue of my stipend (of only iiij s. a day for me and all myne), and that in these tymes of very great dearth here, yea, so great, that unleast (in his most fatherly Providence) the Almighty God had stirred up some mens hartes to send me, this present yere, from Dantzic, some barrells of kye; from Wales some cattall, and from Hull some fish for Lent: God knoweth that it passed all our wittes and habilitie to devise or use any other meanes, sufficient to the preserving of the lives of me and my familie together, being now but of eightene persons, most nedefull: I my wife and our children, being the one half of them. So hard and thynne a dyet, never, in all my life, did I, nay was I forced, so long to use: Neyther did ever any household servants of myne have so slender allowance at their Table. And yet all that hath not so much pynched me inwardly as the cares and cumbers for the college affaires have done, for they have altered, yea barred and stayed my whole course of life, and bereaved me of my so many yeres contynued Joyes, taken in my most esteemed studies and exercises.

“But as it pleaseth the king of heven and earthe thus to deale with me: So I beseche him to give me grace to like best of this his long leading of me per multas tribulationes. And Beside all the rest, This encreaseth my grief: that I know no one as yet of her Majesties most honorable Privy Counsaile, who willingly and comfortably will listen unto my pitifull complainte and Declaration: How this Colledg of Manchester is almost become No College, in any respect; I say in any

respect, forr I can verifie my wordes to[o] manifestly. But why do I cumber yr wurship (thus abruptlie) with such my colledg cumbers? Pardon me, I pray you, the pang of my mynde, half amazed, when the multitude of these cumbers and of the confused and intricate causes of this Colledge, do russh at once into my fantazie. But, undowtedly, either God will give me grace sufficient and send me might help (tempore opportune) to end them, or else they will help to hasten my deliverance from these and all other vayne and earthly Actions humayne.

“Sir, how well (and that hartily) not onely I, but my paynfull Jane, and my children of discretion, allso do, at God’s handes, wich unto yr wurship, you my easily gesse, for it is our duetie.

“And so, I beseche your wurship undowtedly to perswade your selfe of us.
Manchester, September 8, A. 1597.

“Yor wurships in fidelitie and sinceritie,

“John Dee.”

A new steward of the college was appointed: Humphrey Davenport, who afterwards became Chief Baron of the Exchequer, and as such delivered judgment upon ship money in Hampden’s case. Very few allusions to domestic and family matters occur in the diary for these Manchester years, but in November, 1597, an accident is recorded to Arthur, who was at home for a time. He was amusing himself by fencing with Edward Arnold, one of Dee’s men and his usual messenger to London, when the foyne or thrust of the rapier of his opponent damaged his left eye. The lad was now about seventeen, probably already entered at Christ Church, Oxford.

Correspondence with friends in London, as Dr. Julio, a well-known physician of the time, and Dr. Caesar (afterwards Sir Julius Caesar and Master of the Rolls), both of Italian origin, sometimes relieved the Warden’s tedious and tiresome disputes with the Fellows, the tenants and the tithe owners of the college.

To Caesar, as Master of the Requests, Dee wrote on October 2, 1596, on behalf of William Nicholson, about an action he had brought against two persons for enclosing moor and mine land at Reddish. Some idea of the lawless proceedings of the time may be gathered from Dee’s description of the injuries the plaintiff had received in having his barns pulled down and his corn and hay, “to the quantitie of a great number of loads, cast out of doors, which some of my family beheld.” Dee adds pointedly: “I shall be forced ere it be long to fly to your direction and help in causes Judiciall”; and ends by a reference to Caesar’s recent marriage, six months earlier, to a Manchester lady (Alice, daughter of Christopher Green): “God bless you and your new Joye.”

Oliver Carter was more troublesome than ever, and lawsuits were instituted by the Warden both against him and George Birch, another of the Fellows. On Sunday, September 25, Dee writes: “Mr. Oliver Carter, his impudent and evident disobedience in the church.” There was evidently a scene, though not, as Mr. Halliwell has it, caused by Carter’s “dissoluteness in the church.” There was no house for the Warden, but the fines of the Fellows for absence were by the last charter to be devoted to its provision. If they did not pay, Dee had to meet the rent himself. At the beginning of 1598 there were four lawsuits on the Warden’s hands, but he records that he “stayed” them all, for one cause or another, one until Sir John Byron returned. In Januaru the college gate and a large piece of the wall fell down at

midnight, so there were repairs to be made. He had a letter from John Pontoys, the friend who had sent him twenty-one loads of Dantzic rye, very useful for consumption. Another welcome contribution for domestic use arrived at this time, viz., “two lings and two haberdines from Mr. Harry Savill, from Lichefield.” Haberdines are dried and salted cod. He records an eclipse of the sun on February 25, with the comment that although it was a cloudy day there was great darkness about half-past nine.

In March, the entries in the diary end abruptly, and are not resumed again till June, 1600, a period of more than two years, of which there appears no record. The time was apparently spent in London or at Mortlake; the purpose of the journey was no doubt to represent to the Privy Council or other authorities the terribly involved state of affairs in Manchester, where the college had become almost “no college.”

CHAPTER XXII

COLLEGE AFFAIRS

“I came among a people who relied much on dreams. And I told them except they could distinguish between dream and dream they would mash or confound all together. For there were three sorts of dreams. For multitude of business sometimes caused dreams; and there were whisperings of Satan in man in the night season; and there were speakings of God to man in dreams.”

George Fox, Journal

The Warden was apparently absent from his charge at Manchester for two years and a quarter, between March, 1598, and June, 1600. When he resumed his diary to chronicle his return, it appeared that he had been very busy in London, arranging for a special commission to sit in the college chapter house, to inquire into encroachments made upon the manor of Newton. His wife and two elder sons, Arthur and Rowland; Mary Nicholls, daughter of his old friend and pupil, Francis Nicholls; all travelled with him from London. What became of the younger children we can only guess. The party set out on the 10th and arrived in Manchester on June 18. Rowland was then seventeen, a Grammar School boy on Bishop Oldham's foundation in Manchester. Early in the following December, he obtained an exhibition at Oxford from the school. Dee, as Warden, was charged with certain official visits of inspection of the Grammar School, and was by no means always pleased with the result. He says, for instance, on August 5 of this year, “I visited the Grammar Schole, and fownd great imperfections in all and every of the scholers, to my great grief.” Of an earlier visit he says it was “to see the ower, &x., for Mr. Heton,” i.e., to see the clock.

Dee had almost completed his seventy-third year, and had maintained his bodily strength on the whole remarkably well. This summer he observed that for the first time in his life his pulse assumed the well-known symptom of intermittent beating, or pulsation. With all his usual exactitude, he records that his pulse kept on missing a pulsation after the fifth, or the seventh, or eleventh beat, although it was for the rest strong and equal. He mentions a great many sleepless nights. “Nocte Amaritudo mea,” “Circa mediam noctem Amaritudo mea,” are entries that occur with some frequency. On July 7, he says, “This morning, as I lay in my bed, it

came into my fantasy to write a boke: *De differentiis quibusdam corporum et spirituum.*” His views on this subject are again sometimes noted. If they are not about books, they concerned that long-frustrated hope of his life, that he might actually one day, and by no fraud or trickery, stumble on the secret which Kelley had professed to know. By this time, Dee must have been assured of Kelley’s knavery, and yet his faith in the possibilities of alchemy remained unshaken to the end. “I had a dream after midnight,” he says, “of my enjoying and working of the philosopher’s stone, with other. My dream was after midnight, toward day.” Alas! this pleasure he was never to enjoy in the flesh. Next night: “I dreamed that along betwene Aldgate and the postern on Tower Hill did men stand in a lane, with pikes in theyr hands, as though more should come to them, or that they wayted for somebody. But theyr regard and looking was directly to Y Towre, where certeyn great personages dyd stand; and one of them as upon a stage did declare with a loud voice to the pikemen, matter of importance, very loud.”

The description of the topography of his dream, given by this Londoner born, is very exact. The gate of Aldgate, taken down in 1606, was the eastern postern of the City, not far from St. Botolph’s Curch. So the lane of pikemen was a very long one, or seems so to us, who know the distance covered with hundreds of buildings and a network of streets.

There was little time now for him to devote to alchemy by day. His work lay in a more practical direction: —

“July 17. I willed the Fellows to com to me by nine the next day. July 18. They cam. It is to be noted of the great pacifications, unexpected of man, which happened this Friday; for in the fore-noone (betwene nine and ten) when the Fellows were greatly in doubt of my heavy displeasure, bu reason of their manifold misusing of themselves against me, I did with all lenity interteyn them, and shewed the most part of the things that I had brought to pass at London for the Colleg good; and told Mr. Carter (going away) that I must speak with him alone. Robert Leghe and Charles Legh [the singing men] were by. Secondly, the great sute between Redich men and me was stayed, and by Mr. Richard Holland, his wisdom. Thirdly, the organs, uppon conditions, wer admitted. And fourthly, Mr. Williamson’s resignation granted, for a preacher to be gotten from Cambridge.”

Richard Holland, of Reddish and Heaton House, was a man of some note in Manchester, a feoffee of the Grammar School, and three or four times sheriff of the county. The “preacher gotten from Cambridge” to succeed the last unsatisfactory curate was William Bourne, a Fellow of St. John’s. “July 31. We held our audit, I and the Fellows, for the two yeres last past in my absence: Olyver Carter, Thomas Williams and Robert Birch, Charles Legh, the elder, being receyver.” This entry in the diary seems to make it plain that Dee was absent from Manchester during the whole of the two years of which we have no account. In July, too, Dee records the loan of his second part of Holinshed’s Chronicle to Mr. Randall Kemp.

In September, the commissioners appointed by the Bishop of Chester again met, and called Dee before them in the church, “about thre of the clok after none, and did deliver to me certain petitions put up by the Fellows against me to answer before the 18th of this month. I answered them all eodem tempore; Yet they gave me leave to write at leisure.” The commissioners were Richard Holland and

William Langley, both of whom we have met before, with the rector of Stockport, Richard Gerard. Things perhaps were set on a little better foundation for a time. Points of dispute were referred to the steward, Humphrey Davenport, "Counsayler, of Grays Inn," and Oliver Carter, the contentious Fellow, died within three or four years.

The last troublous years in Manchester must be briefly passed over, and indeed the material for them is scanty. Dee had to borrow money on more plate, "double gilt potts with cover and handells," "bowles and cupps with handles," from Edmund Chetham, the high master of the Grammar School; and he had not been able to redeem them when Chetham's father and executor made his will in March, 1603. He says in it that Dee delivered to his son "six severall parcells of Plate to be kept as a payne or pledge for the same [loan], which by reason of my said executorshippe are now come into my possession," and he wills the ten pounds lent upon them to his other sons Humfrey and Ralphe. When, if ever, the pieces were redeemed, does not appear. Another valuable article — "a silver salt, dubble gilt, with a cover, waying 14 oz.," had to be deposited with Adam Holland in January 1601, for a loan of five pounds for one year. Dee's store of plate, though large, was being heavily drained and irrevocably scattered in this way. The old man doubtless saw his treasures, the gifts of friends and patrons of half a century, disappear with feelings of deep chagrin and disappointment, mingled with memories of past triumphs, and little light upon the future. A piece of the plate came to light at the Tudor Exhibition in the New Gallery in 1890, when a silver cup, the property of Mrs. John Hookham Frere (said to be Dee's great-great-niece), was exhibited. Writing of this cup to her son Bartle Frer, about the end of the eighteenth century, Mrs. Frere says, "My great thrice- great uncle, John Dee, because he was a wise man, was taken for a conjurer. I have his silver cup now here with me, and you may drink of it, but I know no story in the family that he ever divined by it. It serves me here for a sugar basan." Evidently Mrs. Frere took an entirely rational view of the powers attributed to her famous ancestor.

Perhaps in these sad days he looked back regretfully to the glorious visions and promises made him by those angelic visitors in the years when he and his skryer lived in the Courts of kings and emperors, and were consulted and deferred to as seers and wise men. Even the thoughts of suspicions harboured; of secret and open foes, at home and abroad; the recollection of heart burnings and passionate scenes with the incalculable Kelley, must have seemed dazzlingly brilliant as compared with these grey hopeless years. It is little wonder that he began to seek among his assistants and friends another skryer, through whom he might renew some glimmer of the former days. Mr. Francis Nicholls, who had come to Mortlake in 1593 to learn astrology, seems to have been tried. He was frequently with the Warden, and his daughter Mary stayed for two or three months with the Dees in Manchester on their return from London. She would be a companion in age for Katherine, and the Warden tells how the two girls, his wife and himself, partook of the sacrament together on August 10, 1600. Bartholomew Hickman was more successful as a medium than Mr. Nicholls, and yet at first not always to be trusted. Dee had learned by now to be very discriminating, and he found many of the "reports of sight and hering spirituall," obtained through this skryer, so untrue that he made a bonfire of all the writings on Michaelmas Day, before his wife; Mr. Nicholls; his brother, William Nicholls, and a Mr. Wortley. "A copy of the first

part, which was afterward found, was burnt before me and my wife.” The revelations afterwards transmitted through Bartholomew were not so treated, and were evidently considered by Dee to be genuine messages from the unseen. His visitors left the next day after the Michaelmas bonfire, the Warden accompanying them on foot as far as Deansgate, where they parted. On his return home a surprise awaited the old man.

Dee’s servants, many of them, attached themselves to him for life, as we have seen. They, at least, regarded him without suspicion. He was no invoker of devils or conjurer of evil spirits to them. No master could be kinder, more gentle, considerate or more strictly honourable. In whatever straits he found himself, he always contrived to pay, and faithful record in his diary the payment of, their wages. We have seen how he writes to Sir Edward Dyer of their diet. It will be remembered that one of his early apprentices, Roger Cook, left him after fourteen years, jealous that another man should be admitted to processes from which he was excluded. This was over twenty years ago, nor had his name ever been mentioned in the diary since. Now, Roger Cook reappeared in Manchester, quite unsought, offering and promising

“his faithful and diligent care and help, to the best of his skill and power, in the processes chymicall, and that he will rather do so than be with any in England; which his promise the Lord bless and confirm! He told me that Mr. Anthony (his late master) considered him very liberally and friendly, but he told him that he had promised me. Then he liked in him the fidelity of regarding such his promise.”

A week or two later, on November 1, Dee writes that R.C. began to distil. Afterwards there seems to have been cause for suspicion that Roger had spread false reports about his former employer, but the mistake was generously acknowledged; matters were cleared up, and peace once more reigned: —

“Feb. 2. Roger Cook, his supposed plot laying to my discredit was by Arthur, my son, found by chance in a box of his papers, in his own handwriting, circa meridiem, and afternoon about 1 1/2 brought to my knowledge face to face. All was mistaken and we reconciled godly. Feb. 5. O libera nos a malo. Feb. 10. Reconciliation between us, and I did declare to my wife, Katherine my daughter, Arthur and Rowland, how things were mistaken.”

In October, Sir George Booth, High Sheriff of Cheshire, came to Manchester to see the steward of the college, Humphrey Davenport, of Gray’s Inn, about some of the college property in Cheshire, which he held. Booth had been knighted since his last visit. After all parties had been interviewed, they came to a mutual agreement that the Warden and Fellows would accept the arbitrament of the steward on the point in question, his decision to be delivered after the lawyer had paid his next visit to London. Davenport’s clerk, John Radclyffe, and Mr. Dumbell were at the college at the time, but Dee says “they heard not our agreement, we were in my dining room.”

He received a kind letter from the Bishop of Chester (Richard Vaughan), recommending Mr. Thomas Billings to him for a curacy. He does not say if the spiritual ministrations of Mr. Billings were accepted. The commissioners were still

sitting, and in November they made an award against Mr. James Ashton, of Chadderton, for holding the manor or property of Nuthurst while its title belonged to the college. There was a final scene with Oliver Carter in the college, before Mr. Birch, Robert and Charles Leigh. At the college audit on December 2, Dee was allowed his portion of 7 pounds yearly for house rent up to the Michaelmas before. A grant was now made to Arthur of the chapter clerkship, but the holder, Owne Hodges, was only going to relinquish it on condition of 6 pounds being paid for his patent. So more silver had to be pledged to meet a loan.

The last entry made by Dee in his diary is on April 6, 1601, when he made "Mr. Holcroft, of Vale Royall, his first acquaintance, at Manchester, by reason of Mr. William Herbert, his servant. He used me and reported of me very freely and worshiply."

For the concluding seven years of the old man's life there are only a few scanty outside records on which to rely, beside two or three fragmentary entries printed in the end of the Book of Mysteries. In such a practised and ready writer as our aged mathematician and astrologer, the failure to set down records seems to betoken failing strength of both intellect and body.

CHAPTER XXIII

LAST DAYS

"If I read aught in Heaven,
Or Heaven write aught of fate, by what the stars,
Voluminous or single characters
In their conjunction met, give me to spell,
Sorrows and labours, opposition, hate
Attends thee; scorns, reproaches, injuries."

— Milton, *Paradise Regained*

A few days after the diary closes, Dee's fourth son, Theodore, died. The boy was just over thirteen, perhaps at the Grammar School. Michael, we remember, had died at Mortlake seven years before, so the only sons left were Arthur and Rowland, both now grown almost to man's estate. Within about a year, Arthur married, and soon embarked on his successful career as a physician in London, Manchester, Moscow and Norwich, to which we can return later.

Arthur's wife was Isabella, daughter of Edmund Prestwich, Justice of the Peace, of Manchester, a member of a family whose name is perpetuated by a large district of the town. The marriage took place in 1602, when Arthur was twenty-four, his bride just under twenty. The young couple settled with or near his parents at first, and Dee had the joy of seeing grandchildren grow up around him. Four of Arthur's twelve children were born during the old man's life, and he pleased himself by drawing a horoscope for two of these, Margarita 1603, and Jane 1605, on the vellum leaves of a small square manuscript volume which still fills us with wonder at his boundless industry. It contains an anatomical drawing of the human body and tables of astrological signs for its different parts, aphorisms, studies of medicine, the actions of metals, and other hermetic notes. Arthur's horoscope, drawn and expounded by his father in the same book, is sufficiently remarkable,

with its prophecy that he should have good fortune from a prince, and die abroad, a violent death. In the centre of the figure, Arthur himself has added the words “sententia patris mei de mea nativitate erat. Magna bona cum multis malis.” Arthur only added one horoscope, that of his seventh child, Isabel, born 1614; otherwise, as they appeared almost annually (twelve in eighteen years), he contented himself with simply writing names and dates on leaves of coarse paper, added to the beginning and end of his father’s little commonplace book, which has been rebound roughly in cheap modern cloth.

Beyond these events, there is nothing to tell of the next three years, which are without a single jotting of his own in any of his diaries; but the old prejudices and suspicions must have revived in a very active and bitter form. The aged student could endure them less patiently than before. He had lost hope of outliving them; he had lost his Queen, who, though she had held out to him promises of preferment as unsubstantial as a mirage of the desert, had ever been friendly and kind; had constantly welcomed, nay, invited, him to her presence; and had apparently maintained her faith in him to the last. Burleigh’s death in 1598, and now the Queen’s, left him without patron and protector. Elizabeth died at Richmond on March 23, 1603, but Dee, presumably, was far away in Manchester, and not near at hand at Mortlake, even had he been required. The course of the magnificent life was run, and no prognostications of her astrologer could put hope into the physicians and courtiers watching around that royal deathbed. The Queen was seventy, and had reigned for fifty-three years.

From King James there was nothing to be hoped for Dee, the man familiar with occult sciences. The Scotsman felt himself a special expert on the subject of witches, demons and magic. Had he not attended the infamous trials of 1590 and 1591? And was he not the author of a book intended to shatter the doubts of those who were still unconvinced of the infamy? He was aghast at the new and unorthodox views of apologists like Wier and Reginald Scot, and upon his accession promptly ordered *The Discoverie of Witchcraft* (1584), by the last named, to be publicly burned. James’s *Demonologie* is a strange piece of reasoning, a plea, in fact, for the devil, with whom he seems to be on particularly intimate terms. “God’s hangman” — that is the title awarded him — is, according to King James, able to return and reanimate any dead body. He announces his faith in the power of conjurers to invoke the devil when they choose, and to invest others with his spirit. He adjures all pious people to unite in exterminating and utterly destroying all persons so possessed: a somewhat unkind request, since he has previously allowed that such objects of reprobation are permitted to exist in order that the godly may be warned!

The first Parliament of James met on March 19, 1604. On the 27th a new and more stringent Act against Witchcraft was brought into the House of Lords. It was referred to the bishops, who discovered it was imperfect, and had a fresh one drawn. On June 9 the execrable Act that disfigured our statute book for 150 years became law. This haste, it was supposed, was used to meet offences exposed by the Scottish trials, now again evidently revived and much talked of in England. It is significant to remember that Shakespeare finished writing *Macbeth* in 1606. In what way Dee felt himself specially involved, unless by the publication, in 1603, of Harsnet’s tirade against impostures and exorcists, it is hard to conjecture, but the times were ripe for him to make, at this identical moment, a passionate appeal to the King and

Parliament. On June 5 he presented to James, in the Palace at Greenwich, a petition couched in the strongest and most piteous terms that any man could devise.

He urged upon the King

“to cause your Highnesse said servant to be tryed and cleared of that horrible and damnable, and to him most grievous and dammageable sclaunder, generally, and for these many yeares last past, in this kingdom raysed and continued, by report and Print against him, namely that he is or hath bin a conjurer or caller or invocator of divels.”

He went on to relate how he had published many times his “earnest apologies against the slander [one we remember in his preface to Billingsley’s Euclid in 1570, and another, the letter to the Archbishop in 1595, he had republished in 1599 and 1603], and yet this ungodly and false report, so boldly, constantly and impudently avouched,” has been uncontrolled and unpunished for so many years; and, moreover, in spite of all, some writer, either a “malicious forraine enemy or an English traytor to the flourishing State and Honor of the Kingdom,” on January 7, 1592, had called him, John Dee, in print, “the conjuror of the Queen’s Privy Council.” It seems, therefore, very needful that the suppliant shall be brought to trial, for the credit of the Lords of the Privy Council as well as for his own.

“Therefore he offereth himself willingly to the punishment of Death, yea eyther to be stoned to death, or to be buried quicke, or to be burned unmercifully, if by any due, true, and just meanes, the name of conjuror, or caller, or invocator of Divels or damned Sprites, can be proved to have beene or to be duely or justly reported and told of him (as to have been of his doing) were true, as they have been told or reasonably caused any wondering among or to the many-headed multitude, or to any other whoseever else.”

Dee’s sympathies were so strongly with the unfortunate, persecuted, so-called witches, that he was willing to throw in his lot with them and share the same fate. He ends this extraordinary petition with “a great and undoubted hope” that the King will “soon redress his farder griefs and hindrances, no longer of him possibly to be endured, so long hath his utter undoing, by little and little, beene most unjustly compassed.”

Following up this petition, the poor man, grown desperate, three days later (June 8) presented an address in verse to Parliament, begging them to pass “an Act Generall against slander, with a special penal order for John Dee, his case.” He was far too much in earnest to be suspected of any humorous intention, but a thought of the needful reformation such an Act might have wrought in the country by this time cannot be suppressed. Certainly it would have been a more creditable piece of legislation than the Act which afforded such wicked and cruel pretext for espionage and terrorism, and for putting unfortunate lunatics — called witches — to death by hanging, burning and stoning by a mob.

It seems as if Dee’s ruined and beggared condition, the long procession of disappointments he had patiently borne, had entirely destroyed the sense of proportion in his mind between personal and public affairs. Continual brooding over the thought of the neglect, the suspicion, that his undeniable talents had undergone, the obstinate slander, ignorant incredulity, or flat denial of things in which he most truly put his faith, all distorted by his natural vanity and good

opinion, seems to have convinced him that his crushed and melancholy fate was little short of a national disaster. This feeling had become an obsession.

There was unfortunately nothing in his halting verses to induce Parliament to pay any heed to a tiresome old petitioner, a survival from the last century and the last reign, who had outlived every contemporary inclined to believe in him, and whose course was now nearly run.

Nor did James respond in any way to his heartbroken petition. Robert Cecil, and all who wished to stand well with him, took their cue from the King, and Dee in his old age was left forsaken and alone.

The following is the address to Parliament: —

“TO THE HONORABLE ASSEMBLIE
OF THE COMMONS IN THE PRESENT PARLIAMENT.”

“The Honor due unto you all,
And reverence to you each one,
I do first yeeld most speciall;
Grant me this time to heare my mone.

“Now (if you write) full well you may,
Fowle sclandrous tongues and divelish hate,
And help the truth to beare some sway
In just defence of a good Name.

“In sundry sorts, this sclander great
(Of conjurer) I have sore blamde:
But wilfull, rash, and spiteful heat,
Doth nothing cease to be enflamde.

“Your helpe, therefore, by Wisdom’s lore,
And by your Powre, so great and sure,
I humbly crave, that never more
This hellish would I shall endure.

“And so your Act, with Honour great
All Ages will hereafter prayse;
And Truth, that sitts in Heavenly sear,
Will in like case your comforts rayse.

Most dutifully in all humilitie at your commandment, John Dee,
servant and Mathematician to his most royall Majestie.

An. 1604. Junij 8.”

Dee’s good name was one of his dearest possessions, but he had long seen it shadowed and dimmed. Another treasure — his “painful” Jane — the wife who had loyally cleaved to him through good and ill report, was to be the next of which he was to be bereft. She was so much his junior that he might reasonably have expected her to tend his declining years and to survive him. But it was thoroughly

in keeping with her unselfish character and devoted life that her death came as a sacrifice to duty. In the spring of 1605, a terrible scourge of plague visited Manchester. She nursed her children safely through the epidemic, but fell a victim to it herself. She died and was buried on March 23 in the collegiate church of St. Mary. The old man had no heart to take up his pen and record her death. The bare fact is all we know, from another source; and the fate of all Jane's children, save Arthur, is wrapped in a like mystery. At her death, Jane was a month under fifty years old; the twenty-seven years of her married life had been crowded years, the one thought in them all to watch over and ward her great childlike, learned, marvellous husband and her children. Now she passed the task on to her daughter Kate, who faithfully fulfilled it.

A few fragments of angelic visions, which after nearly twenty years were once again vouchsafed, are all that remain to tell of the last two years of the old man's life.

Bartholomew Hickman was the skryer, and Dee was in London, "at Mrs. Goodman her house," very ill. On March 20 and 29, Raphael appeared, to comfort him as regards his alarming symptoms of haemorrhage, and bade him use the medical skill that God had given him. Dee, in utter dejection, owned that he was beaten in his "great attempt to make the council privy of my beggary, and to offer the Earl of Salisbury such my duties as I may perfect to his account." He was right to hope nothing from the great Burleigh's little-minded son. Robert Cecil lacked almost everything that had made William Cecil great, even a great sovereign to serve.

In July Dee was again in London, this time staying in Westminster, at the "Three Kings" in King Street. Katherine was with him, his devoted daughter, now a woman of twenty-six, apparently unmarried. Two companions or servants, Patrick Saunders and Thomas Turner, were in attendance. On the 9th, the angel Raphael came to the sad and broken old man of eighty, holding out promises and hopes that seem cruelly delusive. But Dee was still wrapped in that inviolable armour of faith or credulity that had already withstood so many severe shocks. Whether he now actually beheld Raphael, whether he still with his ears heard the angel's voice, or whether only within his spiritual consciousness he felt the impulse and the message, is quite immaterial. But it is noticeable that there are now no descriptions of Raphael as an apparition. The message is all he heeds. As he is sinking slowly down into his grave from natural decay, there is a double and figurative meaning to be read into the angel's words. Raphael bade him first believe that his perishing bodily frame shall be restored and made sound, for, however reluctant he at his great age may feel, he is to go shortly on a long journey to friends beyond the sea, where the secrets of wisdom, the philosopher's stone, the book of St. Dunstan, and "that Jewel that was delivered," shall be made known to him. He is not to go alone, for his good friend, John Pontoys, will come from Dantzic to be his stay and helper. "Therefore set thy things in order for thy Wardenship, and all thy other worldly affairs, as shortly as thou canst, by all means possible." He is not to mistrust because of his physical weakness, for he shall have long life like Hezekiah, and instead of living in want or beholden to those who love him not, he shall be provided for where he shall be able to do God service. He shall enjoy fame and memory to the end, and Raphael will accompany him, as he did the young Tobias, on his journey. Perhaps Dee remembered the mystical words of Gabriel, used to him at Cracow in April of 1584, —

“Happy is he that hath his skirts tied up and is prepared for a journey, for the way shall be open unto him, and in his joynts shall there dwell no wearinesse. His meat shall be as the tender dew, as the sweetness of a bullock’s cud. For unto them that have shall be given, and from them that have not shall be taken away. For why? The burr cleaveth to the willow stem, but on the sands it is tossed as a feather without dwelling. Happy are they that cleave unto the Lord, for they shall be brought unto the storehouse, and be accounted and accepted as the ornaments of his beauty.”

[The old man penned on a slip of paper some notes to aid his failing memory when next he should see his instructor. In two days, on July 11, he was able to put the questions.

What country shall he go to?

The answer is, where he will. “Thou hast been a great traveller, and it is referred to thy own choice,” subject to divine approval. Dee suggests Germany, and receives consent.

Whom shall he take with him besides John Pontoys? What about his daughter Katherine, and the young man, Patrick Saunders?

The answer is very emphatic. It shows how dependent the old man had become upon this elder daughter of his old age. “John Dee, thou of thyself dost best know that without thy daughter, thou canst not be without her.”

Certainly he could not part from Katherine, even with Pontoys as his “special comfort and aid,” and the “honest and well-disposed young man,” Saunders, who had been sent on purpose to go with him.

What about books and appurtenances? Is Mr. Bardolf to go? What shall Arthur do in his intended travel? “Shall I ever return to England, and shall I keep a title to enjoy my house when I do return?” Will the King grant a licence, or will it not be another disappointment, like so many that have gone before?

It is all a vain and illusory and impossible chimera. The only journey left for the old man to take was the one to “that undiscovered bourne from whence no traveller returns.” Still, the wonderful visions perhaps brought him ecstatic hours. His brain was yet strong and clear, less worn out than his body, but like all old people, he lived over again and loved to dwell upon the past. A few days later he sat talking after dinner to Bartholomew “of divers my doings with Mr. Kelley.” He had forgotten little of these dazzling experiences, and perhaps to while away the time he read his precious diaries over and over again. But of later events his memory was failing: “I asked Bartholomew if he had ever seen my jewel that was brought since it was set in gold [this had been done more than twenty years before], and he thought that he had not seen it.” Surely tactful politeness on Bartholomew’s part. “Whereupon I went speedily to my chest, unlocked it, and took it out, and undid the case and set the stone in his due manner.”

Soon Raphael appeared in the stone, and Dee heard his voice, promising that the powder (i.e., Kelley’s powder) which he was keeping — “the which thou dost make account of as no better but dust” — should be turned to its right use.

Is it possible that the old belief in the golden secret had at last been killed? The powder was now but dust, as the old man would soon become, and as all his fixed dreams of projection had ever been.

The last entry in the spiritualistic diary was made on September 7, 1607, but whether Dee was at Mortlake or in London cannot be said. Pontoys had arrived. He was anxious to know if he would be thought fit to serve Dee in Bartholomew's absence. Also he earnestly desired to know his guardian angel, and he would fain hear also "the end of the Polish troubles."

Captain Langham, it is hoped, is going to lend 100 pounds; if not, Pontoys will set to work "to win some help for money by distillations and alchemical conclusions." Poverty is again stretching her gaunt fingers over this fond dreamer of gold. He had missed his "silver double gilt bell salt" and many other things from his house. He is "bereaved of his own goods." The truth was that Arthur had secretly taken them away to sell or pawn, in order to provide necessities for the family. Dee has been expecting a sum of money from the Emperor Rudolph, how much he does not know. But Raphael tells him to "let it go and speak no further of it. The Emperor of all emperors will be thy comfort. Thou hast no more need of him [Rudolph], only to keep good will and friendship betwixt him and thee." [Then Raphael fades into the eternal invisible, and the last word of the angelic visions is written.

In the private diary, kept in the almanack from Venice throughout this last year, there is little beside the bare stroke marking the months off into weeks, as was Dee's usual habit. The strokes are continued beyond the month of his death, December, 1608. The last written entry is on December 19, and is almost illegible. It is in the old man's hand and appears to read "tonitrum a Corffe."

On which day at the death of the old year, Dee's spirit joined those others that had always been so near to him, we do not know, or on what precise date he was buried in the chancel of the church standing so close to the house at Mortlake which had been his home for thirty years. The parish registers for five years are missing, and the stone which Aubrey says marked his grave has long since disappeared.

Fifty years later, John Aubrey talked to Goodwife Faldo, an old woman of eighty who had known him, and was shown a slab from which the brass had disappeared. She said that her mother had tended him in his sickness before he died in his own house in Mortlake, "next the house where the tapestry hangings are made." Evidently his last days were passed in the cottage which he had purchased many years before to add to the larger house, inherited from his mother. The old woman's gossip was interesting to Aubrey, for he was a grandson of Dee's cousin and neighbour, Dr. William Aubrey, the Master of Requests who had helped Dee to the Manchester post. She was full of marvellous stories, of course, for Dee's reputation for "magic" was impelled to survive him. But they were harmless stories enough: he had "layed a storm for Sir Everard Digby"; he had recovered a basket of clothes which she as a girl, and one of his younger daughters of her own age, had negligently lost together; he had bidden a butler who had lost his master's plate on a boat coming down from London by water to go back on a certain day, and he would see the man who had taken the wrong basket by exchange: the butler had done so and had found his plate; he had told a woman that she laboured under the evil tongue of an ill neighbour; he would not recover some lost horses, though he was offered several angels. He used to distil egg-shells, and kept a great many stills going. He had given and built the gallery to the church at Mortlake, and Goody Faldo's father was the carpenter that worked on it. "He was a great peacemaker, and

if any of the neighbours fell out, he would never let them alone till he had made them friends." "A mighty good man he was."

The old woman remembered that he entertained the Polish ambassador not long before he died, and showed to him the eclipse of the sun, in a dark room. She could call to mind the stone upon his grave: it was between the tombstones of two other servants of Queen Elizabeth, Mr. Holt and Mr. Miles, upon both of which were brasses. The children, she said, dreaded him because he was accounted a conjurer, and yet whenever they strayed into the church, they would run straight to play upon his gravestone. There were steps at the upper end of the chancel when he was buried, but the minister laid them plain in Olver's days, and then the stone that covered Dr. Dee was removed. She could recall his appearance: a man tall and slender, clad in a gown like an artist's gown, with hanging sleeves and a slit.

These garrulous reminiscences give us a picture of the old philosopher's end more valuable than any mere formal entry of the date. Some day, however, it may be possible to recover that.

Meanwhile, Dee's memory may be entrusted to the kinder judges of to-day, who will be more charitable because more enlightened and less impregnated with superstition. They may see in him a vain, presumptuous and much deluded person, but at any rate they must acknowledge his sincere and good intentions; his personal piety; his uncommon purity of thought and mind. If, in his thirst for knowledge of the infinite unknowable, he pushed back the curtain farther than was wise or justifiable, did he harm any one's reputation beside his own? Did he not suffer all the penalty in his own miserable failure, so far as comfort and prosperity in material things were concerned? In all the vague hopes held out by him to Queen, Princes and Emperors, of enriching them through his alchemical skill, he was no conscious charlatan, playing a part to lure them on, but a devout believer in man's power and purpose to wrest scientific secrets from the womb of the future. Can we look back upon the discoveries of three hundred years and feel his certainty was vain? The powers of electricity, the training to our uses that marvellous and long concealed agency and light; the healing virtues of radium, should be worth more to us than much manufactured gold.

APPENDIX I

THE DESCENDANTS OF JOHN DEE

When the aged mathematician died at Mortlake in 1608 he left to survive him five or six out of his eight children. Michael, born at Prague, had died on his father's birthday in 1594. Theodore, born at Trebona, died at Manchester 1601. Arthur and Rowland were left. Katherine was his companion to the end. The three younger girls, Madinia, Frances and Margaret, had, for anything we know, survived the plague which was so fatal to their mother, but there is no trace of either of them after that event in March, 1606. Aubrey, indeed, did hear from Goody Faldo of a daughter, whose name he thinks was Sarah, married to a flax dresser of Bermondsey. Dee had no daughter Sarah, and Aubrey does not suggest a name for the problematic husband.

Arthur, the eldest son, we have followed through a childhood of accidents to his selection and setting apart with a solemn rite to be his father's "skryer" in the

magic crystal, in the eighth year of his age. We have traced the failure of that ill-advised choice, and have seen the lad of thirteen sent off to Westminster School with a little trunk and his mother's blessing. The next events in his life recorded by his father are his being wounded by a foyne while fencing with Edward Arnold, and the grant of the chapter clerkship of Manchester, in 1600.

He married in 1602, lived for a while in Manchester, and began practising medicine. Wood says he spent some time at Oxford, but his name has so far not been found in any college admissions. In his will he is described as "Doctor of Physic." Probably he took his degree abroad. His marriage to Isabella Prestwich, daughter of a well-known Manchester justice of the peace, took place when he was twenty-two, and it is to be presumed that he continued living on in Manchester until his father left that city some time in 1605 or 1606, after the sad death of his wife. Arthur set up a practice in London some time about that year, although precise dates are not obtainable. He seems to have followed the common usage of hanging outside his door a list or "table" of medicines, and their excellent therapeutic properties, which were said to effect certain cures of several diseases. This attracted the attentio of the censors appointed by the Royal College of Physicians, who proceeded against him forthwith, under the powers granted them against empiricks, which they had exercised since the foundation of the College in the early years of Henry VIII. The learned members of the college esteemed this "crime" such an "intolerable cheat and imposture," that they summoned Arthur Dee to appear before them with his remedies that they might impose a due penalty upon his presumption. The rest of the story is unrelated, and we cannot say what fine or order was his reward.

He seems, either through inflence or talent, to have made his mark as a doctor. In July, 1614, he was recommended by the Archbishop of Canterbury and the Lord Chancellor to be elected physician of Thomas Sutton's newly founded hospital, the Charterhouse, and we may presume the appointment was made. In May, 1627, Charles I. recommended him as physician to the Emperor of Russia, and in June it was agreed to send letters out by him or his agent, the stipulation being made that he must sail at once, "or not have passage this year."

He took up his abode at Moscow, if not in the splendour and riches offered to his father, at least sufficiently provided for to maintain his huge family in comfort. Four or five of his twelve children died in infancy; the complete list of them, as given in his father's book of horoscopes in the British Museum, is as under: —

Margaret	born	April 4, 1603.
Jane	"	March 31, 1605.
John	"	July 24, 1606 (died).
Arthur	"	March 16, 1608.
Maria	"	February 24, 1612.
Rowland	"	September 8, 1613.
Isabel	"	September 5, 1614.
Frances	"	October 25, 1615.
William	"	August 27, 1617.
John	"	March 30, 1619.
Edmund	baptised	August 27, 1620.
	buried	September 23, 1621.

Anna born

January 15, 1622.

Arthur's wife, Isabella Dee, died July 24, 1634. About this time he returned to England and settled in Norwich, near his friend, Sir Thomas Browne, who was then busily engaged in writing down the ethical and theological conclusions which he called the *Religio Medici*. Browne was, of course, the younger man. Writing in 1658, a few years after Arthur's death, to Elias Ashmole, Sir Thomas tells of the many talks about the doings of Dee and Kelley that he had with "my familiar friend, sonne unto old Doctor Dee, the mathematician," who had "lived many years and died in Norwich." Browne sent to Ashmole "the scheme of Arthur's nativity, erected by his father, Dr. John Dee," a copy from the original, made by Arthur himself, with comments added by a Moscow astrologer, Franciscus Murrerus.

Dr. Arthur, in spite, or perhaps because, of his early environment, retained until his dying day a devout belief in the possibilities of alchemy to make projection or transmutation. He had grown up in the fixed idea that the ever-exclusive secret would soon be found out. In fact, he was persuaded that divers workers had indeed discovered the art. The child of seven or eight, who had played with quoits or playthings, which he understood had been turned into gold upon the premises, was likely to retain this conviction. To doubt it would be to cast a slur upon his father's memory. Of Kelley his recollections — the recollections of a boy under nine — could be but dim and hazy, untouched with any possible scepticism or critical judgment. After the February day when Kelley rode off to Prague in 1588, neither Arthur or his father had ever set eyes on this adventurer again.

He had succeeded in convincing his old friend of the truth of these recollections, for Browne writes of him as "a persevering student in hermetically philosophy, who had no small encouragement, having seen projection made, and with the highest asseverations he confirmed unto his death that he had ocularly, undeceivably and frequently beheld it in Bohemia. And to my knowledge, had not an accident prevented, he had, not many years before his death, retired beyond the sea and fallen upon the solemn process of the great work."

Continuing the correspondence six months later, when additional matter rises to mind, Sir Thomas writes again to Ashmole, in 1675, with more particulars of the "solemn process."

"I was very well acquainted with Dr. Arthur Dee, and at one time or another he has given me some account of the whole course of his life. I have heard the doctor say that he lived in Bohemia with his father, both at Prague and in other parts. That Prince or Count Rosenberg was their great patron, who delighted much in alchemie. I have often heard him affirme, and sometimes with oaths, that he had seen projection made, and transmutation of pewter dishes and flaggons into silver, which the goldsmiths at Prague bought of them. And that Count Rosenberg played at quoits with silver quoits made by projection as before. That this transmutation was made by a powder they had, which was found in some old place, and a book lying by it containing nothing but heiroglyphicks; which book his father bestowed much time upon, but I could not hear that he could make it out. He said also that Kelley dealth not justly by his father, and that he went away with the greatest part of the powder, and was afterwards imprisoned by the Emperor in a castle, from whence attempting to escape down the wall, he fell and broke his leg, and was imprisoned again. That his father, Dr. John Dee, presented Queen Elizabeth

with a little of the powder, who having made trial thereof, attempted to get Kelley out of prison, and sent some [persons] to that purpose, who, giving opium in drink unto the keepers, laid them so fast asleep that Kelley found opportunity to attempt an escape; and there were horses readie to carry him away; but the business unhappily succeeded as is before declared. Dr. Arthur Dee was a young man [he was a boy of eight] when he saw this projection made in Bohemia, but he was so inflamed therewith that he fell early upon that study, and read not much all his life but books of that subject; and two years before his death, contracted with one Hunniades, or Hans Hanyar, in London, to be his operator. This Hans Hanyar having lived long in London and growing in yhears, resolved to return into Hungary. He went first to Amsterdam, where he was to remain ten weeks, till Dr. Arthur came to him. the Dr. to my knowledge was serious in this businesse and had provided all in readiness to go, but suddenly he heard that Hans Hanyar was dead.”

During his residence in Moscow, Arthur compiled a book of alchemical notes and extracts, which was published at Paris in 1631 under the title of *Fasciculus Chemicus*, etc. Ashmole, among his early enthusiastic labours upon alchemical authors prosecuted under the name of “James Hasolle,” translated this into English in 1650. While the book was at press in the beginning of the year, he wrote to Arthur, apparently as a stranger, informing him of his occupation, and putting at the same time a question or two upon his father’s books.

Arthur’s reply, dated Norwich, January 31, 1649 [50], now in the Bodleian Library, begins by expressing regret that “you or any man should take pains to translate any book of that nature into English, for the art is vilified so much already by scholars that daily do deride it, in regard they are ignorant of the principles. How then can it any way be advanced by the vulgar? But to satisfie your question, you may be resolved that he who wrote Euclid’s Preface was my father. The *Fasciculus*, I must cofess, was my labour and work.” He ends by saying that he will be in London that day week, and if Ashmole wants to see him, he may hear of him in Butler’s Court at the end of Lombard Street, at his son Rowland Dee’s warehouse. The writing, and especially the signature of this letter, are good testimonies to the care bestowed by William Camden of Westminster School on the boy’s handwriting. His father, as we remember, had asked for special supervision of the roman hand, since matter, poor in itself, but set down in a good style, did, in his opinion, often receive more attention than good material badly written and expressed.

Browne had received from Arthur a complete catalogue of all his father’s writings, both finished and intended. But there was one not included, viz., the *Book of Mysteries*. Sir Thomas, writing in 1675, says he never heard him say one word of “the *Book of Spiritts* sett out by Dr. Casaubone, which if hee had knowne I make no doubt butt hee would have spoake of it unto mee, for he was very inquisitive after any manuscripts of his father’s, and desirous to print as many as he could possibly obtain.” He goes on to say that Arthur understood that Sir William Boswell, the English Resident in Holland, owned a number of Dee’s MSS., which he had collected and kept in a trunk in his Dutch home. Boswell refused many applications from Arthur for leave to print some of these, which the famous mathematician’s son considered should not be locked up from the world. Boswell announced his intention of printing them himse, which of course he never did.

Nor did the Book of Spirits see the light of day during Arthur's lifetime. Perhaps had Casaubon appealed to him as Ashmole had done, it would never have been issued at all. A son would certainly have remonstrated against this revelations, this tearing down the veil from the inner tabernacle of his father's soul.

Arthur died in the autumn of 1651, eight years before Casaubon published his book. He made his will on September 17, describing himself as Doctor of Physick, of the city of Norwich, and leaving a small legacy of twenty shillings to the poor of the parish of St. George Tombland, in which he had lived.

Only three sons out of his seven, and three daughters of the six are named in the will, all the others being dead, unless it was Arthur, the eldest, who had been a merchant in Amsterdam. There is a legacy of twenty pounds to his wife.

The second son, Rowland, was established, as we have seen, in Lombard Street as a merchant. To him Arthur had already given his father's portrait, now in the Ashmolean Museum and reproduced as the Frontispiece to this book; and a painted coat of arms. Sir Thomas Browne, who had often seen it, speaks of an addition made to the coat by grant of the Emperor Rudolph in the shape of a mathematical figure; probably the delta which Dee always used for his name in the spiritual diary. To Rowland's wife there is a legacy of twenty pounds.

"To John Dee, my youngest son," Arthur left one hundred pounds and his gold seal ring with the coat of arms cut in a sapphire. John was a Russia merchant.

There is no mention of his eldest child and daughter, Margaret, who is said to have married another Russia merchant named Abraham Ashe.

To three sons-in-law, "my son Grymes;" "my son Anguish" (this was the husband of his youngest child, Anne); and "my son Fowell," he leaves respectively a plush coat; a saddle and pistol; and a black gown and plush suit.

To each of his three daughters, their wives (none of them mentioned by name), he gives 20 pounds; and to the two elder, his two iron-barred sealskin trunks with long cushions and foot carpets, feather bed, blankets, bolsters and coverlets. He appoints his friend John Toley, of Norwich, his executor, and gives him his watch and silver chain, with a square box of cypress wood, double-leafed, with drawers. His servant, John Sergeant, is to have all the contents of his extensive wardrobe, consisting of his coloured cloth suit and and cloak; black suit and cloak lined with rough bayes (Norwich was the seat of the bay and say industry); his winter pair of boots, and two pairs of summer boots; his "hatts;" his "stokins whatsoever;" his black satin doublet; shirts; six of his "worst-falling bands and ruffs;" and forty shillings due for wages at the Michaelmas following.

Arthur Dee died before October 16 of the same year, 1650, when the will was proved by John Toley.

Rowland, Arthur's fourth son, married and died in 1687, when his wife was executrix of his will. Rowland's sons by this wife Jane (d. 1698) were Rowland, born March 25, 1646, married October, 1675; Elizabeth Gardiner of Aldersgate (d. September, 1698); and Duncan, born November 3, 1657. Both were educated at Merchant Taylors' School on the Bishop of Peterborough's foundation (see below). Duncan went on to St. John's College, Oxford, and entered the legal profession. He was chosen Common Serjeant of London in 1700. He defended Dr. Sacheverell for four days of his trial in the House of Lords in 1710; died in 1720, and was buried in St. Mary Aldermanbury. By his wife Mary (d. Stoke Newington, March 24, 1728) he left a son Henry (d. 1725), others having died young.

David Dee, born in Shropshire, of St. Mary's Hall, Oxford, rector of St. Bartholomew the Great, Smithfield, 1587 — 1605, is said to have been a grandson of Bedo Dee. If so, he must have been either brother or cousin of John Dee of Mortlake, who, strange to say, alludes nowhere in his diary to any relation of the name of Dee, although he speaks often of his Welsh kinsfolk, and of his cousin Aubrey. As he died at Mortlake in 1608, aged eighty and a half, David, who survived him twelve years, must have been his junior. David Dee was deprived of St. Bartholomew, "for what," says Newcourt, "I know not"; but he was brought back there to be buried on February 3, 1620. By his wife Martia, daughter of John Rogers, David Dee had three sons, of whom Francis, the eldest, was educated at Merchant Taylors' School and St. John's College, Cambridge. He entered the Church, held various livings in London and elsewhere, and four years before his death was consecrated Bishop of Peterborough. By his will (dated May 28, 1638), he gave his rectory of Pagham, Sussex, to found two fellowships and two scholarships in St. John's College, one of which was to be held for ever by "one of my kindred or of my name, from either Merchant Taylors' School, London, or from Peterborough School." We have seen that two of John Dee's great grandchildren were sent to Merchant Taylors', and one, Duncan, proceeded to St. John's, probably on this foundation. The Bishop's eldest son, Adrian Dee, Canon of Chichester, died unmarried, but his younger sons, John and Daniel, left descendants.

APPENDIX II

BIBLIOGRAPHY

The principal authorities for Dee's Life are his own Diaries, already frequently cited in the foregoing pages, viz.: —

(1) The Private Diary. The original notes comprising this are in two 4to almanacks in the Bodleian Library, Oxford, numbered Ashmolean MSS. 487, 488. They were transcribed and printed for the Camden Society (1842), with numerous omissions, by Mr. J.O. Halliwell [-Phillipps]. The Manchester portion of this Diary, covering the years 1595-1601, was edited with much local knowledge and care by Mr. J. Eglington Bailey, and privately printed; only twenty copies (1880). Mr. Bailey also reprinted from Notes and Queries (May, 1879) his paper on Dee and the Steganographia of Trithemius.

(2) The Spiritual Diary, or Liber Mysteriorum, divided by Dee into separate books, each dealing with a special epoch. The first five books, with an appendix to the fifth — dating in all from December 22, 1581, to May 23, 1583 — are comprised in Sloane MSS. 3188, at the British Museum. The remaining books, actually twelve but not consecutively numbered, were printed by Dr. Meric Casaubon in The True and Faithful Relation, etc., 1659, fol. Three of them are entitled "Libri Mystici Apertorii Carcoviensis Sabbatici"; three "Mysteriorum Pragensium Confirmatio"; and the two last "Liber Resurrectionis" and "Mysteriorum divinatorum memorabilia." This ends on May 23, 1587. About a dozen pages of occurrences taking place in 1607 are printed by Casaubon at the end of his book, from stray papers.

Dee's autobiographical Compendious Rehearsall ranks next in importance. The original MS. was partly burned in the fire in the Cottonian Library, but a transcript made by Dr. Thomas Smith (author of a life of Dee, see below) was printed

by Hearne in the Appendix to *Johannis Glastoniensis Chronicon* (Oxford, 1726). This printed version was collated with Ashmole's transcript of the original (Ashmolean Ms. 1788), and edited by James Crossley for the Chetham society, in *Autobiographical Tracts of Dr. John Dee, Warden of the College of Manchester*, 1851. In his preface, the editor promises another volume of correspondence and selections of Dee, which never appeared.

The Latin life of Dee, *Vitae Eruditissimorum et Illustrium Virorum*, by Dr. Thomas Smith (1707); the article in the *Biographia Britannica*, edited by Kippis (1778, etc.), largely based upon the foregoing, and upon Strype's *Annals* (1725, etc.); some account in Wood's *Athenae Oxoniensis* (Bliss), i. 639, 640, and *Fasti*, i. 143; in Foxe's *Acts and Monuments*, ed. Townsend, vii., 77, 85, 349 n., 638, 641, 642, 681, 734, 756, 783, 784; and in Ashmole's *Theatrum Chemicum Britannicum* (1652), pp. 478-483; with Aubrey's *Lives*, ed. by Dr. A. Clark (1898); and *A Treatise of Religious and Learned Men* (1656), by Edward Leigh, are further sources. For the Manchester years, Hibbert and Ware's *Foundations of Manchester* (1833) is useful; and for Dee's descendants, see a *General Account of Families derived from Bedo Dee*, by H.B. Wilson (1815) and his *History of Merchant Taylors' School* (1812-14). Later writers who have descanted more or less at large upon the romantic episodes of Dee's partnership with Kelley, as apart from any other achievement of his long life, are William Godwin, in his *History of the Necromancers* (1834); Charles Mackay, *Memoirs of Extraordinary Popular Delusions* (1841); Isaac Disrael, *Amenities of Literature* (1841); W. Cooke-Taylor's *Romantic Biography of the Age of Elizabeth* (1842); A. E. Waite in his *Lives of Alchemical Philosophers* (Edinburgh, 1888), *Studies in Myticism* (1906), and *The Alchemical Writings of Edward Kelley* (1893); Thomas Seccombe, *Twelve Bad Men* (1894); Adelung's *Geschichte der Menschlichen Narrheit* (1785-9); Lenglet de Fresnoy's *Histoire de la Philosophie Hermetique* (1742); Manget's *Bibliotheca Chemica Curiosa* (Geneva, 1702), and Louis Figuier's *L'Alchimie et les Alchimistes* (1856).

Purely fictitious accounts are those in John Dee, *Astrologer of Queen Elizabeth*, by "Hippocrates, jun." (1899), and "John Roby's" *Traditions of Lancashire* (1906).

For the study of witchcraft in the sixteenth century the following may be consulted: George Gifford, *Subtle Practices of Witches* (1587); T.A. Spalding, *Elizabethan Demonology*, etc. (1880); James I., *Demonologie* (1603); Meric Casaubon, *Treatise on Spirits, Witches*, etc. (1672); Reginald Scot, *Discoverie of Witchcraft* (1584, 3rd edition 1605); Sir Walter Scott, *Letters on Demonology and Witchcraft* (1830); Henry Howard, Earl of Northampton, *Defensative against Poyson* (1583), and many other kindred works.

For the history of crystal gazing see Caspar Peucer, *Les Devins* (Antwerp, 1584); M.A. del Rio, *Disquisitionum Magicarum*, 1599; Pierre de l'Ancre, *L'Incredulite et Miscreance du Sortilege* (Paris, 1622); Guido Bonatus, *The Astrologer's Guide* (1866); Andrew Lang, in *Psychical Research of the Nineteenth Century* (1901), and *Introduction to Northcote's Crystal Gazing* (1905); Mrs. de Morgan, *From Matter to Spirit* (1863); Sir William Crookes, *Psychic Force and Modern Spiritualism* (1871), and his *Researches in the Phenomena of Spiritualism* (1874); Miss Goodrich Freer's *Essays in Psychical Research* (1899), where she compares the revelations of the spirits to Dee with the work "of a lady novelist of the eighties"; M. Camille Flammarion's popular and numerous works; F. W.

Myers' *Phantasms of the Living* (1886) and his *Human Personality* (1903); with the *Proceedings of the Psychical Research Society*, will all afford information upon psychical and spiritualistic progress. The consummate description of John Inglesant's tragic and pregnant vision of his brother's murder, seen before hand in the crystal, as related by J.H. Shorthouse, will occur to everyone.

Dee's own writings were extraordinarily numerous. In his *Rehearsall* he enumerated forty-nine. There is a list of seventy- nine in Cooper's *Athenae Cantabrigensis*, vol. ii., pp. 505-509; but some of these are doubtful: e.g., No. 66, *Treatise of the Rosicrucian Secrets*, etc.; for the Rosicrusians only came into existence about the time of Dee's death. Others are but notes from among Ashmole's manuscripts. One (No. 75) is the horoscope or nativity of Kelley, drawn or erected by Dee, which Ashmole has printed in his *Theatrum* (p. 479). To add to Mr. Cooper's list there are some Latin verses in Henry Perry's *Egluryn Phraethineb* (1595).

All the printed books by Dee are extremely rare. There is much information about them in Ames, *Typographical Antiquities* (e.d Herbert). Copies of thirteen are in the British Museum Library, including those of other writers to which he contributed prefaces, additions and notes, as *Recorde's Grounde of Arts* (many editions); Billingsley's *Euclid*; Roger Bacon's *de Secretis operibus artis et naturae*, etc. and various *Ephemerides*. There are three copies of the *General and Rare Memorials pertaining to the Perfect Art of Navigation*;" and both the enditionsof his *Letter...Apologeticall*, etc., addressed to the Archbishop as a protestation and plea for the course of "the philosophicall studies and exercises of a certaine studious gentleman" (1599, 1603). The petitions addressed to the House of Commons and the King are printed on broadsides (1604). There are also three copies of Casaubon's *True Relation* in the British Museum, one of them collated with the original MS. by William Shippen, of Stockport, 1683.

No adequate idea of the remarkable doings of Dee and Kelley over the crystal can be entertained without a study of Dee's manuscript "Book of Enoch" in Sloane MSS., 663, 120, and 2,599, 1-45; and his "Claves Angelicae," 3191 in the same collection. the diagrams of complicated arrangement of letters and figures, their neatness of execution, mathematical precision and etymological intricacy are no less amazing than the clear bold text in which the descriptions are written in printing hand. Regretfully it was decided not to reproduce an example, owing to the lack of pictorial value.

The Portrait of Dee, now in the Ashmolean Museum at Oxford, reproduced as Frontispiece to this volume, was painted when he was 67; it belonged to his grandson, Rowland Dee, and at his death it passed to the possession of Elias Ashmole and was by him bequeathed to the University of Oxford. It has been engraved by Scheneker and W.P. Sherlock. Engraved portraits of Dee and Kelley, by Francis Cleyne, are included, with Roger Bacon; Paracelsus; the prophet Mahomet; and Apollonius of Tyana, on the title-page of Casaubon's volume. Dee's is the same as an anonymous engraving in the Print room, British Museum, from a younger (German) portrait, in a furred gown and peaked cap; the globe and compasses are in his right hand.

A number of stones and crystals, purporting to be Dr. Dee's, have from time to time been exhibited. Two were at the Tudor Exhibition; another was sold at Sotheby's in 1906, and is now in Dresden. That formerly in the possession of Lord

Londesborough (once Horace Walpole's) appears to have been actually the Doctor's; also the globe of smoky quartz now in the British Museum.

The Pedigree which Dee made, tracing his descent from the mythical times of King Arthur, and showing Queen Elizabeth, through her Welsh ancestry, as related to the same source, is illuminated with coats of arms and a small coloured profile portrait of "John Dee, philosophus," in a cap and furred gown. He here (Cotton Charter, xiv. 1) describes his grandfather, Bedo Dee, as a soldier fighting under the Emperor Maximilian I., in 1512; his father, Rowland Dee, armiger, as gentleman sewer to King Henry VIII.; and himself as a philosopher.

JOHN DEE

(1527—1608)

BY

CHARLOTTE, FELL-SMITH

AUTHOR OF "MARY RICH, COUNTESS OF WARWICK"

With Portrait and Illustrations

LONDON
CONSTABLE & COMPANY LTD
1909

TABLE OF CONTENTS

CHAPTER I

BIRTH AND EDUCATION

Tercentenary of Dee's death — No life of him — Persistent misunderstanding — Birth — Parentage — At Chelmsford Grammar School — St. John's College, Cambridge — Fellow of Trinity — Theatrical enterprise — In the Low Countries — M.A. of Cambridge — Louvain University — Paris — Readings in Euclid — Correspondents abroad — Return to England.

CHAPTER II

IMPRISONMENT AND AUTHORSHIP

Books dedicated to Edward VI. — Upton Rectory — Long Leadenham — Books dedicated to Duchess of Northumberland — Ferrys informs against his "magic" — In prison — Handed over to Bonner — At Philpot's trial — Efforts to found a State Library — Astrology — Horoscopes — Choice of a day for Queen Elizabeth's coronation — Introduced to her by Dudley — Sympathetic magic — Bachelor of Divinity — In Antwerp — Monas Hieroglyphica — Preface to Billingsley's Euclid — Called a conjurer.

CHAPTER III

MORTLAKE

Proposed benefices — Propædeumata Aphoristica — Alchemical secrets — Settled at Mortlake — Journey to Lorraine — Illness — The Queen's attentions — Mines and hidden treasure — Wigmore Castle — Marriage — Death of first wife — Literary correspondence — John Stow — Diary commenced — The Hexameron Brytannicum — The British Complement — Slander and falsehood — A petty navy — The sea-power of Albion — Fisheries and foreign policy.

CHAPTER IV

JANE DEE

A comet or blazing star — Second marriage — Jane Fromond — Hurried journey abroad — Berlin and Frankfort — Birth of a son — Christening — Edward Dyer — Duc d'Alencon — Michael Lock — His sons — The Queen's visit — Sir Humphrey Gilbert at Mortlake — Adrian Gilbert — John Davis — The Queen's Title Royall — Lord Treasurer Burleigh — Death of Dee's mother — The Queen's visit of condolence — Map of America — Visits to the Muscovy House — Frobisher and Hawkins — Birth of a daughter — Accident to Arthur.

CHAPTER V

THE SEARCH FOR A MEDIUM

Assistants — Roger cook — Magic and alchemy — Psychic powers — Crystal gazing — Dreams and mysteries — Vincent Murphy and a lawsuit — Jean Bodin visits England — Quarrel between Leicester and Sussex — Mary Herbert — Sir George Peckham — The stage at Paris Garden — Mr. Secretary Walsingham — The Queen at Greenwich — Barnabas Saul as medium — Edward Talbot — Sight in the stone — The table of practice — The waxen seals.

CHAPTER VI

EDWARD KELLEY

Edward Kelley — An alias — His previous history — His mysterious powder — Marriage to Joan Cooper — Jane Dee's dislike of Kelley — The diary of the actions — How Ashmole obtained the MSS. — Book of Mysteries — The four angels — Dee's thirst for hidden knowledge — A crystal is brought — Medicina.

CHAPTER VII

THE CRYSTAL GAZERS

Kelley, the skryer — A third person — Adrian Gilbert — Kelley and an "illuder" — Dee employed to reform the Calendar — The Queen and Raleigh — Hidden treasure — Burleigh's library — Dee's precious books — Kelley rebellious — Threatens to depart — Pacified by Adrian Gilbert — His wife's letters — He goes to London — Becomes clairvoyant — Sees Mary Queen of Scots executed.

CHAPTER VIII

MADIMI

Straits for lack of money — Count Albert Laski — Aspirations toward the Polish Crown — King Stephan Bathory — Dee introduced to him by Leicester — Laski at Oxford — At Mortlake — Madimi — Galvah or Finis — Laski's guardian angel — Madimi a linguist — Kelley threatens to leave — His salary of 50 pounds — Thomas Kelley — Dee's suspicions — Kelley's tempers — His love of money.

CHAPTER IX

A FOREIGN JOURNEY

Gifts from the Queen — Departure from Mortlake — Laski and the whole party sail from Gravesend — Queenborough — The Brill — Haarlem —

Amsterdam — Harlingen — Dokkum — Instructions from Gabriel — Embden — Oldenberg — Bremen — Il's levity — Visions of England — Hamburg — Lubeck.

CHAPTER X

PROMISES AND VISIONS

Promises of wealth — Dee's doubts — His books and library destroyed by the mob — Rostock — Stettin — Posen Cathedral — Severe winter weather — The table set up — Nalvage — Sir Harry Sidney — Madimi — The Queen's affection — At Lask — Cracow.

CHAPTER XI

CRACOW

Cracow — The new Style — Dee's work on the Reformation of the Calendar — Kelley's discontent — Geographical lessons — Laski and King Stephan — Kesmark — Gabriel's pleading — Kelley repentant — A vision of four castles — Ave — Dee's patience.

CHAPTER XII

FROM CRACOW TO PRAGUE

Rowland's illness — Dee sets out for Prague — Thomas Kelley — Dr. Hageck's house — Rudolph II. — Simon's study — Interview with the Emperor — Kelley's outbursts — Dr. Jacob Curtius — Dee's natural history — The Spanish Ambassador — Jane Dee ill — A passport granted — Back to Prague — Kelley's doubts.

CHAPTER XIII

A DREAM OF GOLD

To Limburg — Michael baptised in Prague Cathedral — Easter — Poverty and distress — Kelley again restive — "Parabola de Nobis Duobus" — Return to Cracow — Mr. Tebaldo — Interviews with King Stephan — His death — Dr. Annibaldus — Back at Prague — Francisco Pucci — The Book of Enoch — Claves Angelicae — Banished by Papal edict — William Count Rosenberg — Dee at Leipsic — Letter to Walsingham — A new Nuncio — Invitation to Trebona.

CHAPTER XIV

THE CASTLE OF TREBONA

Trebona Castle — Rosenberg Viceroy of Bohemia — Invitation to Russia — Projection with Kelley's powder — A gift to Jane Dee — Letter from Kelley — Jane to her husband — Joan Kelley — Dee's friends desert him for Kelley — Arthur to be the skryer — Kelley's pretended vision — A hard and impure doctrine — Dee's scruples overridden — A solemn pact — Kelley disowns blame — End of his clairvoyance — The spirits' diary closed.

CHAPTER XV

THE END OF THE PARTNERSHIP

Letters to Walsingham — A tutor for the children — Coldness and jealousy — Furnaces constructed — Rumours and reports — Book of Dunstan — Kelley's haughtiness — Accident to Michael — The great secret — Kelley steals the best workman — Break-up of the Trebona family — Dee's letter to the Queen on the Armada — Gifts to Kelley — His departure — Coaches and horses provided — Dee quits Bohemia — Arrival in Bremen.

CHAPTER XVI

THE END OF KELLEY

Kelley in favour with Rudolph — Given a title — Corresponds with Dee — Fabulous stories of gold — Burleigh begs his return to England — A token to be sent — A prescription for his gout — Letter to Kelley — Kelley's fall from favour — Flight from arrest — Capture at Sobislaus — Imprisonment — Writings on alchemy — Letters to Dee — Attempted escape — Death.

CHAPTER XVII

RETURN TO ENGLAND

Dee's life in Bremen — Letter of safe conduct from the Queen — Writes to Walsingham — Timon Coccius — Heinrich Khunrath — Departure for England — Dr. Pezel — Events in England since Dee left — Arrival at Court — Offers of friends — Madinia born — School for the children — Death of Walsingham — Richard Cavendish — Ann Frank — The Queen at Richmond — Christmas gifts.

CHAPTER XVIII

A ROYAL COMMISSION

Loss of income — Hopes of a benefice — The Court at Nonsuch — Mary Herbert — Arthur sent to Westminster School — His disposition — Birth of Frances — Dr. William Aubrey — Deferred hopes — The commissioners' visit — Compendious Rehearsall — Dee's half-hundred years — The blinded lady Fortune.

CHAPTER XIX

DEE'S LIBRARY

The library at Mortlake — Books and instruments — Richard Chancellor's quadrant — A radius Astronomicus — Mercator's globes — A watch-clock by Dibbley — Boxes of MSS. — Seals and coats of arms — Records for the Tower — Autograph works — Recorde's Ground of Artes — Catalogue of the books — Classic authors — English authors.

CHAPTER XX

ADIEU TO COURTS AND COURTING

The Queen's gift — Anne Countess of Warwick — Christmas at Tooting — Francis Nicholls — Visitors to Mortlake — the Lord Keeper — Elizabeth Kyrton — Messengers from Laski — Mr. Webbe — Bartholomew Hickman — The Queen at Greenwich — Advantages of St. Cross — Archbishop Whitgift — The whole family to see the Queen — "Adieu to Courts and Courting" — Michael's death — Chancellor of St. Paul's — Jane's supplication — A post at last — Manchester College — Birth of Margaret — Lord Derby — A move northward.

CHAPTER XXI

MANCHESTER

Collegiate Church of Manchester — The Byrons of Clayton — Cotton's servant — Titles of the college lands — Mr. Harry Savile — Survey of the town — Christopher Saxton — A surprise visit — Governess for the girls — Witchcraft in Lancashire — Dee's library in request — Disputes among the Fellows — Perambulation of the bounds — Richard Hooker — Marking boundaries — Earl and Countess of Derby — College affairs — The Queen's sea sovereignty — Letter to Sir Edward Dyer — Humphrey Davenport — Sir Julius Caesar — Welcome gifts — Journey to London.

CHAPTER XXII

COLLEGE AFFAIRS

Absence from Manchester — A special commission — Return to the north — Grammar School inspection — Dreams and sleepless nights — Trouble with the Fellows — Unsatisfactory curates — Borrowing money on plate — Crystal gazing again — Untrue visions — Return of Roger Cook — College property in Cheshire — Arthur the chapter clerk — End of the Diary.

CHAPTER XXIII

LAST DAYS

Death of Theodore — Arthur's marriage — His horoscope — Death of the Queen — James I. and his *Demonologie* — Act against witchcraft — Dee petitions Parliament and the King at Greenwich — Passionate protest — Offers to be burned — Pleads for an Act against slander — Neglected and alone — Death of Jane — The children ill — Dee in London — Katherine his mainstay — Cruel delusions — A journey to go — Failing memory — John Pontoys — The vision fades — Death — A grave at Mortlake — Garrulous reminiscences.

APPENDICES I AND II

I. DEE'S DESCENDANTS

II. BIBLIOGRAPHY

LIST OF ILLUSTRATIONS

1. PORTRAIT OF JOHN DEE.

From the original (artist unknown) in the Ashmolean Museum, Oxford. It is inscribed on the face "Johannes Dee Anglus Londinensis Aet suae 67." The portrait was acquired by Ashmole from Dr. John Dee's grandson Rowland, and was left by him to Oxford University with his collections. It has been engraved by Scheneker and W.P. Sherlock.

2. TITLE-PAGE OF DEE'S "GENERAL AND RARE MEMORIALS PERTAINING TO THE PERFECT ART OF NAVIGATION," PRINTED BY JOHN DAY, 1577.

The motto "Plura latent quam patent" surrounds the title; above, the Queen's arms, a rose branch through a loop at each end. Allegorical drawing in a square; the date 1576 in Greek in the corners. The Queen seated at the helm of a "capital," i.e., first-class, ship; arms of England on the rudder; three noblemen standing in the waist. On the vessel's side Jupiter and Europa. Signs of famine on shore: a wheat ear upside down and a skull. A Dutch ship is anchored in the river; fore more lie at its mouth; soldiers, a small boat, a man offering a purse, and in the corner a walled town. On the rock at the river's mouth stands Lady Opportunity; the angel Raphael overhead with flaming sword, and shield bearing St. George's Cross. The sun, moon, and ten stars; rays of glory proceeding from the name of Jehovah. (See Ames, *Typographical Antiquities*, ed. Herbert, vol. i., p. 661)

3. PICTURE OF AN ALCHEMIST WITH HIS ASSISTANT TENDING STILLS.

From an engraving by Robert Vaughan in Ashmole's *Theatrum Chemicum Britonum* (1652), where it illustrates the first English translation of Thomas Norton's *Ordinall of Alchemy*, a metrical treatise in Latin, which Dee transcribed in the year 1577. His copy, bound in purple velvet, and with the index made by himself, is now Ashmolean MS. 57

"IF I HAD KNOWNE THIS AND HAD DONE SOE
I HAD AVOYDED MICKLE WOE."

THOMAS NORTON *The Ordinall of Alchimy.*

4. DIAGRAM OF THE VISION OF FOUR CASTLES.

Seen and drawn by Kelley at Cracow. From Casaubon's True Relation

5. FACSIMILE PHOTOGRAPH OF DEE'S LETTER TO QUEEN ELIZABETH ON
THE DEFEAT OF THE SPANISH ARMADA.
From the original in Harleian MS. 6986, fo. 45

A PAGE FROM THE THESAURUS AMICORUM OF TIMON COCCIUS.

6. A PAGE FROM THE ALBUM OF TIMON COCCIUS, BREMEN, 1589.
Dee's contribution to his Thesaurus Amicorum. From the original in Add. MSS.
19,065

Most Gracious Sovereigne Lady, The God of Heauen and earth,
Who hath mightilie, and evidently, giuen vnto your most excellent
Royall Maies tie, this wonderfull Triumphant victorie, against
your mortall enemies) be alwaies, thanked, prayesd, and glorified:
And the same God Almighty: euer more direct and defend your
most Royall Highnes from all euill and encumbrance: and finish
and confirme in your most excellent Maies tie Royall, the blessings
long since, both decreed and offered: yet, euen vnto your most
gratious Royall bosom, and Lap. Happy are they, that can
perceyue, and so obey the pleasant call, of the mightie Ladies,
OPPORTVNITIE. And, Therefore, finding our duetie conuincit
with a most secret beck, of the said Gracious Princess Ladies
OPPORTVNITIE, NOW to embrace, and enioy your
most excellent Royall Maies ties high fauor, and gracious great
Clemencie, of CALLING me, M^r Kelsey, and our families,
hoame, into your Brytish Earthly Paradise, and Monarchie
incomparable: (and, that, about an yere since: by Master
Customer Yong, his letters,) I, and myne, (by Gods his fauor
and help, and after the most conuenient manner we can,)
Will, from henceforth, endeuour our selues, faithfully, loyally,
carefully, warily, and diligently, to ryd and vntangle our
selues from hence: And, so, very deuotely, and seruauntlie,
at your Sacred Maies ties feet, to offer our selues, and all,
wherein we are, or may be able, to serue God, and your most
Excellent Royall Maies tie. The Lord of Hosts, be our
help, and Gyde, there: and graunt vnto your most excellent
Royall Maies tie, the incomparable Triumphant Raigne, and Monarchie,
that euer was, since Mans creation. Amen.

Trebon. in the Kingdome of Boemia
the 10th of Nouembre: A.D. 1588: Age 200

Your Sacred and most excellent
Royall Maies ties
most humble and dutifull
Subiect, and Seruaunt:
John D.

DEE TO QUEEN ELIZABETH ON THE DEFEAT OF THE SPANISH ARMADA.
(See p. 198.)

7. ILLUSTRATION TO NORTON'S ORDINALL.

Engraved by Vaughan in Ashmole's Theatrum. (See above, No. 3)

“WHICH FIER MUST EVER BE COEQUALL.
IN EVERY MINUTE, AND YET PERPETUALL:
FOR IT MAY NEVER ABATE NE INCREASE,
AND YET THE FIER MAIE NEVER CEASE.”

8. DEE'S COAT OF ARMS.

From an illustration to his Letter and Apology, presented to the Archbishop of Canterbury 1599, second edition 1603

ARMS OF DEE AS SHOWN IN A CUT AT THE END OF HIS
"LETTER APOLOGETICALL" (1599).

CHAPTER I

BIRTH AND EDUCATION

“O Incredulities, the wit of fooles
That slovenly will spit on all thinges faire,
The coward’s castle and the sluggard’s cradle,
How easy ‘tis to be an infidel!”

— George Chapman

It seems remarkable that three hundred years should have been allowed to elapse since the death of John Dee in December, 1608, without producing any Life of an individual so conspicuous, so debatable, and so remarkably picturesque.

There is perhaps no learned author in history who has been so persistently misjudged, nay, even slandered, by his posterity, and not a voice in all the three centuries uplifted even to claim for him a fair hearing. Surely it is time that the cause of all this universal condemnation should be examined in the light of reason and science; and perhaps it will be found to exist mainly in the fact that he was too far advanced in speculative thought for his own age to understand. For more than fifty years out of the eighty-one of his life, Dee was famous, even if suspected and looked askance at as clever beyond human interpretation. Then his Queen died. With the narrow-minded Scotsman who succeeded her came a change in the fashion of men’s minds. The reign of the devil and his handmaidens — the witches and possessed persons — was set up in order to be piously overthrown, and the very bigotry of the times gave birth to independent and rational thought — to Newton, Bacon, Locke.

But Dee was already labelled once and for all. Every succeeding writer who has touched upon his career, has followed the leaders blindly, and has only cast another, and yet another, stone to the heap of obloquy piled upon his name. The fascination of his psychic projections has always led the critic to ignore his more solid achievements in the realms of history and science, while at the same time, these are the only cited to be loudly condemned. The learned Dr. Meric Casaubon, who, fifty years after Dee’s death, edited his Book of Mysteries — the absorbing recital of four out of the six or seven years of his crystal gazing — was perhaps the fairest critic he yet has had. Although he calls Dee’s spiritual revelations a “sad record,” and a “work of darkness,” he confesses that he himself, and other learned and holy men (including an archbishop), read it with avidity to the end, and were eager to see it printed. He felt certain, as he remarks in his preface, that men’s curiosity would lead them to devour what seems to him “not paralleled in that kind, by any book that hath been set out in any age to read.” And yet on no account was he publishing it to satisfy curiosity, but only “to do good and promote Religion.” For Dee, he is persuaded, was a true, sincere Christian, his Relation made in the most absolute good faith, although undoubtedly he was imposed upon and deluded by the evil spirits whom he sometimes mistook for good ones.

It may be well here to remark that this voluminous Book of Mysteries or True and Faithful Relation (fol. 1659), from which in the following pages there will be found many extracts, abounds in tedious and unintelligible pages of what Casaubon calls “sermon-like stuff,” interspersed with passages of extraordinary beauty. Some of the figures and parables, as well as the language used, are full of a

rare poetic imagery, singularly free from any coarse or sensual symbolism. Like jewels embedded in dull settings, here and there a gem of loftiest religious thought shines and sparkles. There are descriptive touches of costume and appearance that possess considerable dramatic value. As the story is unfolded in a kind of spiritual drama, the sense of a gradual moving development, and the choice of a fitting vehicle in which to clothe it, is striking. The *dramatis personae*, too, the “spiritual creatures” who, as Dee believed, influence the destinies of man, become living and real, as of course they were to the seer. In many respects these “actions” were an exact counterpart of the dealings inaugurated by psychical scientists 275 years later, if we omit the close investigation for fraud.

Casaubon’s successor in dealing with the shunned and avoided subject of John Dee was Thomas Smith, Fellow of Magdalen College, Oxford, who, in 1707, wrote the first connected Life of him, in a book of the *Lives of Learned Men*. It was based upon some of Dee’s autobiographical papers, and out of a total of a hundred pages, gave fifty to letters already printed by Casaubon.

After this no sustained account of Dee’s romantic career is to be found outside the pages of biographical dictionaries and magazine articles, or among writers upon necromancy, hermetic philosophy, and alchemy. Many of these decorate their collections with apocryphal marvels culled from the well-worn traditional stories of Dee and his companion, Edward Kelley. Thus, throughout his lifetime and since, he has continued to run the gauntlet of criticism. “Old imposturing juggler,” “fanatic,” “quack,” are mild terms: in the *Biographia Britannica* he is called “extremely credulous, extravagantly vain, and a most deluded enthusiast.” Even the writer on Dee in the *Dictionary of National Biography* says his conferences with the angels are “such a tissue of blasphemy and absurdity that they might suggest insanity.” Many more such summary verdicts might be quoted, but these will suffice for the present.

It has been said that no Life of Dee exists. And yet the materials for such a Life are so abundant that only a selection can be here used. His private diary, for instance, if properly edited, would supply much supplementary, useful, and interesting historical information.

It is the object of this work to present the facts of John Dee’s life as calmly and impartially as possible, and to let them speak for themselves. In the course of writing it, many false assertions have disentangled themselves from truth, many doubts have been resolved, and a mass of information sees the light for the first time. The subject is of course hedged about with innumerable difficulties; but in spite of the temptations to stray into a hundred bypaths, an endeavour has been strictly made to do no more than throw a little dim light on the point where the paths break off from the main road. If, at the end of the way, any who have persevered so far, feel they have followed a magnetic and interesting personality, the labour expended will not have been in vain. With a word of apology to serious historical readers for the incorrigibly romantic tendency of much of the narrative, which, in spite of the stern sentinel of a literary conscience, would continually reassert itself, the story of our astrologer’s strange life may now begin.

John Dee was the son of Rowland Dee; he was born in London, according to the horoscope of his own drawing, on July 13, 1527.

His mother was Jane, daughter of William Wild. Various Welsh writers have assigned to Dee a genealogical descent of the highest antiquity, and the pedigree which he drew up for himself in later life traces back his family history from his grandfather, Bedo Dee, to Roderick the Great, Prince of Wales. All authorities agree that Radnor was the county from whence the Dees sprang.

Rowland Dee, the father, held an appointment at Court, as gentleman server to Henry VIII., but was very indifferently treated by the King. This may partly account for the persistence with which Dee exhibited before Queen Elizabeth his claims to preferment at her hands. To be in habitual attendance at Court in those days, however, bred in men a great desire for place, and a courtier was but a mendicant on a grand scale.

The boy, John Dee, was early bred in "grammar learning," and was inured to Latin from his tender years. Perhaps he was not more than nine or ten when he was sent to Chelmsford, to the chantry school founded there seven years before the great school at Winchester came into existence. The master who presided over Dee's school hours in Essex was Peter Wilegh, whom the chantry commissioners in 1548 reported as a man "of good conversation" who had kept the school there for sixteen years. Dee has always been claimed by the Grammar School at Chelmsford as one of their most famous alumni, whose extraordinary career with its halo of mystery and marvel they perhaps feel little qualified to explore. Dee's testimony that at Chelmsford he was "metely well furnished with understanding of the Latin tongue" is an unconscious tribute to Peter Wilegh's teaching.

In November, 1542, Dee, being then fifteen years and four months old, left Chelmsford to enter at St. John's College, Cambridge, where, as he tells us in his autobiography, he soon became a most assiduous student. "In the years 1543, 1544, 1545, I was so vehemently bent to studie, that for those years I did inviolably keep this order: only to sleep four houres every night; to allow to meate and drink (and some refreshing after) two houres every day; and of the other eighteen houres all (except the tyme of going to and being at divine service) was spent in my studies and learning." Early in 1546 he graduated B.A. from St. John's College. At the close of the same year, Trinity College was founded by Henry VIII., and Dee was selected one of the original Fellows. He was also appointed under-reader in Greek to Trinity College, the principal Greek reader being then Robert Pember. The young Fellow created the first sensation of his sensational career soon after this by arranging some of the (*Eirene* — Peace) of Aristophanes, in which he apparently acted as stage manager and carpenter.

For this play he devised a clever mechanical and very spectacular effect. Trygaeus, the Attic vine-dresser, carrying a large basket of food for himself, and mounted on his gigantic beetle or scarab (which ate only dung), was seen ascending from his dwelling on the stage to enter the palace of Zeus in the clouds above. One has only to think of the scenic effects presented by Faust and Mephistopheles at Mr. Tree's theatre, for instance, to realise how crude and ineffective these attempts must have been; but thirty or forty years before Shakespeare's plays were written, so unusual an exhibition was enough to excite wild rumours of supernatural powers. We hear no more of theatrical performances, although several references in his after-life serve to show that his interest in the English drama, about to be born, lagged not far behind that of his greater contemporaries. He does mention, however, a Christmas pastime in St. John's College, which seems to have been

inspired by this same dramatic spirit. Of details we are totally ignorant; he only relates that the custom of electing a "Christmas Magistrate" was varied at his suggestion by crowning the chosen victim as Emperor. The first imperial president of the Christmas revels in St. John's College "was one Mr. Thomas Dunne, a very goodly man of person, stature and complexion, and well learned also," evidently a presence fit for a throne. Dee adds: "They which yet live and were hearers and beholders, they can testifie more than is meete here to be written of these my boyish attempts and exploites scholasticall."

He turned to sterner studies, and became a skilful astronomer, taking "thousands of observations (very many to the hour and minute) of the heavenly influences and operations actual in this elementall portion of the world." These he afterwards published in various "Ephemerides."

In May, 1547, Dee made his first journey abroad, to confer with learned men of the Dutch Universities upon the science of mathematics, to which he had already begun to devote his serious attention. He spent several months in the Low Countries, formed close friendships with Gerard Mercator, Gemma Frisius, Joannes Caspar Myricaëus, the Orientalist Antonius Gogava, and other philosophers of world-wide fame. Upon his return to Cambridge, he brought with him two great globes of Mercator's making, and an astronomer's armillary ring and staff of brass, "such as Frisius had newly devised and was in the habit of using." These he afterwards gave to the Fellows and students of Trinity College; he cites a letter of acknowledgment from John Christopherson (afterwards Bishop of Chichester), but upon search being made for the objects recently, through the kindness of the Master, it appears they are not now to be found. Dee returned to Cambridge in the year 1548 to take his degree of M.A., and soon after went abroad. "And never after that was I any more student in Cambridge." Before he left, he obtained under the seal of the Vice-Chancellor and Convocation, April 14, 1548, a testimonial to his learning and good conduct, which he proposed to take with him abroad. Many times did he prove it to be of some value.

In Midsummer Term, 1548, he entered as a student at the University of Louvain, which had been founded more than a hundred years before in this quaint old Brabantian town of mediaeval ramparts and textile industries. At Louvain, Dee continued his studies for two years, and here he soon acquired a reputation for learning quite beyond his years. It has been presumed that he here graduated doctor, to account for the title that has always been given him. "Doctor Dee" certainly possesses an alliterative value not to be neglected. At Cambridge he was only M.A.

Long after, when he had passed middle life, and when his remarkable genius in every branch of science had carried him so far beyond the dull wit of the people who surrounded him that they could only explain his manifestations by the old cry of "sorcery and magic," Dee made a passionate appeal to the Queen, his constant patron and employer, to send two emissaries of her own choosing to his house at Mortlake, and bid them examine everything they could find, that his character might be cleared from the damaging charges laid against him. He prepared for these two commissioners, to whose visit we shall revert in its proper place, an autobiographical document of the greatest value, which he calls "The Compendious Rehearsal of John Dee: his dutiful declaration and prooffe of the course and race of his studious life, for the space of half an hundred years, now (by God's favour and help) fully spent." It is from this narrative that the facts of his early life are

ascertainable. Perhaps we discern them through a faint mist of retrospective glorification for which the strange streak of vanity almost inseparable from attainments like Dee's was accountable. But there is every reason to reply upon the accuracy of the mathematician's story.

"Beyond the seas, far and nere, was a good opinion conceived of my studies philosophicall and mathematicall." People of all ranks began to flock to see this wonderful young man. He gives the names of those who came to Louvain, a few hours' journey from Brussels, where the brilliant court of Charles V. was assembled, with evident pride. Italian and Spanish nobles; the dukes of Mantua and Medina Celi; the Danish king's mathematician, Mathias Hacus; and his physician, Joannes Capito; Bohemian students, all arrived to put his reputation to the test. A distinguished Englishman, Sir William Pickering, afterwards ambassador to France, came as his pupil to study astronomy "by the light of Mercator's globes, the astrolabe, and the astronomer's ring of brass that Frisius had invented." For his recreation, the teacher "looked into the method of civil law," and mastered easily the points of jurisprudence, even "those accounted very intricate and dark." It was at Louvain, no doubt, that his interest in the subject of alchemy became strengthened and fixed. Stories were rife of course of the famous alchemist, Henricus Cornelius Agrippa, who had died there, in the service of Margaret of Austria, only a dozen years or so before. Agrippa had been secretary to the Emperor Maximilian, had lived in France, London, and Italy, and Louvain, no doubt, was bursting with his extraordinary feats of magic.

The two years soon came to an end, and a couple of days after his twenty-third birthday, young Dee left the Low Countries for Paris, where he arrived on July 20, 1550. His fame had preceded him, and within a few days, at the request of some English gentlemen and for the honour of his country, he began a course of free public lectures or readings in Euclid, "Mathematice, Physice et Pythagorice," at the College of Rheims, in Paris, a thing, he says, which had never been done before in any university in Christendom. His audience (most of them older than himself) was so large that the mathematical schools would not hold them, and many of the students were forced in their eagerness to climb up outside the windows, where, if they could not hear the lecturer, they could at least see him. He demonstrated upon every proposition, and gave dictation and exposition. A greater astonishment was created, he says, than even at his scarabaeus mounting up to the top of Trinity Hall in Cambridge. The members of the University in Paris at the time numbered over 4,000 students, who came from every part of the known world. He made many friends among the professors and graduates, friends of "all estates and professions," several of whose names he gives; among them, the learned writers and theologians of the day, Orontius, Mizaldus, Petrus Montaneus, Ranconetus (Ranconnet), Fernellius, and Francis Silvius.

The fruit of these years spent in Louvain and Paris was that Dee afterwards maintained throughout his life a lively correspondence with professors and doctors in almost every university of note upon the Continent. He names especially his correspondents in the universities of Orleans, Cologne, Heidelberg, Strasburg, Verona, Padua, Ferrara, Bologna, Urbino, Rome, and many others, whose letters lay open for the inspection of the commissioners on that later visit already alluded to.

An offer was made him to become a King's Reader in mathematics in Paris University, with a stipend of two hundred French crowns yearly, but he had made

up his mind to return to England, and nothing would tempt him to stay. He received other proposals, promising enough, to enter the service of M. Babeu, M. de Rohan, and M. de Monluc, who was starting as special ambassador to the Great Turk, but his thoughts turned back to England, and thither, in 1551, he bent his steps.

CHAPTER II

IMPRISONMENT AND AUTHORSHIP

“A man is but what he knoweth.” — Bacon

In December, 1551, Dee obtained, through the offices of Mr. (afterwards Sir) John Cheke, an introduction to Secretary Cecil and to King Edward VI. He had already written for and dedicated to the King two books (in manuscript): *De usu Globi Coelestis*, 1550, and *De nubium, solis, lunae, ac reliquorum planetarum*, etc., 1551. These perhaps had been sent to Cheke, the King's tutor, in the hope that they might prove useful lesson books. The pleasing result of the dedication was the gift of an annual royal pension of a hundred crowns. This allowance was afterwards exchanged for the rectory of Upton-upon-Severn, in Worcestershire, which Dee found an extremely bad bargain.

From the Beacon Hill above West Malvern Priory, the visitor may turn from inspection of the ancient British camp of Caractacus to admire the magnificent view; and across the level fields where the Severn winds, the tower of Upton church will be seen rising in the middle distance. Further west, if the day be clear, the more imposing towers of Tewkesbury and Cloucester may be discerned, while half a turn eastward will show Worcester Cathedral, not far away. Dee never lived in this beautiful place, although he was presented to the living on May 19, 1553. Even when the rectory of Long Leadenham, in Lincolnshire, was added to Upton, the two together were worth only about eighty pounds a year. Next year he declined an invitation to become Lecturer on Mathematical Science at Oxford, conveyed to him through “Mr. Doctor Smith” (Richard, D.C.L., 1528, the reformer), of Oriel College, and “Mr. du Bruarne,” of Christ Church. He was occupied with literary work, and in 1553 produced, among other things, a couple of works on *The Cause of Floods and Ebbs*, and *The Philosophical and Political Occasions and Names of the Heavenly Asterismes*, both written at the request of Jane, Duchess of Northumberland.

When Mary Tudor succeeded her young brother as queen in 1553, Dee was invited to calculate her nativity. He began soon after to open up a correspondence with the Princess Elizabeth, who was then living at Woodstock, and he cast her horoscope also. Before long he was arrested on the plea of an informant named George Ferrys, who alleged that one of his children had been struck blind and another killed by Dee's “magic.” Ferrys also declared that Dee was directing his enchantments against the Queen's life. Dee's lodgings in London were searched and sealed up, and he himself was sent to prison. He was examined before the Secretary of State, afterwards upon eighteen articles by the Privy Council, and at last brought into the Star Chamber for trial. There he was cleared of all suspicion of treason, and liberated by an Order in Council. August 29, 1555, but handed over to Bishop Bonner for examination in matters of religion. Bonner was apparently equally satisfied. Dee was certainly enjoined by him, at John Philpot's examination on

November 19, 1555, to put questions as a test of his orthodoxy. He quoted St. Cyprian to Philpot, who replied: "Master Dee, you are too young in divinity to teach me in the matters of my faith, though you be more learned in other things."

Dee deserves well of all writers and students for time everlasting because of his most praiseworthy efforts to found a State National Library of books and manuscripts, with copies of foreign treasures, wherever they might be. On January 15, 1556, he presented to Queen Mary "a Supplication for the recovery and preservation of ancient writers and monuments." Within a few years he had seen the monasteries dissolved and the priceless collections of these houses lamentably dispersed, some burned and others buried. He drew up a very remarkable address to the Queen dwelling on the calamity of thus distributing "the treasure of all antiquity and the everlasting seeds of continual excellency within this your Grace's realm." Many precious jewels, he knows, have already perished, but in time there may be saved and recovered the remnants of a store of theological and scientific writings which are now being scattered up and down the kingdom, some in unlearned men's hands, some walled up or buried in the ground. Dee uses powerful arguments to enforce his plea, choosing such as would make the most direct appeal to both Queen and people. She will build for herself a lasting name and monument; they will be able all in common to enjoy what is now only the privilege of a few scholars, and even these have to depend on the goodwill of private owners. He proposes first that a commission shall be appointed to inquire what valuable manuscripts exist; that those reported on shall be borrowed (on demand), a fair copy made, and if the owner will not relinquish it, the original be returned. Secondly, he points out that the commission should get to work at once, lest some owners, hearing of it, should hide away or convey away their treasures, and so, he pithily adds, "prove by a certain token that they are not sincere lovers of good learning because they will not share them with others." The expenses of the commission and of the copying, etc., he proposed should be borne by the Lord Cardinal and the Synod of the province of Canterbury, who should also be charged to oversee the manuscripts and books collected until a library "apt in all points" is made ready for their reception.

Finally, Dee suggests that to him be committed the procuring of copies of many famous manuscript volumes to be found in the great libraries abroad: the Vatican Library at Rome, St. Mark's at Venice, and in Bologna, Florence, Vienna, etc. He offers to set to work to obtain these, the expenses only of transcription and carriage to England to be charged to the State. As to printed books, they are to "be gotten in wonderfull abundance." In this generous offer of his life to be spent in transcribing crabbed manuscripts, we cannot see the restless genius of John Dee long satisfied, but at any rate he proved himself not seeking for private gain.

Thus was the germ of a great National Library first started by the Cambridge mathematician, nearly fifty years before Thomas Bodley opened his unique collection at Oxford, and close upon 200 years before there was founded in the capital the vast and indispensable book-mine known to all scholars at home and abroad as the British Museum. The Historical Manuscripts Commission, whose labours in cataloguing private collections of archives are also foreshadowed in Dee's supplication, only came into being with the appointment of Keepers of the Public Records, by an Act signalling the first and second years of Queen Victoria's reign.

It is needless to say that nothing came of Dee's very disinterested proposition. So he became the more industrious in collecting a library of his own, which soon

consisted of more than 4,000 volumes, which were always at the disposal of the friends who came often to see him.

They came also for another reason.

Astrology was a very essential part of astronomy in the sixteenth century, and the belief in the controlling power of the stars over human destinies is almost as old as man himself. The relative positions of the planets in the firmament, their situations amongst the constellations, at the hour of a man's birth, were considered by the ancients to be dominant factors and influences throughout his whole life. It is not too much to say that a belief in the truth of horoscopes cast by a skilled calculator still survives in our Western civilisation as well as in the East. Medical science today pays its due respect to astrology in the sign, little altered from the astrological figure for Jupiter, with which all prescriptions are still headed.

Dee, as one of the foremost mathematicians and astronomers of the time, and one employed by the Queen, became continually in request to calculate the nativity and cast a horoscope for men and women in all ranks of life. He has left many notes of people's births; his own children's are entered with the greatest precision, for which a biographer has to thank him.

When Elizabeth mounted with firm steps the throne that her unhappy sister had found so precarious and uneasy a heritage, Dee was very quickly sought for at Court. His first commission was entirely sui generis. He was commanded by Robert Dudley to name an auspicious day for the coronation, and his astrological calculations thereupon seem to have impressed the Queen and all her courtiers. Whether or no we believe in the future auguries of such a combination of influences as presided over the selection of the 14th of January, 1559, for the day of crowning Elizabeth in Westminster Abbey, we must acknowledge that Dee's choice of a date was succeeded by benign and happy destinies.

He was then living in London. We do not know where his lodging was, but several of the books belonging to his library have come down to us with his autograph, "Joannes Dee, Londini," and the dates of the years 1555, 1557, and 1558.

Elizabeth sent for him soon after her accession, and invited him to her service at Whitehall with all fair promises. He was introduced by Dudley, then and long afterwards her first favourite; so he was likely to stand well. "Where my brother hath given him a crown," she said to Dudley, or to Dee's other sponsor, the Earl of Pembroke, "I will give him a noble." This was the first of innumerable vague promises made, but it was long indeed before any real and tangible gift was conferred on the astrologer, although he was continually busied about one thing and another at the fancy of the Queen. The reversion of the Mastership of St. Catherine's Hospital was promised him, but "Dr. Willson politickly prevented me."

One morning the whole Court and the Privy Council were put into a terrible flutter by a simple piece of what was common enough in ancient times and in Egypt — sympathetic magic. A wax image of the Queen had been found lying in Lincoln's Inn Fields, with a great pin stuck through its breast, and it was supposed undoubtedly to portend the wasting away and death of her Majesty, or some other dreadful omen. Messenger after messenger was despatched to summon Dee, and bid him make haste. He hurried off, satisfied himself apparently of the harmless nature of the practical joke, and repaired, with Mr. Secretary Wilson as a witness of the whole proceedings and a proof of all good faith, to Richmond, where the Queen was. The Queen sat in that part of her private garden that sloped down to the river,

near the steps of the royal landing-place at Hampton Court; the Earl of Leicester (as Dudley had now become) was in attendance, gorgeous and insolent as ever; the Lords of the Privy Council had also been summoned, when Dee and Mr. Secretary expounded the inner meaning of this untoward circumstance, and satisfied and allayed all their fears. Something about the calm attributes of this seasoned and travelled scholar seemed always to give moral support to the Queen and her household; this is only the first of many occasions when he had to allay their superstitious fright. That she felt it essential to keep him within reach of herself may have been one reason for not giving him the appointments for which he, and others for him, constantly sued. Dee was not an easy person to fit into a living: he required one with no cure of souls attached; for this, he says, “a cura animarum annexa, did terrifie me to deal with them.” He is called a bachelor of divinity by Foxe in 1555, and as a matter of fact he does, both in 1558 and in 1564, add the letters S. D. T. to his name in his printed works. This degree also was not from Cambridge. At last he grew tired of waiting, and a certain restlessness in his character, not incompatible with the long patience of the true follower of science, drove him again abroad. His intention was to arrange for printing works already prepared in manuscript. To search among out-of-the-way bookmongers and book-lovers in high-walled German towns, for rare treasures wherewith to enrich his native country, was another magnet that drew his feet. In February, 1563, after he had been thus employed for more than a year, he wrote from the sign of the Golden Angel, in Antwerp, to Cecil, to ask if he was expected to return to England, or if he might remain to oversee the printing of his books, and continue his researches among Dutch books and scholars. He had intended, he says, to return before Easter, but this was now impossible, owing to printer’s delays. When we remember that a hundred years had barely elapsed since the first metal types had been cast and used in a hand press, it is not wonderful that Dee’s treatise, with its hieroglyphic and cabalistic signs, took long to print. He announces in the letter to Cecil a great bargain he has picked up, a work, “for which many a learned man hath long sought and dayley yet doth seek,” upon cipher writing, viz. *Steganographia*, by the famous Abbot Trithemius of Wurzburg. It is the earliest elaborate treatise upon shorthand and cipher, a subject in which Cecil was particularly interested. It was then in manuscript (first printed, Frankfort, 1606). Dee continues that he knows his correspondent will be well acquainted with the name of the book, for the author mentions it in his Epistles, and in both the editions of his *Polygraphia*. He urges its claims upon the future Lord Treasurer, already a statesman of ripe experience, in the following words: “A boke for your honor or a Prince, so meet, so nedefull and commodious, as in human knowledge none can be meeter or more behovefull. Of this boke, either as I now have yt, or hereafter shall have yt, fully wholl and perfect, (yf it peas you to accept my present) I give unto your Honor as the most precious juell that I have yet of other mens travailles recovered.”

He then goes on to beg the minister and Secretary of State to procure for him that “learned leisure (*dulcia illa ocia*) the fruit whereof my country and all the republic of letters shall justly ascribe to your wisdom and honorable zeal toward the advancement of good letters and wonderful, divine, and secret sciences.” Dee had copied in ten days, “by continual labour,” about half of the book: a Hungarian nobleman there has offered to finish the rest, if Dee will remain in Antwerp and direct his studies for a time.

“Of this booke the one half (with contynual labour and watch, the most part of 10 days) have I copyed oute. and now I stand at the curtesye of a nobleman of Hungary for writing furth the rest; who hath promised me leave thereto, after he shall perceyve that I may remayne by him longer (with the leave of my Prince) to pleasure him also with such pointes of science as at my handes he requireth.

“I assure you the meanes that I used to cumpas the knowledge where this man and other such are, and likewise of such book as this, as for this present I have advertisement of, have cost me all that ever I could here with honesty borrow, besydes that which (for so short a time intended) I thowght needefull to bring with me, to the value of xxlib. God knoweth my zeale to honest and true knowledg; for which my flesh, blud, and bones should make the marchandize, if the case so required.”

Dee did remain in the Low Countries; he completed his *Monas Hieroglyphica*, dated its prefatory dedication to the Emperor Maximilian II., at Antwerp, January 29, 1564, and added an address to the typographer, his “singular good friend, Gulielmo Silvio,” dated the following day. the book appeared in April, and he at once journeyed to Presburg, to present a copy to Maximilian. Its twenty-four theorems deal with the variations of the figure represented on our title-page, which may be roughly explained as the moon, the sun, the elements (the cross), and fire as represented by the waving line below. Dee says that many “universitie graduates of high degree, and other gentlemen, dispraised it because they understood it not,” but “Her Majestie graciously defended my credit in my absence beyond the seas.” On his return in June she sent for him to Court and desired him to read the book with her. Dee’s account of his regal pupil is given with much quaintness. “She vouchsafed to account herself my schollar in my book...and said whereas I had prefixed in the forefront of the book: *Qui non intelligit aut taceat, aut discat*: if I would disclose to her the secrets of that book she would *et discere et facere*. Whereupon her Majestie had a little perusion of the same with me, and then in most heroicall and princely wise did comfort and encourage me in my studies philosophicall and mathematicall.”[His escort had been required for the Marchioness of Northampton, who was returning from Antwerp to Greenwich. In return for this assistance the lady begged the Queen’s favour for her cavalier. elizabeth was always Dee’s very good friend, and she made a grant to him on December 8, 1564, of the Deanery of Gloucester, then void, but other counsels prevailed, and it was soon bestowed on some other man. No doubt the appointment would have given great offence, for the popular eye was already beginning to see in Dee no highly equipped mathematician, geographer and astronomer, but a conjuror and magisian of doubtful reputation, in fact, in the current jargon, one who “had dealings with the devil.” What there had been at this time to excite these suspicions beyond the fact that Dee was always ready to expound a comet or an eclipse, to cast a horoscope, or explain that the Queen would not immediately expire because a wax doll with a stiletto in its heart was found under a tree, it is hard to say. But that these rumours were extremely persistent is seen by the astrologer’s defence of himself in the “very fruitfull” preface which he, as the first mathematician of the day, was asked to write to Henry Billingsley’s first English translation of Euclid’s *Elements*, in February, 1570. This preface must be reckoned as

one of Dee's best achievements, although, as he says, in writing it, "he was so pinched with straightness of time that he could not pen down the matter as he would." He points out that Euclid has already appeared in Italian, German, High Dutch, French, Spanish and Portuguese dress, and now at last comes to England. [

In spite of its ex parte nature, a study of this preface alone must convince any reader that the author was no charlatan or pretender, but a true devotee of learning, gifted with a far insight into human progress. He covers in review every art and science then known, and some "until these our daies greatly missed" (his comments on music and harmony are truly remarkable), and comes back to his own predilection — arithmetic, "which next to theologie is most divine, most pure, most ample and generall, most profound, most subtile, most commodious and most necessary." He quotes Plato to show how "it lifts the heart above the heavens by invisible lines, and by its immortal beams melteth the reflection of light incomprehensible, and so procureth joy and perfection unspeakable." Speaking of the refraction of light, he foreshadows the telescope as he describes how the captain of either foot or horsemen should employ "an astronomical staffe commodiously framed for carriage and use, and may wonderfully help himself by perspective glasses; in which I trust our posterity will prove more skilfull and expert and to greater purpose than in these days can almost be credited to be possible." Then he alludes to a wonderful glass belonging to Sir William P., famous for his skill in mathematics, who will let the glass be seen. The passage seems to show that looking-glasses were not common, or that this particular one was a convex mirror.

"A man," he says, "may be curstly afraid of his own shadow, yea, so much to feare, that you being alone nere a certain glasse, and proffer with dagger or sword to foyne at the glasse, you shall suddenly be moved to give back (in maner) by reason of an image appearing in the ayre betweene you and the glasse, with like hand, sword or dagger, and with like quickness foyning at your very eye, like as you do at the glasse. Strange this is to heare of, but more mervailous to behold than these my wordes can signifie, nevertheless by demonstration optically the order and cause thereof is certified, even so the effect is consequent."

This mirror was given to Dee not long afterwards.

From optics he passes on to mechanics, and mentions having seen at Prague mills worked by water, sawing "great and long deale bordes, no man being by." He describes accurately a diving chamber supplied with air, and sums up some of the mechanical marvels of the world: — the brazen head made by Albertus Magnus, which seemed to speak; a strange "self-moving" which he saw at St. Denis in 1551; images seen in the air by means of a perspective glass; Archimedes' sphere; the dove of Archytas; and the wheel of Vulcan, spoken of by Aristotle; and comes down to recent workmanship in Nuremberg, where an artificer let fly an insect of iron, that buzzed about the guests at table, and then returned "to his master's hand agayne as though it were weary." All these things are easily achieved he says, by "skill, will industry and ability duly applied to proof." "But is any honest student, or a modest Christian philosopher, to be, for such like feats, mathematically and mechanically wrought, counted and called a conjuror? Shall the folly of idiots and the mallice of the scornfull so much prevaile that he who seeketh no worldly gaine or glory at their hands, but onely of God the Threasure of heavenly wisdom and knowledge of

pure veritie, shall he, I say, in the mean space, be robbed and spoiled of his honest name and fame? He that seeketh, by S. Paul's advertisement in the creatures' properties and wonderfull vertues, to find juste cause to glorifie the eternall and Almighty Creator by, shall that man be condemned as a companion of Hell-hounds and a caller and conjuror of wicked damned spirits?" Then he recounts his years of study, and asks, "Should I have fished with so large and costly a nett, and been so long time drawing, even with the helpe of Lady Philosophie and Queen Theologie, and at length have catched but a frog, nay a Devill?...How great is the blindness and boldness of the multitude in things above their capacitie!"[Then he refers to some who have appeared against him in print.

"O my unkind countrymen. O unnatural Countrymen, O unthankfull countrymen, O brainsicke, Rashe, spitefull and disdainfull countrymen. Why oppresse you me thus violently with your slaundering of me, contrary to veritie, and contrary to your own conscience? And I, to this hower, neither by worde, deede or thought, have bene anyway hurtfull, damageable, or injurious to you or yours! Have I so long, so dearly, so farre, so carefully, so painfully, so dangerously fought and travailed for the learning of wisdom and atteyning of vertue, and in the end am I become worse than when I began? Worse than a madman, a dangerous member in teh Commonwelath and no Member of the Church of Christ? Call you this to be learned? Call you this to be a philosopher and a lover of wisdom?"

He goes on to speak of examples before his time to whom in godliness and learning he is not worthy to be compared: — "patient Socrates," Apuleius, Joannes Picus and Trithemius, Roger Bacon, "the flower of whose worthy fame can never dye nor wither," and ends by summing up the people who can conceive nothing outside the compass of their capacity as of four sorts: — "vain prattling busybodies, fond friends, imperfectly zealous, and malicious ignorant." Of these he is inclined to think the fond friends the most damaging, for they overshoot the mark and relate marvels and wonderful feats which were never done, or had any spark of likelihood to be done, in order that other men may marvel at their hap to have such a learned friend.[The eloquent irony of this passage seems equalled only by its extraordinary universality, its knowledge of human character and its high philosophic spirit. At what a cost did a seeker after scientific truths follow his calling in the sixteenth century!

CHAPTER III

MORTLAKE

"In her princely countenance I never perceived frown toward me, or discontented regard or view on me, but at all times favourable and gracious, to the joy and comfort of my true, faithful and loyal heart." — DEE, of Queen Elizabeth.

The promised benefice did not yet come, although Dee's friends at Court were all busy on his behalf. Either now or later, he was actually mentioned as Provost of Eton, and the Queen "answered favourably." Mistress Blanche Parry and Mistress Scudamore, lady-in-waiting to Anne, Countess of Warwick, urged his claims for the

Mastership of St. Cross at Winchester, which it was thought Dr. Watson would soon vacate. But all he seems to have obtained was a fresh dispensation from Matthew Parker, Archbishop of Canterbury, to enjoy the two Midland rectories for ten years.[

He continued his literary work, and beside writing new manuscript treatises, bethought himself of an old one, which although printed had not received great attention. This was the *Propoedeumata Aphoristica* (London, 1558), dedicated to his old and dear friend and fellow-student at Louvain, Mercator, “my Gerard,” as he affectionately calls him. In January, 1568, Dee presented a copy of a new edition, with an address to the studious and sincere philosophical reader, dated December 24, 1567, from “our museum” at Mortlake, to “Mr. Secretary Cecil, now Lord Treasurer.” Two copies were given at the same time to the Earl of Pembroke, one for him to use or give away at his pleasure, the other, by Cecil’s advice, to be presented by him to the Queen. Within three days, Dee heard from Pembroke that she had graciously accepted and well liked his book. This gratifying information was rendered acceptable by a gift: — “He gave me very bountifully in his owne behalfe xxlib. to requite such my reverent regard of his honour.”[An interview with the Queen followed on February 16, at 2 o’clock, when there was talk between them in the gallery at Westminster “of the great secret for my sake to be disclosed unto her Majesty by Nicholas Grudius, sometime one of the secretaries to the Emperor Charles V.” Of this alchemical secret, no doubt concerning transmutation, Dee writes after, “What was the hinderance of the perfecting of that purpose, God best knoweth.”[He was now over forty, and had a natural desire to range himself and house his library. Before 1570 he took up his abode with his mother, in a house belonging to her at Mortlake, on the river Thames. It was an old rambling place, standing west of the church between it and the river. Dee added to it by degrees, purchasing small tenements adjoining, so that at length it comprised laboratories for his experiments, libraries and rooms for a busy hive of workers and servants. Mrs. Dee occupied a set of rooms of her own. Nothing of the old premises now remains, unless it be an ancient gateway leading from the garden towards the river. After Dee’s death the house passed through an interesting phase of existence, being adapted by Sir Francis Crane for the Royal tapestry works, where, encouraged by a handsome grant of money and orders from the parsimonious James, suits of hangings of beautiful workmanship were executed under the eye of Francis Cleyne, a “limner,” who was brought over from Flanders to undertake the designs. At the end of the eighteenth century, a large panelled room with red and white roses, carved and coloured, was still in existence. Early in the nineteenth century the house was used for a girls’ school, kept by a Mrs. Dubois.[Here Dee took up his abode. Its nearness to London and to the favourite places of Elizabeth’s residence — Greenwich, Hampton Court, Sion House, Isleworth, and Nonsuch — was at first considered a great advantage, and the journey to and from London was almost invariably made by water. The Queen desired her astrologer to be near at hand. When he fell dangerously ill at Mortlake in 1571, after a tedious journey abroad into the duchy of Lorraine on some mysterious errand, Elizabeth sent down two of her own physicians, Doctors Atslove and Balthorp, to attend him. Lady Sidney was also despatched with kind, and gracious, and “pithy” messages from the sovereign, and delicacies, “divers raretiess,” were supplied from the royal table to supplement his mother’s provision for the invalid. The Queen seems to have felt a special obligation to look after him, as she had sent him on some mission of her own,

which probably we shall not be far wrong in thinking connected with Dee's alchemistic experiments. Every Court in Europe at this time had astrologers and alchemists in its employ, and the Queen and Burleigh were as anxious as Dee that he should really attain the ever-elusive secret of transmutation. Dee had of course carried the Queen's passport for himself and a couple of servants, with horses, and had obtained permits through foreign ambassadors in London to travel freely through various countries.[Dee was now bent on rather a strange form of public service. On October 3, 1574, he wrote a very remarkable letter to Lord Burleigh of four and a half folio pages in that best printed hand of his which offers no excuse for skipping. His own paramount deserts are very naturally one of the main subjects. He has spent all his money and all his life in attaining knowledge. "Certes, by due conference with all that ever I yet met with in Europe, the poor English Bryttaine (*Il favorita di vostra Excellentia*) hath carried the Bell away. God Almighty have the glory." If he had only a sufficiency of two or three hundred pounds a year, he could pursue science with ease. Failing that, there is another way. Treasure trouve is a very casual thing, and the Queen is little enriched thereby, in spite of her royal prerogative. No one knows this better than the Lord Treasurer. Now, if her Majesty will grant him, but Letters Patent under her hand and seal, the right for life to all treasure he can find, he promises to give Burleigh one half, and of course to render to the Queen and Commonwealth the proportion that is theirs. It is not the gold, as wealth, that appeals to this man of books and stars: —

"The value of a mine is matter for King's Treasure, but a pott of two or three hundred pounds hid in the ground, wall, or tree, is but the price of a good book, or instrument for perspective astronomy, or some feat of importance."

He has spent twenty years in considering the subject; people from all parts have consulted him about dreams, visions, attractions and demonstrations of *sympathia et antipathia rerum*;" but it is not likley he would counsel them to proceed without permission from the State. Yet what a loss is here!

"Obscure persons, as hosiers or tanners, can, under color of seeking assays of metalls for the Saymaster, enioy libertie to dig after dreamish demonstrations of places. May not I then, in respect of my payns, cost, and credit in matters philosophical and mathematicall, if no better or easier turn will fall to my Lot from her Majestie's hands, may I not then be thought to mean and intend good service toward the Queen and this realm, yf I will do the best I can at my own cost and charge to discover and deliver true prooffe of a myne, vayn, or ore of gold or silver, in some place of her Grace's kingdom, for her Grace's only use?"

The Society of Royal Mines had been incorporated May 28, 1565, and the Queen had granted patents to Germans and others to dig for mines and ores. It was well known that the country abounded in hidden treasure. The valuables of the monasteries had been, in many cases, hastily buried before the last abbot was ejected at the dissolution. The subject had a special fascination for Dee, who was conscious of a "divining rod" power to discover the hiding places. He made a curious diagram of ten localities, in various counties, marked by crosses, near which he believed treasure to lie concealed. He ends his letter to Burleigh with a more practical and

much more congenial request. He has been lately at Wigmore Castle, and has seen a quantity of parchments and papers from which he has copied accounts, obligations, acquittances. Will the Treasurer give him a letter to Mr. Harley, keeper of the records there, asking permission to examine them and report as to the contents? "My fantasy is I can get from them, at my leisure, matter for chronicle or pedigree, by way of recreation." So he ends with an apology for his long letter and is "you Lordship's most bownden John Dee."

Nothing seems to have resulted from this letter at the time; later he did receive a grant of royalties from a mine.

in 1575 Dee married. He seems to have had no time for such an event before. He was now in his forty-eighth year, and did not execute the fatal folly (which, in his Court life, he had seen many times exemplified) of committing the indiscretion first and informing the Queen after. He duly laid before her his intention, and received in return a "very gracious letter of credit for my marriage." He also had congratulatory epistles from Leicester and from Christopher Hatton.

The Queen, when out riding in Richmond Park with her lords and ladies, would sometimes pass through the East Sheen Gate, down the hill towards the river, and would stop at the house between Mortlake Church and the Thames, desiring to be shown the latest invention of her astrologer, or the newest acquisition of his library. On the afternoon of one such windy day in march, 1576, she arrived at a slightly unlucky moment, for Dee's young wife, after a year of marriage, had just died, and not four hours earlier had been carried out of the house for burial in the churchyard opposite. Hearing this, Elizabeth refused to enter, but bade Dee fetch his famous glass and explain its properties to her outside in the field. Summoning Leicester to her assistance, she alighted from her horse by the church wall, was shown the wonderful convex mirror, admired the distorted image of herself, and finally rode away amused and merry, leaving the philosopher's distress at his recent bereavement assuaged for the moment by such gracious marks of royal interest and favour. And so this wraith of Dee's first wife fades away in the courtly picture, and we do not even know her name.

He turned more than ever to literary work and followed up the scholastic books dedicated to the young King Edward VI. and the studies of astrological hieroglyphs with books of another kind. To this year of historical labours, perhaps, belongs a letter from Dee to his "loving friend," Stow, the historian. Contrary to Dee's careful practice, it is undated, save for day and month, "this 5th of December." He has evidently been the means of introducing a fellow-author in influential quarters, for he says, "My friend, Mr. Dyer, did deliver your books to the two Earls, who took them thankfully, but, as he noted, there was no reward commanded of them. What shall be hereafter, God knoweth. So could not I have done." Then he adjures Stow to "hope as well as I," and turns from considering fruits to the sources of their toil. He sends a list of the varius ports, including the Cinque Ports, that have a mayor or bailey, all except Gravesend, which has a portreeve. Stow may get fuller information, "the very true plat," from Lord Cobham's secretary. He returns a manuscript of Asser's Saxon Chronicle; "it is not of the best and perfectest copy. I had done iwth it in an hour. If you have Floriacensis Wigornensis [the Chronicle of Florence of Worcester] I would gladly see him a little."

Stow, like Dee, was a Londoner and, within a year or two, of the same age. He had already published his *Annals of England*, which had then gone through four editions.

Dee now began to keep a diary of his doings, written in the pages and margins of three fat quarto almanacs, bound in sheepskin and clasped. Quotations have perhaps already shown that his style, his spelling, his use of words, is that we expect from a man of his wide culture and reading. He was of the new learning, though before Shakespeare and Bacon. He had also two or more distinct handwritings, a roman hand with neat printed letters, and a scribbling hand. In the former all his manuscript works and his letters are written; his diary is in the last. This diary was quite unnoticed until about 1835, when the almanacs were discovered at Oxford in the Ashmolean Library, having been acquired by Elias Ashmole, a devout believer in hermetic philosophy and collector of all alchemical writings. They were transcribed (very inaccurately) by J.O. Halliwell and printed by the Camden Society in 1842.

The books contain a strange medley of borrowings and lendings, births and deaths, illnesses, lawsuits, dreams and bickerings; observations of stars, eclipses and comets, above all of the weather (for Dee was a great meteorologist), of horoscopes, experiments in alchemy and topographical notes. Here are some of the earliest entries: —

“1577. Jan. 16. The Earl of Leicester, Mr. Philip Sidney, and Mr. Dyer, etc., came to my house.” This was Edward Dyer, Sidney’s friend, afterwards to be dramatically associated with Dee and Kelley in their reputed discovery of the secret of making gold. “Feb. 19th. great wynde S.W., close, cloudy. March 11. My fall upon my right knucklebone about 9 o’clock. Wyth oyle of Hypericon in 24 hours eased above all hope. God be thanked for such his goodness to his creatures! March 12. Abrahamus Ortelius me inuisit Mortlakii.” This interesting visit from the great Dutch map-maker is entirely omitted in the printed diary. “May 20. I hyred the barber of Chyswick, Walter Hooper, to kepe my hedges and knots in as good order as he seed them then, and that to be done with twice cutting in the year, at the least, and he to have yearly five shillings and meat and drink.”

Then he speaks of a visitor, Alexander Simon, who comes from Persia, and has promised his “service” on his return, probably to assist with information on Eastern lore and wisdom. His friend and neighbour, William Herbert, sends him notes upon his already published *Monas*. Another work is ready for press, and he is constrained to raise money, whether for the printing or other expenses. In June he borrowed 40 pounds from one, 20 pounds from another, and 27 pounds upon “the chain of gold.” On August 19, his new book is put to printing (one hundred copies) at John Day’s press in Aldersgate.

This was another of those works, so pithy and so alive in their remarkable application to the future, which have fallen with their author into undeserved neglect. Dee had made suggestions about supplying officers of the army with perspective glasses as part of their equipment. Now his friendship with the Gilberts, Davis, Hawkins, Frobisher, and others of the great sea-captains, drew his attention to the sister service and the sea power of “this blessed isle of Albion.” He had spent most of the previous year (1576) in writing a series of volumes to be entitled “General and Rare Memorials pertaining to the perfect art of Navigation.” The first

volume, *The British Monarchy, or Hexameron Brytannicum*, was finished in August. It was dedicated to Christopher Hatton in some verses beginning: —

“If privat wealth be leef and deere
To any wight on British soyl,
Ought public weale have any peere?
To that is due all wealth and toyle.

Whereof such lore as I of late
Have lern’d, and for security,
By godly means to Garde this state,
To you I now send carefully.”

The intention is better than the lines. Dee was no poet, and even a bad versifier, but he would not have been a true Elizabethan had he not on special occasions dropped into rhyme, like the rest of his peers.

The second volume, *The British Complement*, “larger in bulk than the English Bible,” was written in the next four months and finished in December. It was never published; its author tells us it would cost many hundreds of pounds to print, because of the tables and figures requisite, and he must first have a “comfortable and sufficient opportunity or supply thereto.” The necessary funds were never forthcoming, and the book remained in manuscript. A considerable part of it is devoted to an exposition of the “paradoxall” compass which its author had invented in 1557.

The third volume was mysterious; it was to be “utterly suppressed or delivered to Vulcan his custody.” The fourth was *Famous and Rich Discoveries*, a book, he thinks, “for British Honour and Wealth, of as great godly pleasure as worldly profit and delight.” It was a work of great historical research which never saw the light.

The prejudice against Dee was so strong, and he was so much misunderstood, some persons openly attributing his works to other writers, others accusing him of selfishly keeping all his knowledge to himself, many perverting his meaning through ignorance, and again one, a Dutch philosopher, publishing a treatise which was in substance a repetition of his, that he determined to withhold his name from the publication. The anonymity is not, however, very well maintained, for Dee used the flimsy device of a preface to the reader by an “unknown friend,” in which all the griefs and ill usages of that “harmless and courteous gentleman,” “that extraordinary studious gentleman,” the author, are freely aired. Under the thin disguise, Dee’s high opinion of his own merits peeps, nay stares, out. Slanders have been spread against him, a damaging letter counterfeited by Vincent Murphy, his name and fame injured; he has been called “the arch-conjurer of the whole kingdom.” “Oh, a damnable sklander,” he bursts out, “utterly untrue in the whole and in every worde and part thereof, as before the King of Kings will appear at the dreadful day.” It is no conceit on Dee’s part, with his European reputation, to say that he “had at God his most mercifull handes received a great Talent of knowledge and sciences, after long and painful and costly travails.” And he goes on to say that he is both warned by God and of his own disposition to enlarge the same and to communicate it to others, but now he finds himself discouraged; he cannot “sayl

against the winds eye,” or pen any more treatises for his disdainful and unthankful countrymen to use or abuse, or put his name to any writing. The unknown friend has no desire to flatter the studious gentleman, but considering all his contributions to learning, he may honestly say, without arrogancy and with great modesty, that “if in the foresaid whole course of his tyme he had found a constant and assistant Christian Alexander, Brytain should now now have been destitute of a Christian Aristotle”!

But he soon gets engrossed in his subject, which is to urge the importance of establishing “a Petty Navy Royall, of three score tall ships or more, but in no case fewer,” of 80 to 200 tons burden, to be thoroughly equipped and manned “as a cinfirt abd safeguard to the Realme.” He shows the security it would give to or merchants, the usefulness in “deciphering our coasts,” sounding channels and harbours, observing of tides. Thousands of soldiers, he says, “will thus be hardened and well broke to the rage and disturbance of the sea, so that in time of need we shall not be forced to use all fresh-water Soldyers,” but we shall have a crew of “hardy sea-soldyers” ready to hand. This is interesting as showing that the word “sailor” was not yet in use. Then he touches on the question of unemployment: “hundreds of lusty handsome men will this way be well occupied and have needful maintenance, which now are idle or want sustenance, or both.” “These skilful sea-soldyers will be more traynable to martiall exploits, more quick-eyed and nimble [he quotes Pericles for this], than the landsmen.” The Petty Navy Royall, as apart from the Grand Navy Royall, will look after pirates, will protect our valuable fisheries, and generally serve us in better stead than four such forts as “Callys or Bulleyn.” Coming to the financial side, he asserts that every natural born subject of this “British Empire” will willingly contribute towards this “perpetual benevolence for sea security” the hundredth penny of his rents and revenues, the five hundredth penny of his goods valuation, for the first seven years, and for the second seven the hundred and fiftieth penny and the seven hundred and fiftieth penny of goods valuation, the same, after fourteen years, to be commuted for ever to half the original contribution. He calculated this tax would amount to 100,000 pounds or over. If that is not sufficient, he would exact a second tax (exempting all such counties, towns, and the five ports, as have Letters Patent for such immunity) of the six hundredth penny of every one’s goods and revenues. He would have twenty victualling ports, in every part of the kingdom, “the incredible abuses of purveyors duly reformed.” He would have a stop put to carrying our gunpowder and saltpetre out of the realm. “Good God,” he cries, “who knoweth not what proviso is made and kept in other Common Weales against armour carrying out of their Limits?” He speaks of many hundred pieces of ordnance lately carried out of the kingdom, so that we must make new; and deplores the wholesale destruction of our forests and timber (which is needed for ships) to keep the iron works going. Then he foreshadows the Trinity House by asking for a “Grand Pilot generall of England.” He outlines a scheme of navy pensions, and in relation to the fisheries quotes sanitary statutes of Richard II. He devotes a chapter to the history of “that peaceable and provident Saxon, King Edgar,” his “yearly pastime of sailing round this island in summer, guarded by his fleet of 4,000 sail,” and speaks of the efficiency of Edgar’s navy and the maintenance of his forts upon the coast. Then he passes to his final argument. We must attain this “incredible political mystery” — the supermacy of our sea power. We must be “Lords of the Seas” in order that out “wits and travayles” may be employed at home

for the enriching of the kingdom, that “our commodities (with due store reserve) may be carried abroad,” and that peace and justice may reign. “For we must keep our own hands and hearts from doing or intending injury to any foreigner on sea or land.”

Enough has been said of this book, perhaps, to show that it is a remarkable contribution towards the history of the navy and the fishing industries of Britain. It may be contended that if within twelve years England could offer a crushing defeat to the greatest sea power of the world, and establish herself mistress of the seas, she was not in need of theoretical advice from a landsman on the subject, but at any rate Dee’s treatise voices the ideals of the times, the hopes that inspired all true lovers of their country and of their Queen in the sixteenth century. In the thunders of the Armada they were to be realised.

CHAPTER IV

JANE DEE

“Content I live, this is my stay,
I seek no more than may suffice;
I press to bear no haughty sway,
Look, what I lack my mind supplies:
Lo! thus I triumph like a king,
Content with that my mind doth bring.”
— Sir Edward Dyer.

That October the Queen and the whole Court were thrown into a perturbed state of mind by a strange appearance in the heavens. This was the comet which the Swedish astronomer, Kepler, declared to predict the appearance in the north of Europe of a prince who should lay waste all Germany, and should vanish in 1632. It was lucky for his prognostications that Gustavus Adolphus was really born in Finland, did embroil Central Europe in the Thirty Years’ War, and did die in 1632.

What the “blazing star,” as they called it, foreboded, no one at Court could tell; Dee was summoned forthwith to expound the phenomenon. “Her Majestie took great pleasure to hear my opinion, for the judgment of some had unduly bred great fear and doubt in many of the Court, being men of no small account. For three diverse dayes she did use me.” Dee did not forget to urge his suit to the Queen, not so much this time for preferment but for protection.

“Her Majestie promised unto me great security against any of her kingdom that would by reason of any my rare studies and philosophical exercises unduly seek my overthrow. Whereupon I again to her Majestie made a very faithful and inviolable promise of great importance. The first part whereof, God is my witness I have truely and sincerely performed; tho’ it be not yet evident, how truely, or of what incredible value. The second part, by God his great mercies and helps, may in due time be performed, if my plat for the meanes be not misused or defaced.”

Nearly two years passed before Dee married his second wife, Jane Fromond, of East Cheam, Surrey. She was a lady-in-waiting

at the Court to Lady Howard of Effingham, wife of the Lord Admiral (Charles Howard) who was afterwards in command of the fleet victorious against the “invincible” Spanish Armada. Lady Howard proved a true friend both to Jane and her elderly but learned husband throughout the rest of her life.

He paid a long visit to the Court at Windsor a couple of months before the marriage, staying there from November 22 to December 1, 1577, and records interviews with the Queen on various days, and with “Mr. Secretary Walsingham.” It may be presumed that the marriage was then arranged, for without the Queen’s consent it could never have taken place. Just before leaving, he had a conversation with Sir Christopher Hatton, the newly-made knight of that day (December 1).

The marriage took place on February 5, 1578, at one o’clock, as the bridegroom tells in his diary, but at what church he omits to say. Perhaps it took place in a Royal Chapel at Court. The young bride was twenty-two. She was a clever, well-born woman, hasty and quick-tempered, but of a steadfast and thorough faithfulness. It was no easy task to be the wife of a brilliant and erudite mathematician nearly thirty years her senior, but to the end of her days Jane proved herself a true and fitting helpmate, a most careful and devoted mother to her eight children. Little could she have foreseen at this bridal hour into what strange paths the coming years would lead her. Dee’s devotion to his Jane, his growing respect for her force of character, is faithfully reflected in his diary, where every detail of her doings and her health is studiously entered.

Before the end of the year, he had to leave home and undertake a sudden journey abroad at the command of the Queen’s ministers. Elizabeth, in spite of an iron constitution, was ill and distracted with toothache and rheumatic pains. She had come to Richmond from Greenwich on September 25, and the next day the fine weather broke up. “The first rayn that came for many a day,” says Dee, “all pasture about us was withered. Rayn in afternone like Aprile showres.” A week or two after this he was summoned to Hampton Court, and had a conference of two hours with the Queen, from nine to eleven in the morning. Dr. Bayly, the Queen’s physician, came to Mortlake on October 16 to consult with him, for his profound hermetic studies gave him all the prestige of a super-doctor. On the 22nd Jane (Dee still writes of her as “Jane Fromonds,” probably to distinguish her from his mother, Jane Dee) went to Hampton Court. She found the Queen no better, in fact a worse fit of paint than ever occurred on the 25th, lasting from nine in the evening till after midnight. On the 28th, Leicester and Walsingham decided to send Dee abroad to consult with some foreign physician about the malady. He was given his instructions at nine o’clock on November 4th; on the 7th he reached Gravesend, and sailed from Lee on the 9th. By three o’clock on the 14th, he was in Hamburg; in Berlin on December 6; and on the 11th at Frankfurt-upon-Oder. The entry on the 15th, “newes of Turnifer’s comming, 8 o’clock, by a speciall messenger,” looks as if the object of his journey was attained. There are no more details of the business.

The diary is resumed in March, 1579, with some trivial entries about his showing Mr. John Lewis and his son, the physician, how to draw aromatical oils, and a note of his cat getting a young fledgling sparrow that “had never had but one — the right — wing, naturally.”

Dee’s mother surrendered to him on June 15, 1579, the house and lands at Mortlake, with reversion to his wife Jane, and to his heirs and assigns after him, for

ever. The document was delivered to him by a surveyor from Wimbledon (in which parish Mortlake was included) under the tree by the church. The fine for the surrender — twenty shillings — was paid to the Queen, as Lady of the Manor, on October 31.

A month later, on his fifty-second birthday, July 13, 1579, Dee's eldest son, Arthur, was born. The event was coincident with another, for that same night, at ten o'clock, Jane's father, Mr. Fromond (Dee always adds an "s" to the name), was seized with a fit and rendered speechless; he died on Tuesday, the 14th, at four in the morning. Arthur was christened at three o'clock on the 16th; Edward Dyer and "Mr. Doctor Lewis, judge of the Admiralty," were his godfathers; his godmother was one of Dee's Welsh relations, "my cosen, Mistress Blanche Parry, of the Queen's Privy Chamber." She was represented by another cousin, Mistress Aubrey, from Kew. "August 9. Jane Dee churched," is almost the next thing recorded.

Dyer was already a person in considerable favour with the Queen. He was Sidney's great friend, and after the poet's death on the field of Zutphen, was legatee of half his books. Dyer was no mean poet himself, even among his greater compeers. He is the author of those immortal verses on "Contentment," beginning "My mind to me a kingdom is," which were set to music in 1588 by William Byrd. We shall meet him again in these pages.

Dee of course knew all about Elizabeth's long flirtation with the King of France's brother, Duc d'Alencon, and her diplomatic holding off from the match. He notes Mr. Stafford's arrival as an emissary from "Monsieur." The Queen kept a very tender spot in her heart for this ugly little deformed suitor, and Dee has a remarkable note of a call from her at Mortlake as she returned from Walsingham's on February 11, 1583: "Her Majesty axed me obscurely of Monsieur's state. I said he was

" (dead-alive).

Pupils now began to resort to Dee. "John Elmeston, student of Oxford, cam to me for dialling." "Mr. Lock brought Benjamin his sonne to me: his eldest sonne also, called Zacharie, cam then with him." This was Michael Lock, the traveller. Zachary was the eldest of Lock's fifteen children; Benjamin afterwards wrote on alchemy — A Picklock for Ripley's Castle.

It was a stormy October, of continuous rains and floods for three or four days and nights, and a "raging wynde at west and southerly." Six persons were drowned in the Kew ferry boat, "by reason of the vehement and high waters overwhelming the boat aupon the roap, but the negligens of the ferryman set there to help." Mrs. Dee had a strange dream that "one cam to her and touched her, saying, `Mistress Dee, you are conceived of child, whose name must be Zacharias; be of good chere, he sal do well, as this doth.'" This, meaning Arthur, had a sharp illness soon after, however, and when the next child arrived, in two years' time, it chanced to be a girl, who was named Katherine. So the dream went by contraries after all. Arthur was weaned in August, and his nurse discharged, with her wages, ten shillings, for the quarter ending at Michaelmas, paid in full. Dee is an exact accountant as well as diarist, and enters every payment with precise care.

The Queen came riding down from Richmond in her coach, to see what her astrologer was doing, on September 17, 1580, and put the household in a flutter. She took

“The higher way of Mortlake field, and when she came right against the church, she turned down toward my house. And when she was against my garden in the field, her Majestie stayed there a good while, and then came into the field at the great gate of the field, where her Majestie espied me at the door, making reverent and dutiful obeysance unto her; and with her hand, her Majestie beckoned for me to come to her, and I came to her coach side; her Majesty then very speedily pulled off her glove and gave me her hand to kiss; and to be short, her Majestie willed me to resort oftener to her Court, and by some of her Privy Chamber to give her to weete when I am there.”

One can picture the gorgeously dressed and pearl-bedecked Queen, her auburn hair glistening in the sun, beckoning majestically to her astrologer, bidding him attend and swell the troops of courtiers and admirers, demanding imperiously to be let know when he came, and to be kept informed of all he did. Dee was a handsome man, tall and slender; he wore a beard, pointed and rather long. Among the crowd of personable courtiers in their rich and most becoming suits, he would be no inconspicuous figure.

It was perhaps the publication of the first volume of the “General and Rare Memorials pertayning to the art of perfect Navigation” that brought Dee into intimate relations with the navigators of the time. Or it may have been his intimacy with them that suggested the work. the Hexameron appeared in September, 1577, and in November the diarist first records a visit from one of them: “Sir Umfrey Gilbert cam to me at Mortlake.” Gilbert was then living at Limehouse, engaged in writing discourses on naval strategy and discovery. A few months later, Dee mentions a suggestion he gave to Richard Hakluyt, the author of the fascinating histories of the voyages: “I told Mr. Daniel Rogers, Mr. Hakluyt of the Middle Temple being by, that Kyng Arthur and King Mary, both of them, did conquer Gelindia, lately called Friseland, which he so noted presently in his written copy of Monumenthensis, for he had no printed book thereof.” On August 5, one of Gilbert’s company, “Mr. Reynolds of Bridewell, tok his leave of me as he passed toward Dartmouth to go with Sir Umfrey Gilbert toward Hochelaga.” The expedition sailed from Dartmouth on September 23, Sir Humphrey having obtained his long-coveted charter to plant a colony in the New World in June. All his money was sunk in this unfortunate expedition, which only met diasaster at the hands of a Spanish fleet. Undaunted, however, Sir Humphrey set to work to collect more funds and information to pursue his end. With the first Dee could not help him much; with the last he believed he could, and in return he exacted a stake in the results: “1580, Aug. 28th. my dealing with Sir Humfrey Gilbert graunted me my request to him made by letter, for the royalties of discovery all to the north above the parallell of the 50 degree of latitude, in the presence of Stoner, Sir John Gilbert his servant or reteiner; and thereupon took me by the hand with faithful promises, in his lodging of Cooke’s house in Wichcross Streete, where we dyned, onely us three together, being Satterday.”

It was more than two years before Gilbert succeeded in getting enough other persons to embark their capital in his project, and then he set out on his final voyage, the second to Newfoundland (the first having been assisted by Raleigh, his half-brother, in 1578). We all know the end, how, after he had planted “his raw

colony of lazy landmen, prison birds and sailors," he set out in his little vessel, The Squirrel, to explore the coast and sandbanks between Cape Breton Island and Newfoundland, and then headed for England. In a storm off the Azores, the little ship foundered and was lost, its captain's last words being, "We are as near Heaven by sea as by land."

With another brother, Adrian Gilbert, Dee had much closer relations, as we shall shortly see. This younger half-brother of Sir Walter Raleigh was reputed "a great chemist in those days," which of course meant something of an alchemist. He is associated in one's mind with "Sidney's sister, Pembroke's mother," that accomplished and beautiful inspirer of the most exquisite epitaph ever penned, for he was one of the "ingenious and learned men" who filled her house at Wilton "so that it was like a college." The Countess of Pembroke spent a great deal yearly in the study of alchemy, and kept Adrian as a laborant for a time. He is described as a buffoon who cared not what he said to man or woman of any quality. Bringing John Davis, another of the breezy Devon sea captains, Adrian came to Mortlake to effect a reconciliation after some uncomfortable passages caused, as they found, by dishonest dealings on the part of William Emery, whom they now exposed. "John Davis say'd that he might curse the tyme that ever he knew Emery, and so much followed his wicked counsaile and advyse. So just is God!" Here again we suspect Dee's reputation for "magic" had been the trouble.

With the discovery of so many new coasts and islands across in the Western seas, the Queen was anxious to know what right she had to call them hers, and what earlier navigators had sailed to them before. After Frobisher's three voyages in search of the North-West Passage, she sent for the author of the Hexameron and bade him set forth her title to Greenland, Estoteland (Newfoundland) and Friseland. This document he calls "Her Majestie's commandment — Anno 1578." Either he prepared another, or did not present this to the Queen for two years.

1580. — "On Monday Oct. 3, at 11 of the clock before none, I delivered my two Rolls of the Queene's Majestie's title unto herself in the garden at Richmond, who appointed after dynner to heare fuder of the matter. Therefore betweene one and two afternone, I was sent for into her highness Pryvy Chamber, where the Lord Treasurer allso was, who having the matter slightly then in consultation, did seme to doubt much that I had or could make the argument probable for her highnes' title so as I pretended. Wheruppon I was to declare to his honor more playnely, and at his leyser, what I had sayd and could say therein, which I did on Tuesday and Wensday following, at his chamber, where he used me very honorably on his behalf."

The next day Dee fancied that Burleigh slighted him. He called to see him, and was not admitted; he stood in the ante-chamber when the great man came out, but the Lord Treasurer swept by and "did not or would not speak to me." Probably he was pondering deeply on important matters of state. Dee's hopes of preferment fell to the ground, and he was persuaded that "some new grief was conceyved." Dee was ambitious; he was not yet surfeited with fame; of wealth he had none, hardly even a competency; he was vain, and he knew that he had gifts which few of his countrymen could rival or even understand; and he was no longer young. Such

advantages as he could attain must be secured quickly, if they were to be enjoyed at all.

“On the 10th, at four o'clock in the morning my mother Jane Dee dyed at Mortlake; she made a godlye ende: God be prayesd therfore! She was 77 yere old.”

News of this event quickly travelled to the Court at Richmond, and the Queen determined to signalise her favour to Dee and her gratification at Burleigh's report of his geographical labours, which reached her on the same day as the news of his loss, by a personal visit of condolence.

“Oct. 10th. The Quene's Majestie, to my great cumfort (hora quinta), cam with her trayn from the court, and at my dore graciously calling me to her, on horsbak, exhorted me briefly to take my mother's death patiently, and withall told me that the Lord Threasurer had greatly commended my doings for her title, which he had to examyn, which title in two rolls he had brought home two hours before; and delivered to Mr. Hudson for me to receive at my coming from my mother's burial at church. Her Majestie remembered allso how at my wive's death, it was her fortune likewise to call uppon me.”

So the fancied slight was nothing. The Queen's second remarkably-timed visit was followed up by an haunch of venison from my Lord Treasurer, and an atmosphere of satisfaction reigned. One of the rolls of which Dee writes is still in existence. It has on one side of the parchment a large map of “Atlantis,” or America, drawn with the skill of a practised cartographer. At the top is his name, “Joannes Dee,” and the date, “Anno 1580.” Among his papers is a smaller map, upon which large tracts in the Polar regions are marked “Infinite yse.” Thge other side of the roll is devoted to proving the Queen's title to lands she would never see or hear of, under the four following heads: “1. The Clayme in Particular. 2. The Reason of the Clayme. 3. The Credit of the Reason. 4. The value of that Credit by Force of Law.”

Dee was also busied this summer attending at the Muscovy House and writing instructions and drawing a chart for the two captains, Charles Jackson and Arthur Pett, for their North-East voyage to “Cathay,” or China.

He had perhaps joined the Company of the Merchant Venturers, for in March, 1579, he had signed a letter with Sir Thomas Gresham, Martin Frobisher (as every one knows, he was knighted in the thick of the Armada fight), and others, to the Council of State, desiring that those Adventurers who have not paid shall be admonished to send in contributions without delay. Another very interesting remark tells how “Young Mr. Hawkins, who had byn with Sir Francis Drake, came to me to Mortlake, in June, 1581; also Hugh Smith, who had just returned from the Straits of Magellan.” In November, Dee is observing “the blasing star,” or comet, of which, with its long tail, he makes a drawing on the margin of his diary. By the 22nd it had disappeared: “Although it were a cler night, I could see it no more.”

On June 7, 1581, at half-past seven in the morning, Dee's second child and eldest daughter, Katherine, was born. She was christened on the 10th, her sponsors being Lady Katherine Crofts, wife of Sir James Crofts, Controller of the Queen's Household; Mistress Mary Scudamore, of the Privy Chamber, the Queen's cousin;

and Mr. Packington, also a court gentleman. The infant was put out to nurse, first at Barnes with Nurse Maspely, then transferred to Goodwife Bennett. On August 11

“Katherine Dee was shifted to nurse Garrett at Petersham, on Fryday, the next day after St. Lawrence day, being the 11th day of the month. My wife went on foot with her, and Ellen Cole, my mayd, George and Benjamin, in very great showers of rain.”

Nevertheless the little Katherine seemed to flourish, and there are entries of monthly payments of six shillings to her nurse, with allowance for candles and soap, up to August 8 of the following year, when “Kate is sickly,” and on the 20th is reported as “still diseased.” Four or five days after, she was taken from nurse Garret, of Petersham, and weaned at home. The mother had several times been over to see the child, sometimes on foot, attended by George or Benjamin, the servants, and once by water with “Mistress Lee in Robyn Jackes bote.” The children seemed in trouble at this time, for about seven weeks before Arthur “fell from the top of the Watergate Stayres, down to the fote from the top, and cut his forhed on the right eyebrow.” This was at the old landing-place at Mortlake. Their childish ailments are always most carefully recorded in the diary, even when the cause is a box on the ears — probably well earned — from their quick-tempered mother. Jane’s friends Mr. and Mrs. Scudamore, and their daughter, and the Queen’s dwarf, Mrs. Tomasin, all came for a night to Mortlake. Jane went back with Mistress Scudamore to the Court at Oatlands. A number of other visitors are named, including “Mr. Fosker of the wardrobe.”

CHAPTER V

THE SEARCH FOR A MEDIUM

“Truth is within ourselves; it takes no rise
From outward things, whate’er you may believe
There is an inmost centre in us all
Where truth abides in fulness; and around
Wall upon wall, the gross flesh hems it in,
This perfect clear perception, which is truth.
A baffling and perverting carnal mesh
Binds it and makes all error; and to KNOW
Rather consists in opening out a way
Whence the imprisoned splendour may escape
Than in effecting entry for a light
Supposed to be without.”

— Browning, Paracelsus.

Dee had always, working with and under him, a number of young students and assistants, who were admitted more or less to his inner counsels. If they proved apt and diligent, he would reward them with promises of alchemical secrets, “whereby they might honestly live”; once he promised 100 pounds, “to be paid as soon of my own clere hability, I myght spare so much.” This was a very safe

provision. Generous as he was, lavish to a fault, money never stuck near him, nor was it of the least value in his eyes, except as a means of advancing science and enriching others.

Naturally, jealousies arose among the assistants. They would suddenly depart from his service, and spread ignorant and perverted reports of his experiments. Roger Cook, who had been with his master fourteen years, took umbrage "on finding himself barred from view of my philosophical dealing with Mr. Henrick." He had imagined himself the chosen confidant, for to him Dee had revealed, December 28, 1579, what he considered a great alchemical secret "of the action of the elixir of salt, one upon a hundred." Roger was now twenty-eight, "of a melancholik nature, and had been pycking and devising occasions of just cause to depart on the sudden," for he was jealous of a newer apprentice. "On September 7th, 1581, Roger went for altogether from me." But it was not "altogether," for Roger returned when Dee was old and infirm and poor, and remained serving him almost to the end. There was always something patriarchal in Dee's care for the members of his large household, evidenced abundantly in his diary. No doubt their loyalty to him was often severely tried by harsh and cruel outside rumours, but as they knew and loved his real nature they only drew closer towards him.

A new phase of his character is now forced upon us. He has appeared hitherto as the man of learning, astronomer and mathematician, a brilliant lecturer and demonstrator, diligent in probing the chemical and alchemical secrets of which his vast reading, his foreign correspondence, and his unique library gave him cognisance. Interested in geographical discovery and history, a bibliographical and mathematical writer, his genuine contributions to science had been considerable. He had written upon navigation and history, logic, travel, geometry, astrology, heraldry, genealogy, and many other subjects. He had essayed to found a National Library, and was contemplating a great work upon the reformation of the Calendar. But these purely legitimate efforts of his genius were discounted in the eyes of his contemporaries by the absurd suspicions with which his name had been associated ever since his college days. After his arrest and trial by Bonner, he never really succeeded in shaking off this savour of something magical. The popular idea of Dee in league with evil powers was, of course, the natural result of ignorance and dull understanding. To a public reared in superstition, untrained in reasoning, unacquainted with the simple laws of gravitation, the power to raise heavy bodies in the air at will, to see pictures in a simple crystal globe, or converse with projections of the air, to forecast a man's life by geometric or planetary calculations, and to discern the influence of one chemical or mineral substance upon another, seemed diabolically clever and quite beyond human agency. Even to study Nature and her secrets was to lay oneself open to the suspicion of being a magician. We must remember that in the early years of Queen Elizabeth's reign it was thought necessary to pass an Act of Parliament decreeing that all who practised sorcery causing death should suffer death; if only injury was caused, imprisonment and the pillory would be the punishment. Any conjuration of an evil spirit was to be punished by death as a felon, without benefit of clergy or sanctuary. Any discovery of hidden treasure by magical means was punishable by death for a second offence.

But if "magic" was tottering on its throne, the reign of alchemy was still uncontested. Belief in it was universal, its great votaries in the past were of all nations. St. Dunstan of Glastonbury, Roger Bacon, Raymond Lully, Canon George

Ripley of Bridlington, Albertus Magnus, Cornelius Agrippa, Arnold de Villa Nova and Paracelsus, all their writings, and hundreds of others, Dee had in his library and constantly upon his tongue. Alchemy was not only a science, it was a religion and a romance. It was even then enduring the birth-throes and sickly infancy of modern chemistry, and the alchemists' long search for the secret of making gold has been called one of its crises. Long after this it was still an article of faith, that such a man as Robert Boyle did not deny. We cannot forget that even that great chemist, Sir Humphry Davy, revered the possibility, and refused to say that the alchemist's belief in the power to make gold was erroneous. How unlike Dante's keen irony of the dark and groping men who seek for "peltro," or tin whitened with mercury. But alchemy was bursting with many other secrets beyond the manufacture of gold. The spiritual element abounding in all minerals, and the symbolism underlying every actual substance, were deeply imbedded in it. It was a science of ideals. It ever led its followers on to scale illimitable heights of knowledge, for in order to surpass all material and rational nature, and attain the crowning end, did not God delegate His own powers to the sage? So the art of healing was thought the noblest, the most Godlike task, and no means of attaining hermetic wisdom were untried. The psychical world became every bit as real to these religious mystics as the physical and rational, which they understood so vaguely. Even the strange shapes which escaped from the retorts of the old alchemists were known to them as "souls." Their successors called them spirits. Paracelsus named them as mercury, and it was left to his pupil, Van Helmont, the true founder of all modern chemistry, to give the name of gas.

It is easy to see how Dee, the astrologer, grew into close touch with those psychic phenomena which, though they have become extremely familiar to us, as yet continue to baffle our most scientific researches. When he first became conscious of his psychic powers, and how far he himself was mediumistic, is harder to discern. It is on May 25, 1581, that he makes in his diary the momentous entry: — "I had sight in Chrystallo offered me, and I saw." We may take it that he "saw" through a medium, for he never afterwards seems to have been able to skry without one. Perhaps his first crystal had then been given him, although, as we have seen, he already owned several curious mirrors, one said to be of Mexican obsidian such as was used for toilet purposes by that ancient race. He had made a study of optics, and in his catalogue of the manuscripts of his library are many famous writings on the spectrum, perspective and burning glasses, etc. Then came the trouble with Roger, "his incredible doggedness and ungratefulness against me to my face, almost ready to lay violent hands on me." Dee hears strange rappings and knockings in his chamber. A gentleman came from Lewisham to consult him about a dream many times repeated. Dee prays with him, and "his dream is confirmed and better instruction given." A mysterious fire breaks out for the second time in "the maydens" chamber at night. The knocking is heard again, this time accompanied with a voice repeated ten times. No words apparently, but a sound like "the schrich of an owl, but more longly drawn and more softly, as it were in my chamber." He has a strange "dream of being naked and my skyn all over wrought with work like some kinde of tuft mockado, with crosses blew and red; and on my left arm, about the arm in a wreath, these words I read: — 'Sine me nihil potestis facere.' And another the same night of Mr. Secretary Walsingham, Mr. Candish and myself." Then he was ten days from home, at "Snedgreene, with John Browne, to hear and

see the manner of the doings.” Evidently some remarkable manifestation. he was becoming more interested in psychic problems, but he was not able to proceed without a medium, and the right one had not yet appeared.

Meanwhile, he fills his diary with all manner of interesting news. Vincent Murphy, the “cosener” who had defamed him, and against whom in September, 1580, he had instituted a troublesome law-suit, was condemned by a jury at the Guildhall to pay 100 pounds damages. “With much adoe, I had judgment against him.” Five or six months later, he agreed with Mr. Godolphin to release the cosener. Jean Bodin, the famous French writer on witches, and publicist, had come to England with “Monsieur,” and Dee was introduced to him by Castelnau, the French ambassador, in the “Chamber of Presence at Westminster.” Letters came from Doctor Andreas Hess, the occult philosopher, sent through Dee’s friend, Richard Hesketh, agent at Antwerp. There are also letters from Rome. John Leonard Haller, of Hallerstein by Worms, came to him to say he had received instructions for his journey into “Quinsay [or Northern china], which journey I moved him unto, and instructed him plentifully for observing the variation of the compass in all places as he passed.” He notes, as if it were a common occurrence, a “fowl falling out” between two earls at Court, Leicester and Sussex [the Lord Chamberlain], tells how they “called each other traitor, whereupon both were commanded to keepe to their chambers at Greenwich, where the Court was.” It sounds like a schoolboys’ quarrel, but the royal schoolmistress would have them both know that they were in disgrace for a time. In July, there was an eclipse of the moon, but it was “cloudy, so as I could not perceive it.” In August, about half-past eight on the night of the 26th, “a strange Meteore in forme of a white clowde crossing galaxium, lay north and south over our zenith. This clowde was at length from the S.E. to the S.W., sharp at both ends, and in the West it was forked for a while. It was about sixty degrees high, it lasted an hour, all the skye cleare about and fair star-shyne.”

Dee made a journey into Huntingdonshire, by St. Neots, to Mr. Hickman’s at Shugborough, in the county of Warwick. Young Bartholomew Hickman was afterwards to become the companion and servant of his old age, and manifested some slight mediumistic powers. On the way home, a month or two later, Dee rode into Sussex to Chailey, probably to the glass works there. The Queen and “Monsieur” were at Whitehall.

A pretty little scene was enacted at Mortlake at the New Year, when “Arthur Dee and Mary Herbert, they being but 3 years old, the eldest of them, did make as it were a shew of childish marriage, of calling each other husband and wife.” Then Dee essays a harmless little play upon words. “The first day Mary Herbert came to her father’s house at Mortlake, the second day she came to her father’s house at East Shene.” Mrs. Dee went the same day to see the baby Katherine at Nurse Garret’s, and Mistress Herbert went with her. So the two families were in great unity.

Sir George Peckham, who sailed with Sir Humphrey Gilbert, came to consult Dee about exploration in North America, and promised a share in his patent of the new lands. He also sent down his sea-master, Mr. Clement, and another gentleman, Mr. Ingram, to see the mathematician. For Sir John Killigrew, Dee devised “a way of protestation to save him harmless for compounding for the Spaniard who was robbed: he promised me fish against Lent.” Haller came again to get instructions how to transfer his money to Nuremberg, and to get letters of introduction to

Constantinople. By him, Dee sent letters to correspondents in Venice, where the German explorer was to winter.

Mr. Newbury, who had been in India, came early in the New Year. Dee recounts how the stage in that well-known old London place of amusement, the Paris Garden, on Bankside, Southwark, fell down suddenly while it was crammed with people beholding the bear-baiting. "Many people were killed thereby, more hurt, and all amazed. The godly expound it as a due plague of God for the wickedness there used, and the Sabbath day so profanely spent." Sunday was the great day for the bear-fights.

"1583. — Jan. 23. Mr. Secretarie Walsingham cam to my howse, where by good luk he found Mr. Awdrian Gilbert, and so talk was begonne of Northwest Straights discovery.

"Jan. 24. Mr. Awdrian Gilbert and John Davis went by appointment to Mr. Secretary, to Mr. Beale his house, where only we four were secret, and we made Mr. Secretarie privie of the N.W. passage, and all charts and rutters were agreed uppon in generall.

"Feb. 3. Mr. Savile, Mor. Powil the younger, travaylors, Mr. Ottomeen his sonne cam to be acquaynted with me.

"Feb. 4. Mr. Edmunds of the Privie Chamber, Mr. Lee, Sir Harry Lee, his brother, who had byn in Moschovia, cam to be acquaynted with me.

"Feb. 11. The Queene lying at Richmond went to Mr. Secretarie Walsingham to dynner; she coming by my dore graciously called me to her, and so I went by her horse side as far as where Mr. Hudson dwelt.

"Feb. 18. Lady Walsingham cam suddenly to my house very freely, and shortly after that she was gone, cam Syr Francis himself, and Mr. Dyer.

"March 6. I and Mr. Adrian Gilbert and John Davis did mete with Mr. Alderman Barnes, Mr. Townson and Mr. Yong and Mr. Hudson, about the N.W. passage.

"March 17. Mr. John Davys went to Chelsey with Mr. Adrian Gilbert to Mr. Radforths, and so, the 18th day from thence, to Devonshyre.

"April 18. The Queene went from Richmond toward Greenwich, and at her going on horsbak, being new up, she called for me by Mr. Rawly his putting her in mynde, and she sayd 'quod defertur non aufertur,' and gave me her right hand to kisse."

While these every-day events were going on and being chronicled, Dee was also occupying himself with the search for a medium. He first tried one named Barnabas Saul (he seems to have been a licensed preacher), who professed himself an occultist. Saul gives news of buried treasure — great chests of precious books hidden somewhere near Oundle in Northamptonshire, but the disappointed book-lover finds the hoard an illusion. Then Saul, who slept in a chamber over the hall at Mortlake, is visited at midnight by "a spiritual creature." The first real seance that Dee records, "Actio Saulina," took place on December 21, 1581. The skryer was bidden to look into the "great crystalline globe," and a message was transmitted by the angel Annael through the percipient to the effect that many things should be declared to Dee, not by the present worker, "but by him that is assigned to the stone." After New Year's tide, on any day but the Sabbath, the stone was to be set in the sun,

the brighter the day the better, and sight should be given. The sitters might “deal both kneeling and sitting.” When we consider how very real to a devout person in the Middle Ages apparitions of the devil and of evil spirits were, there seems nothing at all extraordinary in Dee’s belief that good spirits also might be permitted to come to his call, for purposes of good. A month or two after this, Saul was indicted on some charge and tried in Westminster Hall, but, thanks to Mr. Serjeant Walmesley and a couple of clever lawyers, he was acquitted. There was an end of his clairvoyance, however: “he confessed he neyther herd or saw any spirituall crature any more.” If the accusation against him had been that of sorcery, he was wise to risk no further appearances in Westminster Hall. He seems to have spread abroad many false reports about Dee, who reproached him bitterly when he called at Mortlake a few months later. Dee had, however, gained psychical experience by these early and tentative experiments. The field was now open for a maturer applicant. When he arrived, he was to change the whole current of Dee’s life and outlook, to become at once a helper and a stumbling-block, a servant and a master, loving as a son, treacherous as only a jealous foe. It was a strange fate that sent Edward Kelley to Dee at this moment, when everything was ripe for his appearance. And it was characteristic of the man that he was ushered into Dee’s life under a feigned name. On March 8, two days after Saul had confessed he saw and heard no more of the spirits, Dee writes in his diary, “Mr. Clerkson and his frende cam to my howse.” He makes the visit very emphatic by repeating the information: “Barnabas went home abowt 2 or 3 o’clock, he lay not at my howse now; he went, I say, on Thursday, and Mr. Clerkson came.” At nine o’clock the same night, there was a wonderful exhibition of the aurora in the northern and eastern heavens, which Dee describes minutely in Latin in the diary. The next day, March 9, he mentions Clerkson’s friend by name as “Mr. Talbot,” and shows how that individual appears to have begun ingratiating himself with his new patron by telling him what a bad man his predecessor was. Barnabas had said that Dee would mock at the new medium; Barnabas had “cosened” both Clerkson and Dee. This, Talbot professed to have been told by “a spiritual creature.” The pair proceeded at once to business. On the 10th, they sat downto gaze into “my stone in a frame given me of a friend,” with very remarkable results. Information was vouchsafed that they should jointly together have knowledge of the angels, if the will of God, viz., conjunction of mind and prayer between them, be performed. They were bidden to “abuse not this excellency nor overshadow it with vanity, but stick firmly, absolutely and perfectly in the love of God for his honour, together.” There were forty-nine good angels, all their names beginning with B, who were to be answerable to their call. The first entry that Dee makes in his Book of Mysteries concerning Talbot is as follows: —

“One Mr. Edward Talbot cam to my howse, and he being willing and desyrours to see or shew something in spirituall practise, wold have had me to have done something therein. And I truely excused myself therein: as not, in the vulgarly accountd magik, neyther studied or exercised. But confessed myself long tyme to have byn desyrours to have help in my philosophicall studies through the cumpany and information of the blessed Angels of God. And thereuppon, I brought furth to him my stonein the frame (which was given me of a frende), and I sayd unto him that I was credibly informed that to it (after a sort) were answerable Aliqui Angeli boni. And also that I was once willed by a skryer to call for the good Angel Annael

to appere in that stone in my owne sight. And therefore I desyred him to call him, and (if he would) Anachor and Anilos likewise, accounted good angels, for I was not prepared thereto.

“He [Talbot] settled himself to the Action, and on his knees at my desk, setting the stone before him, fell to prayer and entreaty, etc. In the mean space, I in my Oratory did pray and make motion to God and his good creatures for the furthering of this Action. And within one quarter of an hour (or less) he had sight of one in the stone.”

The one to appear was Uriel, the Spirit of Light. On the 14th, the angel Michael appeared, and gave Dee a ring with a seal. Only on two other occasions does a tangible object pass between them. Dee was overjoyed at the success of his new “speculator” or “skryer”; the sittings were daily conducted until March 21, when the medium was overcome with faintness and giddiness, and Michael, who was conversing with him, bade them rest and wait for a quarter of an hour. The next day, Talbot departed from Mortlake, being bidden by Michael to go fetch some books of Lord Monteagle’s which were at Lancaster, or thereby, and which would else perish.

He returned before long, and all through April, instructions were being given at the sittings for the future revelations. elaborate preparations were needed, and they were described in minute detail.

By April 29, a square table, “the table of practice,” was complete. It was made of sweet wood, and was about two cubits high (“by two cubits I mean our usual yard”), with four legs. On its sides certain characters, as revealed, were to be written with sacred yellow oil, such as is used in churches. Each leg was to be set upon a seal of wax made in the same pattern as the larger seal, “Sigilla AEmeth,” which was to be placed upon the centre of the table, this seal to be made of perfect, that is, clean purified wax, 9 inches in diameter, 27 inches or more in circumference. It was to be an inch and half a quarter of an inch thick, and upon the under-side was to be a figure as below.

It was a mystical sign, similar to those in use in the East, and also used by contemporary astrologers

[INSERT ILLUSTRATION]

The four letters in the centre are the initials of the Hebrew words, “Thou art great for ever, O Lord,” which were considered a charm in the Middle Ages.

The upper side of the seal was engraved with an elaborate figure obtained in the following manner. First, a table of forty-nine squares was drawn and filled up with the seven names of God — “names not known to the angels, neither can they be spoken or read of man. These names bring forth seven angels, the governors of the heavens next unto us. Every letter of the angels’ names bringeth forth seven daughters. Every daughter bringeth forth seven daughters. Every daughter her daughter bringeth forth a son. Every son hath his son.”

The seal “was not to be looked upon without great reverence and devotion.”

It is extremely curious and interesting to relate that two of these tablets of wax, “Sigillum Dei,” and one of the smaller seals for the feet of the table, with a crystal globe, all formerly belonging to Dee, are still preserved in the British

Museum, having come there from Sir Thomas Cotton's library, where the table of practice was also long preserved.

The spirits were kind enough to say: "We have no respect of cullours," but the table was to be set upon a square of red silk as changeable (i.e., shot) as may be, two yards square, and a red silk cover, with "knops or tassels" at the four corners, was to be laid over the seal, and to hang below the edge of the table. The crystal glove in its frame was then to be set upon the centre of the cover, resting on the seal with the silk between.

The skryer seated himself in "the green chair" at the table, Dee at his desk to write down the conversations. These were noted by him then and there at the time, and he is careful to particularise any remark or addition told him by the Ckryer afterwards. Once a spirit tells him: "There is time enough, and we may take leisure." Whereupon Dee conversed directly with the visitant; sometimes apparently only Talbot hears and repeats to him what is said. A golden curtain was usually first seen in the stone, and occasionally there was a long pause before it was withdrawn. Once Dee writes: "He taketh the darkness and wrappeth it up, and casteth it into the middle of the earthen globe." The spirits generally appeared in the stone, but sometimes they stept down into a dazzling beam of light from it, and moved about the room. On some occasions a voice only is heard. At the close of the action, the "black cloth of silence is drawn," and they leave off for the present.

There are very few comments or general impressions of the actions left by Dee, but on one occasion he does use expressions that show his analytical powers to have been actively at work to account for the phenomena. He brought his reason to bear upon the means of communication with the unseen world in a remarkable manner. In speaking to the angels one day he said: "I do think you have no organs or Instruments apt for voyce, but are meere spirituall and nothing corporall, but have the power and property from God to insinuate your message or meaning to ear or eye [so that] man's imagination shall be that they hear and see you sensibly."

As Plotinus says, "Not everything which is in the soul is now sensible, but it arrives to us when it proceeds as far as sense."

The minute descriptions of the figures seen are of course characteristic of clairvoyant or mediumistic visions. In the case of Bobogel, the account of his "sage and grave" attire — the common dress of a serious gentleman of the time — may be quoted.

"They that now come in are jolly fellows, all trymmed after the manner of Nobilities now-a-dayes, with gylt rapiers and curled haire, and they bragged up and downe. Bobogel standeth in a black velvet coat, and his hose, close round hose of velvet upperstocks, over layd with gold lace. He hath a velvet hat cap with a black feather in it, with a cape on one of his shoulders; his purse hanging at his neck, and so put under his girdell. His beard long. He had pantoffolls and pynsons. Seven others are apparelled like Bobogel, sagely and gravely."

CHAPTER VI

EDWARD KELLEY

"Kelley did all his feats upon

The Devil's looking-glass, a stone
Where, playing with him at bo-peep,
He solv'd all problems ne'er so deep."

— Butler, *Hudibras*

It is now time to inquire who this Talbot, this seer and medium, was. Where did he come from, and what was his previous history?

That he came to the Mortlake philosopher under a feigned name is perhaps not so damning an accusation as might at first sight appear. There was in his case, certainly, every reason why he should change his identity, if possible, but an alias in those days was so common a thing that perhaps more stress has been laid upon Kelley's than is strictly fair.

The whole of Kelley's story is so wildly and romantically coloured, it is so incredible, and so full of marvels, that it is extremely difficult to know what to believe. There is no disentangling the sober facts of his life from the romance attributed to him; indeed, there are no sober facts, as the reader will see when the accepted traditions of this extraordinary man's career are laid down.

From March 8 to November, 1582, Edward Talbot, the skryer, came and went in the Mortlake establishment, gazed in the crystal, and ingratiated himself into his employer's liking. Then he disappeared, and Edward Kelley took his place. There had been a quarrel of some kind, precursor of many others, and Dee opens his fourth Book of Mysteries, on November 15, "after the reconciliation with Kelley." Henceforth "E.K." is his name.

Kelley was born at Worcester, on August 1, 1555, as appears by the horoscope drawn for him by the astrologer. He began life as an apothecary's apprentice, and showed some aptitude for his calling. It has been stated that, under the name of Talbot, he studied for a short time at Oxford, but left abruptly under a cloud. A few years later, he was exposed in the pillory in Lancaster for having either forged ancient title deeds or coined base money. Both feats are accounted to him. The next incident in his career is a charge of having dug up a newly buried "caitiff's" corpse in Walton-le-Dale churchyard, Lancashire, for the purpose of questioning the dead, or "an evil spirit speaking through his organs," respecting the future of "a noble young gentleman," then a minor. After this savoury episode, Kelley is reported to have been wandering in Wales (it is suggested that he was hiding from justice), when he stumbled accidentally upon an old alchemical manuscript and two caskets or phials containing a mysterious red and white powder. Another version of this discovery is that Dee and Kelley together found the powder at Glastonbury. This we may dismiss. Wherever he procured it, Kelley undoubtedly owned a small quantity of some substance which he regarded as of priceless value, inasmuch as, if properly understood and manipulated, it could be used for transmuting baser metals into gold.

The reputation of the learned doctor of Mortlake, who was known all over the Continent, was a favourite at Court, and in touch with every adventure by sea or land, had of course reached Kelley. Dee's parsonage of Upton-on-Severn, near Worcester, did not trouble him much with responsibility, but it must have been on one occasional visit to it that he received from the Dean of Worcester Cathedral a Latin volume, in which he inscribed the gift thus: "Joannes Dee, 1565, Februarii 21. Wigorniae, ex dono decani ecclesiae magistri Beddar."

With the powder that he did not know how to use, and the alchemical manuscript which he could not decipher, and which yet might contain the invaluable secret (if indeed there is any truth in the story of his find), Kelley, the adventurer, sought out some means of introduction to the man so likely to help him. He had dabbled in alchemy, and came to Mortlake with something of a reputation, for Dee speaks of him as “that lerned man.” It is utterly unlikely that Dee had heard anything of Kelley’s exploits in the north. Such doings would scarcely penetrate the solmen recesses of the laboratory on the Thames side. So Kelley arrived, and was recieved in all good faith. He told Dee that the last seer, Barnabas, had “cosened” him, and seems to have at once impressed himself favourably upon the astrologer, who at the moment was without a reliable assistant. The sittings began, as we have seen, in March, and were successful immediately. In May the message comes that “none shall enter into the knowledge of these mysteries but this worker,” and Kelley’s position is secured.

Kelley was now about twenty-seven years old, and unmarried. He was bidden by the spirits on April 20 to take a wife, “which thing to do,” he told Dee, “I have no natural inclination, neither with a safe conscience may I do it.” but Michael had made him swear on his sword to follow his counsel, so he married reluctantly, not long after, Joan, or Johanna, Cooper, of Chipping Norton, who was eight years his junior, and about nineteen.

There was little love on his side apparently, but the girl seems at any rate to have essayed to do her duty as a wife. She was apparently a complete stranger to the Dees, although soon to become part of their household. What were Jane’s feelings at the thought of this invasion of her domestic peace we can only guess from an entry in Dee’s diary made two days after one of these first sittings. Dee does not write much about his wife in his diary, save only entries relating to her health, and this one he has carefully erased, as if he thought some disloyalty to her was involved in it. It is, however, possible to make it out almost entirely. “1582, 6 May. Jane in a merveyulous rage at 8 of the cloke at night, and all that night, and next morning till 8 of the cloke, melancholike and ch[?ided me] terribly for....” Something illegible follows, and then this: “that come to me only honest and lerned men.” Finally, “by Mr. Clerkson his help was [?pacified].” What can this mean save that she had taken a violent dislike to, and disapproval of, Kelley; that she mistrusted his honesty and wished they might have no more to do with him; that it was only by his friend Clerkson’s help that she was at last quieted? Her woman’s intuition was scarcely at fault; however kindly she came to treat her husband’s medium afterwards, however charitable she showed herself, she was right in suspecting no good to come to Dee through association with Kelley.

The accounts of the actions with the spirits which took place under Kelley’s control were minutely written down by Dee, as we have seen, mostly during the time of the sittings. The papers had a romantic history. The last thirteen books, which were in Sir Thomas Cotton’s library, were printed by Dr. Meric Casaubon about fifty years after Dee’s death, under the title of *A True and Faithful Relation of what passed for many Yeers between Dr. John Dee, a Mathematician of Great Fame in Q. Elizabeth and K. James their Reigns, and some Spirits: Tending (had it succeeded) To a General Alteration of most States and Kingdomes in the World...With a Preface confirming the reality (as to the Point of Spirits) of this Relation; and shewing the several good Uses that a sober Christian may make of all*

(folio 1659). Casaubon in his learned preface maintains stoutly that the visions were no distempered fancy, that Dee acted throughout with all sincerity, but that he was deluded. His book sold with great rapidity; it excited so much controversy, and incurred such disapproval from Owen, Pye, and the other Puritan divines, that it came near being suppressed; only the excellent demand for it prevented its confiscation, for not a copy could be found. The True Relation contains the record of all actions after the beginning of June, 1583. The earlier conversations, from the first with Barnabas, and Talbot's appearance on the scene, are still to be found in manuscript, they having in some way parted company from those of which Cotton had possession.

These earlier papers were acquired by the antiquary, Elias Ashmole, in a rather romantic way. Ashmole had been visiting William Lilly, the astrologer, at Horsham, in August, 1672, when on his return his servant brought him a large bundle of Dee's autograph MSS. which a few days before he had received from one of the warders of the Tower. The warder called on Ashmole at the Excise Office, and offered to give them in exchange for one of Ashmole's own printed works. The Windsor Herald cheerfully agreed, and sent him a volume "fairly bound and gilt on the back," of which of his works we know not.

Now for the history of the papers. Mrs. Wale, the warder's wife, had brought them with her dower from her lamented first husband, Mr. Jones, confectioner, of the Plow, Lombard Street. While courting, these young people had picked up among the "joyners in Adle Street" a large chest whose "very good lock and hinges of extraordinary neat work" took their fancy. It had belonged, said the shopman, to Mr. John Woodall, surgeon, father of Thomas Woodall, surgeon to King Charles II. and Ashmole's friend. He had bought it probably at the sale of Dee's effects in 1609, after his death. The Joneses owned the chest for twenty years without a suspicion of its contents. Then, on moving it one day, they heard a rattle inside. Jones prized open the space below the till, and discovered a large secret drawer stuffed full of papers, and a rosary of olive-wood beads with a cross, which had caused the rattle. The papers proved to be the conferences with angels from December 22, 1581, down to the time of the printed volume; the original manuscripts of the (unprinted) books entitled, "48 Claves Angelicae," "De Heptarchia Mystica," and "Liber Scientiae Auxiliis et Victoriae Terrestris." We may imagine Ashmole's excitement when he found he had in his hand the earlier chapters of the very remarkable book that was still in every one's mouth, published only thirteen years before.

We may now briefly examine this remarkable and voluminous Book of Mysteries. In view of the fact that it is perhaps the earliest record of mediumistic transactions, the first attempt to relate consecutive psychic transmissions, in fact a sort of sixteenth century Proceedings of a Society for Psychical Research, it seems to warrant investigation at some length.

The first book (still in manuscript) opens with a Latin invocation to the Almighty, and an attribution of all wisdom and philosophy to their divine original source. It ends "O beata et super benedicta omnipotens Trinitas, concedas mihi (Joanni Dee) petitionem hanc modo tali, qui tibi maxime placebit, Amen." Then comes a table of the four angels — Michael, Gabriel, Raphael, and Uriel, their particular attributes, and their descent from Annael. A long prayer in English follows, which gives a remarkable insight into Dee's attitude of mind. Unfeigned humility towards God, a certain unconsciousness of self and of his own particular

acquirements, are mingled with a calm assumption of authority and power to enter into the heart of knowledge. This was perhaps the chief characteristic of the exalted mysticism so prevalent at the time in a small section of alchemists, especially on the Continent. Dee was its representative in England, having, of course, imbibed much of it during his residence abroad. Paracelsus had been dead but forty years. His disciples everywhere were seeking three secrets which were to fulfil his teaching — the secret of transmutation, the elixir of life, and the philosophic stone, key to all wisdom. Bruno was still alive, developing his theories of God as the great unity behind the world and humanity. Copernicus was not long dead, and his new theories of the solar system were gradually becoming accepted. Galileo was still a student at Pisa, his inventions as yet slumbering in his brain. Montaigne was writing his gentle satires on humanity. Everywhere and in every sphere new thought was beginning to stir.

Dee did not scruple to claim in his prayer gifts like those bestowed upon the prophets. He deprecates any kind of traffic with unauthorised or unreliable spirits, and acknowledges again the only Source of wisdom. But since he has so long and faithfully followed learning, he does think it of importance that he should know more. The blessed angels, for instance, could impart to him things of at least as much consequence as when the prophet told Saul, the son of Kish, where to find a lost ass or two! A spirit afterwards told him that ignorance was the nakedness wherewith he was first tormented, and “the first plague that fell unto man was the want of science.”

He had reached that state of mind when he seemed unable to discern any boundary line between finite and infinite. His hope and his confidence were alike fixed on nothing less than wresting all the secrets of the universe from the abyss of knowledge, or, at any rate, as many of them as God willed. He explains how from his youth up he has prayed for pure and sound wisdom and understanding,

“such as might be brought, under the talent of my capacitie, to God’s honour and glory and the benefit of his servants, my brethren and sisters. And forasmuch as for many yeres, in many places, far and nere, in many books and sundry languages, I have wrought and studied, and with sundry men conferred, and with my owne reasonable discourse laboured, whereby to fynde or get some yinking, glimpse, or beame, of such the aforesaid radicall truthe:...And seeing I have read in they books and records how Enoch enjoyed thy favor and conversation, with Moses thou wast familiar, And also that to Abraham, Isaac, and Jacob, Josua, Gedeon, Esdras, Daniel, Tobias, and sundry other, the good angels were sent, by thy disposition, to instruct them, informe them, help them, yea in worldly and domesticall affairs; yea and sometimes to satisfy theyr desires, doubts and questions of thy secrets; and furthermore, considering the Shewstone which the high priests did use by thy owne ordering, wherein they had light and judgments in their great doubts, and considering also that thou (O God) didst not refuse to instruct the prophets (then called seers), to give answers to common people of things oeconomically, as Samuel for Saul, seeking for his father’s asses, being gone astray: and as other things, vulgar true predictions, whereby to win credit unto their weightier affairs. And thinking within myself the lack of thy wisdom to me to be of more importance than the value of an Ass or two could be to Cis (Saul his father): And remembering what good counsaile thy apostle James giveth, saying Si quies autem vestrum etc. And

that Solomon the wise, did so, even immediately by thyselfe, attayne to his wonderfull sidome: Therefore, Seeing I was sufficiently taught and confirmed that this wisdome could not be come by at mans hand, or by human powre, but onely from thee (O God) mediately or immediately. And having allwayes a great regarde and care to beware of the filthy abuse of such as willingly and wittingly did invoke and consult (in divers sorte) Spirituall Creatures of the damned sort: Angels of darknes, forgers and patrons of lies and untruths; I did fly unto thee by hartly prayer, full oft, and in sundry manners: sometymes crying unto thee *Mittas Lucem tuam et veritatem, tuam quoe me ducant, etc.*”

Then he goes on to say that his slight experience with two different persons has convinced him of God’s wish to enlighten him through His angels. He has heard of a man accounted a good seer and skryer, a master of arts and preachger of the Word, and through his means he has seen spiritual apparitions “either in the christalline receptab\cle, or in open ayre.” He hopes to have help from this person until “some after man or meanes are sent him from on high.” But Saul — for it is Saul he means — is not devout, sincere and honest. Evil spirits have come to him, much to Dee’s terror “but that thou didst pitch thy holy tent to my defence and comfort.” He has quoted to Saul Roger Bacon’s warning to wicked devil-callers; but the man cannot brook rebuke, and is angry at being further debarred from the mysteries “which were the only things I desired, through thy grace.” He begs, most humbly and deprecatingly for leave to note down the actions, and asks that Annael may come to his help.

Barnabas having proved so unreliable, he rejoiced at having found another skryer. The one accessory wanting, when all the table and seals were comlete, was a “shewstone.” Dee seems already to have owned several. He had used a crystal before this time, but a new one was desirable. One evening, towards sunset, a little child angel appears standing in the sunbeams from the western window of the study, holding in its hand a thing “most bright, most clere and clorius, of the bigness of an egg.” Michael with his fiery sword appeared and bade Dee “Go forward, take it up, and let no mortall hand touch it but thine own.”

Michael tells them, too, that he and Kelley are to be joined in the holy work, united as if one man. But one is to be master, the other minister; one the hand, the other the finger. They are to be contented with their calling, for vessels are not all of one bigness, yet all can be full. Dee is reminded that all his knowledge is “more wonderful than profitable, unless thou art led to a true use of the same.”

Another spirit, *Medicus Dei*, or *Medicina*, says, “Great are the purposes of him whose medecine I carry,” and on one of the early march days utters some remarkable words on the precious doctrine of the universality of the Light: —

“Your voices are but shadows of the voices that understand all things. The things you look on because you see them not indeed, you also do name amiss...

“We are fully understanding. We open the eyes from the sun in the morning to the sun at night. Distance is nothing withus, unless it be the distance which separateth the wicked from His mercy. Secrets there arenone, but that are buried in the shaddow of man’s sould....Iniquitie shall not range where the fire of his piercing judgment and election doth light.”

Calvin had been dead but twenty years, but with his scheme of election and eternal reprobation Dee had no affinity. His mind was far more in harmony with the ancient hermetic teaching that medicine, healing, was the true road to all philosophy.

CHAPTER VII

THE CRYSTAL GAZERS

“To follow knowledge like a sinking star
Beyond the utmost bound of human thought.”

— Tennyson, *Ulysses*

It is a curious picture to call up, that of the strangely assorted pair seated in the inner room at Mortlake, acting out this spiritual drama. Dee had asked for instructions about the room for the sittings: “May my little farthest chamber serve, if the bed be taken down?” The table, covered with its cloth stood in the centre upon the seals. Kelley, perhaps with the black cap he is credited with having always worn, pulled close over his cropped ears, was seated at it. Dee at his desk sat writing in the great folio book. He was now fifty-six years old; his beard was long, but perhaps not yet “as white as milk,” as Aubrey describes it. He did not apparently ever see the visions himself. Once he reproachfully said, “You know I cannot see or skry.” He conversed with the spirits and sometimes heard what they said; but to the eye and ear of his body they were invisible; hence his dependence upon a skryer.

The sole object of his ambition was the attainment of legitimate wisdom. When conversing with the angels, how near within his grasp it seemed! Michael’s exposition seemed almost to promise it to him: —

“‘Wilt thou have witt and wisdom? Here it is.’

“Michael points each time to a figure of seven squares shown within a circle of light.

“‘The exaltation and government of princes is in my hand.

“‘In counsayle and Nobilitie, I prevayle.

“‘The Gayne and Trade of Merchandise is in my hand. Lo! here it is.

“‘The Qualitie of the Earth and Waters is my knowledge, and I know them. And here it is.

“‘The motion of the Ayre and those that move in it, are all known to me. Lo! here they are.

“‘I signifie wisdom. In fire is my government. I was in the beginning and shall be to the end.

“‘Mark these mysteries. For this knowne, the state of the whole earth is knowne, and all that is thereon. Mighty is God, yea, mighty is he who hath composed for ever. Give diligent eye. Be wise, merry and pleasant in the Lord.’“

Quite early in the actions, it was told them that a third person was necessary to the complete work. Adrian Gilbert was the first selected, and permission was given for him to be made “privie of the mysteries, but not to be a practiser.”

Gilbert was making ready for a voyage to the North-West. Dee and the spirits seem to think it may be a kind of missionary enterprise, and Dee asks for (but does

not actually obtain) a geographical description of the country he is going to. The answer is that Dee knows about it, as indeed he did, sufficiently well, as we have seen, to draw very good charts of North America and the Frozen Seas. An angel named Me tells him he must counsel A.G. and be his father. "Who made the sun of nothing? Who set Nature to thrust up her shoulder amongst trees and herbs like a gentle fire? How great is his power in those in whom he kindleth a soul of understanding."

In Dee's absence in London, at the Muscovy House, on Maundy Thursday (March 28), Kelley tried to summon Medicina again, but was only visited by an "illuder." Next day Dee asks for "the veritie of his doings," and is told that darkness has presumed to put itself in place of light. Kelley will not be overthrown, but he is to brag not. "When I yoked your feathers together, I joined them not for a while." The illuder is made to confess deception and is consumed by fire, and Dee turns to his skryer with "Master Kelley, is your doubt of the spirit taken away?"

Dee had been requested to prepare a calculation for the reformation of the Calendar, or at any rate to give his opinion on the scheme propounded by Pope Gregory. His calculations were approved by all the English mathematicians of the time, but the Queen, advised by the bishops, did not see her way to adopt them in effect. Dee tells his angel friends how "grieved" he is that "Her Majestie will not reform the Kalendar in the best terms of veritie." He desires counsel what to do.

Easter Day passed, and the crystal gazing still went on. The sittings were often long. On April 3, Dee ventured to tell his visitor that "it will be dark soon, and our company will expect our coming down to supper. If without offence we might now leave off, it might seem good to do so." Three days after, he again offered a slight remonstrance, asking why they had not been warned of Mistress Frances Howard's coming, a gentlewoman of Her Majestie's Privy Chamber. She had caused interruption of their exercise for a full hour, or two. Was this to be forgiven her because of her great charity, and goodness in procuring the Queen's alms for many needy people?

The Queen was then at Richmond, and Dee was several times at Court. He seems to have been there to bid her adieu when she left for Greenwich on the 18th: — "At her going on horseback, being new up, she called for me, by Mr. Rawly his putting her in mynde, and she sayd, 'quod defertur non aufertur,' and gave me her right hande to kisse."

Dee was now puzzling over some mysterious papers brought him by Kelley, whether those he is reported to have found in Wales of Glastonbury we can scarcely decide, but they seem to concern ten places in England where treasure was supposed to be hid. There is a curious drawing of them in the MS. diary: "After coming from the Court, I thought I would try to discover the ciphers of the paper E.K. brought me as willed to do, found at Huets Cross, with a book of magic and alchemy, to which a spiritual creature led them." Dee was by no means the easy dupe of Kelley that he has been called. Two or three months after he first knew him he writes in his diary of his "abominable lyes"; and he here makes a very telling remark, an aside, so to speak: "Of this K., I doubt yet."

Kelley's hot, uncontrollable nature and his overbearing ways had already begun to appear. There was an outbreak at supper one night because Charles Sled had "done him an injurie in speeche at my table." Probably some story of his early

career had been raked up. A voice next morning says to him appropriately: "Serve God and take hold of nettles."

The manuscript in crabbed signs puzzled the astrologer desperately, and he was unhappy at the delay. An angel tells him they are to be "rocks in faith." "While sorrow be measured thou shalt bind up thy fardell." He is not to seek to know the mysteries till the very hour he is called. "Can you bow to Nature and not honour the workman?"

A new spirit visits them, Il, "a merie creature, apparelled like a Vyce in a [morality] play. He skipped here and there." Dee asks where is his Arabic book of tables that he has lent and lost. Il says it is in Scotland and is nothing worth. Then Dee asks about the Lord Treasurer's books, for he had not seen Burleigh's library, and had all the rival collector's jealousy over his own treasures. He was never quite sure that Burleigh was his friend; there seemed always a suspicion in his mind where the Lord Treasurer was concerned. The feeling was reflected in a curious dream that he had soon after the beginning of his partnership with Kelley: "I dreamed on Saturday night that I was deade, and afterwards my bowels wer taken out. I walked and talked with divers, and among other with the Lord Thresorer, who was cum to my howse to burn my bookes when I was dead. I thought he looked sourely on me." Now, Il tells him that Burleigh has no books "belonging to Soyga," and explains that name as in "the language of Paradise, before Babel's aery tower." Dee takes up a lexicon to look for the word, but Il points to another book on "the mysteries of Greek, Latin and Hebrew." Then Il becomes very practical, and says: "Your chimney will speak against you anon," and Dee remembers that he had hidden there "in a cap-case" the records of his doings with Saul and the others. Il advises Kelley to communicate to his employer the book and the powder, and all the rest of the roll. "True friends are not to hide anything each from the other."

This was perhaps the cause of the "great and eager pangs" that now took place between Dee and Kelley. The medium pretends to fear they are dealing with evil spirits. He bursts into a passion, declares he is a cumber to the house, and dwells there as in a prison. He had better be far away in the open country, where he can walk abroad, and not be troubled with slanderous tongues. He is wasting his time there, and must follow some study whereby he may live. As for these spirit mysteries, Adam and Enoch knew them before the Flood. Dee responds gravely to this tirade: He will wait God's time, and he will not believe a stone will be given them and no bread. As to Kelley's necessities, are not his own far greater? At the present moment, he owes 300 pounds, and does not know how to pay it. He has spent forty years, and travelled thousands of miles, in incredible forcing of his wit in study, to learn, or bowel out, some good thing, yet he would willingly go up and down England in a blanket, begging his bread, for a year or more, if at the end he might be sure of attaining to godly wisdom, whereby to do God service for His glory. He was resolved either willingly to leave this world, to enjoy the fountain of all wisdom, or to pass his days on earth in the enjoyment of its blessings and mysteries.

Another violent scene occurred before long; this time the mistress of the house was the one offended. Dee says: "By A[drian] G[ilbert] and Providence, E.K.'s vehement passions were pacified. He came back again to my house, and my wife was willing and quiet in mind and friendly to E.K. in word and countenance. A new pacification in all parts confirmed and all upon the confidence of God his service faithfully performed." Kelley's wife had not yet joined him at Mortlake, but

he had occasional letters from her. One found him in a tender religious mood, about to “pray in his bedchamber, on a little prayer book which Mr. Adrian Gilbert had left here, ad it lay on the table during the action.” It was Seven Sobbes of a Sorrowful Soul for Sinne, in English metre, “made by Mr. William Harris.” When he opened it, he found some automatic script in the end, or, as he calls it, a counterfeit of his own hand. He took it to Dee, who saw in it the work of a wicked spirit trying to shake their confidence. The next evening, both prayed against their enemy, Kelley on his knees before the green chair standing at the chimney. Uriel appeared and said temptation was requisite. “If it were not, how should men know God to be merciful?” He speaks to Kelley: — ”Thou, O yongling, but old sinner, why dost thou suffer thy blindness to increase? Why not yield thy Limbs to the service and fulfilling of an eternal veritie? Pluck up thy heart, and follow the way that leadeth to the knowledge of the end.” He explains how the trouble is caused by Belmagel, “the firebrand who hath followed thy soul from the beginning.”

The whole of this spring, the pair of partners had been busily engaged in preparing the various things — the table, the wax seals, the ring and lamin — required for use. Most complicated diagrams of letters and figures had also been dictated to them, and Kelley, whose mathematical training had been slight, was sometimes very exhausted. Once fire shoots out of the crystal into his eyes, and when it is taken back, he can read no more. As Dee remarks one day to a spirit, apologising for his many questions: “For my parte I could finde it in my heart to contynue whole days and nights in this manner of doing, even tyll my body should be ready to synk down for weariness before I could give over, but I feare I have caused weariness to my friends here.” A journey is foretold, but first of all Kelley is to go to the places of hidden treasure, and bring earth, that it may be tested. He may be away ten days. He bought a “pretty dun mare” for the journey, of “good man “Penticost,” for which he paid three pounds ready money in angels. A day or two after, he took boat to London to buy a saddle, bridle, and “boote-hose.”

At supper the night before he started, in a clairvoyant state, he had an extraordinary prophetic sight of the execution of Mary Queen of Scots, a beautiful woman having her head cut off by a tall black man. He also speaks of seeing the sea, covered with many ships. Uriel warns them that foreign Powers are providing ships “against the welfare of England, which shall shortly be put in practice.” It is hardly necessary to remind the reader that the Queen of Scots’ execution and the defeat of the Spanish Armada took place in two following years, 1587, 1588, four years after this vision.

CHAPTER VIII

MADIMI

“Therefore for spirits I am so far from denying their existence that I could easily believe that not only whole countries but particular persons have their tutelary and guardian angels. It is not a new opinion, but an old one of Pythagoras and Plato. There is no heresy in it, and if not manifestly defined in Scripture, yet it is an opinion of good and wholesome use in the cours and actions of a man’s life, and would serve as an hypothesis to solve many doubts whereof common philosophy affordeth no solution.”

Dee's costly apparatus and experiments, his large establishment and generous treatment of his servants and assistants, his entertainment of great folk, were all heavy drains upon his resources. He spent lavish amounts upon books and manuscripts for his library; he contributed as able to some of the Adventurers' funds. He borrowed freely, and he had sometimes to run long bills. Beside the rent of the two livings (about eighty pounds a year) he had no fixed income. The Queen was ever promising him benefices which either never fell vacant, or when they did, had to be bestowed elsewhere. At the time he first fell in with Kelley, he knew not where to turn for money. Almost at this very moment, however, a rich patron appeared unexpectedly on the horizon and changed Dee's outlook for several years.

On March 18, 1583, Mr. North came to Mortlake bringing a "salutation" from Albert or Adelbert Laski, Count Palatine of Siradia, a Polish Prince then about to arrive on a visit to the Queen. He wished to make Dee's acquaintance, to see his library, and discuss magic, of which he had made a study. Laski was one of the most powerful of the Polish nobles reconverted to Catholicism. He had taken a very prominent part in the patriotic movement of a few years before in Poland, when almost every European sovereign had made a bid for the Polish crown. Elizabeth's old suitor, the Duc d'Alencon, had actually worn it a month or two before escaping in the night to his brother of France. Laski was a dashing adventurer of heroic courage, quite unscrupulous as to cost; and although he had favoured the claims of the Emperor of Austria, he had, openly at least, agreed in the people's victorious choice of Stephan Bathory. When that Transylvanian Prince had been elected King in 1576, Laski had taken a prominent part in affairs. He was popular and ambitious, not without aspiration towards the Polish crown himself. Burleigh, in writing of him to Hatton, called him "a personage of great estimation, few in the Empire of the greatest exceed him in sovereignty and power." He is described by contemporary writers as a most learned man, handsome in stature and lineaments, richly clothed, "of very comely and decent apparel," and of graceful behaviour. He wore his beard very long, not clipped close like the English courtiers. He arrived in London by Harwich on May Day, and proceeded to Winchester House, Southwark, where he made his headquarters during his stay. There seemed some doubt about how he was to be received, whether he was actually in favour or in disgrace with King Stephan. Burleigh desired Hatton to get some Essex nobleman — Lord Rich or Lord Darcy — to meet him at Harwich with proper state, "if he is the very Count Palatine of the House of Laski." Hatton replied that he must wait to hear more from Leicester, for in his letter to the Queen the visitor has called her "the refuge of the disconsolate and afflicted," so perhaps he is out of favour after all.

Dee first saw Laski on May 13, at half-past seven in the evening, in the Earl of Leicester's apartments at the Court at Greenwich, when he was introduced by Leicester himself.

Five days after the first meeting, Laski "came to me at Mortlake withonly two men. He cam at afternone and tarryed supper, and [till] after sone set." Near a month elapsed before his next visit, when he made a sort of royal progress down the Thames from Oxford to Mortlake.

“June 15 about 5 of the clock, came the Polonian Prince, Lord Albert Lasky, down from Bissham, where he had lodged the night before, being returned from Oxford, whither he had gone of purpose to see the university, where he was very honorably used and entertained. He had in his company Lord Russell, Sir Philip Sydney and other gentlemen: he was rowed by the Queene’s men, he had the barge covered with the Queene’s cloth, the Queene’s trumpeters, etc. He came of purpose to do me honor, for which God be praised!”

The visit was repeated on the 19th, when the distinguished foreigner was hospitably entertained for the night. The Queen was then at Greenwich, but on July 30 she and her court proceeded in great splendour up the river to Sion House. She passed by Dee’s door, and probably paused as usual for a greeting. Next morning Leicester rode over to Mortlake, and put the household in commotion by announcing that Lasky and others would come to dine at Mortlake on the next day but one. These festivities were a great tax on the astrologer’s means, and he confessed sincerely that he was “not able to prepare them a convenient dinner, unless I should sell some of my plate or some of my pewter for it. Whereupon her Majestie sent unto me very royally, within one hour after, forty angels of gold [20 pounds] from Sion, whither her Majestie was now come from Greenwich.” Leicester’s secretary, Mr. Lloyd, was despatched post-haste with the gift, prompted, as Dee adds, “through the Earle his speech to the Queene.” One imagine Leicester’s somewhat peremptory suggestion and the Queen’s impulsive acquiescence. In minor matters she was woman enough to relish being sometimes dictated to. The secretary also brought what was hardly less acceptable to Dee, viz., “Mr. Rawligh his letter unto me of her Majestie’s good disposition unto me.” Raleigh was then in great favour with the Queen.

In the intervals between these visits of the Prince, the spirits had been consulted about Lasky’s prospects. They had at once interested themselves in him, and Madimi, one of the most fascinating of these psychical projections, had vouchsafed some kind of genealogical information, connecting him with the Lacys and Richard, Duke of York. She was the first of the female angels who appeared to Dee, as it seemed in answer to his arguments reproving Trithemius, who had asserted that no good spirits ever took the shape of women. Madimi, who suddenly appeared on May 28, was “like a pretty girle of 7 or 9 years, attired in a gown of Sey, changeable green and red, with a train”; her hair was “rowled up before and hanging down very long behind.” She came into the study and played by herself; “she seemed to go in and out behind my books;...the books seemed to give place sufficiently, one heap with the other, while she passed between them.” She announced that her elder sister would come presently, and corrected Dee’s pronunciation of her name. “My sister is not so short as you make her: Esemeli not Esemeli.” Madimi was a very clever and accomplished little fairy. She learned Greek, Arabic, and Syrian on purpose to be useful to Dee. On June 14 Dee asked the spirit Galvah, or Finis, what she had to say about the “Polandish Lord Albertus Lasky.” The reply came, “Ask me these things to-morrow.” But when the next day came, Kelley, the seer, “spent all that afternoon (almost) in angling, when I was very desirous to have had his company and helping hand in this action.” So at the next sitting Galvah administers to Kelley a sharply pointed reproof: “You, sir, were best to hunt and fish after Verity.” Dee adds that “she spake so to E.K. because he spent

too much time in Fishing and Angling.” Then he asked if Laski should return to Poland in August, if his relation with the Prince should bring him credit, and how should he “use himself therein to God’s liking, his country’s honour, and his own credit.” Galvah replied oracularly: “He shall want no direction in anything he desireth.” “Whom God hath armed, no man can prevaile against.” Again, on June 19, Dee asked if it would be best for the Prince to take the first opportunity of going homeward.

“It shall be answered soon,” replied Galvah.

“May he be present at the action?”

“Those that are of this house are not to be denied the Banquets therein.”

“May I request you to cause some sensible apparition to appear to him, to comfort him and establish his minde more abundantly in the godly intent of God his service?”

“If he follow us, let him be governed by us. But whatsoever is of flesh is not of us.”

“You perceive how he understandeth of the Lord Treasurer his grudge against him. And perhaps some others also are of like malicious nature. What danger may follow hereof, or encombrance?”

“The sum of his life is already appointed; one jot cannot be diminished. But he that is Almighty can augment at his pleasure. Let him rejoice in poverty, be sorry for his enemies, and do the works of justice.”

Then the “cloud of invisibility” — a drop scene between the acts — came over Galvah, and she disappeared.

Next day Laski was present at the action. An angel named Jubanladec appeared, and said he was appointed the Prince’s “good governour or Angel,” “the keeper and defender of this man present.” He bade him “look to the steps of his youth, measure the length of his body, live better and see himself inwardly.” Excellent advice, which might have been continued had not a man named Tanfield, attached to the Prince, arrived suddenly at Mortlake, with a message from the Court, and, contrary to all good manners, burst into the study. Laski had gone out another way through the oratory to meet him. The angel was annoyed, and prophesied rather unkindly that in five months the rash interrupter should be devoured by fishes of the sea. Was he drowned then or ever? Then the thread was resumed.

“What do ye seek after? Do ye hunt after the swiftness of the winds? Or are you imagining a form unto the coulds? Or go ye forth to hear the braying of an Asse, which passeth away with the swiftness of the air? Seek for true wisdom, for it beholdeth the highest and appeareth unto the lowest.”

Then Laski’s guardian angel becomes extremely practical and interesting: “Cecil hateth him [Laski] to the heart, and desireth he were gone hence. Many others do privily sting at him.”

Dee endeavours to keep him to the point.

“For his return, what is your advice? Perhaps he wanteth necessary provision, and money.”

“He shall be helpen, perhaps miraculously. Let him go so soon as he can conveniently.”

“I say again, perhaps he wanteth money; but the Treasures of the Lord are not sent to them whom he favoureth.”

“His help shall be strange. The Queen loveth him faithfully and hath fallen out with Cecil about him. Leicester flattereth him. His doings are looked into narrowly. But I alwayes inwardly direct him. I will minister such comfort to him as shall be necessary in the midst of all his doings.”

Mingled with these sayings were some propheticall utterances about Laski overcoming the Saracens and Paynims with a bloody cross shown in his hand, and about Dee’s passing to his country and aiding him to establish his kingdom. Then the familiar spirit sank through the table like a spark of fire, “seeming to make haste to his charge, I mean the Lord Laski.”

On Wednesday, the 26th, Laski again being present, the good angel Il appeared with a besom in his hand. The Prince’s pedigree was then barely begun, but on June 29 the clever little Madimi promised to finish the book exactly as Dee would have written it. It was no matter where the book was left, she told him, locked up or lying about. “Your locks are no hindrance to us.”

“You have eased my heart of a thousand pound weight,” ejaculated Dee, fervently. “Now I shall have leisure to follow my sute, and to do all Mr. Gilbert’s businesse.”

Madimi was much too learned a scholar for Kelley, who on this same day grew very angry with her for speaking to him in Greek, of which he knew nothing, not even the alphabet. As an alternative she gave him Arabic. “Unless you speak some language which I understand, I will expresse no more of this Gibberish,” he said, rudely.

Poor Dee! His skryer was a constant anxiety to him. Like every medium since known, he would sometimes apply himself and sometimes not, was often honest and yet frequently a cheat.

Dee writes: —

“My heart did throb oftentimes this day, and I thought E.K. did intend to absent himself from me, and now upon this warning, I was confirmed, and more assured that it was so. Whereupon seeing him make such haste to ride to Islington, I asked him why he so hasted to ride thither. And I said if it were to ride to Mr. harry Lee, I would go thither also, to be acquainted with him; seeing now I had so good leisure, being eased of the book writing [through Madimi’s good offices]. Then he said that one told him the other day that the Duke did but flatter him, and told him other things, both against the Duke and me. I answered for the Duke and myself, and also said that if the forty pound annuity which Mr. Lee did offer him was the chief cause of his mind feeling that way (contrary to some of his former promises to me), that then I would assure him of fifty pounds yearly, and would do my best by following of my sute [with the Queen] to bring it to passe as soon as possibly I could, and thereupon did make him promise upon the Bible. Then E.K. again, upon the same Bible, did swear unto me constant friendship and never to

forsake me: And moreover said that unless this had so faln out, he would have gone beyond the Seas, taking ship at Newcastle, within eight days next. And so we did plight our faith to one another, taking each other by the hands upon these points of brotherly and friendly fidelity during life, which Covenant I beseech God to turn to his honour, glorie and service, and the comfort of our brethren (his children) here on earth.”

This reconciliation was not for long, in spite of the promised salary, and soon another scene occurred. On June 5 Dee write that from nine in the morning Kelley was “in a marvellous great disquietness of mind, fury and rage,” because his brother Thomas Kelley brought him word, first, that a commission was out to attach and apprehend him as a felon for coining money; second, that his wife, whom he had left at Mistress Freeman’s house at Blockley, having heard from Mr. Hussey that he was a cosener, had gone home to her mother, Mrs. Cooper, at Chipping Norton. Dee is “touched with a great pang of compassion,” grieved that any Christian should use such speeches and be of so revenging a mind, even more than he is distressed that his own credit shall be endangered for embracing the company of such a disorderly person, especially if he be arreseted at Mortlake, “which will be no small grief and disgrace.” But he so generously resolves to stand by his friend. Kelley, it seems, had been met coming from Islington with his scroll, book and powder, and had been threatened to “be pulled in pieces” if he brought them to Dee. A drawing in the margin of the MS. shows the book to have had a cross on the cover, one clasp, and deep metal bands across its two sides. Presumably these were some of the treasures reported to have been found at Glastonbury.

A day or two after, June 18, Kelley again simulated great fear and distress at seeing evil spirits. He protested he would skry no more, and was so excited that he brought on himself the wise rebuke from Galvah: “He that is angry cannot see well.” He seems to have wished to show Laski some reprobate spirits in Dee’s study, but the older man wisely kept the crystal and teh “table of communion” under his own control. It was, perhaps, partly cunning that made Kelley, although he really possessed extraordinary mediumistic powers, so sceptical. “I am Thomas Didymus,” he says to the spirits. “How can ye persuade me ye are no deluders?”

Three days after this, Dee was writing letters to Adrian Gilbert, in Devonshire, when Madimi suddenly appeared to Kelley, who was seated in the green chair.

Dee said, “How is the mind of Mr. Secretary toward me? Methinketh it is alienated marvellously.”

Dee had long been on neighbourly terms with Sir Francis and Lady Walsingham. If any cause existed for supposing both Burleigh’s and Walsingham’s attitude toward him was changed, it may have been that the Lord Treasurer, the great finanacier of the time, resented his constant applications for a salary from the exchequer, while Walsingham, with his intimate knowledge of foreign affairs, perhaps misdoubted this intimacy between Dee and the scheming Polish Prince. Curiously enough, it was through this very intimacy with Laski that both Burleigh and Walsingham came later to regard the alchemists in the light of a valuable national asset.

Madimi replied —

"The Lord Treasurer and he are joyned together, and they hate thee. I heard them when they both said, thou wouldst go mad shortly. Whatever they can do against thee, assure thyself of. They will shortly lay a bait for thee, but eschew them."

D. — "Lord have mercy upon me, what bait, I beseech you, and by whom?"

M. — "They have determined to search thy house, but they stay untill the Duke be gone."

D. — "What would they search it for?"

M. — "They hate the Duke, both, unto death."

Then with a sharp caution to Kelley to deal uprightly with Dee, and a protestation from him of his "faithful mind" to his master, she goes on to reveal the suspicions attached to Laski: —

M. — "Look unto the kind of people about the Duke in the manner of their diligence."

D. — "What mean you by that? His own people? Or who?"

M. — "The espies."

D. — "Which be those?"

M. — "All. There is not one true."

D. — "You mean the Englishmen."

M. — "You are very grosse if you understand not my sayings."

D. — "Lord! what is thy counsel to prevent all?"

M. — "The speech is general. The wicked shall not prevail."

D. — "But will they enter to search my house or no?"

M. — "Immediately after the Duke his going, they will."

D. — "To what intent? What do they hope to find?"

M. — "They suspect the Duke is inwardly a traitor."

Dee replies with sincerity, "They can by no means charge me, no not so much as with a traitorous thought."

M. — "Though thy thoughts be good, they cannot comprehend the doings of the wicked. In summe, they hate thee. Trust them not. They shall go about shortly to offer thee friendship. But be thou a worm in a heap of straw."

D. — "I pray you expound that parable."

M. — "A heap of straw being never so great, is no weight upon a worm. Notwithstanding every straw hindereth the worm's passage. See them and be not seen of them; dost thou understand it?"

It now seemed certain that Dee and his skryer were to embark their fortunes with Laski. Dee begs for particular instructions when they had better take ship, what shall be done with all the furniture prepared and standing in the chamber of practice? Is it best for the Pole to resort hither oft, or to stay quiet at his house in London?

Madimi retorts —

"Thou hast no faith. He is your friend greatly and intendeth to do much for you. He is prepared to do thee good, and thou art prepared to do him service. Those

who are not faithful shall die a most miserable death, and shall drink of sleep everlasting.”

A couple of days after, on July 4, Dee returning from Court, found Kelley making preparation to go away for five days, having fixed to meet some companions in Mortlake, others in Brentford. Doubtless he found all this mystical and angelic society somewhat of a bore, and was yearning for an outburst a little more to his taste. Dee, who had seen Laski in London, knew that he intended to come down to Mortlake within a day or two, “who also,” he says, “delighted in E.K. his company.” So he wrote a short note in very polite Latin to the “Nobilissimi Princeps,” bidding him put off his visit, as “our Edward” was about to take a journey, and would not be home for five days, or so he says: “Quid sit ipsa veritas.”

He showed Kelley the letter. Kelley took great offence at these words, suspecting some secret understanding between the two against him. Dee gently referred to Kelley’s own words that his return might be within, or at the end of, five days. Kelley, angry and suspicious, seized the letter and tore it up.

Soon after, Kelley beholds “a spiritual creature” by his right shoulder, telling him to go clean away, for if he stays there he will be hanged. If he goes with the Prince, he will cut off his head, and (to Dee)

“You mean not to keep promise with me. And therefore if I might have a thousand pound to tarry, yea, a kingdom, I cannot. Therefore I release you of your promise of 50 pounds yearly stipend to me, and you need not doubt but God will defend you and prosper you, and can of the very stones raise up children unto Abraham. And again, I cannot abide my wife, I love her not, nay, I abhor her, and here in the house I am misliked because I favour her no better.”

Dee endeavoured to calm this turbulent young man, spoke of his confidence in him in his dealings with their spiritual friends, but such doings and sayings as these, he points out, are not meet and fitting.

Kelley flung out of the room in a passion, mounted his mare, and rode off furiously towards Brentford, clattering out of the house with such commotion that Jane came running up to her husband’s study to know what was the matter. It was about seven o’clock in the evening.

“‘Jane,’ I said, ‘this man is marvellously out of quiet against his wife, for her friends their bitter reports against him behind his back, and her silence thereat, etc. He is gone,’ said I, ‘but I beseech the Almighty God to guide him and defend him from danger and shame. I doubt not but God will be merciful to him, and bring him at length to such order as he shall be a faithful servant unto God.’”

Then a remarkable thing happened. By ten o’clock that night (the long midsummer twilight barely over), the prodigal returned, and mounted softly up the study stairs, “unbooted, for he was come in a boat from Brentford. When I saw him, I was very glad inwardly. But I remained writing of those records as I had yet to write, of last Tuesday’s action.

“‘I have lent my mare,’ he said, ‘and so am returned.’

“‘It is well done,’ said I.

"Thereupon he sate down in the chair by my table where he was wont to sit. He took up in his hand the books which I had brought from London, of the Lord Laskie, written to him in his commendations." Evidently books sent to Kelley by way of compliment.

Almost immediately, Madimi, who seemed to have a special wardship over books, appeared. She patted the parchment cover of one and would have taken it out of Kelley's hand. Dee heard the strokes, he says. He took a paper and, greeting his visitor, noted the conversation.

D. — "Mistresse Madimi, you are welcome in God for good, as I hope. What is the cause of your coming now?"

M. — "To see how you do."

D. — I know you see me often, but I see you onely by faith and imagination."

M. (who is always more personal than the other spirits) —

"That sight is perfecter than his," pointing to Kelley.

D. (with emotion) — "O Madimi, shall I have any more of these grievous pangs?"

M. (oracularly) — "Curst wives and great Devils are sore companions."

D. — "In respect of the Lord Treasurer, Mr. Secretary and Mr. Rawly, I pray you, what worldly comfort is there to be looked for? Besides that I do principally put my trust in God."

M. — "Madder will staine, wicked men will offend, and are easie to be offended."

D. — "And being offended, will do wickedly, to the persecution of them that mean simply."

M. — "Or else they were not to be called wicked."

D. — "As concerning Alb. Laski, his pedigree, you said your sister would tell all."

M. — "I told you more than all your Dog painters and Cat painters can do."

Kelley interrupts Dee's questions about Laski's pedigree and parentage, impatiently, with

K. — "Will you, Madimi, lend me a hundred pounds for a fortnight?"

M. — "I have swept all my money out of doors."

D. — As for money, we shall have that which is necessary when God seeth time."

Then Madimi, becoming serious, addresses to Kelley a beautiful exposition of the unity of all things: "Love is the spirit of God uniting and knitting things together in a laudable proportion." She turns sharply to him, with

"What dost thou hunt after? Speak, man, what doest thou hunt after?...Thou lovest not God. Lo, behold, thou breakest his commandments: thy bragging words are confounded...If thou hast none of these [faith, hope, love] thou hast hate. Dost thou love Silver and Gold? The one is a Thief; the other is a Murderer. Wilt thou seek honour? So did Cain. But thou hast a just God that

loveth thee, just and virtuous men that delight in thee. Therefore be thou virtuous.”

Next follows a remarkable scene. Madimi summons Barma and his fourteen evil companions, who have assumed possession of Kelley, with the words “Venite Tenebrae fugite spirito meo,” and orders them to return to the Prince of Darkness: “Depart unto the last cry. Go you thither....The hand of the Lord is like a strong oak. When it falleth it cutteth in sunder many bushes. The light of His eyes shall expel darkness.”

Kelley sees the whole crew sink down through the floor of the chamber: “A thing like a wind came and pluckt them by the feet away.” He professes his deliverance: “Methinketh I am lighter than I was, and I seem to be empty and to be returned from a great amazing. For this fortnight, I do not well remember what I have done or said.”

“Thou art eased of a great burden. Love God. Love thy friends. Love thy wife.”

And with this parting injunction, and a psalm of thanksgiving from Dee, the story of Kelley’s wild attack of temper, or as it was regarded in the sixteenth century, his possession, for the present ends. Nor is there any record of further dealings with spirits for more than two months.

CHAPTER IX

A FOREIGN JOURNEY

“Friends are everywhere to him that behave himself well, and a prophet is not esteemed in his country.”

— Robert Burton

There is a hiatus in the *Liber Mysteriorum* after this tempestuous scene with Kelley. We can, however, slightly fill it up from Dee’s other diary. It seems as if the skryer went away, leaving behind at Mortlake the poor slighted wife, who must have joined him there, for Dee notes on July 7 payment of wages to a servant he dismissed, “in the presens of Goodman Hilton and Mistress Kelley in my study.”

On the 30th, as we have seen, the Queen came in grand procession, heralded with music and song, down the river to Sion. The next day, Leicester’s secretary brought letters and gifts. On August 1, John Halton, a London minister, called; also a Worcestershire man, “a wicked spy came to my howse, whom I used as an honest man, and found nothing wrong, as I thought. He was sent to E.K.”

This entry is characteristic of the philosopher who, in spite of all his learning, was, as regards men, of so confiding and innocent a nature that he ended by being infinitely more deceived by another Worcestershire man — Kelley, for whom he entertained to the last a most faithful friendship.

Then we come on a very entertaining remark in the diary: “Aug. 18. A great tempest of wynde at midnight. Maxima era E. K. cum uxore ejus.” Kelley had

returned, and his wife was treated to another of his outbreaks, by comparison with which the gale outside was slight.

This is the last entry in the diary before Dee's departure for Poland with Laski.

The Prince proposed to take the whole party from Mortlake back with him to the Continent. He was reputed to be deeply in debt, and seems to have entertained wild hopes that they, aided by the spirits, would provide him with gold, and secure to him the crown of Poland. Kelley foresaw an easy and luxurious life, plenty of change and variety suited to his restless, impetuous nature. He hadn't as yet been out of England. There were very obvious reasons that he should quit the country now if he would escape a prison. Dee had been a great traveller, as we know, and these were not the attractions to a man of his years. He went in obedience to a supposed call, in the hope of furthering his own knowledge and the Prince's good. The notion of providing for himself and his family lay doubtless at the back of his mind also, but he had all a genius's disregard for thrift and economy, and though very precise and practical about small details, as his diary proves, his mind refused to contemplate these larger considerations of ways and means.

He disposed of the house at Mortlake to his brother-in-law, Nicholas Fromond, but in such a loose and casual way that before his return he found himself compelled to make a new agreement with him. He took no steps about appointing a receiver of the rents of his two livings, and when he came back the whole six years were owing, nor did he ever obtain the money. He says he intended at the most to be absent one year and eight months. It was more than six years before he again set foot in England.

So, unprepared, he left Mortlake about three in the afternoon of Saturday, September 21, 1583. He met the Prince by appointment on the river, and travelled up after dark to London. A certain secrecy was observed about the journey. Laski, as we have seen, was under some suspicion of Walsingham and Burleigh, whose business it had become to learn news from every Court in Europe. He was suspected of plots against the King of Poland.

In the dead of night, Dee and Laski went by wherries to Greenwich, "to my friend Goodman Fern, the Potter, his house, where we refreshed ourselves." Probably a man whom Dee had employed to make retorts and other vessels for his chemical work. Perhaps they met there the rest of the party, but on the whole it seems more probable that all started together from Mortlake. The exit of such a company from the riverside house must have been quite an event. At Gravesend, a "great Tylte-boat" rowed up to Fern's house, on the quay, and took them out to the two vessels arranged to convey them abroad. These ships, which Dee had hired, were lying seven or eight miles down stream — a Danish double fly-boat, in which Laski, Dee, Kelley, Mrs. Dee and Mrs. Kelley and the three children, Arthur, Katherine and Rowland Dee, embarked at sunrise on Sunday morning; and a boyer, "a pretty ship," which conveyed the Prince's men, some servants of Dee, and a couple of horses. They sailed at once, but the wind coming from N.W., they anchored on the Spits. The fly-boat dragged her anchor, and the wind suddenly changing to N.E., they were in danger of grounding. However, next morning they made Queenborough Haven, and landed in small fishing boats. On the landing, the boat in which the party were seated was nearly upset. Water came in up to their knees, an oar was lost, and they were in considerable peril, but Kelley seems to have risen to the occasion by baling water out of the bottom with a great gauntlet. Dee

thinks he saved their lives. Dee, poor man, was dropped from the captain's back on landing into ooze and mud, so that he was "foule arrayed" on reaching "Queenborough town, up the crooked creek." "God be praised for ever that all that danger was ended with so small grief or hurt," is his cheerful comment.

After three nights ashore, they again embarked, and at daybreak on the 27th sailed out into the Channel. On the 29th they landed at Brill. Here Laski's guardian angel, Jubanladec, seems to have granted them an interview. They only paused for two or three days, and hurried on, travelling forward each day by the sluggish Dutch canals, having exchanged their vessel for a hoy of Amsterdam at Rotterdam. They passed through Tergowd and Haarlem to Amsterdam; here they stayed three days, and Dee despatched Edmond Hilton with his heavy goods by sea to Dantzic. By Enkhuisen they sailed up the Zuyder Zee to Harlingen, then took the canals again in little "scuts," or small boats, to Leewarden, thence to Dokkum, in West Friesland, in some still smaller craft. On the Sunday spent at Dokkum, Gabriel appeared in the crystal, and delivered to them the most searching and exalted code of ideals for the conduct of their lives. Everything was laid bare before his relentless and unerring eyes. They were bidden to live in brotherly charity, the imperfections of each to be by the other "perfectly shadowed in charity."

"Bear your own infirmities, and so the infirmities of others, with quiet and hidden minde...The Cross of Christ is the comparison in mildness over thy brethren...He that forsaketh the world for the love of God in Christ shall have his reward, but he that forsaketh himself shall be crowned with a diadem of glory. Bridle the flesh. Riotousness is the sleep of death and the slumber to destruction. Feed the soul, but bridle the flesh, for it is insolent. Look to your servants. Make them clean. Let your friendship be for the service of God. All friendship else is vain and of no account. Persevere to the end. Many men begin, but few end. He that leaveth off is a damned soul."

From Dokkum the travellers put out to sea again, beyond the islands, and sailed up the Western Ems to Embden. They arrived after dusk, and found the city gates shut, so they lay all night on shipboard. Next morning, the 18th October, Laski took up his quarters at "The White Swan," on the quay, for he was to remain there to see the Landgrave, and obtain money. The others "lay at 'The Three Golden Keys,' by the English House," and left early next morning by a small boat to sail up the river Ems to Leer, and thence by a little tributary to Stickhuysen and Apen — "a very simple village," and so on to Oldenburg. A night there, and then on by Delmenhorst to Bremen, where they lodged at "an old widow, her house, at the signe of the Crown."

Here Il, the jaunty spirit who was like a Vice in a morality play, again appeared to them, clad in a white satin jerkin, ragged below the girdle. The curtain lifted, and his first words were theatrically light.

"Room for a player! Jesus! who would have thought I should have met you here?"

D. (solemnly). — "By the mercies of God we are here. And by your will and propriety and the power of God, you are here."

Il. "Tush, doubt not of me, for I am Il."

Kelley (with rebuke). — "My thinketh that the gravity of this action requireth a more grave gesture, and more grave speeches."

Il. — "If I must bear with thee for speaking foolishly, which art but flesh and speakest of thy own wisdom, how much more oughtest thou to be contented with my gesture, which is appointed of Him which regardeth not the outward form, but the fulfilling of His will and the keeping of His commandments, etc., etc."

Kelley. — "I do not understand your words. I do only repeat your sayings."

Il. — "It is the part of a servant to do his duty, of him that watcheth to look that he seeth...Do that which is appointed, for he that doeth more is not a true servant."

Il turns from Kelley to Dee. "Sir, here is money, but I have it very hardly. Bear with me, for I can help thee with no more. Come on, Andras; where are you, Andras?" he calls.

Andras, in a bare and shabby gown, "like a London 'prentice," appears, but empty-handed.

Il. — "This is one of those that forgetteth his businesse so soon as it is told him."

Andras. — "Sir, I went half-way."

Il. — "And how then? Speak on. Speak on."

Andras. — "Then, being somewhat weary, I stayed, the rather because I met my friends. The third day, I came thither, but I found them not at home. His family told me he had gone forth."

Il. — "And you returned a coxcomb. Well, thus it is. I placed thee above my servants, and did what I could to promote thee. But I am rewarded with loytring and have brought up an idle person. Go thy way, the officer shall deliver thee to prison, and there thou shalt be rewarded. For such as do that they are commanded deserve freedom; but unto those that loytre and are idle, vengeance and hunger belongeth."

Then Dee questions Il about Laski, and whether he is having any success in his efforts to obtain money, about Laski's brother-in-law, Vincent Seve, whose errand in England is not yet completed, and whether they shall all arrive safe at Cracow, or the place appointed.

Kelley has a sight of Master Vincent in a black satin doublet, "cut with cross cuts," a ruff and a long cloak, edged with black or blue. Then Il goes off into a mystical rhapsody, at the end of which he suddenly falls "all in pieces as small as ashes."

Next day, Kelley sees Master Vincent again, walking down by Charing Cross, accompanied by "a tall man with a cutberd, a sword and skie-coloured cloack." He passes on towards Westminster and overtakes a gentleman on horseback with five followers in short cape-cloaks and long moustaches. The rider is a lean-visaged man in a short cloak and with a gold rapier. His horse wears a velvet foot cloth. (It sounds like a vision of Raleigh.)

They are merry. Vincent laughs heartily and shows two broad front teeth. He has a little stick in his crooked fingers. The scar on his left hand is plainly seen. He has very high straight close boots. They arrive at Westminster Church (the Abbey). Many people are coming out. A number of boats lie in the river, and in the gardens at Whitehall a man is grafting fruit trees. The lean-visaged man on horseback

alights, and goes down towards, and up, the steps of Westminster Hall, Vincent with him. His companion walks outside and accosts a waterman. The waterman asks if that is the Polish bishop? The servant wants to know what business it is of his. A messenger comes down the steps of the Hall and says to Vincent's man that his master shall be despatched to-morrow. The servant saith he is glad of it. "Then all that shew is vanished away."

There are one or two allusions here to an emissary from Denmark who has brought a bag of amber. Il also says he has much business in Denmark. Frederick, the King of Denmark, was in frequent correspondence with Queen Elizabeth at this time.

At Bremen, where they stayed a week, Dee says that Kelley, when skrying by himself, was given a kind of rambling prophetic verse of thirty-two lines, which he prints, foretelling the downfall of England, Spain, France and Poland. In fact, a general debacle of nations. It is very bad prophecy and still worse poetry, but evidently inspired by the highly diplomatic foreign relations of Elizabeth and her two ministers.

On leaving Bremen, the party travelled by Osterholz to Harburg, on the left bank of the Elbe. They crossed the river and went on by coach to Hamburg. Laski had then rejoined them, but stayed behind in Hamburg, at "the English house," probably the consul's. Dee and the rest reached Lubeck on November 7.

CHAPTER X

PROMISES AND VISIONS

"Search while thou wilt; and let thy reason go
To ransom truth, e'en to th'abyss below;
Rally the scattered causes; and that line
Which nature twists be able to untwine.
It is thy Maker's will; for unto none
But unto reason can He e'er be known."

— Sir Thomas Browne

The dealings which Kelley had in Lubeck with the spirits seem to throw a light on all his relations with Dee. Kelley is gaining confidence; he sees that he is already able to dupe his employer considerably. He has only to manipulate the conversations a little to show up often his so-called sincerity. He can pretend he is aghast at Il's levity, and he seems to have been cunning enough when the spirits very often blamed him.

Buthis dreams of advancement in wealth and fame were no nearer accomplishment. He had seen through Dee's ambition. It was very different from his own, but he thought he could use it to his own advantage. Dee was now flattered without stint.

So at the sitting in November 15 he sees eleven noblemen in rich sables. One, wearing a regal cap trimmed with sable, is seated on a chair beset with precious stones. "He is a goodlier man than the Lord A.L." He addresses Dee with glittering promises. He is the King or the Emperor, and is represented in the margin of the diary by a crown. He says to Dee: —

“Pluck up thy heart and be merry, pine not thy Soul away with inward groanings, for I will open unto thee the secrets of Nature and the riches of the world, and withal give thee such direction that shall deliver thee from many infirmities both of body and mind, ease thee of they tedious labours and settle thee where thou shalt have comfort.

“Thanks be given unto the Highest now and ever.

“Why doest thou [hesitate] within thy thought? Hast thou not need of comfort?”

“Yes, God knows, for I am half confounded.”

“Then first determine within thyself to rest thee for this winter. Secondly, open thy mind to desire such things as may advance thy credit and enrich thy family, reap unto thee many friends and lift thee up to honour. For I will stir up the mindes of learned men, the profoundest in the world, that they shall visit thee. And I will disclose unto you such things as shall be wonderful and of exceeding profit. Moreover I will put to my hands and help your proceedings, that the world may talk of your wisdom hereafter. Therefore wander not farther into unknown places: contagious, the very seats of death for thee and thy children and such as are thy friends. If thou enquire of me where and how, I answer, everywhere, or how thou wilt. Thou shalt forthwith become rich, and thou shalt be able to enrich kings and help such as are needy. Wast thou not born to use the commodity of this world? were not all things made for man’s use?”

Here are the old dreams of the philosopher’s stone, the elixir of life, the transmutation of metals and all the works of alchemy, for which both these travellers were adventuring their lives in a foreign land. Dee does not seem exactly dazzled by these allurements. He only begs leave to ask questions, and seeks to keep the speaker to the point. “Are they to stay there and not to go on with Laski? Where are they to spend the winter?”

“Where you will,” comes the answer. “Are you so unwise as to go with him now? Let him go before, and provide for himself and the better for you. In the Summer, when it is more fair, you can follow. The weather now will be hard and the travel unfit for children. Heap not up thy wife’s sorrow.”

“I desire to live in quiet that my spirit may the better attend to the service of God.”

“Well, you are contented?”

Dee asks again, are they to part from Laski? Will it not be prejudicial to their arrangement, they having entered into a kind of covenant with him? “Are you not content?” the visitor repeats.

Then he did impart some remarkable information to Dee, in which there was certainly a grain of telepathically conveyed truth.

“Your brother is clapped up in prison. How like you that? Your house-keeper I mean.”

This evidently refers to Nicholas Fromond.

“They examine him. They say that thou hast hid divers secret things. As for thy books, thou mayst go look at them at leisure. It may be that thy house may be burnt for a remembrance of thee, too. Well, if they do, so it is. I have given thee my counsel, and desired to do thee good. The choice is thine.”

There is no evidence that Fromond was imprisoned, but he was a poor protector of his brother-in-law's valuable effects. He was powerless against a mob who broke into Dee's house not long after his departure from Mortlake, made havoc of his priceless books and instruments, and wrought irreparable damage. It was not nearly two months since Dee had left Mortlake, and, moving from place to place, it was unlikely that he had heard any news from thence. No date has ever been assigned to this action of the mob. It is quite conceivable that it actually took place on this day, November 15, and that by Kelley's clairvoyant or telepathic power the news was communicated across the sea and continent to Dee.

The poor astrologer was torn with doubts and misgivings. He fell upon his knees, uttering a piercing supplication to the “Author of all truth and direction of such as put their trust in him.”

“I most humbly beseech thee consider these promises thus to me propounded. If they be true and from thee, confirm them. If they be illusions and not from thee, disprove them. For hardly in my judgment they do or can agree with our former precepts and order taken by thee.”

And again, in an agony:

“O Lord, I doubt of these promises of ease, wealth, and honour: I suspect the whole apparition of the eleven to be an illusion. O confirm my judgment or disprove it.”

So he seeks for a revelation of guidance, writes letters to Laski, and waits. Soon he perceives these temptations to have come from “a very foolish devil.” He decides that they will continue to throw in their lot with Laski, who rejoined them in Lubeck. He left again to visit the Duke of Mecklenburg, they meanwhile going by Wismar to Rostock and Stettin, which place they reached at ten o'clock on Christmas morning. Laski joined them in a fortnight. They passed on by Stayard to Posen, where Dee adds an antiquarian note that the cathedral church was founded in 1025, and that the tomb of Wenceslaus, the Christian king, is of one huge stone. It was here that Dee began to enter curious notes about Kelley in the *Liber Peregrinationis*, written in Greek characters, but the words are Latin words, or more frequently English. The supposition is that Kelley was unacquainted even with the Greek alphabet. Dee kept his other foreign diary, written in an *Ephemerides Coelestium* (printed in Venice, 1582), secret from his partner, for Kelley had obtained possession of an earlier one kept in England and had written in it unfavourable comments, as well as erased things, about himself. Dee had the last word, and has added above Kelley's “shameful lye,” “This is Mr. Talbot's, his own writing in my booke, very unduely as he came by it.” The various diaries sound, perhaps, confusing to the reader, but are really quite simple. By the private diary is meant the scraps in the Bodleian Almanacs, edited by Halliwell for the Camden

Society, in which he seldom alludes to psychic affairs. The Book of Mysteries is the diary in which he relates all the history of the crystal gazing. The printed version (True Relation) begins with Laski's visit to Mortlake on May 28, 1583.

Winter had now set in with unwonted rigour, and one is amazed at the celerity with which this great caravanserai of people and goods pushed on from place to place. From Stettin to Posen, for instance, is more than 200 miles, and it was accomplished within four days and apparently with only one stop. Then southwards into the watery district between the Oder and the Warthe, where the country was so icebound that they had to employ five-and-twenty men to cut the ice for their coaches for a distance as long as two English miles. On February 3 they reached Lask, on the Prince's own property, and at last were comfortably housed in the Provost's "fair house by the Church." Here Dee was ill with ague, but the table was set up, and a new spirit called Nalvage appeared in the globe. Nalvage's "pysiognomy was like the picture of King Edward the Sixth. His hair hangeth down a quarter of the length of the cap, somewhat curling, yellow." Dee, of course, had seen the young King when he presented his books, so this is a first-hand reminiscence. Nalvage stood upon a round table of mother-of-pearl, and revealed to them many cabalistic mysteries, tables of letters and names. There was a terrible vision of Mrs. Dee lying dead, with her face all battered in, and of the maid Mary being pulled out of a pool of water half drowned. But it seems to portend no more than did another piece of ill news conveyed at the same time: "Sir Harry Sidney died upon Wednesday last. A privy enemy of yours." Dee says, "I ever took him for one of my chief friends," and adds, with unconscious humour:

"Note. At Prague, Aug. 24, I understood that Sir H. Sidney was not dead in February nor March, no, not in May last. Therefore this must be considered. Doctor Hagek, his son, told me."

This note makes us realise for a moment how slowly news travelled from England to the Continent in this year of grace 1584.

The informant, Madimi, "a little wench in white," told Dee that she had been in England at his house, and all there were well. The Queen said she was sorry she had lost her philosopher. But the Lord Treasurer answered, "He will come home shortly a begging to you." "Truly," adds Madimi, "none can turn the Queen's heart from you." Then, recurring to Mortlake, she says: "I could not come into your study. The Queen hath caused it to be sealed." This no doubt after the breaking in of the rioters. Dee was counselled to go and live at Cracow. He would like to be led step by step, and begs to know what house "is in God's determination for me and mine." Madimi answers, "As wise as I am, I cannot yet tell what to say." Dee demurs to the expense, and reproaches her for not telling them sooner. Needless cost would have been saved, and he does not know if Laski will have enough money for yet another move. He had rather Kesmark had been redeemed before Laski went to Cracow. Perhaps then his credit with the people would be greater.

Laski had heavily mortgaged his estates in Poland; he was in debt, and he had apparently raised a loan on his Kesmark property for a large sum of money. The bond was to expire on St. George's Day, April 23 next, and without the Emperor's help Dee did not see how it could be met. Kelley recurs to the Danish treasure he had found in England, hidden in ten places, which they would fain have

transported to Poland now, very speedily, for Laski's use. Dee is anxious to know from Madimi whether his rents are being duly received in England by his deputy or not, "whether Her Majesty or the Council do intend to send for me again or no." They ask instructions from Gabriel about Kelley's red powder, and how they shall use it. Dee seeks for information about the Prince's wife, whom they have not yet seen, but they doubt she is not their sound friend. He begs for medicine for his ague. And again, shall he take the pedestal, being made in Lask for the holy table, on to Cracow when they go, "rather than make a new one there, both to save time and to have our doings the more secret"? This pedestal was for the crystal to rest in upon the table. Three iron hasps and padlocks were also made at Lask for the table. If any answer to these questions was vouchsafed by the spirits, it was in the usual enigmas.

Part of Dee's baggage, a chest left at Toon on their way out, not having arrived, they did not immediately obey the injunction to move on to Cracow, but after about five weeks in Lask, they again journeyed forward.

CHAPTER XI

CRACOW

"Sir, to a wise man all the world's his soil:
It is not Italy, nor France, nor Europe
That must bound me if my fates call me forth.
Yet, I protest it is no salt desire
Of seeing countries, shifting a religion;
Nor any disaffection to the State
Where I was bred, and unto which I owe
My dearest plots, hath brought me out: much less
That idle, antique, stale, grey-headed project
Of knowing men's minds and manners."

— Jonson, Volpone, or The Fox

At the close of the sixteenth century, Cracow was at the height of its fame and prosperity. It was still the capital of Poland, and the residence of her kings, as well as the seat of the university founded two hundred years before by Casimir the Great. The Gothic cathedral erected under the same king, the burial place of Polish monarchs, was already adorned with sculptures and bronzes, the work of Renaissance artists from Florence and Siena. The visitor of today will find himself surrounded by churches and other buildings dating from the twelfth, fourteenth, and sixteenth centuries. Amid the ramparts of the Austrian fortress can still be traced here and there the older fortifications.

The city lies in the centre of a vast plain, almost at the confluence of two rivers, the Vistula and Rudowa. Across this plain from the north-west the travellers came, and reached Cracow in the afternoon of March 13, 1584.

"We were lodged in the suburbs by the church, where we remained a seven night, and then we (I and my wife) removed to the house in St. Stephen Street, which I had hired for a year for 80 gylvers of 30 groschen. And Master Edward Kelley came to us on Friday in the Easter week by the new Gregorian Kalendar,

being the 27 day of March by the old Kalendar, but the sixth day of April by the new Kalendar, Easter Day being the first day of April in Poland, by the new Gregorian institution.”

From the time of arriving in Poland Dee is careful to enter the dates in both old and new styles. The New Style was then extremely new, it having been introduced by Pope Gregory XIII. only a couple of years before, and universally adopted by all Roman Catholic countries. England, in all the fervour of her recently established Protestantism, would have none of it, but still desired not to lag behind in needful reforms. Dee, as already stated, had been commissioned before he left England to make calculations by which the calendar could be suitably adopted in this country. The Roman Church had assumed the chronology adopted by the Council of Nice to be strictly correct. But Dee desired to ascertain the actual position of the earth in relation to the sun at the birth of Christ, as a basis on which to rectify the calendar. The result of his calculations would have omitted eleven instead of ten days.

Dee's book (which was never printed, but remains in manuscript among the Ashmolean MSS.) was entitled “A Playne discourse and humble advise for our gracious Queene Elizabeth, her most Excellent Majestie, to peruse and consider as concerning the needful Reformation of the Vulgar Kalendar for the civile yeres and daies accompting or verifying, according to the tyme truely spent.” It was finished and delivered to Burleigh on February 26, 1583. To him it was inscribed with these rather playful verses: —

“Το οτι, and Το διοτι
I shew the thing and reason why,
At large, in briefe, in middle wise
I humbly give a playne advise;
For want of tyme, the tyme untrew
If I have must, command anew
Your honour may, so shall you see
That love of truth doth govern me.”

Burleigh proposed that skilful men in science, as Mr. Digges, be called from the universities to peruse the work and confer. But the Council of State consulted Archbishop Grindal and three of the bishops who recommended the rejection of Dee's scheme, chiefly on the ground that it emanated from Rome, and so their opposition delayed this desirable public reform in England for 170 years. Dee agreed to grant the ten days for the sake of conformity with the rest of the world, if his calculation that eleven were strictly accurate was publicly announced. It will be remembered that in 1742, when the change was made, eleven days were omitted from the calendar.

The household at Cracow now consisted of Mrs. Dee, Arthur, Katherine, Rowland and his nurse, and the maid Mary, Mrs. Kelley and her husband, a servant named John Crocker and a boy. It was augmented before long.

The actions with the spirits soon recommenced. Kelley began very unfairly by trying sittings alone, for he was importunate to know how the Prince was going

to treat them as regards money. But he seems only to have drawn reproof and much excellent counsel on himself from Nalvage.

The next few weeks were taken up with instructions from Gabriel and Nalvage, consisting of letters, numbers and words in a strange Eastern or angelic language, to which Dee probably had some key, though they appear unintelligible. The partners were bidden to keep the Sabbath, and Dee resolves to go always to church. Kelley seems to have turned restive once again. On April 17 he declared he would sit no more to receive these A.B.C. messages unless they were better explained. "There is your boy, John," he said; "he can well enough give you these simple signs. You need me no longer. I will be gone." As Casaubon remarks, "he was ever and anon upon projects to break with Dee."

Two days after, Dee heard him come upstairs to his own study, and called him in. Dee's study was an inner room through one that opened on to the stairs, at the foot of which was a door. He explained that he had now a distinct clue to the meaning of the tables of letters on which he had long been puzzling; dwelt on how essential it was to miss not a single letter, or else the words would err. He asked him, in fact, to resume his skrying, and encouraged him by saying that he knew he "would come to like better this due and methodical manner of our friends' proceeding," if only he would continue. Kelley scornfully replied that their teachers were mere deluders, and no good or sufficient teachers. In two years they had not made them able to understand, or do anything. "In two years," he said boastingly, "I could have learned all the seven liberal arts and sciences, if I had first learned Logick." He protested he would have no more to do with the spirits in any manner or way, wished himself in England, and vowed if the books were his he would burn them all. "These spiritual creatures are not bound to me. Take John for your skryer."

Dee pathetically recapitulated his long desire for wisdom, his faith that more knowledge will be granted him. Kelley went out leaving Dee buried in prayer.

In two days, Kelley was again submissive to the spirits, who bade him not mistrust. "Let him that is a servant and is commanded to go, go. And let not the earth rise up and strive against the plowman." So they go on again with their cabalistic letters and signs. In the beginning of May, Dee notes: "E.K. is very well persuaded of these actions now, thanked be the Highest."

Later in the month he says: "There happened a great storm or temptation to E.K. of doubting and mistaking our instructors and their doings, and of contemning and condemning anything that I knew or could do. I bare all things patiently for God his sake." Kelley at the same time says: "I am contented to see and to make true report of what they will show, but my heart standeth against them."

That night after the sitting, he again swore he would not go on skrying. The morning after, Dee knocked at his study door, and bade him come, for Nalvage had left off the previous day in the middle of an interesting geographical lesson about unknown parts of the earth, and had told them to be ready to continue it next morning. Kelley was obdurate, and Dee retired to prayer. In half an hour, the skryer burst in with a volume of Cornelius Agrippa's in his hand, where he said all the countries they were told about yesterday were described and written down. "What is the use," he said, "in going on with this farce, if they tell us nothing new?" Dee replied that he was glad to see Kelley had such a book of his own; that Nalvage in giving those ninety-one new names of countries, all of seven letters, was answering

his particular request; that he had verified the lands in the charts of Gerardus Mercator and Pomponius Mela, which he had at hand and produced, "and now," he said triumphantly, "we know exactly what angels govern which countries, in case we are ever called to practise there." Nalvage had described the natives of the countries and the products, suggesting that in Greenland a vein of gold might be found. "Your wilful phantasie," Dee ended to Kelley, "perverts your reason; and whereas you find fault with our instructors, I, who much more narrowly peruse their words, know that they give direct answers to my questions, except indeed when you misreport them, or I make a mistake in hearing or writing." So three days were lost, as Dee bemoans in the margin, and then Kelley was again induced to resume his skrying.

On the 25th, Laski arrived and left again for Kesmark. He now intended to redeem his property there. But King Stephan and his Chancellor were both set against him, and he wished Dee to go with him to the Emperor of Austria, Rudolph II.

Instructions were now given that they must be ready to go with Laski to the Emperor, must make themselves apt and meet, for until no remembrance of wickedness is left among them they cannot forward the Lord's expeditions. Gabriel tells Kelley at some length of his many faults. Dee did not hear this, but considerably does not ask for a repetition of the catalogue. He only bids Kelley listen well. Gabriel says if any will be God's minister, he must sweep his house clean, without spot. He must not let his life be a scandal to the will of the Lord.

"God finds thee, as he passes by in his Angel, fit in matter, but, my brother, God knows, far unfit in life. O consider the Dignity of thy creation. See how God beareth with thy infirmity fromtime to time. Consider how thou art now at a Turning where there lieth two wayes. One shall be to thy comfort, the other to perpetual woe."

Gabriel's dart, like a flame of fire, is upright in his hand. He pleads with Kelley in such adorable gentleness and with such tender and ecstatic weeping, that both his hearers cannot withhold their tears. Gabriel's words so moved Kelley that he professed absolute repentance for all his dealings with wicked spirits, vowed he would burn whatsoever he has of their trash and experiments, and write a book setting forth their horrible untruth, and blasphemous doctrine against Christ and the Holy Ghost. It is curious that among the other errors he renounced was the Eastern doctrine that a fixed number of souls and bodies have always been in the world, and that a man's soul goes from one body to another, viz., into the new-born child. In the light of after-events, it is significant that another belief abjured is that to the chosen there is no sin.

Dee was overjoyed, and full of thanksgiving. He believed utterly in Kelley's conversion, all the more because of his former lapses. If anything were wanting to prove it, it was to be found in the humble and patient spirit in which this impracticable, volcanic skryer of his now sat on patiently for two hours and a half before the stone without either cloud, veil, or voice appearing. This to Kelley was "no light pang." Nay, he argues that servants must wait as long as their Master pleases, and the time is better spent than in any human doings. He opens his wayward heart to Dee, the man without guile, and avows that he had fully intended at his last outburst, ten days before, to have gone away secretly with those with whom he had so long dealt had they not threatened him with beggary — a thing,

adds Dee, that he most hated and feared. Therefore, till this time he had been a hypocrite. Now, in his new-found elation, he cares not for poverty; life eternal is more than riches and wealth. He that can be hired with money to forsake the devil is no Christian. He will doubt no more, but believe. Dee adds that he omits many others of his godly sayings, thinking these sufficient to write down. He had no suspicion of any ill faith. His love for Kelley was truly unbounded in its long-suffering. He offered a fervent thanksgiving for the conversion, and for Satan's defeat, and prayed for them both for "continual zeal, love of truth, purity of life, charitable humility and constant patience to the end."

The same atmosphere continued next day, June 11. Kelley protests he could sit for seven years awaiting a vision. They do wait nearly four hours. Evidently Kelley converted is not going to be so good a medium as Kelley unregenerate. Dee explains the non-appearance as retribution for the three days wasted before. But they are all rather depressed, especially the Prince.

Then a vision appears of the castle of Grono, in Littau, where the King of Poland then was. Stephan's arms are seen over the gate. A man like an Italian is beheld, carrying an iron chest within which are an image in black wax, a dead hand, and so on. The promise is that Laski shall be King of Poland.

Early next morning Kelley, lying awake in bed, had a vision which he or Dee afterwards embodied in the curious diagram facing [?].

It may be taken as a sample of the kind of intricate complications of theurgy which often absorbed the pair for days together.

The vision was expounded by Ave, something in the following manner: —

A VISION.

East and West, North and South, stand four sumptuous and belligerent Castles, out of which sound Trumpets thrice. From every Castle, a Cloth, the sign of Majesty, is cast. In the East it is red, like new-smitten blood. In the South, lily-white. In the West, green, garlick-bladed like the skins of many dragons. In the North, hair-coloured, black like bilberry juice. Four trumpeters issue from the Castles, with trumpets pyramidal, of six cones, wreathed. Three Ensign bearers, with the names of God on their banners, follow them. Seniors, Kings, Princes as train bearers, Angels in four phalanxes like crosses, all in their order, march to the central Court, and range themselves about the ensigns.

IT VANISHETH.

The dazzling, shifting formation seems to proceed in a glorious pageant of colour, and then to rest, frozen into a minutely exact phantasticon of harmony.

Now for the meaning of the allegory. The Castles are Watch towers provided against the Devil, the Watchman in each is a mighty angel. The ensigns publish the redemption of mankind. The Angels of the Aires, which come out of the Crosses, are to subvert whole countries, without armies, in this war waged against the Powers of Darkness.

Many weeks were taken up with tables of letters for the games, angels, seniors, etc.

Kelley is again sometimes very much tempted to doubt the good faith of the angelic visitants, more especially as he sadly fears that good angels will not provide them with the needful money that the Prince requires for the success of his cause. One day, Dee wrote in his diary: "E.K. had the Megrom sore." Kelley read this, and "A great temptation fell on E.K., upon E.K. taking these words to be a scoff, which were words of compassion and friendship." After this Dee resorts more frequently to the use of his Greek characters.

The Dees were still living near the church of St. Stephen, where Kelley was a frequent visitor. Laski lodged with the Franciscans in their convent. The revelations were now of tables of letters again, intended, Dee things, that they may learn the names of angels and distinguish the bad from the good. (The bad angels' names are said to be all of three letters.) He hopes Ave is about to reveal the healing medicines; the property of fire; the knowledge, finding, and use of metals; the virtues of stones, and the understanding of arts mechanical. But Ave says it is the wicked spirits who give money coined, although there are good angels who can find metals, gather them and use them. Then Madimi appears, after a long absence, and addressing Dee as "my gentle brother," tells him that Ave is a good creature and they might have made more of him. She wants to know why they have not gone to the Emperor Rudolph. The old excuse of poverty is pleaded.

That evening, June 26, at seven o'clock, Dee sat in his study considering the day's action, when Kelley entered and asked if he understood it. He, it seems, had burst out again, had raged and abused Michael and Gabriel, called Ave a devil, made "horrible speeches." There had been a most terrible storm of thunder and rain, and Kelley always appeared sensitive to these electric disturbances. Now he is penitent once more, acknowledges his words were "not decent," and begs forgiveness of God and Dee. The talk lasted long, and several calls to supper were unheeded; then, just as they were leaving the room, Kelley felt something warm and heavy on his shoulder, and behold! it was Ave come to acknowledge his repentance. Dee hands him his Psalter book, and with three prayers devoutly said, all is smooth again, and they go down to supper.

Dee's patience and humility seemed unending. In conversing with the spirits he is always, as it were, face to face with God. His replies are made direct to the Majesty of the Divine. When Kelley is blamed he assumes equal blame.

Ave. — "Which of you have sought the Lord for the Lord his sake?"

D. — "That God can judge. We vaunt nothing of our doings, nor challenge anything by the perfection of our doings. We challenge nothing, Lord, upon any merits, but fly unto thy mercy, and that we crave and call for. Curiosity is far from our intents."

CHAPTER XII

FROM CRACOW TO PRAGUE

"Since all men from their birth employ sense prior to intellect, and are necessarily first conversant with sensible things: some, proceeding no farther, pass through life considering these as first and last; and apprehending what is painful to be evil, what is pleasant good, they deem it sufficient to shun the one and pursue

the other. Some pretending to greater reason than the rest, esteem this wisdom; like earth-bound birds, though they have wings they are unable to fly. The secret souls of others would recall them from pleasure to worthier pursuits, but they cannot soar: they choose the lower way, and strive in vain. Thirdly, there are those — divine men — whose eyes pierce through clouds and darkness to the supernal vision, where they abide as in their own lawful country.”

— Plotinus

All this time, Dee is so absolutely absorbed with his spiritual visions that we know very little about his outer existence. For three years after he left England, he neglected to enter anything in his ordinary diary, and the *Liber Mysticus* contains nothing of everyday affairs.

In this July, 1584, however, at Cracow, he does enter an important piece of information about his boy Rowland, the baby then about a year and a half old.

“1584. Remember that on Saturday the fourteenth day of July by the Gregorian Calendar, and the fourth day of July by the old Calendar, Rowlande my childe (who was born Anno 1583, January 28 by the old calendar) was extreemely sick about noon or mid-day, and by one of the clock was ready to give up the ghost, or rather lay for dead, and his eyes set and sunck in his head.

“I made a vow if the Lord did foresee him to be his true servant, and so would grant him life, and confirm him his health at this danger, and from this danger, I would during my life on Saturdays eat but one meal.”

Although we never find this vow referred to again, there is no doubt that Dee devoutly kept his bargain. Rowland did grow up and had other remarkable escapades.

Still the journey to Prague to the Emperor Rudolph was postponed, and it was not until the first day of August that the trio set off. Dee and Kelley were ready to go sooner, but Laski had not sufficiently recovered his finances. The party had been augmented by the arrival of Kelley's brother, Thomas, and Edmond Hilton, son of Dee's old friend, Goodman Hilton, who had sometimes lent him money, and who in 1579 had requested leave for his two sons to resort to Dee's house. Thomas Kelley accompanied the Prince and his pair of crystal gazers. The women were left behind under Edmond Hilton's charge.

Five or six days after arriving in Prague, on the day of the Assumption of the Blessed Virgin Mary, August 15, Dee was settled in the house of Dr. Hageck, by Bethlem in Old Prague (Altstadt), kindly lent him for his use. The house was not far from the old Rathhaus, the great clock tower of which, dated 1474, and the Council Chamber, still exist. It was also near the Carolinum or University, founded by Charles IV. in 1383, in whose hall John Huss a hundred and fifty years before had held his disputations. When Dee and his party arrived in the city Tycho Brahe was still alive, though not yet a resident in Prague. Prague was the city of alchemists. The sombre, melancholy Emporer himself relieved his more seriuous studies by experiments in alchemics and physics. A mania for collecting rare and valuable objects provided him with a still lighter pastime. He painted, read much, and worked in iron, was a good linguist, and a regular dilettante. Unmarried, and with

all the weaknesses of the Habsburgs, for nearly thirty years out of his long life and far too protracted reign he was quite mad. Not many years after his reception of Dee he ceased to make any pretence of public appearance.

The excellent little study or “stove” (from “stube,” German for study) in Dr. Hageck’s house had been since 1518 the abode of some student of alchemy, skilful of the holy stone. The name of the alchemist, “Simon,” was written up in letters of gold and silver in several places in the room. Dee’s eyes also fell daily on many cabalistic hieroglyphs, as well as on drawings or carvings of birds, fishes, flowers, fruits, leaves and six vessels, all the work, he presumed, of Simon baccalaureus Pragensis. Over the door were the lines:

“Immortale Decus par gloriaque illi debentur
Cujus ab ingenio est discolor hic paries,”

and on the south wall of the study was a long quotation from some philosophical work ending with

“Ars nostra est Ludus puero cum labor mulierum. Scitote omnes filii artis hujus, quod nemo potest colligere fructus nostri Elixiris, nisi per introitum nostri lapidis Elementati, et si aliam viam quaerit, viam nunquam intrabit nec attinget. Rubigo est opus, quod sit ex solo auro, dum intraverit in suam humiditatem.”

In these congenial surroundings skrying was at once resumed. Madimi (now grown into a woman) was the first visitor, and Dee hastened to inquire for his wife and child at Cracow. He notes that his first letter from her arrived on the 21st. She joined him before long. He was told to write to the Emperor Rudolph. He did so on August 17, and he relates in the epistle the favourable attention he has received from Charles V. and his brother Ferdinand, Rudolph’s father, the Emperor Maximilian II., who accepted the dedication of his book *Monas Hieroglyphica*, and others of the imperial house. He signs the letter, “Humillimus et fidelissimus clientulus Joannes Dee.”

After waiting a week he sent the letter by Laski’s secretary to the Spanish ambassador, Don Guglielmo de Sancto Clemente, who was to present it to Rudolph. With it he also sent a copy of his *Monas*. The same night he heard by Emerich Sontag, the secretary, that the Emperor had graciously accepted the book, and within three or four days would appoint a time for giving him an audience.

He received letters from England on August 27, which were dated April 15 and 16. His brother-in-law, Nicholas Fromond, told him that Mr. Gilbert, Mr. Sled, and his bookseller had used him very ill. Doubtless he was expecting some money from the sale of his books. Mrs. Dee was much upset at her brother’s defections, and poor Dee was worried all round, for, as he writes in the margin of his diary, “Satan is very busy with E.K. about this time.” Kelley seems to have been making friends with young Simon Hageck, son of “our host,” as Dee calls him. To furnish his own study he has bought a clock of Mrs. Hageck for five ducats, which was so good a bargain that she requested “a quart of wine” (probably a quarter hogshead) thrown in. She herself does not seem to have benefited much by the largess, for Kelley and Laski’s man Alexander proceeded to get drunk on it, and fell to fighting and quarrelling. Dee, who had stayed writing in his study instead of going to supper,

was warned by the city watchman to keep better peace in his house. Looking from his window to account for the caution, he saw Laski's man sitting on a great stone, and called him to come in. When he had heard the tale he went off to Hageck's to "understand the very truth," and there found Kelley lying in a drunken sleep on a form. This was a relief. He was better pleased to think that angry words had been spoken "when wine, not wit, had rule," and persuaded Laski's man to stay in his lodgings that night instead of raging forth into the street. Already a scandal had been made which he foresaw would do him much harm. Next morning Kelley had a madder fit than ever.

"Much ado. Emerich and his brother (Thomas Kelley) and I had to stop or hold him from going on Alexander with his weapon. At length we let him go, in his doublet and hose without a cap or hat on his head, and into the street he hasted with his brother's rapier drawn, and challenged Alexander to fight. But Alexander said 'Nolo, Domine Kelleie, Nolo.' Hereupon E.K. took up a stone and threw after him as after a dog, and so came into the house again in a most furious rage for that he might not fight with Alexander. The rage and fury was so great in words and gestures as might plainly prove that the wicked enemy sought either E.K. his own destroying of himself, or of me, or of his brother. This may suffice to notify the mighty temptation and vehement working of the subtle spiritual enemy, Satan, wherewith God suffered E.K. to be tempted and almost overcome: to my great grief, discomfort, and most great discredit, if it should come to the Emperor's understanding. I was in great doubt how God would take this offence, and devised with myself how I might with honesty be cleared from the shame and danger that might arise if these two should fight. At the least, it would cross all good hope here with the Emperor for a time, till God redressed it."

By this time Dee had become skilled and tactful in dealing with his turbulent squire, and he soon brought him to quietness by yielding to his humour and saying little. At mid-day came Dee's messenger from Cracow, bringing letters from and tidings by word of mouth of his dear wife Jane, "to my great comfort." Much he was in need of comfort, and when a letter from the Emperor arrived the same day, desiring to see him, Kelley's enormities began to assume less desperate proportions.

Dee started at once to the Castle, the Palace of Prague, and waited in the guard-chamber, sending Emericus to the Lord Chamberlain, Octavius Spinola, to announce his coming.

"Spinola came to me very courteously and led me by the skirt of the gown, through the dining chamber to the Privie chamber, where the Emperor sat at a table, with a great chest and standish of silver before him, and my Monads and Letters by him."

Rudolph thanked Dee politely for the book (which was dedicated to his father), adding that it was "too hard for his capacity" to understand; but he encouraged the English philosopher to say on all that was in his mind. Dee recounted his life history at some length, and told how for forty years he had sought, without finding, true wisdom in books and men; how God had sent him His Light, Uriel, who for two years and a half, with other spirits, had taught him, had finished

his books for him, and had brought him a stone of more value than any earthly kingdom. This angelic friend had given him a message to deliver to Rudolph. He was to bid him forsake his sins and turn to the Lord. Dee was to show him the Holy Vision.

“This my commission is from God. I feign nothing, neither am I a hypocrite, an ambitious man, or doting or dreaming in this cause. If I speak otherwise than I have just cause, I forsake my salvation,” said he.

Rudolph was probably very much bored by this mystical rhapsody. He excused himself from seeing the vision at this time, and said he would hear more later. He promised friendship and patronage, and Dee, who says he had told him almost more than he intended of his purposes, “to the intent they might get some root or better stick in his minde,” was fain to take his leave. In a few days he was informed, through the Spanish ambassador, that one Doctor Curtius, of the Privy Council, “a wise, learned, and faithful councillor,” was to be sent to listen to him on the Emperor’s behalf. Uriel, whose head had been bound of late in a black silk mourning scarf because of Kelley’s misdoings, now reappeared in a wheel of fire, and announced favour to Rudolph.

“If he live righteously and follow me truly, I will hold up his house with pillars of hyacinth, and his chambers shall be full of modesty and comfort. I will bring the East wind over him as a Lady of Comfort, and she shall sit upon his castles with Triumph, and she shall sleep with joy.”

To Dee, he says, has been given “the spirit of choice.” Dee petitions that his understanding of that dark saying may be opened: “Dwell thou in me, O Lord, for I am frail and without thee very blind.”

The conference between Dee and Curtius on September 15 lasted for six hours. It took place at the Austrian’s house, whither Dee was permitted, it seems, to take the magic stone and the books of the dealings. Dee in all good faith promised that many excellent things should happen to Rudolph, if only he would listen to the voice of Uriel. Dee’s sincerity, credulous though it appears, was as yet unshaken. He lived in a transcendental atmosphere, and trembled, as he believed, on the brink of a great revelation. The very heavens seemed opening to him, and soon, he thought, he would probe knowledge to its heart.

Kelley, on the other hand, was under no delusion. He had worked the spirit mystery for long enough without profit; already he was beginning to more than suspect that the game was played out; that their dreams of Laski as King of Poland, dispensing wealth and favour to his two helpers, were never to be realised; that the Emperor’s favour would be equally chimerical and vain; and that some more profitable occupation had better be sought. At the back of his mind lay always the hope of the golden secret. Somehow and somewhere this last aspiration of the alchemist must be realised.

At the very time when the two learned doctors were holding their confabulation, Kelley, says Dee, was visited at their lodgings with a wicked spirit who told him that Dee’s companion would use him like a serpent, “compassing his

destruction with both head and taylor; and that our practices would never come to any fruitful end."

This was a true prophecy indeed, but many things were yet to come to pass.

Uriel now instructs Dee to write to the Emperor and tell him that he can make the philosopher's stone: in other words, that he can transmute base metal into gold. In the next breath Uriel foretells that Rudolph shall be succeeded by his brother Ernest, for when he sees and possesses gold (which is the thing he desireth, and those that counsel him do also most desire), he shall perish, and his end shall be terrible. Dee shall be brought safely home to England. Uriel used a curious simile, that Dee "shall ascend the hills as the spiders do." Dee, with his knowledge of many sciences, has never shown himself a naturalist, but he here gives us an interesting scrap of natural history. He writes in the margin: "Perhaps spiders flying in the air, are carried by strings of their own spinning or making, or else I know not how."

Dee's suit with the Emperor did not much progress. His ministers were naturally envious of this foreigner, and many whispers, as well as louder allegations against the two Englishmen, were abroad, although, as San Clemente told him, the Emperor himself was favourable. The Spanish ambassador was friendly enough, and Dee dined several times at his table. He professed to be descended from Raymond Lully, and, of course, like every educated person of the fifteenth and sixteenth centuries, was a believer in the virtues of the philosopher's stone. He bade them not regard the Dutchmen's ill tongues, "who can hardly brook any stranger." Dee wrote again to the Emperor a letter of elaborate compliment and praise of *vestroae sacrae Coesarae Majestatis*, in which he offered to come and show him the philosopher's stone and the magic crystal.

Still nothing came of it, and these needy adventurers in a foreign land began to get into deadly straits. "Now were we all brought to great penury: not able without the Lord Laski's, or some heavenly help, to sustain our state any longer." Dee returned from a dinner at the Spanish ambassador's to find Kelley resolved to throw up the whole business and start for England the next day, going first to Cracow to pick up his wife. If she will not go he must set off without her, but go he will. He will sell his clothes and go to Hamburg, and so to England. It is all very well for the spirits to promise spiritual covenants and blessings; but as Kelley said to Uriel, "When will you give us meat, drink and cloathing?"

At this time the women and children did join the party from Cracow, although Dee does not record it in his diary. But on September 27 Dr. Curtius called to see him at his lodging in Dr. Hageck's house by Bethlem, and he says "saluted my wife and little Katherine, my daughter." Dee laid before him some of the slanders that he knew were going about. He had been called at Clemente's table a bankrupt alchemist, a conjuror and necromantist, who had sold his own goods and given the proceeds to Laski, whom he had beguiled, and now he was going to fawn upon the Emperor. Curtius was at last induced to spread before the Emperor his report of the conference he had held (by command) with Dee. "Rudolph," said Curtius, "thinks the things you have told him almost either incredible or impossible. He wants you to show him the books." Then the talk became the learned gossip of a couple of bookish and erudite scholars. Dee produced some rare editions which the others had never seen. Curtius offered the loan of one of his own works, *De Superficerum Divisionibus*, printed at Pesaro. After this, with mutual courtesies

offered on both parts, “after the manner of the world,” Curtius took his horse, and returned homeward.

Jane Dee was ailing at this time, and Dee was much distressed. Gabriel, when consulted, told him that the true medicine is trust in the God of Hosts and in His Son Christ. “The Lamb of Life is the true medicine of comfort and consolation.” He did, however, condescend to give a remarkable prescription for her use, concocted of a pint of wheat, a live pheasant cock, eleven ounces of white amber, and an ounce of red wine, all distilled together. Dee, though no Christian Scientist, was willing enough to administer the strange decoction, but says he knows not where or how to get a cock pheasant. In the spring of the next year, Jane’s fourth child, Michael, was born. He was always rather sickly, and died when nine years old. Theodore, her fifth child, was only thirteen when he too died, but all the six other children grew up.

Curtius and Dee became good friends. The Austrian showed his English acquaintance several of his inventions connected with the quadrant and with astronomical tables, and Dee confided to him the secret of a battering glass he had contrived for taking observations on a dark night. The glass was left at Cracow with his books and other goods, but he would gladly go and fetch it to show the Emperor. This led to Dee’s request for a passport to enable him to travel, with servants, wife and children, where he would in the Emperor’s dominions at any time within a year. He drew it up himself on October 8, 1584, and the Emperor granted it without demur. Dee soon started for Cracow to bring the rest of his goods to Prague, but the diary for the month of November is missing, and the following book opens on December 10, when he had set out from Cracow to return to Prague. “Master Kelley” was with him, John Crocker, and Rowland and his nurse, who had been left behind when Mrs. Dee and the two elder children joined her husband in Prague. As before, more than a week was occupied with the journey, which was made in a coach, with horses bought of “Master Frizer.” In Prague a new lodging was found in a house belonging to two sisters, of whom one was married to Mr. Christopher Christian, the registrar of Old Prague. Dee hired the whole house from him at a rent of 70 “dollars” or thalers a year, to be paid quarterly.

“On Saturday afternoon, January 12, 1585, I removed clean from Doctor Hageck, his house by Bedlem, and came with all my household to the House which I had hired of the two sisters (married) not far from the Market Place in old Prage.”

He announced his return to the Spanish ambassador and to Dr. Curtius, and continued his interviews with “the schoolmaster” daily.

Some of the sittings recorded at this time are really of the nature of school lessons, which to a man of Dee’s acquirements must have seemed rather elementary, yet he humbled himself as a child to learn. One day geographical and ethnographical information is imparted about America, or, as Dee calls it, “Atlantis”; Cathay; the Bactrian desert; and Phalagon, a country of which Dee says he never heard. Another day, minerals and their properties form the subject of the lesson.

Much was said about the doubting, incredulous spirit of Kelley, which Dee always feels is the hindrance to further knowledge. At length he is given permission to choose another skryer if he will: “Take whomsoever thou wilt in

whose face the Lord shall seem to dwell, and place him with this Seer, and let him stand seven times by him. I will take the spirit from him and will give it unto the same that standeth by, and he shall fulfill my word that I have begun.”

But Dee was strangely reluctant to part with Kelley. He loved him like a son, he yearned over his soul, and he entertained more lively hopes than ever of his real conversion, for Kelley had at last consented to partake of the sacrament with his older friend. Dee uttered aloud a solemn prayer: —

“O God, thou hast coupled us two together in thy election, and what the Lord hath joyned, no fleshly fancy of mine shall willingly separate. But if it be thy will, seeing he is so hard to give credit to thy holy messengers, without some proof in work first past, as for example this doctrine of the philosopher’s stone, that so he may come to be allowed, though he imitate Thomas Didymus in his hard and slow belief. And because he is to receive the pledge of thy mercies, and mystery of the heavenly food, we would gladly hear of that holy sacrament some discourse for our better instruction, and his better encouragement to the mystery receiving.”

Then was delivered a remarkable homily expounding Protestant Christian belief upon several points: the Creation, the fall of Adam (because he wanted the beauty and excellency of God’s spirit for which he was created); of the sacrament of Christ’s body, “the holy sign of peace between God and man”; and the mystery and wonder of the rite as shown to the disciples, not, as the wicked do, “tying the power and majesty of God and His omnipotence to the tail or end of reason, to be haled as she will....It is a holy miracle, and thou must believe, as the Disciples did, that thou partakest of the true Body of Christ sub forma panis. But receiving ceasing, the Sacrament ceaseth also.” This in answer to Dee’s interposed question. The Hussite doctrine of the permanence of the sacred element in the common food when blessed was of course much in men’s minds in Prague. So with an injunction to “share this doctrine with your wives,” this exposition ends.

CHAPTER XIII

A DREAM OF GOLD

“Now, Epicure,
Heighten thyself, talk to her all in gold,
Rain her as many showers as Jove did drips
Unto his Danaid, shew the gold a miser
Compared with Mammon. What! the stone will do’t.
She shall feel gold, taste gold, hear gold, sleep gold.”

— Jonson, *The Alchemist*

On February 27, 1585, Dee and Kelley, with Thomas Kelley, rode with great secrecy to Limburg, six miles from Prague, in obedience to Madimi, who however told them on arriving that Rudolph knew of their departure. Dee suspected Laski’s man, Sontag, of treachery. Michael appeared to them there, and instructed Dee to name his new-born child Michael. The infant was baptised by the Court chaplain in Prague Cathedral (which is dedicated to the very unpopular Saint Vitus) on March

18, the Spanish ambassador being godfather and the Lady Dietrichstein, wife of the Emperor's major-domo, godmother.

Kelley was still murmuring under the mystical dealings of the angels. "Let them give me somewhat profitable to my body, or some wisdom to my mind's behoof, and then I will believe in them," he says. Then he protests he will confess all to the priest, and if the holy father does not allow their doings or counsel to be genuine, neither will he.

The remarkable answer that Dee gives again shows us how in advance he was of his times in matters spiritual as well as scientific. "The authority of good angels or messengers from God is greater," says he, "than the authority of the Pope, or priests."

So the weeks went on. Kelley postponed the day of taking the sacrament. At Easter will be a fit time. He will wait till then. He is tired of skrying: "I pray you to deal with another. Here is John, a boy in the house. You may use him." Thus, for the third time, a boy is suggested.

It is a curious piece of psychology, or crystallogmancy, that Kelley, who possessed the mediumistic powers, was always so reluctant to use them, while Dee, who as Madimi told him, had clearer sight than his skryer, was entirely unable to open up communication with the unseen.

Money was scarcer than ever. "My wife being in great perplexity, requested E.K. and me that the annexed petition might be propounded to God and his good angels, to give answer or counsel in the cause." Jane's petition set out simply that they had no provision for meat and drink for their family, that it "would discredit the actions wherewith they are vowed and linked unto the heavenly majesty" to lay the ornaments of their house or coverings of their bodies in pawn to the Jews, and that the city was full of malicious slanders. Aid and direction are implored how or by whom they are to be aided and relieved. The spirits, while reminding her grandiloquently that she is only a woman, full of infirmities, frail in soul, and not fit to enter the synagogue, yet favourably listen, and bid her be faithful and obedient as she is yoked, promising that she and her children shall be cared for. Meanwhile her husband is to gird himself together and hasten to see Laski and King Stephan.

This injunction seems not to have been obeyed for some time, for Dee was now very busy inditing letters to Queen Elizabeth and to other of his friends in England. He was reminded of it later when something went wrong, and another crisis arrived with Kelley. On March 27, a Wednesday, Dee was busy in his study, when the skryer burst in, demanding unceremoniously a copy of a certain magic circle of letters which he professed to have had revealed to him by spirits at Oxford. He wished to show it to a Jesuit priest with whom he had made friends. He protested he would quit the company of the spirits with whom they had recently dealt and return to his former associates — the evil set. Dee said he had no leisure to look for the paper now, he was writing letters of importance, and in a week's time or when able, he would see it was found. This of course was irritating. Kelley stormed and raged, said the old man should not stir his foot from the room till it had been produced, and was about to lock up the door when Dee caught him by the shoulders, "calling aloud to my folks. They came in all, and my wife, and so afterwards by degrees his fury assuaged, and my folks, my wife and his, went away, and after he had sitten two or three hours with me, he saw on my head, as I sat

writing, Michael stand with a sword, who willed him to speak, which he did forbear to do above a quarter of an hour.”

Kelley, like a spoilt child, demanded of Michael if he should have his circle of letters. The angel addressed him then in a passage of exceeding beauty, seeming to scorch and wither the promptings of the skryer’s evil nature, while wrestling at the same time with all the powers of darkness for his soul: —

“O Jehovah, whose look is more terrible to thy angels than all the fires thou hast created,...wilt thou suffer one man to be carried away, to the dishonouring and treading under foot of thee and thy light, of thee and thy truth? Can one man be dearer unto thee than the whole world was? Shall the heavens be thrown headlong down, and he go uncorrected?”

He intimates to the partners that their work and calling is greater than honour, money, pride and jewels. As it is great, so must their temptation be great.

“Therefore God has framed one of you as a stiffe-made Ashe, to bind up the continuance of his work, and to be free from yielding unto Satan.”

As for the other, Michael promises Kelley that no evil spirit shall visibly show himself unto him any more as long as he is in the flesh.

“Whosoever therefore appeareth hereafter is of good.”

Thus begins to yawn before the pair the most dangerous pitfall of all. Pride and confidence in the perfect intuition of God’s will has led many a good and holy man astray. Soon even the stiff-made ash is to arrive at the pitch of believing that their teachers cannot err, and then comes a terrible downfall. Michael in an exquisite little parable bids them cleave fast together. And again it is clear why the elder man, the seeker after hidden knowledge, the pure-minded and gentle-hearted old mathematician and astrologer, though torn in pieces with his partner’s wild outbursts, his notorious cupidity, impatience, and evil living, yearned over him and his rebellious youth as a mother over her child. Like Michael, he seems involved in a prolonged struggle for the rescue of his soul from the demons in whose power he devoutly believed.

“PARABOLA DE NOBIS DUOBUS.

“A wood grew up, and the trees were young, and lo! there arose a great Tempest from the North, and the Seas threw out the air that had subtilly stolen himself into them. And the winds were great. And behold there was one Tree which was older than the rest, and had grown longer than that which shot up by him. This Tree could not be moved with the wind, but the Tree that was young was moved to and from with the wind, and strook himself oftentimes upon the stiff-set tree. The Forrester came and beheld, and said within himself, ‘The force of this wind is great. See this young Tree beateth himself in pieces against the greater. I will go home, and will bring my ground instruments, and will eradicate him, and I will place him farther off. Then if the winds come, he shall have room to move.’

But when he came home, the Lord of the Wood seeing him in a readiness with his Mattock and his spade, asked him of his goings, which told the thing in order unto his Master. But lo! his Master rebuked him, and he said thus: `When the winds are not, they increase, they are not hurtful one to the other. Suffer them therefore. When the young Tree taketh roots, and shall look up unto some years, his roots shall link themselves with and under the roots of the greater. Then, though the winds come, they shall not be hurtful one to another, but shall stand so much the more fast, by how much the more they are wrapped together; yea, when the old tree withereth, he shall be a strength unto him, and shall add unto his age as much as he hath added unto his youth.'

“And he ceased to dig.

“Be not you therefore haled in sunder, neither be you offended one at another. Peradventure Reason would set you aside. But God will not. Behold, if you break the yoke that you are in and runne astray, he that erreth shall perish, even so shall he that standeth also be desolate. Love therefore one another, and comfort one another, for he that comforteth his brother comforteth himself....Let youth yield to ripe years...You have vowed that one of you do nothing without the other's counsel, but you shall not be two counsellors. Let the Doer occupie the superiority. The Seer, let him see and look after the doings of that he seeth, for you are but one body in this work.”

In April, Dee and Kelley returned to Cracow. As they were nearing the city they saw a great whirlwind wreathing up the dust and shooting forward in a southerly direction. They found their house let under them to a “forced-in tenant,” but as Dee had brought his keys, he effected an entrance, and secured at least a bedstead. By the aid of his lawyer, Mr. Tebaldo, “an ancient practitioner in Polish causes,” he obtained a decree against his landlord that without six months' notice he could not be ejected. They took up their abode in the College of Nyepolonize. Laski now joined them in Cracow, and took Dee on May 23 to an audience of King Stephan. Stephan was seated by the south window of his principal audience and banqueting chamber, looking out upon the beautiful new gardens that he was then making. Polite speeches of greeting in Latin passed between the two, but there was scant time for more before the Vice-Chancellor and Chief Secretary, with others, came in, bringing Bills for the King to read and sign. Stephan had small time to spare for visionary alchemists. His very glorious reign was crowded with great achievements. Though a strong Catholic himself, he respected the liberties of his Protestant subjects, won back the Russian provinces for Poland, reformed the universities and established the Jesuits in educational seminaries, and protected the Jews. He died very suddenly about a year after Dee's third interview with him. Dee has the following very valuable note of his death, entered in the diary a few weeks after his arrival at Trebona Castle in 1586: “December 11, Stephan Poloniensis obiit: natus anno 1530, die 13 Januarii, hora quarta mane min 25, in Transylvania. Obiit hora secunda post medium noctem, ut intellexi ex literis Dni Lasky, receptis die 29 per Alexandrum.”

Dee also visited Dr. Hannibal (Annibaldus), the famous divine, and discussed with him his commentaries on Latin authors- -Hermes Trismegistus and Mandellus. He partook of the Communion at the Bernardine convent where the Doctor was a professor. Three times within Easter week did he communicate, “that

in all manner of wayes I might have a clean and quiet conscience.” On “Easter Monday, very devoutly, in St. Stephan’s Church, E.K. received the Communion, to my unspeakable gladness and content, being a thing so long and earnestly required and urged of him by our spiritual good friends.” As Dee wrote to Walsingham, “Saul had become a Paul.”

It was a very short interlude. For Laski had not yet paid him the “money long since due,” and Kelley once more vows he will leave, for the “actions are unsuccessful and are to be cut off.” Laski was again admitted to the sittings, and King Stephan granted them another interview. Laski urged the King to take the two alchemists into his service and give them “a yearly maintenance.” In obedience to his instructors, Dee promises to make the philosopher’s stone, if the King will bear the charge. He does not profess that he can, but he believes the angels will teach him the secret. Stephan was not so sanguine. In the King’s private chamber, a sitting was held, with the crystal set before him, but he remained unconvinced. He gave no encouragement, and in August the pair, hopeless of patronage from Poland, returned to Prague, where Jane and Joan Kelley, the children and the servants, had been left under Edmond Hilton’s care.

An anglicised Italian pervert, Francisco Pucci, now appeared upon the scenes and was admitted to the sittings at the shew-stone. Pucci had been a Lyons merchant, but had “laid aside his trade to study sacred letters,” and become a theological disputant of the current type. Professing himself a Protestant, he came to Oxford to study, graduated M.A. in 1574, and in London, Basle, Antwerp, and other places, became an open and notorious writer and champion against the Church which he had abjured. He had followed Socinus to Cracow, and had noisily opposed the Jesuits there. Soon after he recanted, became a Romish priest and secretary to a cardinal in Rome, where he died in 1606, and was buried in the Church of San Onofrio on the Janiculum.

On his information it appears that three copies of Dee’s manuscripts were burned in Prague, April 10, 1586. These were the Book of Enoch, the Forty-eight Keys of the Angels (*Claves Angelicae*) and the *Liber Scientiae Auxilii et Victoriae Terrestris*, works which had been written down from the spirit revelations since the partnership with Kelley had commenced. The books burned were not of course the originals, the two first of which still exist. Of the Book of Enoch there are three copies, one made by Kelley, a remarkable tribute to the mechanical skill in draughtsmanship, the extraordinary application and ability, of this very versatile personage. It contains hundreds of diagrams of figures, round or rectangular in shape, composed of an infinite number of minute squares each containing a letter or figure. These letters occur in every possible combination and order, some reading straight across the page, others diagonally, and so on. Dee gives an extraordinary story of the restoration on April 30 of the books said to have been burned, by a man like a gardener, invisible to himself, to Joan Kelley, and to all in the garden at the time, save Kelley. The gardener placed them under an almond tree in Carpio’s vineyard, on a sloping bank between the banqueting house and the “cliff side.” Trickery of Kelley’s, no doubt.

The feeling against these foreign adventurers grew strong in the city. Sixtus V., who had succeeded as Pope, issued a Papal edict, dated May 29, 1586, banishing Dee and Kelley from Prague within six days. It seemed to trouble them very little, for Dee was already away on a visit to a new patron, William Ursinus, Count

Rosenberg, at his country seat on the Moldau. From thence he went to see some glass works at Volkanau, about twelve miles north of the city; then he proceeded to Leipsic in time for the fair on May 11. There he met Lawrence Overton, an English merchant to whom Jane Dee had given kind attention and hospitality when he had fallen ill in her house a year before. Overton had returned from England, where he had seen Edmond Hilton, sent in November with letters to the Queen, Sir Francis Walsingham, and others. Hilton was expected back shortly. Overton was on the point of returning to England, and by him another letter to the Secretary was despatched.

Dee's letters to Walsingham, with their veiled allusions to secret affairs, form one of the grounds upon which the supposition has been based that he was employed by the Queen's minister as a secret spy and diplomatic agent abroad, and that his cabalistic diagrams contained a cipher. An elaborate theory was constructed to support this contention.

From this letter it is evident that Dee wishes his friends in England to believe that he and his partner have already found the hidden secret, but he wraps his words in due mystery, and it is impossible to say exactly when Kelley first professed to have made, and when he induced his partner to believe that he actually had made, the gold on which his heart was set. That Dee's heart was equally fixed on the discovery is indisputable, but from what a different cause!

“To ye Rt. Hon^{ble}. Sr. Fr. Walsingham Knt, her most excellent Maties.
Principal Secretary my singular good Fr^d. and Patron with speed.

“Right Honorable Sir,

“Albeit I have almost in vain come a hundred miles (from Prague to this Leipsic Mart) hoping either to meet my servant there with answer to my former letters, sent in November last to her Majesty (when also I wrote unto your honour and others). And so with speed from this Leipsick to have sent again most speedily, as occasion should have served. and now I find neither servant neither letter from him, neither word of mouth, yet all this notwithstanding; and whatsoever the hindrance or delay hereof may be (whether the keeping back of my letters from her Majesty, or the manifold and important most weighty affairs public hindring or delaying her Majesty's most gracious discreet and wise resolution herein. Or what other occasion else hath and doth cause this long and wonderful delay of answer receiving); all this notwithstanding, I thought good before I set up my coach to write, and most humbly to salute your honour very faithfully, dutifully and sincerely, with great and the same good will that my Letter some years since written to your Honour (but then a stumbling block unto your Honour and others for the strangeness of the phrases therein) doth pretend. So it is, right Honorable, that the merciful providence of the Highest, declared in his great and abundant graces upon me, and mine, is so wonderful and mighty, that very few, unless they be present witnesses, can believe the same. Therefore how hard they are to be believed there, where all my life and doings were construed to a contrary sense, and processe of death contrived and decreed against the Innocent, who cannot easily judge?

“I am forced to be brief. That which England suspected, was also here, for these two years almost, secretly in doubt, in question, in consultation, Imperial and Royal, by Honourable Espies; fawning about me and by others discoursed upon,

pryed and peered into. And at length both the chief Romish power and Imperial dignity are brought to that point resolutely that partly they are sorry of their so late reclaiming their erroneous judgment against us and of us, and seek means to deal with us so as we might favour both the one and the other; and partly to Rome is sent, for as great authority and power as can be devised; and likewise here all other means and wayes contrived, how by force or for feare they may make us glad to follow their humours. But all in vain, for force human we fear not, as plainly and often I have to the Princes declared. And otherwise than in pure verity and godlinesse we will not favour any (my words may seem very marvellous in your Honours ears, but mark the end, we have had, and shall have, to deal with no babes). I have full oft, and upon many of their requests and questions, referred myself to her Majesties answer thus in vain expected. Nuncius Apostolicus Germanicus Malaspina, after his year's suit to be acquainted with me, at length had such his answer that he is gone to Rome with a flea in his eare, that disquieteth him and terrifieth the whole state Romish and Jesuitical. Secretly they threaten us violent death, and openly they fawn upon us. We know the Sting of Envy and the fury of fear in tyrannical minds, what desperate attempts they have and do often undertake. But the God of Heaven and Earth is our Light, Leader and Defender. To the World's end, his mercies upon us will breed his praises Honour and glory. Thus much, very rhapsodically yet faithfully, tanquam dictum sapienti, I thought good to commit to the safe and speedy conveyance of a young merchant here called Lawrence Overton, which if it come to your Honours hand before my Servant have left his despatch, I may by your honor be advertised. Your Honour is sufficient from her Majesty to deal and proceed with me, if it be thought food. But if you make a Council Table Case of it, Quot homines, tot sententioe. And my Commission from above is not so large: Qui potest capere, capiat."

The almost apostolical flavour which Dee permits himself to impart to some of this letter, owing to the greatness of his believed mission, shows to what a height of "rhapsodical" fervours his spirit had now attained. It is still more emphasised in the concluding passage, which begins, however, very practically, with an anxious thought cast back to his English possessions. His desire that Thomas Digges, the eminent mathematician to whom his calculations for the reformed calendar had been submitted, should be sent over to inspect their doings, was curious, but it shows that he, at any rate, wished to deal openly and conceal nothing. He ends thus:

"Sir, I trust I shall have Justice, for my house library, goods and Revenues, etc. Do not you disdain, neither fear to bear favour unto your poor innocent neighbour. If you send unto me Master Thomas Digges, in her Majestie's behalf, his faithfulness to her Majesty and my well liking of the man, shall bring forth some piece of good service. But her Majesty had been better to have spent or given away in alms, a Million of gold, than to have lost some opportunities past. No human reason can limit or determine God his marvellous means of proceeding with us. He hath made of Saul (E.K.) a Paul, but yet now and then visited with a pang of human frailty. The Almighty bless her Majestie both in this World and eternally; and inspire your heart iwth some conceiving of his merciful purposes, yet not utterly cut off from her Majesty to enjoy.

From Leipsic this 14 of May, 1586,
at Peter Hans Swarts house.

Your Honours faithful welwisher to use and command for the
honour of God and her Majesties best service,

“John Dee.”

On being ejected from Prague, Dee removed his family and goods to Erfurt, but in spite of the influence of Dr. Curtius, and of a friend of Rosenberg, he was not allowed to hire a house there, for the Italian was before him. Pucci called on Dee after supper, and held out hopes that he might obtain permission for their return to Prague, for the new Nuncio, the Bishop of Piacenza, was inclined to a more favourable view than Malaspina. Pucci protested that they were only to be examined and if found heretical to be sent to Rome. He brought an invitation for their return, if they would promise not to exercise magical arts. Dee, who was starting early next morning to look at a house at Saalfeld, wherein to settle his exiled family, bade Kelley copy it and rode off. On the ride he thought it over. Pucci he had never liked, neither had Jane. “His household behaviour was not acceptable to our wives and family. He had blabbed our secrets without our leave. He was unquiet in disputation.” Dee summed up the man as a spy, the letter as a bait, and set to work to devise a way of being rid of him “by quiet and honest means.” He was absent two or three days, but the Italian was still there when he returned, urging them to go to Rome. Dee rebuked him for curiosity and interference, and accused him of conspiring against them; he, a mere probationer and not yet owned of the spirits (who in fact had said he was “leprous” and should be “cut off”), to presume an equal authority with them in their revelations!

Dee wrote a dignified letter to the Nuncio, and despatched it by the Italian, who was to receive from John Carpio, a wealthy neighbour and friend of theirs in Prague, a sum of fifty dollars for his expenses. The travellers went on to Cassel and to Gotha, but it was not long before a permanent asylum offered for the exiles. Their new patron, Count Rosenberg, was a friend worth having, for he was all-powerful with Rudolph; he was Viceroy of Bohemia and a Knight of the Golden Fleece. His influence and protection were now to be at the Englishmen’s disposal. On August 8, Rosenberg obtained from the Emperor a partial revocation of the decree against them, since they were permitted by it to reside freely in any of his lordship’s towns, cities or castles. They settled on September 14, 1586, at Tribau or Trebona, in Southern Bohemia, and here for about two years their wanderings came to an end.

Dee resumed the writing of his private diary, in which he had made no entry for three years, the last event recorded there being the departure of the family from Mortlake just three years before, on September 21, 1583. He opened a new volume, an Ephemerides Coelestium, calculated for the years 1581-1620, by Joh. Antonius Maginus, printed in Venice, 1582. The first entry made in it was Michael’s birth at Prague on February 12, 1586; the next was their arrival at Trebona (for it will be more convenient to follow Dee’s latinised version of the name).

CHAPTER XIV

THE CASTLE OF TREBONA

“Welcome the sour cup of prosperity!
Affliction may one day smile again: and until then,
Sit down, sorrow.”

— Shakespeare, *Love’s Labour Lost*

Tribau, or Wittingau, the Trebona or our story, is a small village lying in the beautiful undulating scenery of the Ludnitz, a small tributary of the river Moldau. It is a few miles from Neuhaus and Weseli, not many from the town of Budweis, on the Upper Moldau, in Southern Bohemia.

In 1586 it consisted of little beside the castle, a Rathhaus, quarters for a small garrison, and a cluster of dwellings where Dee tells a fire broke out on Whit Sunday, 1585, and destroyed several houses. The castle was one of Rosenberg’s many residences in Bohemia, and apparently a favourite one. the Viceroy was now just over fifty (he was born on March 10, 1535); he married about this time, and his wife constantly accompanied him on his visits to Trebona. They had also another castle at Neuhaus, beside a residence with beautiful gardens bordering the Moldau opposite Prague. They were frequently on the wing, flitting from Krumau to Vienna and from Vienna back to Prague. He welcomed the English travellers himself at Trebona, assigned them their rooms, and promised them all that heart could desire.

The actions, which had long been interrupted, were now resumed in “a goodly chapel next my chamber,” where all the “appurtenances” were set up, with the “angelicall stone” in its frame of gold upon the table. Rosenberg had been already admitted to the sittings, in obedience to directions received on October 14. When the communications were made in English, Dee translated them into Latin for his benefit. But experiments with Kelley’s powder were now all-engrossing, and even the spirits pass for a time into the background. Kelley went off to Prague for three weeks and was followed by Rosenberg. Dee remained with his wife and children; after their hardships, poverty, dangerous and wandering life, poor Jane must have been thankful for so luxurious a shelter. Visitors for Dee constantly arrived. Among them was Dr. Victor Reinhold, the astronomer. Pucci also came for a fortnight.

In December Dee received a very flattering invitation from the Emperor of Russia (Feodor Ivanowich) to go and take up his residence at Moscow in the Court. Dee’s fame as a learned astrologer and mathematician had spread to Russia; still more was his reputation as an alchemist bruited abroad: perhaps he was already credited with having actually made gold by projection or transmutation.

The first intimation of the Emperor’s wish was conveyed by Thomas Simkinson, an Englishman, of Hull, commissioned by Edward Garland to go to Brunswick or Cassel, or wherever Dee might be found, and beg him to remain there until Garland could come from Russia. He might tell Dee that the Emperor, having certain knowledge of his learning and wisdom, is marvellous desirous for him to come to his country, and had given Garland a sealed letter of invitation, promising a sum of 2,000 pounds yearly and free diet from the royal kitchen if he will come. His charges of removing shall be paid, and he shall travel royally with 500 hourses

to convey him through the land. If he thinks the salary offered too little, Garland, when he arrives, will assure him that if he asks as much more, he shall have it. The "Lord Protector," too, Prince Boris, took Garland in his arms on his departure and promised 1,000 roubles from his own purse beside the Emperor's allowance.

Simkinson reached Trebona on September 18, and at once declared his flattering errand. "On December 8 at noon, Garland came to me from the Emperor of Moschovia, according to the articles before sent unto me by Thomas Simkinson." On December 17, at Trebona, Edward Garland drew up a paper repeating all the former promises in the Emperor's name, and signed it, with Kelley, his brother Francis Garland, and others, as witnesses.

There is no doubt that the Emperor thought he was inviting to his Court the man who could fill his coffers and bring glory and prestige to his name. Hakluyt hints at it when he says the offer was made partly for his counsel about discoveries to the North-East, partly for some other weighty occasions. Dee was no self-seeker, or Court flatterer, although this was the fifth sovereign he says he might have served. The offer seems never to have tempted him from his loyalty to his own Queen. He bade Garland at once dismiss six out of the eight Russian servants he had brought to attend them on their journey, and turned to matters more important.

"On 19th December, to the great gratification of Master Edward Garland and Francis, his brother, which Edward had been sent to me with a message from the Emperor of Muschovia, that I should come to him, E.K. made projection with his powder in the proportion of one minim (upon an ounce and a quarter of mercury) and produced nearly an ounce of best gold; which gold we afterwards distributed from the crucible, and gave one to Edward."

It is quite significant that Kelley made the gold, Kelley showed it, and Dee is content to give him all the credit. The pangs and heartburnings and jealousies have yet to come. Now he only felt that at last he was victorious in his long quest. He was on the crest of the wave. His hour had come.

How the wonderful trick was done, Kelley could best describe.

Kelley was now constantly riding to Prague, or making longer expeditions to Poland, for he still had hopes of getting more money from Laski. By March his hope seems to have been realised, for Dee notes that Kelley paid him about 500 ducats in two or more sums (about 233 pounds). This plenitude of money of course encouraged the idea abroad that they were actually making it. When he returned from Prague on January 18, Kelley brought a handsome present from Rosenberg to Jane Dee, in the shape of a beautiful jewelled chain, the value of which was "esteemed at 300 duckettes," says Dee, "200 the juell stones and 100 the gold." In three days Kelley had posted off again to Prague, to join Rosenberg at his house in the scity. This time he took with him his brother Thomas, Francis Garland, and a Bohemian servant, Ferdinand Hernyck. No doubt he was pursuing his experiments for the "multiplying" of gold in the city, away from Dee.

Kelley's letter to Dee announcing this arrival of his in Prague is the only communication between this strange pair of partners that seems to have survived. It shows that erratic and wayward creature in a gentle and even affectionate light, and although its pious protestations are obviously overdone, it pictures for us quite

vividly the relations between the two, and partly accounts for the strength of the tie that bound Dee to his intractable pupil, soon to become his master. For while Dee laboured laboriously and scientifically with his alchemical compounds, Kelley at one bound overleaped the chasm and by some process best known to himself professed to have arrived at the goal.

To Dee's single-hearted nature such success was magnificent, wonderful. He began forthwith to treat his quondam skryer with added respect; the expression "Dominus Kelley" creeps once into the diary; and Kelley grew arrogant and overbearing. For the moment, however, he is all for friendship and respect.

"Prage. 1587. 25 Januarii." [This in Dee's hand.] (addressed) "To the Right Worshipful and his assured friend Mr. John Dee Esquire, give these. Magnifico Domino, Domino Dee.

"Sir. My hearty commendations unto you, desiring your health as my own; my Lord was exceeding glad of your Letters, and said, 'Now I see he loveth me,' and truly as far as I perceive he loveth us heartily. This Sunday in the Name of the Blessed Trinity I begin my journey [to Poland], wherein I commend me unto your prayers, desiring the Almighty to send his fortitude with me. I commend me unto Mrs. Dee a thousand times, and unto your little babes: wishing myself rather amongst you than elsewhere. I will by God's grace about twenty days hence return in the mean season all comfort and joy be amongst you.

"Your assured and immoveable friend

"E. KELLEY."

When this letter reached Trebona, Dee had gone riding with two horsemen of the city of Neuhaus, hoping to meet Rosenberg, who he thought would return that way from Vienna to Prague. Mrs. Dee at once despatched the servant Ludovic to meet his master. So Dee received Kelley's affectionate letter "in the highway, without Platz," a village about half-way to Neuhaus. Ludovic carried also a little note from Jane to her husband. It is the only letter of hers we have, but it confirms all that we suspect. We know her to have been a well-educated, well-read woman; the writing is strong and clear; and did not Francis Pucci describe her as a learned woman, "lectissima femina"? She must also have been an extraordinarily capable one to have controlled and managed her large household of children, assistants, apprentices, servants and miscellaneous visitors, often in the absence of her husband, and in a foreign land, constantly moving on from place to place in this nomadic life they led. Dee has a charming name for her. Somewhere in a letter he speaks of "my payneful Jane." Full of pains she must indeed have been, the model wife for an elderly, incomprehensible husband, using her intellectual powers to accommodate her family, while the learned man pursued his angelic visions and his alchemical experiments unhampered. Above all things she must have been a peacemaker, hot and hasty although she sometimes was. Here is the letter to the husband who had only left her that morning: —

"Swethart. I commend me unto you, hoping in God that you ar in good health as I, and my children, with all my household, am here, I prayse God for it. I have non other matter to write unto you at this time."

There is a capable and managing sound about “my” children and “my” household, which leads one to wonder what this practical housewife thought of all the angelic promises which were never kept or performed. At the outset of the mysterious Kelley doings she was, we know, in her impetuous way, annoyed, angry, probably contemptuous, but by this time she perhaps had grown either to believe in them or tolerantly to acquiesce. She was only thirty- two, yet she had lived through many strange experiences and was soon to be put to the strongest test possible to a woman.

By April Kelley was once more settled as part of the household, and on the 4th the crystal gazing was resumed. He professed to hear instructions to Rosenberg, who was present, to build a commonwealth, render tribute to Rudolph, and he shall be Duke of Brandenburg. To himself things are said he is not reluctant to hear. We have seen how almost immediately after his marriage he took a violent dislike to his wife. In the four years, it seems, he had reproached her for giving him no child. To him generation was the root principle of alchemy, and the phase of it in which he centred his attention. It is always the marriage of the red man, copper, and the white woman, mercury, that is to tinge the whole world with gold. Now a voice tells him why he is barren. Not because of his reckless, disordered life, but because she was of his own choosing — the wrong woman! Therefore he is to be seedless and fruitless for ever. Had it not been for the Dees’ kindness to her, and especially Jane’s, poor neglected Joan Kelley would have had but a sorry time. She was only twenty-four; lively and docile, she seemed to please everyone but her husband. Pucci, with perhaps a little flattery, calls her “*rarum exemplum juvenilis sanctitatis, castitatis, atque omnium virtutem.*” If she had not all the virtues, she at least had several. Her brother, Edmund Cooper, and another friend so loved her that they came over from England a year later on purpose to see if she and her husband could not be more reconciled.

Kelley had been more unsettled than ever, discontented with his wife, with his calling, its results, and above all with his position and his poverty. What was a pittance of fifty pounds a year to a man in constant intercourse with princes and nobles, with credulous fools possessed with dreams of gold? The same qualities that attracted Dee were equally magnetic with others. Laski loved him; Edward Dyer deserted his old friend Dee for this newcomer, a nobody. He had made himself invaluable to Rosenberg, who seems to have had implicit faith in his powers. Rosenberg induces the Emperor to employ him. Had he not already found the secret of projection? Was he not the possessor of the magic powder which waited only for the opportunity to be transformed into countless heaps of ducats? Only money was wanting, and that he could certainly get. But he must first be released from this galling position of medium. He told Dee that all through this Lent he had prayed once a day at least that he might “no more have dealing to skry.” At Easter-time he did receive a promise to be set free from the crystal gazing, as he desired, but his wish for freedom was not exactly approved by the angelic ministers.

“Is it a burthen unto thee to be comforted from above? O foolish man! By how much the heavens excel the earth, by so much doth the gift that is given thee excel all earthly treasure. Notwithstanding, thou shalt not at any time hereafter be constrained to see the judgment of the Highest, or to hear the voices of heaven, for thou art a stumbling block to many....And the power which is given thee of seeing

shall be diminished in thee, and shall dwell upon the first begotten son of him that sitteth by thee.”

The selection of a child as Kelley’s successor seems not to have been altogether unexpected. It had been hinted in Prague a year before that a boy would serve for the office; but that the choice would fall upon Dee’s own son must have come as a dreadful surprise, at any rate to his mother. No doubt the old man regarded it as a mark of special heavenly honour.

It is more likely that Jane, with her practical mind, regarded the change of medium with anything but satisfaction. Arthur was now seven and three quarters of a year old, a clever child, already well grounded in Latin, but far too tender in years and disposition to be made the subject of any psychological experiments. Fortunately for him, his skrying was a dismal failure, although it seems to have bent his childish mind towards the occultism he followed in after-life. Distinguished physician as he afterwards become, both at home and in the service of the Emperor of Russia, he was a true son of his father, and maintained to the end of his life a belief in alchemy and transmutation which nothing could shake.

Kelley was desired to initiate the child.

“I thereupon thinking that E.K. would, should or best could, instruct and direct the childe in that exercise, did alwayes await that E.K. would of himself call the boy to that exercise with him; and so much the rather because he said that he was very glad now that he should have a Witness of the things shewed and declared by spiritual creatures: And that he would be more willing to do what should be so enjoined to him to do, than if only he himself did see. But when E.K. said to me that I should exercise the child and not he, and that he would not, I thereupon appointed with myself to bring the childe to the place, and to offer him, and present him to the service of Seeing and Skrying from God and by God’s assignment.”

Then Dee drew up a petition to put in the child’s mouth that he might be “a true and perfect seer, Hearer, Declarer and Witness of such things as might be revealed to him either immediately or mediately by the angels.” Three times a day for three days he was to offer this prayer thrice over, while seated at the stone. The poor child happily beheld in the magic crystal nothing more than dots and pricks, letters and lines, and “a young man in a white leathern doublet and a grey cloke, like hans of Gloats, his cloak,” of all which even his father could make little. On the fourth day came Kelley, to see how Arthur and his skrying progressed. But still the child saw nothing. Then Kelley applied himself to skry as usual. Looking from the gallery window, he had already without any crystal seen Il and Madimi, also Uriel, who justifies their words. What they command he hesitates to say. Next day he is again the percipient; the result is the same. At length, with feigned reluctance, he tells Dee of a vision of strange and subversive portent. It is so repugnant to him that he can hardly impart it. Madimi, throwing aside all her garments, mysteriously bids them participate in all things one with another. Kelley affects not to understand, but after more hesitation expounds to Dee that the sharing is to be in everything, even of their wives. All things are to be in common between them.

Dee, to whom Madimi is invisible, though he hears her voice, fiercely rebukes her: “Such words are unmeet for any godly creature to use. Are the

commandments of God to be broken?" This participation, he insists to Kelley, can be meant only in a Christian and godly sense. Kelley construes the injunction very differently, but he affects a chaste horror and swears for the hundredth time that he will deal no more with the spirits.

Then Madimi, with scathing irony, addresses them both as "fools, and of little understanding." Not content to be hearers, would they be "Lords, Gods, judgers of the heavens"? She turns away. "Your own reason riseth up against my wisdom. Behold, you are free. Do that which most pleaseth you."

It is a comfort to learn that the child Arthur had all this time fallen down "in a swoond." He was indeed very ill for some time afterwards, and small wonder.

Dee protested and argued with Kelley and with Madimi. He was consumed with grief and amazement that good angels could propound "so hard and unpure a doctrine." Had he not offered his very soul "as a pawn to discharge E.K. his crediting of them to the good and faithful ministers of Almighty God"? Was it not his life's work to withdraw Kelley from any kind of association with the bad spirits who had frequented him before he came to Mortlake?

Until two in the morning of this April 18, 1587, the pair sat up arguing, talking, praying. Kelley held forth about a little spirit, Ben, who had that day appeared to him in his laboratory alone, and had shown him how to distil oil from spirit of wine "over a retort in two silver dishes whelmed one upon another, with a hole through the middle and a sponge between them, in which the oil would remain." Ben had foretold Elizabeth's death in July (she lived for sixteen years), the death of the King of Spain and the Pope; in fact, a general moribundity of sovereigns. Francis Garland was a spy sent by Burleigh to see what they were doing; Rosenberg would be shortly poisoned; famine and bloodshed would cover the land. Many other dire calamities would happen if they were not conformable to the voice; chief of all, the virtue should be taken from Kelley's precious powder; it would be rendered unprofitable, and he would become a beggar. It was Ben, he says, who had brought him his powder.

Dee replied that he had found so much halting and untruth in Kelley's reports of actions when he was not present, that he would believe nothing save what by better trial he found to be true. But at last his resistance seemed to be overridden, and in the chill of the early morning he went to bed, heavy at heart in spite of his delusion. His poor wife was lying awake, wondering what turn their ill-starred fortunes were next to take.

"`Jane,' I said, `I can see that there is no other remedy, but as hath been said of our cross-matching, so it must needs be done.'"

Poor Mrs. Dee, shocked and horrified, fell a-weeping and trembling for a full quarter of an hour, then burst into a fury of anger. At last she implored her husband never to leave her. "I trust," said she, "that though I give myself thus to be used, that God will turn me into a stone before he would suffer me in my obedience to receive any shame or inconvenience." She would eat neither fish nor flesh, she vowed, until this action, so contrary to the wholesome law of God, and so different from former actions, which had often comforted her; was confirmed. Both the indignant women demanded a repetition of the action.

In obedience to Raphael's counsel, a solemn pact or covenant was humbly drawn up by Dee on the 21st, and signed by these four strange partners in delusion. It promised blind obedience, with secrecy upon pain of death to any of the four. It deprecated all intention of impurity and guilt. Its subscribers promise to captivate and tread under foot all human timorous doubting that the true original power and authority of sins releasing or discharging is from the Creator. True Christian charity spiritual, perfect friendship and matrimonial liberty between the four is vowed, and they beseech that this "last mystical admonishment" be not imputed to them for rashness, presumption, or wanton lust.

Dee's hand is unmistakable in the document. He regarded the new development apparently only as a symbol of further spiritual union, and a means of obtaining a closer entrance into the secrets of all knowledge. It was no matter to him, he says, if the women were imperfectly obedient. "If it offend not God, it offended not mee, and I pray God it did not offend him."

Kelley drew up a paper the day after Dee's, washing his hands of the whole matter, protesting that he did not believe so damnable a doctrine would be commanded, recounting his warnings to his worshipful Master Dee, and so on. On May 6 Dee spread his covenant, a document of the most truly devout character, before the holy south table in the chapel of the castle, with many prayers for divine guidance. The next day Kelley obtained the paper, cut it in pieces and destroyed it, made away with one of the crystals (which was found again under Mrs. Dee's pillow), and threatened to depart elsewhere with John Carpio. Coldness and jealousy fell between the pair.

So ended the whole extraordinary episode of the Talbot- Kelley spiritualistic revelations. Madimi appeared for the last time on May 23. Then the *Liber Mysteriorum* is closed. For twenty years there are no more records of angels' visits. And the few pages that remain are written in a halting hand in Dee's stricken old age, when he was seldom visited by his unseen friends, badly though he needed their comfort. No other medium like Kelley was ever found. One can only wonder whether, after so rude an awakening, even Dee would have implicitly trusted anyone again. These five years with the skryer had filled him to the brim with a consciousness of some power beyond his wit to control, a power amazing in its ingenuity to torture him. He had asked Madimi piteously if he should suffer any more of these pangs. He knew now that he would. Yet, in spite of all, these marvellous doings had brought him hours of exquisite happiness, moments when he had seemed lost in the unity of the combined wisdom of the ages, which to him meant — God.

CHAPTER XV

THE END OF THE PARTNERSHIP

"If all you boast of your great art be true,
Sure willing poverty lives most in you."

— Ben Jonson, Epigram to Alchymists.

Dee now resumed diligently his writing in the other diary, which becomes a strange medley of daily affairs small and great. He sent Francis Garland to England

with another letter to Walsingham, dated June 17, begging him to continue his opinion of Dee's fidelity towards Her Majesty and the realm. It would be useless as yet to render any account of commodity to them or their country reaped by this peregrination, "but I trust more will be glad of our coming home than were sorry of our going abroad." He has not heard from Mr. Justice Young since May twelvemonth, but hopes his pitiful case of the books and other injuries endured have, by Walsingham's favour, had some redress. There is no news of importance but the Polish King's election, "the mysteries whereof, by the time this bearer reaches England, will be known to you." "Remember me to your good lady and to your daughter Lady Sidney." Money was now plentiful enough, and on September 1 Dee covenanted with John Basset (who had arrived at Trebona on August 20) "to teach the children the Latin tongue, and I do give him seven ducats by the quarter, and the term to begyne this day; and so I gave him presently seven ducketts of Hungary in gold, before my wife. God speede his work." Arthur, who was just over eight, was getting on with his "grammar"; Katherine was six. Thus was another element introduced into the oddly assorted household, and on September 4 Dee writes: "Basset his hurly burly with T. Kelley." Payments to Basset were entered regularly each quarter until August following, when the tutor, whose real name seems to have been Edward Whitlock, went off to Budweis on pretence of buying "cullors" — perhaps for painting, and never returned.

Various visitors came to Trebona, among them Pucci, bringing Christian Francke, the author of some books written against the Jesuits. Rosenberg returned to Trebona, and finding a constraint existing in the relations of the household, set himself to reconcile them. "July 19th. a certayn kind of recommendation between our wives. Next day some relenting of E.K., also by my Lord's entreaty." Rosenberg came and went frequently, so did his wife. Lord Biberstein, a friend of theirs, came to make Dee's acquaintance.

Alchemical experiments were being prosecuted with vigour. It was Dee's turn to make something prized, even if it were not gold. "Sept. 28th. I delivered to Mr. Ed. Kelley (earnestly requiring it as his part) the half of all the animal which was made. It is to weigh 20 ounces; he wayed it himself in my chamber. He bought his weights purposely for it. My Lord had spoken to me before for some, but Mr. Kelley had not spoken." Secrecy being necessary, he is evidently using a word of hidden meaning.

Kelley was constantly riding to Prague, and in October, while he was away, "John Carpio [who had joined them at Trebona] did begyn to make furnaces over the gate. He used of my rownd bricks, and for the yern pot was contented now to use the lesser bricks, 60 to make a furnace." Experiments on a large scale were about to be begun, and when Kelley returned a week later, *terribilis expostulatio*, etc., is the entry under his name. Edmond Hilton returned from England, and a month later Francis Garland, bringing letters from Edward Dyer. He brought also letters from Court advising their return home. People in the neighbourhood were beginning to talk about the strange doings of the foreigners in the Castle, and the Captain Critzin of the Guard disdained to come to a wedding supper in the Rathhaus because Dee and Kelley were to be present. The household grew larger and larger. Thomas Kelley was married in June. In December, "Mr. John Carpio went towards Prague to marry the maiden he had trubbled; for the Emperor's Majestie, by my Lord Rosenberg's means, had so ordered the matter." He was absent till February 16, and

in April brought his wife. Dee turned back to his books of tables, figures and symbols. “The 30 and 31 day I began to frame myself toward the practice of the Heptagonos of my 4th boke. God prosper my purpose.” Kelley, on the other hand, was absorbed in alchemical studies. Perhaps the secret he had once professed to have captured had again eluded him.

“Dec. 12 afternone somewhat. Mr. Ed. Keley his lamp overthrow, the spirit of wyne being spent to[o] nere, and the glas being not stayed with buks abowt it, as it was wont to be; and the same glas so flitting on one side, the spirit ws spilled out, and burnt all that was on the table where it stood, lynnen and written books — as the bok of Zacharius withthe Alkanor that I translated out of French for some by spirituall could not [?]; Rowlaschy his third boke of waters philosophicall; the boke called Angelicum opus, all in pictures of the work from the beginning to the end; the copy of the man of Budwise Conclusions for the Transmutation of metalls, and 40 leaves in 40, intituled, Extractiones Dunstani, which he himself extracted and noted out of Dunstan his boke, and the very bok of Dunstan was but cast on the bed hard by from the table.”

The “very bok of Dunstan” was no doubt a copy of the manuscript *Tractatus...de lapide philosophorum*, which was formerly ascribed to the Saint of Glastonbury. It was the constant companion of these two alchemists, held in awe and great esteem, as we see by Dee’s words above.

In his new liberation from crystal gazing, Kelley became a changed and haughty being. He was established in his own apartments, and when he felt weary his former master was now summoned imperiously to come and amuse him! He sends the old man a message by his brother Tomas, saying, “You study too much, it is too late in the day to go to Cromlaw, as you intended, he wishes you to come to pass the tyme with him at play.” Dee mildly consents: “I went after dynner and payd, he and I against Mr. F. Garland and Mr. Rob., tyll supper tyme in his dyning rome, and after supper he came and the others, and we played there two or three houres and frendely departed. This was then after the great and wonderful unkindness used toward me in taking my man.” A week or two later Kelley sent for Dee late in the evening to come to his laboratory over the gate, to see how he distilled sericon, “according as in time past and of late he heard of me out of Riplay. God lend his heart to all charity and vertue.”

It is evident that Kelley was jealously and secretly working at his experiments apart from Dee. He had learned much alchemy from his master and his master’s wonderful library inthe four years, but there was still knowledge stored in chambers of Dee’s brain of which he could not pick the lock. To enter those inner recesses had been doubtless Kelley’s aim when he represented the spirits as bidding them share everything with each other. But he, on his part, had no intention of sharing anything that he discovered.

The year 1588 began badly, for the child Michael, on New Year’s Day,

“going childyshly with a sharp stick of eight inches long and a little wax cadell light on the top of it [evidently the child was keeping Christmastide in good old German fashion], did fall uppon the playn bords in Marie’s chamber, and the sharp point of the stik entred through the lid of his left ey toward the corner next the nose, and so

persed through, insomuch that great abundance of blud came out under the lid, in the very corner of the sayd ey. The hole on the outside is not bygger than a pin's hed; it was anoynted with St. John's oyle. The boy slept well. God spede the rest of the cure. The next day after, it apperid that the first towch of the stikes point was at the very myddle of the apple of the ey, and so (by God's mercy and favor) glanced tothe place where it entred; with the strength of his hed and the fire of his fulness. I may make some shew of it to the prayse of God for his mercies and protection."

Dee of course was as skilled in medicine as any doctor of the time. He rendered medical assistance when Thomas Kelley's wife, Lydia, miscarried with twin boys. He notes his own symptoms carefully: "June 19, I had a grudging of the ague. June 22, I did evidently receive the ague and layd down. Jan. 17. The humming in my ears began." Another time "I was very sik uppon two or three sage leaves eten in the morning; better suddenly at night. When I cast them up, I was well."

The coldness between the two became unbearable to Dee, the peacemaker, of whom Aubrey relates that if ever any of his neighbours fell out, "he would not let them alone until he had made them friends." In April, he wrote to Kelley and his wife "2 charitable letters, requiring at theyre hands mutual charity." The same day he made friends with Captain Critzin, and on Sunday, when Jane ws churched after Theodore's birth, received the Communion with her. He hears of some fresh treachery of Pucci, and of Rosenberg's displeasure, but all is forgotten on May 10, when Kelley "did open the great secret to me, God be thanked!" A few days after, "Mistris Kelley received the sacrament, and to me and my wife gave her hand in charity, and we rushed not fromher." The reconciliation does not seem to have been altogether comlete. Every visitor throughout that summer, Edmund Cooper, Joan Kelley's brother; Mr. Thomas Southwell, his friend; Edward Dyer, Francis Garland, and Count Rosenberg, all seem to have tried to patch up the quarrel, but things only grew worse.

The "great secret" opened by Kelley was no doubt the professed secret of the gold. Dee must very soon have found out the true value of this "secret," but apparently he continued to believe that Kelley had honestly transmuted base metal, and was keeping the method to himself. Nothing was less likely than that he would share his knowledge, even with the master who had taught him all he knew. The first essential in alchemy was secrecy. It is characteristic of Dee that he seems to have been more pained at Kelley's want of confidence in him, than chagrined at not knowing the secret. Of jealousy that Kelley was, or seemed to be, the successful alchemist, there is no trace. But Kelley was gradually undermining all Dee's influence and friendship with Rosenberg, who was their one powerful friend. The Viceroy of Bohemia had much influence with the Emperor. He was costantly at the Castle or with Kelley in Prague. Kelley had stolen the old man's best workman, and was now turning all his friends against him. Rosenberg and Kelley were always working in secret, while he was left outside in the cold. "September 15th, the Lord Chancellor cam to Trebona and went away on the 17th. The rancor and dissiumlation now evident to me, God deliver me! I was not sent for." The pathos of the situation is irresistible. The man of a Continental reputation, whom five emperors had honoured, must stand aside and see his upstart pupil made much of and set onthe high-road to fortune. But Fate was more just than she seemed, and

Dee, who clung to the honest and true way, had in the end the better lot. Not in ease or success, truly; but who would not rather leave behind him the reputation of a sincere man deluded than that of a deceiver, even though not unmasked? Till then Dee says he had been “chief governor of our philosophical proceedings, but little by little I became hindered and crossed by fine and subtle devices, laid first by the Bohemians, somewhat by Italians, and lastly by my own countrymen.”

The strange partnership had now run its tempestuous course to the end, and the heterogeneous colony of English men and women at Trebona was about to break up, never all to meet again. The first to depart was Mistress Kelley, thankful, no doubt, to disentangle herself from the web of pretences, deception and bickerings. On October 17, “Mistress Kelley and the rest rode towards Pouchartz in the morning.” She was on her way to England, and only once thereafter does this young woman’s name enter into our story.[On November 23, Francis Garland and Mr. Dyer’s servant, Edward Rowley, who had come back a week or two earlier, left for England. Dee sent by them a most important letter to the Queen, also letters to Dyer, Mr. Young, and to Edmond Hilton. News from England travelled slowly, and Dee had not long since heard of the glorious defeat of the Spanish Armada of the previous May. The victorious captains, Frobisher, Drake, Hawkins, were all well known to him, and with the Admiral in chief command, Lord Howard of Effingham, he was very familiar at Court, for his wife had been Jane’s early patron and friend. Patriot that Dee was, yearning to get back to England, he now wrote to the Queen a letter of congratulation (dated November 1-, 1588) upon the splendid victory of her navy. It was couched in the graceful and fantastic terms of homage of the day, and is a literary production well befitting a man of his reputation. The letter is reproduced from the original. It is printed by Ellis in *Letters of Eminent Men*.

[REPRODUCTION OF LETTER GOES HERE]

He speaks in it of his proposed return, and begs for a safe conduct through all the domains of princes and potentates which lay between him and home. “Happy are they that can perceive and so obey the pleasant call of the mightie Lady Opportunitie.” The answer, of course, took long to come, but he began to make his preparations slowly. He gave to Kelley the wonderful convex glass which the Queen had so often admired. A fortnight after, Kelley gave it to Rosenberg, and the Count presented it to the Emperor. Dee says the Emperor had long esteemed it, but he has not told us when he showed it to Rudolph. He had described the mirror in his Preface to Billingsley’s *Euclid* (see ante, p. 25).

On February 4 he also made over to Kelley “the powder, the books, the glass, and the bone, for Rosenberg, and he thereupon gave me discharge in writing of his own hand subscribed and sealed.” Rosenberg was away, and did not trouble to return to bid him good-bye. Instead he wrote to Kelley to take his leave of Dee for him, and said that he would send instructions to his man Menschik to “dispatch him,” perhaps with some settlement of a financial character.

On the afternoon of February 16, 1588, Kelley rode away to Prague, taking most of the assistants with him: John Carpio, F. Garland, Simkinson. Dee never saw him again.

Three new coaches had been ordered in Budweis, and when they were ready, Dee dispatched Edmond Hilton (who had returned from England in December) to Prague to buy a dozen coach and saddle horses. Money was plentiful at this time, the practice of economy was impossible to Dee, so he set off to travel homewards in state, as became a man to whom an emperor had offered a princely salary. It was very unnecessary, even absurd, but it was characteristic of Dee and his exalted ideas, not so much of himself, as of his peculiar mission. The journey cost, as he reckoned up afterwards, more than 600 pounds. The horses — twelve young Hungarian coach horses and three Wallachees for the saddle- -cost 120 pounds, and cheap they were at that. The three new coaches, with harness, saddles and bridles, cost 60 pounds; and the hiring of two or three waggons for his goods, books, furniture, vessels, etc., ran into 110 pounds. Then he had an escort of twenty-four soldiers from Diepholt to Oldenburg, as permitted by the Emperor's passport; and from Oldenburg to Bremen, the Duke of that province sent six musqueteers to protect him. It was a dangerous time to ride abroad, as he says, not long before the outbreak of the Thirty Years' War. A party of eighteen horsemen had lain in wait for his caravan for five days, but a warning came through a Scot in the garrison of Oldenburg, and Robert, the Landgrave of Hesse, extended his powerful protection.

The train of coaches and waggons, with the travellers and their baggage, left Trebona on March 11. The Castle had been their home for a year and a half, and we can fancy Jane, at any rate, dreading to take up once more the old wandering life. For it was to be a year and three-quarters more before they set foot in England. On the 18th they were in Nuremburg, where they stayed two nights; on March 26 they reached Frankfurt-am-Main, and on April 19, five weeks after leaving Trebona, they were in Bremen, their present destination.

CHAPTER XVI

THE END OF KELLEY

“All you that faine philosophers would be,
And day and night in Geber's kitchen broyle,
Wasting the chips of ancient Hermes' tree,
Weening to turn them to a precious oyle,
The more you worke the more you loose and spoile.
To you, I say, how learned soe'er you be,
Go burn your Bookes and come and learne of me.”
— Sir Edward Kelley, Metrical Treatise on Alchemy.

Before continuing the story of Dee's life in Bremen and his return to England, the end of Kelley's extraordinary meteoric career, which six more years extinguished, must be briefly traced.

Dee expected Kelley to join him at Stade. He confidently thought they would return to England together, obedient to the Queen's summons. But Kelley was now a great man with Rudolph, who had given him an estate and a title, and established him at his Court in Prague as a citizen and councillor of state. Apparently he succeeded in keeping up the deception of making gold. The news of his promotion was conveyed by Dee to Walsingham, at Barn Elms, in a letter dated August 22, 1589,

to which we shall again return. He speaks of Kelley as “my great friend, yet in Boemia,” and surmises that Walsingham may have heard direct from him, who is “now in most favourable manner created a Baron of the Kingdom of Boemia.”

The actual title conferred was *eques auratus*, a synonym for “miles” which took its origin in the fact that a knight’s armour was gilded. In English it was of course “Sir.” The title must have been conferred on Kelley very soon after Dee left Trebona in March; for by the end of June he is called Sir Edward by a couple of Englishmen, Robert Tatton and George Leycester, who with Edmond Hilton were at Trebona then, and came on to Dee at Bremen. Kelley commissioned them to take down particulars of the treachery of one Parkins, a Jesuit in Prague, who was plotting with the King of Spain and the Pope against England. He wished of course to score “his faithful discoverie of this treason.” He also desired Burleigh and others in England to know what great honour had been done him, and he obtained in February, 1590, a confirmation of the grant of his title to send him over, lest there should be any doubt in English minds. The document, curiously enough, is countersigned by Dr. Jacob Curtius, the acquaintance of three years before.

Constant letters passed between the two former fellow-workers through the year 1590, the messenger being either Thomas Kelley or Francis Garland. All manner of wild stories were current in England, and have been gathered up and repeated by every writer upon Dee and Kelley. The sober Anthony Wood relates that gold was so plentiful in Trebona before Dee left that the young Arthur played with gold quoits made by projection, while a youthful Count Rosenberg (he seems a quite fictitious person) was throwing about silver playthings procured by the like means. Burleigh had written for a specimen of their wonderful art, and it said that the Queen was actually the recipient of a warming-pan, from the copper or brass lid of which a piece had been cut, transmuted into gold, and replaced. Elias Ashmole goes further in the story to say that “without Sir Edward’s touching or handling it, or melting the metal, onely warming it in the Fire, the Elixir being put thereon, it was transmuted into pure gold.” He adds that he has heard from a credible person (who has seen them) that Kelley made rings of gold wire twisted twice round the finger, which he gave away, to the value of 4,000 pounds: at the marriage of Rosenberg’s servant before alluded to. Ashmole adds: “This was highly generous, but to say the truth, openly Profuse beyond the modest limits of a sober philosopher.” Sir Thomas Browne says he heard from Arthur Dee, his friend, conclusive evidence of the manufacture of gold. The reader may smile at these fairy tales, but what is to be said of a staid and sober minister like Burleigh being ready to credit the truth of Kelley’s exploits, whether convinced by the warming-pan, or by other means? In a long letter to Edward Dyer, in 1591, who was then acting as the Queen’s agent in Germany, he urges him to use every means in his power to induce “Sir Edward Kelley to come over to his native country and honour her Majesty with the fruits of such knowledge as God has given him.” Dyer had been Dee’s friend for a great many years, as we know, and was Arthur’s godfather, but he transferred all his attentions to Kelley as soon as that clever trickster began making gold. Dee only says he “did injure me unkindlie.” Kelley and Dyer became inseparable, and Dyer wrote home to Burleigh wonderful reports of Kelley’s miracles. Ignoring all that had passed, Burleigh is ready to welcome the quondam coiner, forger, or what not, with open arms back to the service of his Queen. “If his knowledge is as certain as you make it, what would you have me think could stay him from flying to the

service of his own sovereign?" If he is afraid of old reports, actions, disgrace, being brought up against him (and we know Kelley's record was none of the cleanest), let him be assured that he shall have his Queen's protection "against all impediments that shall arise." Burleigh becomes almost poetical as he speaks of the patronage of "such a Princess, who never yet was stained with any breach of Promise to them that deserved her favour. If I did not know to whom I write, who has had long experience of her rare vertues,...I could use many arguments to move any man never to mistrust her." He implores Dyer to induce Kelley to come. If he does not come, it can only be because by cunning or legerdemain he has deceived them and cannot do what he promises, or else he is an unnatural disloyal man and subject. In case Kelley will not come, he asks if Dyer cannot send a very small portion of his powder to make a demonstration to the Queen's own sight. What the Treasurer would like most of all is that Kelley should "send her Majesty as a token a good round sum of money, say enough to defray the charges of the navy for this summer," for the ships of Spain were gathering courage after their defeat. "But wishers and woulders were never good householders," he ends. The Queen is at his house at Theobalds, and will be some time longer. He would not be content the time were tripled, so he "had but one corn of Sir Edward Kelley's powder." Burleigh and Kelley were also in direct correspondence. Beside urging his return, the Lord Treasurer, who seemed to consider Kelley as the storehouse of the elixir of life as well as of the philosopher's stone, begs for a prescription with the proof of manufactured gold. In a brief note of February 18, 1591, Kelley says he will shortly send the good thing desired for your health." He has received the salutations sent through Mr. Dyer, and "at his return you shall know how I thank you." This, the only original letter of Kelley's to be traced, characteristically promises what he never meant to do. Burleigh replied in May, again begging him to send "something of your operation to strengthen me afore next winter against my old enemy the gout." He once more strongly urges Kelley's return. How can he hesitate to bestow the gifts that God has given him rather upon his own Prince and Countrie than upon strangers?

Kelley of course did not return, but apparently wrote again, urging powerful reasons of excuse. Burleigh's faith in him began to shake. He sent a last imperative recall, some of which may be quoted from the rough draft written in his own hand. It shows once more what sort of men the great Queen had to serve her, and what a Queen she was to serve.

Beginning "Good Sir Edward Kelley," Burleigh acknowledges Kelley's letters by Dyer. "Without particular knowledge of your impediments, I may not give any such censures as others soe unconsiderately, yea uncharitably, may doe. You confess a desire to return to your native countrie; your minde draws to your sovereign. This is commendable, yet many say if you come not, it is because you cannot perform what has been reported of you. Malicious persons say you are an imposter, like some in other countries have been proved. You fear severe punishment. Now, good knight, though I write thus plainly to you, yet such is my credit in Mr. Dyer, such my allowance of your loyal profession, such opinion do I firmly conceive of your wisdom and love expressed in your letters, such my perswasion of your habillitie to performe what Mr. Dyer has reported (by reason of the estimation, honor and credit I see that you have gotton by yr behaviour), that I rest only

unsatisfied in your delaye of coming; and I am expressly commanded by Her Majestie to require you to have regard to her honour, and according to the tenor of her former letters, to assure yrself singularly favoured in respect of the benefit you may bring to Her Majestie....

“Be assured of worldly reward. You can make yr Queen so happie for her, surely as no subject she hath can do the like. Good Knight, let me end my letter conjuring you, in God’s holy name not to keep God’s gift from yr natural countrie, but rather help make Her Majestie a glorious and victorious power against the mallice of hers and God’s enemies. Let honor and glory move yr naturall hart to become honorable in yr own countrie rather than in a strange one, and leave a monument of yr name with posterity. Let no other country bereave us of this felicitie: that only, yea only by you, I say, is to be expected. Let no time be lost; we are all mortall: you that should be author, this noble Queen yt should be receiver thereof.”

Then he politely acknowledges some gift Kelley has sent. Instead of an ingot of gold, it seems more like a geological specimen for a museum, and certainly does not excite the Lord Treasurer’s immense gratitude.

“All this in answer to your by Dyer. I thank you for the montayn or rock sent safely from Staden. I will place it in my house, where I bestow other things of workmanship, and it shall be memoryall of yr kindness, wishing I might receive some small receipt from you yt might comfor my spyritts in myn age, rather than my coffers with any welth, for I esteeme helth above welth.”

But Kelley knew better than to face the astute Englishmen at home. In Prague he felt secure, and all too bitterly he learned his mistake. A couple of independent letters from two English merchants to Burleigh and to Edward Wootton give the exciting story of his fall from favour.

He had been established in a house of his own close to the Palace; his wife and brother had rejoined him; Edward Dyer made it his headquarters. One day, the last of April, perhaps even before Burleigh’s letter was dispatched, he was suddenly arrested by the fitful Rudolph’s command, and thrown into prison. A large force of the imperial guard, accompanied by the City Provost and one of the Secretaries of State, burst uninvited into his house to take him whilst at dinner. But a friend at Court had whispered a word, and the evening before he had ridden off with one attendant towards Rosenberg. The intruders had to be content with haling off brother Thomas to prison, “pinacled like a thief.” They searched the house thoroughly, broke open doors, and thrust their halberds into the beds or any place where “Sir Edward” might possibly lie hid. Satisfied he was not there, they sealed up certain of the rooms, laid some of the servants in chains — one was afterwards “racked” — and departed, leaving a guard over “Lady Kelley” and Mr. Dyer, forbidding them to stir from the house. Returning with their news to the Emperor, Rudolph “cursed in the Dutch manner,” and gave orders to search the town and the highways.

Kelley had ridden off many miles towards his patron, the all-powerful Rosenberg, but being weary and fasting, halted at the inn at Sobislaus, fed, and threw himself on a couch to sleep. By three days after, May 2, the soldiers had tracked him

down; and roughly seizing him, they cut open his doublet with a knife to search for concealed valuables or papers, vowing they cared not whether they took him dead or alive to the Emperor. Kelley appealed to his all-powerful friend, Rosenberg. "In Bohemia," says the merchant in his letter, "it is a rule that his Majesty dares do nothing without the Earl's consent, he being Burgrave of Prague, the immediate person and officer under the Crown." Rudolph was already sinking into the melancholy and madness in which he ended his days. However, Rosenberg's protection did not avail. Kelley was taken to the Castle of Purglitz, three miles from Prague, and there he was closely confined for more than two years.

And now for the cause of Rudolph's displeasure, and the reason of the arrest.

First, it is surmised to be debt, but the merchant adds that although Kelley is known to owe a large sum to two Cologne merchants who trade in jewels, he owes nothing to the Emperor, nor ever had put him to any charge, save for coals and house room.

Next it is thought he was in league with a professed gold-maker from Venice, executed by the Duke of Bavaria at Munich, on April 25. (Of him, too, Burleigh has written in his letter to Dyer.) Thirdly, the Emperor's fear that Kelley would depart for England is adduced. Dyer had brought autograph letters from the Queen recalling him. A doctor's son in the town, who had served Sir Philip Sidney in England, and knew her hand, had reported this. It was of course an invention; and the merchant opines Dyer is of too rare a discretion to permit secret letters to be seen or even heard of; it is more likely that Kelley has some time or other vaunted at table that the Queen had sent for him. "He is a man who taketh, as I hear, a pleasure that Princes desire him." Fourthly, it is the doing of the powerful family of the Poppels, second family in the kingdom, and great enemies of the Rosenbergs, who have been "the setters up and principal maintainers of Sir Edward Kelley hitherto." The fifth report is that Kelley had distilled an oil or medicine for the Emperor's heart disease, which was poison. Lastly, the writer comes to what he takes for the true reason of Rudolph's anger.

An Italian, named Scoto, having cast imputations on Kelley's powers of projection, the Emperor sent for him to come and make proof of his art at Court. Kelley of course excused himself, saying he was sick. Three times he was summoned, and then the guard was despatched to bring him. The accusation was Laesus Mejestatis, and the city wonders what will be the end. The Emperor dare not openly execute him, for fear of Rosenberg and the strong feeling in the State for a change of ruler. Yet he may easily be put to death secretly in that castle where he is confined, "and Rosenberg not know otherwise than that he liveth, or is dead by disease. Almost grown now to be a common Practice in the Empire, and in the Palatine especially, noted that way."

This dark hint is almost a prophecy of Kelley's fate; but the doom was not yet quite prepared. On December 5, 1593, Dee received news of his having been set at liberty on the previous October 4, just two and a half years after his arrest. Not a word of him in Dee's diary in the meantime, until March 12 of that year, when the old man records that he dreamt much of Kelley two nights running, "as if he wer in my house, familiar, with his wife and brother."

Kelley characteristically says he was "utterly incapable of remaining idle even in prison, and employed his time in writing alchemical treatises," from which it seems he was allowed books and papers, for his writings are mere compilations

from ancient chief masters of the art. In *The Stone of the Philosophers*, dedicated to Rudolph, he speaks of two imprisonments, tells him grandiloquently that he has for two or three years (1588-91) used great labour and expense to discover for him that which might afford profit and pleasure; and adds, with great bombast, "If my teaching displeases you, you are still wandering astray from the true scope and aim of this matter, utterly wasting your money, time, labour and hope." Truth is more desirable than anything else, and posterity will discover that he is to be counted among those who have suffered for it. Kelley as a sufferer for truth is highly entertaining, but he goes on to make a still more distasteful allusion. "It always way, and always will be, the way of mankind to release Barabbas and crucify Christ."

Beside this treatise Kelley certainly produced an earlier writing of some sort on the subject, which Dee discussed with the Archbishop of Canterbury on July 13, 1590. It had apparently incurred his displeasure. Mr. Waite attributes two other short papers to Kelley, *The Humid Path* and *The Theatre of Terrestrial Astronomy*. A couple of rather quaint alchemical poems — one of thirty-nine stanzas, from which the heading of this chapter is taken — are doubtless by him, perhaps written also in captivity.

During the next year letters were two or three times exchanged between Kelley and Dee, and in March, 1595, Francis Garland, who had then not long returned from Prague, "came to visit me and had much talk with me of E.K." Kelley was apparently then restored to the Emperor's favour, for on August 12, Dee says he "receyved Sir Edward Kelley's letters of the Emperor, inviting me to his servyce again." Did Kelley think there might be further hints to be got from his old alchemical master? Then under date of November 25, 1595, Dee enters this curt note: "the news that Sir Edward Kelley was slayne." Never thereafter does he mention this adventurer's name.

The prevalent story is that Kelley was again imprisoned in one of Rudolph's castles, and that, attempting to escape by a turret window, he fell from a great height and broke both legs, receiving other injuries, from which he shortly died. It is even said with some amount of credibility, that the Queen wrote imperatively to Dyer to secure his release, and that everything was prepared in readiness to convey him secretly to England, and that he was escaping for that purpose when the accident happened. This story has hardly been tracked home to its source. It may be true. On the other hand, the end may have come in the more swift and secret manner suggested by the English merchant. In either case, the spirit warning of eleven years before, that he should die a violent death, was fulfilled. Into his forty years as much adventure, folly, trickery and deceit, fortune, fame, favour, riches and poverty, had been crowded as could supply material for many a volume of romance.

Some of the incidents were indeed used a few years after his death by more than one dramatist. Dee had only quitted the world about a year and a half when Kelley's pretensions, Dee's learning, and the whole paraphernalia of alchemy, were severely satirised by Ben Jonson in *The Alchemist* (1610), a play which reflects all the crudest superstitions of the time. The credulous knight, Sir Epicure Mammon, describes Subtle, the alchemist, as

"A divine instructor can extract
The soul of all things by his art; call all
The virtues and the miracles of the sun

Into a temperate furnce; teach dull nature
What her own forces are.
A man the Emperor
Has courted above Kelley; sent his medals
And chains to invite him.”

In Butler’s *Hudibras*, first published in 1663, but written ten or fifteen years earlier, Dee and Kelley are again cited, though the satire is chiefly directed against Sidrophel, i.e., William Lilly. The devil is said to have appeared “in divers shapes to Kelley;” and in the description of Sidrophel, these lines occur:

“He had been long toward mathematics,
Optics, philosophy and statics,
Magic, horoscopy, astrology,
and was old dog at physiology;...
He had read Dee’s Prefaces before
The Devil and Euclid, o’er and o’er;
And all the intrigues ‘twixt him and Kelley,
Lescus, and the Emperor, would tell ye.”

One may wonder how much these scurrilous references had to do with fixing Dee’s reputation in the eyes of his immediate posterity.

CHAPTER XVII

RETURN TO ENGLAND

“If I have done my dutiful service any way to her Majesties well liking and gracious accepting, I am greatly bound to thank Allmighty God, and during my life to frame the best of my little skill to do my bounden duty to her most excellent Majestie.”

— Dee, *Compendius Rehearsall*

Upon Dee’s arrival in Bremen on April 19, 1598, a house was at once hired, and the family moved in on May 13. He put out his three saddle horses to grass in the town meadow till Michaelmas, for nine ducats, and presented the twelve Hungarian coach horses to the Landgrave of Hesse, to whose kindness he had been indebted for protection as he passed through his territories. In June, Thomas Kelley, his wife Lydia; Francis Garland, and Dyer’s man, Edward Rowley, left for England. At the same time Edmond Hilton returned to Prague. An agreement or bond had been entered into between the late partners that the proceeds of the wonderful discovery should be shared. Hilton was back on July 30, with news of Kelley: perhaps not good news, for three nights after, towards daybreak, Dee’s sleep was disturbed by a “terrible” dream, which visited him not for the first time, that “Mr. Kelley would by force bereave me of my books.” Hilton left almost immediately for England with a letter from Dee to Walsingham to disclose the treason of the Jesuit, Parkins. This letter has been already referred to [p. 201 in original], but it contains other interesting matter, all conveyed in Dee’s beautiful neat hand. He has already

written to acknowledge the Queen's gracious letter of safe conduct, received from Walsingham, but Hilton and the two English gentlemen, Tatton and Leycester, are still detained at Stade, waiting for a wind. After speaking of the designs of the Jesuit, he goes on to give the Secretary an important summary of the state of affairs in the Low Countries, where the struggle for independence was well advanced. "The Provinces all incline to a desire to endure one fortune and become one whole united. They acknowledge Her Majestie's Wars to be just but uncompassable. Their minds are getting alienated from us, only fayr means and great wisdom will win them over." He has taken counsel of "the one of all the inhabitants the most sharp-witted, the greatest understander of all occurrences generall of secret purposes; the best languaged one (as knowing Hebrew, Greek, Latin, French, Italian, Dutch, etc.); and one employed in the councils; one who was courageous in the first bickerings with Spaniards at Antwerp; who has observed all the beginnings and proceedings of errors, political and military, committed on all hands. Now and then he visiteth me, and I have asked him to pen his opinion on what can be done to recover and reform the States, but as yet he has not found leisure." Then he begs the Secretary's leniency if he has offended in writing of matters not pertaining to him, "and of which no doubt your honour has already had all necessary advertisement from properly authorised persons." He will write no more of public affairs, his coming thither was no public but his private cause, the beginning of his "nere return-making into my most derely beloved Native Country."

At the same time (August 20), Dee wrote to his friend, Mr. Justice Young, that the messengers had been delayed twenty-five days waiting for a wind; that he feared the Low Countries were bent on shaking off the Queen's authority if they could; and that he feared he sould have "to endure this Breamish habitation this winter, as I do not hear a word of the approach of Sir Ed. Kelley, or of Mr. Dyer's return."

In Bremen, Dee mingled with all the learned and distinguished men of the time. A memento of this period is to be found in an album, the *Thesaurus Amicorum*, of Timon Coccious (or Koch), a young Bremen student who died while at Leyden University three or four years after. The album of white vellum, faded and yellowed with age, with its edges still shining with the mellow lustre of old gold, was the receptacle of autographs, wise and pithy sayings, original or quoted, all inscribed after the beginning of July, 1589. Sayings from Plautus and Seneca, Juvenal, Pythagoras and Homer, follow and press close upon the wisdom of Boethius, from *De Consolatione*, and the divine poetry of Dante. The first to write in the book was Bruno, Count Mansfeldt, Helmstad, July 1. He is followed by Dr. Cristoph Pezel, then Professor of Divinity and superintendent of the churches at Bremen, and on the seventh page is Dee's beautiful signature and his motto — in the light of posterity's unchallenged view of him, full of irony — "Nothing useful if not honest."

Mr. Hart, minister of the English colony at Stade, who had escaped from the Spanish service in Flanders with Sir William Stanley, and the Deputy Governor of Stade, both came from the port town near by to see Dee. Dr. Heinrich Khunrath was the chief writer of the advanced school of alchemists who passed from the pursuit of material gold to the discovery of incorruptible spiritual treasures hidden in the palaces of truth to which they provided a spiritual key; and it is a pregnant fact that all of his books were published after this conference with Dee. Daniel Vander Muelen was another visitor, and from Mr. Southwell Dee had news that Edward

Dyer was sent on a mission to Denmark. Two or three weeks later, he met Dyer unexpectedly in the town. News came of Rosenberg, and several of Dee's men left him to return to Kelley. He was warned to leave his house in Bremen.

By November, Dee resolved to wait no longer for Kelley, but to start for England. He still hoped, however, to meet that individual ere he embarked. On November 19, his whole party took ship by the Vineyard. A crowd of townspeople and students collected to bid him good speed, and to see the homeward bound travellers off; quite a little scene took place, which must have pleased and flattered Dee immensely, for there was no lack of a man's full share of vanity in him. Pezel had composed some verses on his departure, had got them printed the night before, and as the party were leaving Bremen for the seaport, a few miles away, the Professor distributed copies as a parting surprise. The travellers arrived in the Thames at Gravesend on December 2, and on landing the next day went straight to the house of Mr. Justice Thomas Young, at Stratford. We may imagine Jane's relief at getting her children safely back to England, with the addition of Michael, born at Prague, nearly four years, and little Theodore, born at Trebona, nearly two years before.

Since Dee's departure from England six years ago, great events had happened. The "invincible" Armada of Philip had been beaten in a six days' running fight up the Channel. The Queen's hated rival, Mary Queen of Scotland, had been put to death; Leicester's short dictatorship of the Netherlands had begun and come to an end. Leicester had been dead about a year. New favourites had arisen in the Queen's favour. But even more significant than these public affairs had been the upward movement in literature, the birth of dramatic art, a passionate outburst of poetic fervour, the growth of a taste for well-disciplined prose. Many splendid fruits of this movement had not yet seen the light, Sidney's *Arcadia* and the first part of Spenser's *Faerie Queen* were to be issued within a few months; the first play of Shakespeare was publicly performed within little more than a year of Dee's return. But Lyly and Marlowe had already, during his absence, given *Campaspe*, *Tamburlaine* and *Doctor Faustus*, to be performed by actors in the first stationary home of the earlier nomadic players, the theatres of Shoreditch, immediately to be followed by those of Bankside. Bacon was perhaps even then meditating his *Essays*, published some half a dozen years later; Hooker issued the first books of his monumental *Laws of Ecclesiastical Polity* within four years; and Nash, Peele, Green, and a horde of other writers, were contributing to establish the English literary renaissance. One can scarcely help wondering how much the fabulous stories of Dee and Kelley, which must have reached Marlowe's ears, contributed to his splendid dramatisation of the Faust legend (first printed in Frankfurt in 1587). But after all, even the story of Dee's angels and Kelley's gold, pales before the lurid glow of the stories of the earlier alchemists, Agrippa and Paracelsus.

Dee landed in England a disappointed and a partly disillusioned man, clinging to a belief which was yet useless, unprofitable to him. He could prove nothing of Kelley's exploits. But he lost no time in repairing to Court, and on December 19 he was graciously received by the Queen at Richmond.

On Christmas Day he first slept in his own house at Mortlake, and beheld for himself his ruined and rifled library, with its precious books and instruments missing. He himself was in dire straits. He had little left him save his wife and children, and some still faithful friends. He took the house over as a tenant from

his brother-in-law, Fromond, and settled down in the old quarters. Adrian Gilbert was the first visitor, generously offering “as much as I could require at his hands, both for my goods carried away, and for the mynes.” Very soon Thomas Kelley arrived and followed suit by offering the loan of ten pounds in gold; he afterwards “sent it me in Hungary new duckettes, by John Croker the same evening. He put me in good hope of Sir Edward Kelley his returning.”

A second daughter was born, and christened at Mortlake, on March 5. The name given her was Madinia, suggested by the busy little spirit who had been so helpful at her first coming. The child was christened at Mortlake on the 5th, Sir George Carew as godfather, Lady Cobham and Lady Walsingham, godmothers. Letters came from Kelley by Garland in March, and replies were despatched by Thomas Kelley in April. Dee is careful to give his former skryer his full title: — “Sir Edward Kelley, Knight, at the Emperor’s Court at Prague.” “Francis Garland was by, and Mr. Thomas Kelley, his wife. God send them well thither and hither again.”

On Lady Day, the children begin to go to school with Mr. Lee at Mortlake. “I gave him his house rent and forty shillings yerely for my three sons and my daughter. The house rent was allmost 4s. yerely, of Mr. Fisher his new house.” Arthur was now ten, Katherine nine, Rowland seven and Michael five. The youngest boy, Theodore, born at Trebona February 28, 1588, was rather more than two. Dee notes that he was “wened” on August 14, 1589. Katherine was not long under the Mortlake schoolmaster, for on May 21 “my dowghter was put to Mistress Brayce at Braynford [Brentford], hir mother and Arthur went with her after dynner.” On April 15, he writes of his neighbour and friend, the Vice-Chancellor: “Good Sir Francis Walsingham died at night hora undecima.” Burleigh was the only one of the old friends left. He records an interesting visit from “the two gentlemen, the unckle, Mr. Richard Candish, and his nephew, the most famous Mr. Thomas Candish, who had sayled round abowt the world.” Cavendish was a Suffolk man. His wonderful voyage occupied two years and nearly two months. He died at sea within a couple of years from Dee’s note. The uncle Cavendish interested himself with the Queen and the Archbishop to obtain for Dee the Provostship of Eton. This, too, fell to the ground, and Cavendish considerably sent him a hogshead of claret. He also lent or gave money to Dee and his wife, in all 302 pounds: in “ryalls and angels.” Dee gave him in return one of his most valued treasures — an alchemical work: —

“A copy of my Paracelsus, twelve lettres, written in French with my own hand, and he promised me before my wife never to disclose to any that he hath it; and that if he dye before me he will restore it agayne to me; but if I dy befor him that he shall deliver it to one of my sonnes, most fit among them to have it. Theoddor had a sore fall on his mowth at mid-day.”

Dee’s income was now almost a negligible quantity. The parsonages had paid him no rent since he left England. He went two or three times to Lambeth, and talked boldly to Archbishop Whitgift of his right to them.

He began to interst himself in his immediate neighbourhood with the idea of stopping the “Bacchus Feast,” at Brentford, a rowdy celebration which had excited his indignation and of which he gave the Bishop of London a warning.

In August a domestic tragedy occurred: one of the women servants became melancholy and went out of her mind. Lunacy being a disease beyond even Dee's medical knowledge, and for 300 years after, being treated more or less as demoniacal possession, it is no wonder that the remedies he tried were ineffectual. It seems another instance of the false views of Dee's character that have been repeated over and over again, that the editor of his Manchester diary urges as proof of Dee's magic and evil experiments that "some of the inmates of his house became suicides when in his service."

"Aug. 2. Nurs her great affliction of mynde. Aug. 22. Ann my nurse had long byn tempted by a wycked spirit, but this day it was evident how she was possessed of him. God is, and hath byn, and shall be her protector and deliverer. Amen.

"25th. Ann Frank was sorrowful, well comforted, and stayed in Gods mercyes acknowledging.

"26th. At night I anoynted (in the name of Jesus) Ann Frank, her brest, with the holy oyle.

"30th. In the morning she required to be anoynted, and I did very devoutly prepare myself and pray for vertue and powr, and Christ his blessing of the oyle to the expulsion of the wycked, an then twyse anoynted, the wycked one did resist a while.

"Sept. 8. Nurse Ann Frank wold have drowned herself in my well, but by divine Providence I cam to take her up befor she was overcome of the water."

After this Dee had the woman carefully watched.

"Sept. 29. Nurse Ann Frank most miserably did cut her own throte, afternone abowt four of the klok, pretending to be in prayer before her keeper, and suddenly and very quickly rising from prayer, and going toward her chamber as the mayden her keper thoght, but indede straight way down the stayrs into the hall of the other howse behind the doore did that horrible act. And the mayden who wayted on her at the stayr fote followed her and missed to fynde her in three or fowr places, tyll at length she hard her ratle in her owne blud."

In november the Queen came to Richmond and sent for Dee. She offered gaily to send him something to "kepe Christmas with." This promise was repeated to his friend, Richard Cavendish, a week or so later: "she told him she wold send me an hundred angells to kepe my Christmas withall. Next day, December 4, the Queen's Majestie called for me at my dore, circa 3 1/2 a meridie, as she passed by, and I met her at the East Shene Gate, where she graciously putting down her mask did say with mery chere, 'I thank thee, Dee. There was never promise made but it was broken or kept.'"

The thanks were obviously ironical for the reminder of the promise; the rest of the speech was rather cruelly jocose, for, as Dee adds, she had promised to send the money that day. However, on the 6th, an earnest of the gift arrived, in the shape of 50 pounds. On the 14th, she again called for Dee as she rode by his door, "to take ayre," and he met her at the park gate as before. He does not indicate the subject of the conversation, but it was probably a request on his part for some kind of royal

permission to continue his experiments in alchemy or transmutation, for on the 16th he tells of a visit from Richard Cavendish, who has received from the Queen, “warrant by word of mouth to assure me to do what I wold in philosophie and alchemie, and non shold chek, controll, or molest me.” Coupled with this message, she sent another promise to make up the 100 pounds.

Dee’s mind was now bent, he says, to deal with his “alchemical exercises,” and the only distractions he appears to have had were the constant visitors and small disasters of the children. The boy Rowland fell into the Thames on August 5, over head and ears, about noon or soon after. Their favourite place of play seems to have been on the river bank, and accidents there were of no infrequent occurrence. Arthur, when a child, had fallen from the top of the Water-gate Stairs to the bottom, and had cut his forehead badly. Theodore also had a nasty fall.

CHAPTER XVIII

A ROYAL COMMISSION

“A wise man never goes the people’s way:
But, as the planets still move contrary
To the world’s motion, so doth he, to opinion.
He will examine, if those accidents
Which common fame calls injuries, happen to him
Deservedly or no? Come they deservedly,
They are no wrongs then, but his punishments:
If undeservedly and he not guilty,
The doer of them, first, should blush, not he.”

Jonson, *The New Inn*

Dee had now abandoned all hope of recovering the two Midland parsonages, the small income of which was all that lay between him and utter dependence upon charity. His thoughts were now set on the mastership of St. Cross, at Winchester, a benefice which he had already, some twenty years before, petitioned the Queen to grant. Dr. Bennett, the present master, who had then obtained it, might now, he thought, fitly be made a bishop. The Countess of Warwick secured from the Queen a promise that Dee should have it, “if it were a living fit for me.” The Archbishop of Canterbury affirmed that it was most fit for Dee and Dee for it. The Lord Treasurer protested, “I will do what I can with her Majestie to pleasure you therein, Mr. Dee.” Lady Warwick, faithful to his cause, repeated her request the following year, and still there was no news of Bennett attaining a mitre. Dee went to Court at Nonsuch in August, and a day or two after his return dined, at Burleigh’s invitation, with the Lord Treasurer and his two sons, Sir Robert and Sir Thomas Cecil, at Mr. Maynard’s, at Mortlake. Burleigh also sent him venison and invited him again to meet Lord Cobham.

All promised their influence in obtaining for him the coveted Mastership. But it was another castle in the air. His friends were extremely good to him. In May, 1591, he says:

“Sir Thomas Jones, Knight (unaxed) offered me his castell of Emlyn in Wales to dwell in so long as he had any interest in it, whose lease dureth yet twelve yeres, freely with commodities adjoining unto it; and also to have as much mow land for rent as myght pleasure me sufficiently. The 27th day he confirmed the same his offer agayn before Mr. John Harbert, Master of the Requestes, in his hall at Mortlake, which his offers I did accept of and he was glad thereof.”

He could never have entertained the idea of going to live in Wales, but no doubt it was policy to accept all offers. Herbert was an old friend and neighbour. His daughter Mary and Arthur had played at a childish marriage years before. They seem to have been playfellows still, after the Dees' long absence, for in this June an accident happened to Arthur “at Mr. Herbert's, about sun setting.” He was “wounded in his hed by his wanton throwing of a brik-bat upright, and not well avoyding the fall of it again. The half-brick weighed 2 1/2 lb.” On May 3 of the following year, Arthur aged thirteen, became a Westminster scholar. “Wensday at ten of the clock Arthur was put to Westminster Schole, under Mr. Grant and Mr. Camden.” He came back home in two or three weeks, perhaps only for a few days, and Dee in returning him to lessons wrote a characteristic letter to his friend, William Camden, the antiquary. It shows how carefully the father had studied the child's health, abilities, and the quick temper, inherited from his mother. There is a tender touch in that mother's forethought to furnish the boy with means towards a special cleanliness which the provision for ablutions at Westminster did not contemplate. The “little chest with lock and key” for the firstborn son to take to school is always a family event of magnitude.

“22 May 1592.

“Worshipfull Sir. I have here returned your scholer unto your jurisdiction, beseching you to shew your charitable affection towards him: he had more and in better order then he will recover speedily. Of your great skylle and faithfull industrie in your function, it is most certayne to your great credit and merit. Of the wonderfull Diversitie of Childrens Dispositions, much you can say by experience: but of myne (this Arthure) I am to request you to conceyve at my hands, that he is of an exceding great and haute mynd naturally, ready to revendge rashly. The naturall inclination is to me evydent: as who hath [Sol] in horoscopo, and [Mars] in corde Leonis. Dictum sapienti sat esto: for vera curatura you may alter this naturall courage to true fortitude and not to frayle rash fancies: Socrates did overcome by grace Divine and his industrie, his untowardness, signified by the Art physiognomicall — you know the historie. This spirituall grammaticall concords of good manners I have great care that all my imps may be instructed in, to the more apt and skilfull serving of our Creator. Syr, my wife hath delivered unto him some more apparayle and furniture in a little chest with lock and key, yea, and with some towales to wype his face on after the morning and other washings of hands and face: willing him to buy him a stone basen and a pott, or a potter, to have allways clene and wholsom water in for his use.

“The boy liketh abundance of meate well: but very bashfully he sayd that there proportion of Drinke is somewhat to[o] little. I pray you by discretion listen to the voyce and opinion of the rest of the counsells within him, for now & in the

summer seasons, the proportion of Drink naturally doth increase above winters appetite thereof.

“Thus I am bold to cumber your wurship with these my speedy ragged lynes. And therein I besече you of one thing more, that his writing, both of roman and secretary hand decay not, but rather be amended: for a fayre writing is often tymes a good grace to matter very simple.

“Wherefore know that today they have at the right Wurshipfull Mr. Deans [Dr. Nowell’s] very honorable guests, and that this night it is intended that they will sup and lodge all night at Fullham. God bless your wurship and prosper you in all & ever your true and faithful wellwisher.

“John Dee.

“To the Worshipfull my singular friende Mr. Camden these be delivered.”

On New Years’ Day, 1592, “at the sunrising exactly,” Dee’s third daughter was born. She was christened Frances on the afternoon of the 9th, and sent off with her nurse to Barn Elms the same day. In August her father notes, “Remember that all things is payd to our nurse at Barnes for the girle Francys Dee from hir birth untill the ende of her eighth month, lacking 12s., and on Sunday the 27th of this August we gave the nurse ten shillings. The eighth month ended the twelfth of this month.” The child stayed on with her nurse till February 14 of the next year, when she was fetched home, “the woman very unquiett and unthankfull.”

Two entries, “March 9, the Pryvy Seale at night,” and March 16, “the great Seale,” refer to a promise given by the Queen to Dee’s cousin, Dr. William Aubrey, of Kew, now Vicar General and one of the Masters of Requests, about five rectories in the Welsh diocese of St. Davids, which Dee was to have when they fell vacant. They were only worth 74 pounds 11s. 2d. in all, and Dee says he never received a penny from them.

Things were so desperate that at last, on November 9, 1592, he drew up a supplicattion which his friend, Lady Warwick presented the same day to the Queen at Hampton Court. This document, which Dee says Elizabeth took in her own hand to read herself, instead of handing it to a secretary, begged for a personal audit of, and investigation into, the state of his affairs. It is probably a unique petition, and in reading it we are scarcely astonished at the confidence with which the old astrologer, now grown old in the Queen’s service, claims her consideration and provision. He appears to regard it as little less than a national reproach that a man of science like himself should be left in beggary. And so indeed it was. For thirty- four years had the Queen, true to the Tudor motto — to use everyone as a servant, to owe no gratitude, only acceptance or approval — spent promises upon him, but she had never given him a chance of providing for himself.

“Forasmuch as the intolerable extremitie of the injuries and indignities which your most excellent Majestie’s faithfull and dutifull servant, John Dee, hath for some years last past endured, and still endureth, is so great and manifold as cannot in friefe be unto your Majestie expressed, neither without good prooffe and testimonie have credit with your Majesties, and because also without speedy and good redress therein performed, it is to be doubted that great and incredible

inconveniences and griefs may ensue thereof in sundry sortes, (which yet may easily be prevented) your Majestie's foresaid most humble and most zealously faithfull servant beseecheth your Majestie to assign twoe or more meet and worthy persons, nobly and vertuously minded, who may and will charitably, indifferently, advisedly, and exactly, see, hear and perceive at the house of your Majestie's said servant in Mortlake, what just and needful occasion he hath thus to make most humble supplication unto your Majestie; and so of things there seen, heard, and perceived, to make true and full report and description unto your Majesty. And thus your Majestie's foresaid most dutiful servant beseecheth the Almighty God most mercifully, prosperously and alwayes to bless and preserve your most excellent Majesty royal. Amen.

"A. 1592. Nov. 9."

The result of this unusual request was that two commissioners were at once appointed by the Queen. Within a fortnight Sir John Wolley, Secretary for the Latin Tongue to Queen Elizabeth, and one of her Privy Council, and Sir Thomas Gorges, Knight, of the Queen's Wardrobe, were seated in Dee's "late library room" at Mortlake, prepared to listen to his manifesto.

We may be sure he had long been preparing for this day. He seated the two gentlemen at a table in the middle of the room, placing near them a couple of other tables spread, one with letters and records of his "studious life for the space of a halfe hundred years, now by God's favour fully spent," the other, with all his own books, printed and manuscript, a complete author's collection of original works. At the suggestio of the commissioners he had occupied the space of thirteen days in praparing the autobiography which he called "The Compendious Rehearsall of John Dee, his dutifull declaration, etc.," so freely quoted in these pages. "It was in some order of method most briefly and speedily contribed against this day;" and in every respect, save that of chronological order, it is a pattern document. It gives the impression of having been written down in fragments, each incident or recital being complete in itself and most carefully dated, on a separate sheet of paper, and then the sheets shuffled and picked out by chance to follow each other for putting together. The story leaps from college day sin 1547 to travels in 1571, on to Christmas gifts in 1590, back to the Queen's visit in 1575, thence to his improsonment and appearance before the Star Chamber in 1555, and his reformation of the Calendar in 1582. He passes very lightly over his late travels abroad, merely ading that he "was very ungodly dealt withall, when I meant all truth sincerity, fidelity and piety towards God, my Queen and Country." The catalogue of his works is valuable, but it is unnecessary to print it in the present volume. He concludes his list of eight printed and thirty-six manuscript works ("some perfectly finished and some unfinished yet") with the very latest, the Compendious Rehearsall itself, adding that there were many other books, pamphlets and discourses not set down. He explains that the list is given neither "as they were written nor by order of yeares," but hastily as they came next to hand "out of diverse chests and baggs wherein they lay." He ends the chapter with a remarkable proof of the fecundity of his still active brain, in spite of his sixty-five years.

“The most part of all these here specified lye here before you on the table on your left hand; but by other books and writings of another sort (if God grant me health and life thereto of some ten or twelve years), I may hereafter make plain and without doubt this sentence to be true, Plura latent, quam patent.” What other works he did accomplish in the sixteen years yet to run of his long life, he described in an Appendix to the Rehearsal, written about two years afterwards, and printed by Hearne, and by the Chetham Society at the end of the autobiographical narrative, to which he had already added a short chapter giving an account of the result of the Commissioners’ visit, calling it “The Sequel of the Premisses.”

To return to the day of the visit, November 22, 1592. The Queen’s Secretary and the Gentleman of her Wardrobe arrived at Mortlake probably in the morning, and stayed to dinner. Having seated them at the tables in the library, Dee read to them, or related with the manuscript at hand, the story of the “halfe hundred” years spent in the attainment of “good learning,” which he reckoned from his leaving Chelmsford Grammar School for Cambridge. It was, of course, drawn up with the skill of a practised author, divided into fourteen chapters, each with an attractive and pithy title. “Her Majesties specially Gracious and very Bountifull favours towards me used etc.,” is by far the longest; the shortest is the twelfth: “The Resolution for Generall, very easy, and speedy Remedy in this Rare and Lamentable Case.” The remedy he suggests is to make him either Master of St. Cross; Warden of Manchester; Provost of Eton; or Master of Sherborne, one of which posts had been already promised him four times in three years. The tenth chapter is “The hard making of provision for some hundred pounds [?a year] for the maintenance of me, my wife, our children and family for these three last years, and that but with a meane dyet and simple apparel: I having not one Peny of certaine Fee, revenue, stipend or Pension, either left me, or restored unto me, or of any yet bestowed on me.” He shows how at his return three years before, he found himself penniless; cut off for ever from his two parsonages; disappointed as yet of the large yearly allowance promised him for his life from Bohemia. Probably on parting from the then affluent Kelley, some bond was entered into by him or by Rosenberg to transmit to him a share of the enormous profits they expected from the multiplication of the gold. “To save us from hunger starving,” he had had to appeal to friends, and he records gratefully that some who had been unfriendly before he left came to his aid on his return. They “put to” their helping hands in many ways, and alredy he had received from them a sum of 500 pounds and more. Yet he has had to pawn his plate little by little until all was gone. “After the same manner went my wife’s jewels of gold, rings, bracelets, chaines and other our rarities, under the thraldom of the userer’s grips, till non plus was written upon the boxes at home.” He has borrowed upon sureties, upon his personal bill of hand, upon his word, upon his promise, and he has run up accounts, so that now he is in debt for 333 pounds, beyond the 500 pounds. “The true accounts of all these gifts, loans, and debts upon score, talley, or book, is here before your Honours;” how the usurer devoureth him and how he is “daily put to shame, may be seen.” Other necessary expenses amounted to 267 pounds, so that he has spent but 566 pounds in three years for housekeeping,” and that with great parsimony, and with gifts from good friends of “wine, whole brawnes, sheep, wheat, pepper, nutmegg, ginger, sugar, etc., and other things for the apparel of me, my wife and our children.” He has mortgaged his house for 400 pounds, and now will have to sell it for half it cost to

pay his debts, he and his family to become wanderers and homeless vagabonds, furnished only with bottles and wallets. What shall he do, he pitifully begs, that he may prevent his name being handed down to posterity as a warning to lovers and students of truth not to follow in his steps and be given to such disgraceful shifts and indignities? He ends with a passage of true eloquence:

“Therefore, seeing the blinded Lady, Fortune, doth not govern in this commonwealth, but justitia and prudentia, and that in better order than in Tully’s Republica, or Books of Offices, they are laid forth to be followed and performed: most reverently and earnestly (yea, in manner with bloody teares of heart), I and my wife, our seaven children and our servants (seaventeene of us in all), doe this day make our petition unto your Honours that upon all godly, charitable and just respects had of all that you have this day seene, heard, and perceived, you will make such report unto her most excellent Majestie (with humble request for speedy reliefe), that we be not constrained to do or suffer otherwise than becometh Christian and true faithfull obedient subjects to do or suffer. And all for want of due mainteynance.”

CHAPTER XIX

DEE’S LIBRARY

The commerce of books accosteth and secondeth all my course, and everywhere assisteth me. It comforts me in age, and solaces me in solitarinesse. It easeth me of the burden of a wearysome sloth, and at all times rids me of tedious companies. It abateth the edge of fretting sorrow and...is the best munition I have found in this human peregrination. — Montaigne, *Essays* (Florio)

The account of the library at Mortlake as it was when Dee left it in 1583, forms one of the most valuable parts of the *Compendious Rehearsall*. Comparing it with the catalogue which he made before leaving with Laski, we can see at a glance of what intrinsic value was this collection of precious books which so often haunted its owner in his dreams. Two original copies of the Catalogue of manuscripts remain, one of which is dated September 6, 1583, a fortnight before he sailed from England, and there is a third, made by Ashmole from one of these.

The library contained, however, not only books and manuscripts, to the number of four thousand, bound and unbound, but scientific instruments collected from several parts of Europe. The books alone Dee valued at 2,000 pounds in the current value of the day, for many of them were unique autographia of famous and rare authors. As a further proof of this estimate, he cited to the two Commissioners a great volume in Greek, two others in French, and a third in High Dutch, which together cost him, and his friends for him, 533 pounds, as the endorsements upon them will show.

The instruments included a valuable quadrant, used and he says made, by his friend, Richard Chancellor, the navigator to Russia and the White Seas. It measured five feet in semi-diameter, and Dee relates that Chancellor and he together made observations of the sun’s height at meridian with it, before this exploring seaman sailed on his last voyage (in which he and his crew perished) in

1556. Many years after, the quadrant was repaired and re-engraved by Mr. Bromfield, the Lieutenant of Ordnance who had given it to Dee, at a cost of 20 pounds. On Dee's return to Mortlake, he found it barbarously hacked to pieces with hammers.

There was also a ten foot radius Astronomicus, (some early form of telescope), its staff and cross divided with equal markings, like Chancellor's quadrant. It swung in a frame, and could be easily directed to any point in the heavens, or used for mensuration on the earth.

A couple of globes of Gerard Mercator's best make were among the most valuable contents of the library, especially as upon the celestial globe Dee had marked his own observations of comets, their place and path in the heavens. There were other objects which Mercator had constructed specially for Dee, viz., three theorics, two with horizon and meridian lines in copper. A number of compasses of many kinds were among the objects, for Dee had invented, as we have seen, what he calls a "Paradoxall Cumpass." There was also a great piece of load-stone, or "magnes-stone," of extraordinary virtue. It had been sold for five shillings, but "being divided up and parted with piece-meal it made more than 20 pounds."

"There was also an excellent watch-clock, made by one Dibley, a notable workman, long since dead, by which clock the tyme might sensibly be measured inteh seconds of an houre, that is, not to faile the 360th. part of an houre. The use of this clock was very great, more than vulgar."

Then in the three laboratories, the chambers and garrets, were stores of "chemical stuff," which he had been twenty years getting together. Also a great cart-load of special vessels for chemical use, some earthen, some of glass, metal and mixed stuff, which he had brought from Lorraine when Mr. Powell and he had gone over in 1571. Of these, only a few broken bits remained. He describes other things left in his other or "open" library, and in particular a "great bladder with about four pounds weight of a very sweetish thing, like a brownish gum in it, artificially prepared by thirty tymes purifying it; whosoever came by it hath more than I could well afford him for one hundred crownes, as may be proved by witnesses yet living."

As regards the manuscript treasures of the library, he mentions specially a great case or frame of boxes, full of rare evidences of lands in Ireland which had been in the hands of some of the ancient Irish Princes. Agreements for submission and tributes, with seals appended, and many other valuable records of the descent of these manors to such families as the Mortimers, the de Burghs, the Clares, etc. How he came by these, save in the way of a collector, does not appear. His interest in Welsh ancestry would account for his amassing Welsh records, of which he says there were many deeds of gift from Welsh princes and nobles, of land devoted by them to the foundation and enriching of religious houses. Norman deeds also dating back to the Conquest. These were all methodically stored away in separate boxes, each marked on the front — "the fore part of the boxes" — with chalk, explaining its contents. When he returned from his six years wandering abroad, and looked in the poor boxes, he found the name outside was all that was left. The deeds had been "imbezzled away, every one of them, which is a loss of great value in sundry respects, as antiquaries can testify for their part, and noble heralds can tell

for their skill, and as her Majesties officers, for her interest and titles Royall, may think in their consideration.”

Near this great chest of boxes stood another box, very much less in size, measuring only two feet by one and a half, which was filled with nothing but seals of coats of arms; many of these were named, and had already proved invaluable to students of heraldry and genealogy, as well as to the Queen’s Heralds who had carefully examined them, also a number of other antiquaries as Camden, Stow and others. The Clerks of the Records in the Tower had sat whole days in the library at Mortlake, “gathering rareties to their liking out of them.” Dee was no blind collector, hoarding things because they were of value to himself. He was a true altruist, gaining his knowledge to share with others.

“Unto the Tower I had vowed these my hardly gotten muniments (gotten as in manner out of a dunghill, in the corner of a church, wherein very many were utterly spoiled by rotting, through the raine continually, for many yeares before, falling on them through the decayed roof of that church, lying desolate and waste at this houre).

“But truly well deserve they the imprisonment of the Tower, that will now still keepe them, if any publique warning by her Majestie or her right honorable Councill were given for restitution of them to the Office in the Tower.”

Dee’s own works were of course in the library although not included in his catalogue. He drew up a list of them for his Apology to the Archbishop in 1595, by which it appears that before he left England eight had been published. The unprinted books and treatises, some, he owns, not perfectly finished, numbered forty-six. To these others were added before he died; two that may be especially named were upon the Three Oracular Sentences of the Ancients: *Nosce te ipsum*, *Homo Homini Deus*, and *Homo Homini Lupus*, (1592); and a “Treatise upon the Queen’s Sovereignty over the Seas,” a fitting subject indeed for an author who had personally known most of the great navigators, and who had already written so intelligently upon the navy and the coast fisheries of “Albion.” The book was undertaken at the request of “an honorable friend in Court.” It had, of course, a long Latin title — *Thalattocratia Brytannica*, etc. It was finished at Manchester and dated September 20, 1597. Another work projected, and perhaps partly finished, was to be called *De Horizonte Aeternitatis*, to consist of three treatises in answer to Andreas Libavius, who had published a book written in misapprehension of something in Dee’s *Monas*.

We spare the reader the long list of titles of Dee’s own books, poured out in an almost continuous stream since *The Art of Logicke*, in English, printed 1547, during his college days. The only idle years as regards literary output, from then up to his departure for life abroad in 1583, seem to have been 1563, 1564, and 1566-9.

The most important of his printed contributions to knowledge are mentioned in these pages. One more may be alluded to here — his edition, in 1582, of Robert Recorde’s arithmetical work, *The Ground of Artes*, etc. Dee had probably known this accomplished physician, antiquary and mathematician at Cambridge, where Recorde was a tutor before 1545. Recorde was afterwards Comptroller of the Mint at Bristol, and Surveyor of Mines and Money to King Henry VIII., but he died a youngish and impoverished man, in the King’s Bench Prison, Southwark, in 1558.

He introduced algebra into this country; was something of an astrologer and a good mathematician. His choice of titles for his books was ingenious. In *The Whetstone of Witte* (1557), the signs for plus, minus and equality were first used in this country. In his *Castle of Knowledge*, a beautiful and dignified hymn of his own composition appears. *The Ground of Artes*, his first work (1540), went through eleven editions before Dee augmented it and added some of his apologetic doggerel rhymes.

That which my friend hath well begun
For very love to common weale
Need not all whole to be new done
But new increase I do reveale.

Something herein I once redrest,
And now again for thy behoofe
Of seale, I doe, and at request,
Both mend and add, fit for all prooffe.

Of numbers use, the endlesse might
No wit nor language can expresse,
Apply and try, both day and night,
And then this truth thou wilt confesse.

I. Dee.

From original and autograph works we may now turn to the miscellaneous contents of Dee's library — a truly vast and precious collection for one private gentleman of precarious fortune to won in the sixteenth century. Printed books were by no means easy to obtain, and manuscript copies entailed a great expenditure of skill, industry, time and cost. The text was often ignorantly or corruptly rendered by an imperfect scribe or copyist, and the scholar and collector could not rest satisfied without several versions of one work.

The cataloguer of the 200 most important manuscripts — Dee himself — enters with exactitude the size and substance of each volume. The bulk of course were in quarto, although a few folios and octavos are mentioned. Most of them were written upon parchment, but a certain number were on paper. Bindings were not noticed, chiefly because as yet few were bound. Two of Roger Bacon's tracts, however, on the multiplication of species, and on perspective, the owner describes as together "in paste-bords with strings." These identical tracts, in Dee's own hand, and now being edited by Mr. Robert Steele, from the originals in the Mazarine Library, *Bibliothèque Nationale*, Paris. From Dee they passed to Sir Richard Eden, afterwards to the Kenelm Digby Library. Treatises on kindred subjects often followed straight upon each other on the same parchment, and sometimes as many as twenty composed a single manuscript, included under a list of titles numbered as one. In some cases the treatise is described as a fragment. Once he writes "the second tract is cut out and to be answered for."

The owner's tastes and pursuits point, of course, to a large representation among his books, of works in philosophy, alchemy, astrology and medicine, with a substantial proportion dealing with metallurgy, geometry, optics, physics, Ptolomaic and Copernican astronomy, and every branch of science already known in a crude

form to Dee's famous predecessors. There are also historical chronicles; works of devotion and ethics; with a fair sprinkling of authors upon poetry, music, and the gentler arts.

Taking first the classics: Dee names the Meno, Phaedo and Timaeus of Plato; writings of Aristotle, Socrates and Hippocrates, of Cicero, Cato and Archimedes. A copy of Pliny's *Mundi Historia*, Lib. ii., Frankfort, 1543, now in the British Museum, bears Dee's signature, Louvain, January, 1550, and many of his notes. Of Euclid he had many copies, and Augustine was his guide and confessor. A vast number of Arabic and Persian writers were comprehended in the list. He was particularly rich in manuscripts of the early and mediaeval writers upon alchemy and the philosopher's stone: Hermes Trismegistus, Geber, Albertus Magnus, John Sacrobosco, Raymond Lully, Philip Alstade, and Arnold de Villa Nova. Other sciences are represented by Guido Bonatus, Anselmus de Boot (Boetius), Alhazen, John of Saxony, Jacob Alkind, and Petrus Peregrinus and a score of learned writers. Dee's own perfect and clean copy of the rare printed Epistle of Peregrinus, upon the Magnet (Augsburg, 1558), is now in the British Museum. It bears his name, "Joannes Dee, 1564," in faded ink, with many and copious notes written by its owner mostly in his large copy-book hand, with a few in the scribbling writing which he used for speed, and some marginal sketches.

Several of the manuscripts named in Dee's list are to be found among the Cotton MSS. at the Museum; in Trinity College, Dublin; and at Oxford and Cambridge.

Of English authors, who are very numerous in the list, the most eagerly sought after, judging by the number of works included by one author, were Roger Bacon and Robert Grosseteste, Bishop of Lincoln. Bacon's writings were owned by Dee in fragments. Some had been already collected and printed in Nuremburg and Paris. The only other writer as often repeated in the catalogue is Boethius, whose *Consolation of Philosophy* had tempted King Alfred into literary translation some seven hundred years before. Dee notes that he gave a manuscript of it in Greek to the Library of Cracow, on July 27, 1584. Some of the ethical and philosophical works of St. Isidore, the canonised Bishop of Seville, were duplicated. Thomas Aquinas; Duns Scotus; Richard of Wallingford, Abbot of St. Albans; Robert of Holcot, the Bible Commentator; Robert of Gloucester; William of Woodford, the Franciscan opponent of Wycliffe; Richard Rolle (de Hampole), the hermit and ethical writer, are among his other English authors. A finely illuminated history of the last years of King Richard II., by a French gentleman who was in his suite, once the property of Dee, is now in the Lambeth Library. His manuscript *Life of Edward the Confessor*, by Ethelred, Abbot of Rievaulx, is another treasure that has survived the wreck of time. It is now among the Harleian MSS. at the British Museum, with his name and the date 1575 inscribed.

Of the three or four thousand printed volumes even Dee's industry has left no catalogue. Many of them he mentions in his diaries, as Holinshed's and Stow's *Chronicles*; the Arabic book that was lost; the collection of writings upon demonology and witchcraft, which were to be so useful to his Lancashire neighbours in after life. The books of the alchemist of Louvain, Cornelius Agrippa, he once speaks of as lying open in the window of his study, and therefore in constant use in the "actions," whether theurgic or alchemistic.

He refers no doubt to Agrippa's *de Occulta Philosophia* (Cologne? 1533), a work enormously read in all countries in the sixteenth and seventeenth centuries, and translated into many languages. Another book by the alchemist of Queen Margaret of the Netherlands had an even greater popularity in England, France, Germany and Italy. This was *On the Nobility and Excellence of the Female Sex* (*de nobilitate et procellentia foeminei sexus*) which in the translation by Henry Care in 1670 becomes magnified into *Female Pre-eminence; or, the Dignity and Excellency of that Sex above the Male*. It is dedicated to Queen Catharine of Braganza.

These are a very few of the authors and writings contained in the manuscript catalogue. Such as they are, however, they give us a faint glimpse into that realm of learning and romance wherein Dee, shut into his library at Mortlake, roamed a free citizen of the world and dwelled where he would.

CHAPTER XX

ADIEU TO COURTS AND COURTING

Let me weep
My youth and its brave hopes, all dead and gone,
In tears which burn! Would I were sure to win
Some startling secret in their stead, a tincture
Of force to flush old age with youth, or breed
Gold, or imprison moonbeams till they change
To opal shafts! — only that hurling it
Indignant back, I might convince myself
My aims remained supreme and pure as ever.
— Browning, *Paracelsus*.

The immediate result of the Commissioners' visit to Mortlake was a gift of a hundred marks from the Queen. The Countess of Warwick sent off "her gentleman, Mr. Jones, very speedily," to tell Dee that Sir Thomas Gorges "had very honorably dealt for" him in the matter, and that the gift was granted. The money was brought next day (December 2) by Sir Thomas himself. He brought also a letter "full of courtesie and kindness and a token of six old angells of gold," from Lady Howard to Jane. Dee seems to have become intimate with Lady Warwick through his early friendship with John Dudley, Earl of Warwick, who died, aged twenty-four, in 1554. In his Preface to Euclid, Dee has left an etched portrait of his own age. "No two besides himself," says Dee, "can so well say what roots vertue had fastened in his brest, what rules of godly and honorable life he had framed to himself, what vices noteable he took great care to eschew, what prowesses he purposed and meant to achieve."

Dee's "few lynes of thankfulness" to the Queen for her gift were probably written at once, but only delivered by Lady Warwick on February 15, at Hampton Court, on the eve of a move to Somerset House.

On the strength of this dole, Dee was able to settle some pressing debts, and to hire a coach and go off with his wife and Arthur and Kate, to spend Christmas and New Year's Day at Tooting, "at Mr. R. Luresey his howse." The Lord Treasurer, he reports, lay dangerously sick at the time. On the 2nd they returned. On the 7th,

welcome letters, perhaps containing money, arrived from Count Laski in Livonia, to which Dee replied on the 20th, sending his letter by a Danish ship called the John of Dansk.

His reputation as an astronomer and mathematician now procured for Dee a pupil, from whom he was to receive in exchange a considerable gift or loan.

“March 17, 1593. At six after none received from Mr. Francis Nicholls 15 pounds, part of one hundred pounds, the rest whereof, 85 pounds, is to be receyved from Mr. Nicholls within a fortnight after the annunciation of Our Lady next; and after that in the beginning of June 100 pounds, and in Julie the third hundred pounds, and I am to teach him the conclusion of fixing and teyming of the moon.”

A rather unwise purchase seems to have been made this may; Dee bought the “next mansion house, with the plat and all the appertenances abowt it,” of Mr. Mark Pierpoint, of Mortlake. It is true the whole mansion only cost 32 pounds, but it entailed other purchases and soon had to be mortgaged. Possession was not obtained till the autumn. A “hovel” in the yard was bought from Goodman Welder in July for a new angel and five new shillings. The bargain with Pierpoint was concluded in the street, when “before Jane my wife, I gave him a saffron noble in earnest for a drink penney.”

Crowds of visitors came to Mortlake to dine. Mr. Beale (who was a borrower of books from Dee — his own Famous and Rich Discoveries, and the Chronica Hollandiae Magnae), and his wife; Francis Blount, uncle of Sir Charles, who had been in Constantinople; Mistress Banister; Mr. Redhead, one of the Queen’s gentlemen ushers, and his wife; the mother of John Pontoys, about whom we shall hear more; Mr. Gubbens, book-binder, and Mrs. Gubbens, and many others. Hospitable as ever, Dee had offered shelter for two months to Antony Ashley, Clerk of the Council, his wife and family, “who used me worshipfully and bountifully for our friendship. They had my mother’s chamber, the mayde’s chamber, and all the other house.”

Not only books were lent, but instruments also. “On Thursday, Mr. Saunders of Ewell, sent home my great sea cumpass, but without a needle. It came in the night by water.”

In August he is much in train with the Lord Keeper, Sir John Eckford, at Kew. On the 8th he dined there, again on the 17th, this time taking Mrs. Dee and Katherine, who at twelve was sufficiently grown up to dine out. On the 28th he was all day with the Lord Keeper. The entries we have here, “Mr. Web and the philosopher came as I was with the Lord Keeper,” and “Mr. Web and the philosopher cam again,” pique one’s curiosity.

At the end of the month, Dee notes the departure from his service “uppon no due cause known to me,” of Elizabeth Kyrton, a servant who had been with him twelve years, had passed through the vicissitudes of travel-life in Bohemia, as Rowland’s nurse; left in charge of him, as we have seen, in Cracow when the others went on to Prague. She had served five years on apprenticeship and seven for wages: five at four and two at five nobles a year. Of her wages there was now four pounds four shillings due. Dee in paying her, presented a new half-angel; Jane Dee gave her another; Arthur half-a-crown for him and his brother (Rowland), and Katherine the like sum for herself and Madinia. Elizabeth’s going seems to have

upset the domestic arrangements for a month or so later Dee makes an unusual entry about his wife: "Jane most desperately angry in respect of her maydes." Margery Thornton, Elizabeth's successor, left next day, and Dorothy Legg came for 30s. yearly.

A messenger from Laski arrived, Mr. Cornelio Camaiere, and stayed a week. These constant communications do not by any means support the contention that Laski parted with Dee in anger, ruined by his costly experiments. It is more probable that Laski was urging him to return and continue Kelley's work.

The Countess of Cumberland, Lord Willoughby and his sister, the Countess of Kent, came to visit Dee. Willoughby dined and next day sent him 20 pounds. Dee was annoyed by "Mr. Gray, the Lady Cumberland's preacher, his wrangling and denying and despising alchemicall philosopher." A New Year's gift of 20 angels, in a new red velvet purse, came to Jane Dee from the Lord Keeper.

Michael Peiser, doctor to the Duke of Brandenburg, visited Dee, also Walter Van der Laen, "an astronomer of great promise." Mr. John Aske sent as a present two little doubtle gilt bowls, weighing thirteen ounces and a half. "Sir Thomas Willes offer philosophical cam to my hands, by Mr. Morrice Kiffen." The children, Madinia and Theodore, were not very well. Several visits were paid to Mr. Webbe, who had been in the Marshalsea prison since the days before Christmas. His chests and boxes were sealed up. It is possible he was the Mr. Webbe who was employed by the Queen to visit and report on Dyer and Kelley at Prague. He may even have been suspected of bringing some of Kelley's manufactured gold to Dee. Bartholomew Hickman and his brother were a good deal to and fro; Bartholomew was first brought to Dee as a lad by his uncle, in 1578, with an introduction from Sir Christopher Hatton. Now, his daughter Jane was taken into service. Dee gave him a nag that the Lord Keeper had presented, and he rode frequently "homeward," to Shugborough in Warwickshire. In December 1594, Dee "preferred" him to Lord Willoughby's service at the Barbican, and there is a whole history about his livery, which was ordered from a Fleet Street tailor, Mr. Jonson.

Dee's health was now often affected in one way or another. The first mention of trouble in the kidneys was in 1592, when, at Court at Greenwich, a midnight seizure was eased by a glyster, applied by Dr. Giffard. There were other slight attacks, and in March 1594, he had a

"Great fit of stone in my left kidney: but I drunk a draught of white wyne and salet oyle, and after that, crabs' eyes in powder with the bone in the carp's head, and about four of the clock I did eat tosted cake buttered, and with sugar and nutmeg on it, and drunk two great draughts of ale with it; and I voyded within an hour much water and a stone as big as an Alexander seed. God be thanked! Five shillings to Robert Web part of his wages."

This servant was discharged on June 23 with forty shillings for a full satisfaction of all things. "On July 1, I gave Robert yet more, a French crown for a far well."

A year and a half passed after the visit of the Commissioners, and beside the immediate result of a donation of a hundred marks, nothing had accrued to better Dee's position. He determined then to redouble his efforts and bring something to

pass. He certainly had enlisted the aid of powerful friends, although no doubt there were still many suspicious enemies.

On May 3, 1594, the Queen sent for him to come to her in the privy garden at Greenwich, between six and seven o'clock in the evening. She received him alone save for the presence of her two ladies, Lady Warwick, Dee's very good friend, and Lady Cecil. Dee presented her with a writing which he calls "the heavenly admonition," which he says she took with grateful thanks. On the 18th, he writes "Her Majestie sent me agayne the copy of the letter of E.K. with thanks by the Lady Warwick." He had received letters from Kelley four or five weeks earlier, on March 28, and he probably had copied out for her certain passages, doubtless referring to the fabulous transmutation of metals. Did he still hold out hopes that he might be able to achieve a like success? On the 21st, "Sir John Wolley moved my sute to her Majesty. She granted after a sort, but referred all to the Lord of Canterbury." "On the 25th. Dr. Aubrey moved my sute to her Majesty, and answered as before." His suit was promotion to the Mastership of St. Cross, the post which had so long been the goal of his hopes, but which he was never destined to attain. He had set out at length in his Rehearsall for the Commissioners, sundry good reasons why he desired it, "rather than any other living, see, or dignity of like value in any other place." First, he gave as a reason his longing to retire to a quiet spot away from the multitude and hoards of friends and acquaintances, chance visitors, and distinguished strangers, who positively "haunted" his house at Mortlake. There, he could deny himself to no one without offence or breach of friendship. It was fatally easy and cheap for every curious person from London, or from the Court, to find his way down to that big rambling place by the riverside, with whose stills and furnaces, and wonderful doings, rumour was so rife. So much for privacy, next for economy. Fuel, coals, bricks, and all things necessary for his purpose, will be cheaper at Winchester than near London; the glass-houses of Sussex are not far away, and he will be able to give personal supervision to the making of special vessels. At Mortlake there are too many eyes and tongues. The south coast is within easy reach, and it will be possible to communicate with his friends abroad, to get over things and workers necessary, and "have the more commodious place for the secret arrival of special men to come unto me there at St. Crosses; some of which men would be loath to be seen or heard of publicly in Court or City." Is it possible that he is still thinking of Kelley, who, though then (1592) an Emperor's favourite and the bearer of a title, could easily in England be identified with Talbot the coiner, forger, and necromancer of former days?

Then Dee sets out in his Rehearsall the capacity of the dwelling at St. Cross, which is roomy enough to entertain rare and excellent men from all parts of the world, as well as any of his fellow-countrymen. This will be for the honour and credit of England. There is room also for lodging his staff of mechanical assistants; for a printing house to be set up for "reproducing good, rare, and antient bookes in Greek and Latin," and "some of my own, to be printed with my own ordering and oversight." Then he lays stress upon the desirable surroundings, a chapel where divine service is held every day, for bringing up his children and family devoutly. He ends with the advantages of Winchester School, close at hand, not only for his four sons "to become Grammarians in," but for his obtaining help from the "good Greek and Latin Grammarians and fair writers in that school, for copying out books for her Majesty."

He is teeming with all these projects and activities in spite of his sixty-five years. He was a born librarian; and still had a national library of books and manuscripts at heart as much as when, nearly forty years before, he had tried in vain to induce Queen Mary to found one.

Dee's eloquent persuasions so far prevailed with the Queen that a draft was prepared before the end of May, granting to Lord Cobham the next advowson of "Holyrood," or St. Cross, at Winchester, in the Queen's gift, to present to John Dee, M.A., on the death or resignation of Dr. Robert Bennett, the present incumbent.

Having drawn up this very full account of his doings and writings, to present to the Commissioners, Dee was naturally anxious that the appeal should be as widespread and far-reaching as possible. Archbishop Whitgift had shown himself favourably inclined, and Dee determined to approach him with a copy of that part of the Rehearsall in which he recited the titles of the books he had written. He prepared a Letter containing a brief Discourse apologeticall with a plaine Demonstration and fervent protestation for the lawful sincere and very faithful and christian course of the philosophicall studies and exercises of a certaine studious gentleman, an ancient servant to her most excellent Majesty Royall, addressed to the Archbishop; he probably presented it himself during this summer of 1595. It is a protest and an appeal, and emphatically states that from his youth he has used good honest lawful and Christian means to attain such knowledge as shall honour God, his country and his Queen. It ends with a prayer that he may be found of the Archbishop, and undoubtedly acknowledged by the wise and just, to have been a zealous and faithful student in the school of Verity and an ancient Graduate in the school of Charity.

On June 3, Dee and Jane, accompanied by all their seven children, four boys and three girls, their ages ranging from Arthur, the Westminster boy of fifteen, to Frances, the baby of two and a half, presented themselves before the Queen at Sion House, Isleworth. Jane was permitted to kiss her hand. Evidently this was an expression of thanks for the official preliminaries of the grant of St. Cross. The Archbishop was present, and Dee humbly requested him to come to his "cottage." The invitation was repeated on the 6th, when Dee supped with the Primate. Things were not, however, settled so quickly. Dr. Robert Bennett had to be provided with a better position before he would resign; some hitch occurred, and on June 29, after a visit to the Archbishop, at Croydon, the poor man writes distractedly of his broken hopes: —

"After I had hard the Archbishop his answers and discourses, and after that he had byn the last Sonday at Tybalds with the Quene and Lord Threasorer, I take myself confounded for all suing or hoping for anything that ever was. And so adiew to court and courting tyll God direct me otherwise! The Archbishop gave me a payre of sufferings [sic] to drinke. God be my help as he is my refuge. Amen."

Everything fell through, and things began to look darker than ever. Michael, who had been a delicate child, fell ill in July. On the 6th, he "becam distempered in his head and bak and arms." Dee himself was unwell, complaining of headache and internal pains, but he does not forget to note that he paid "Letice my servant 5s., part of her wages, with part whereof she is to buy a smok and nekercher." Michael's illness was short: "July 13th, in ortu solis, Michael Dee did give up the ghost, after

he said `O Lord, have mercy upon me!’“ His father omits any reference to the child’s burial.

The summer passed with very little to record in the diary beyond a visit on Aug. 25, from Ferard, the herbalist of quaint and fragrant memory; another on the 30th, from “Monsieur Walter Mallet, who took his leave to go to Tholose. He had the fix oyle of saltpetre.” Dee sends letters in September to Kelley, and in October determines on another appeal to royal favour. But Elizabeth was getting old and hard to move; Burleigh also was failing. Dee wrote in his wife’s name to Lady Scudamore, her old friend and Katherine’s godmother, begging her to intercede with the Queen that either he might appear and declare his case before the Council, or else have a licence under the Great Seal to go where he would. St. Cross was farther off than ever; England cold and inhospitable; and he prepared to say a final good-bye to courts and courting at home, and betake himself to Germany, or Austria, or some other land. Francis Garland arrived on December 2 from Prague, “just as I came five years ago to a day from Bremen to England.” Little profit indeed had he reaped in that five years.

On the 7th, “Jane delivered her supplication with her own hand to the Queen, as she passed out of the privy garden at Somerset House, to go to dinner with Sir Thomas Heneage at the Savoy.” Elizabeth handed the letter to the Lord Admiral, but took it again from him, and kept it on her cushion. The next day, the Lord Admiral and Lord Buckhurst reminded her of the matter; presently she told the Archbishop that she wished Dee to have Dr. Day’s place of Chancellor at St. Paul’s. “8th Dec. The Chancellorship presented. The Archbishop of Canterbury willing,” he writes; but this was apparently another castle in the air, for Dr. William Day was not appointed Bishop of Winchester till a year later, November 23, 1595, and although Dee’s name appears as Chancellor under the date of December 8, 1594, he seems never to have held office.

His friends, however, were not idle. In a month’s time, January 3, Archbishop Whitgift was recommending Elizabeth to grant him the Wardenship of Christ’s College, Manchester, in her own gift. Dr. William Chadderton, who was then Warden and Bishop of Chester, was to be promoted to the see of Lincoln, and here was an opening for Dee. On February 5, Sir John Wolley endeavoured to get her to sign the patent for his appointment, “but she deferred it.” Dee was up and down to London from Mortlake, and on February 10, at two in the afternoon, he “took a cut-purse taking his purse out of his pocket in the Temple.” On April 18, the Queen did sign the bill, when it was offered her by Dee’s friend and neighbour at Mortlake, John Herbert, Master of the Requests. On May 25, 26, 27, it passed the Signet, the Privy Seal, and the Great Seal; and, as a climax to his entry in the diary, Dee adds, “3 pounds 12s. borrowed of my brother Arnold,” doubtless to pay the fees.

The Earl of Derby gave him letters of introduction, and he was soon in correspondence with Oliver Carter, one of the Fellows; with Thomas Williams, another; and with Mr. Goodier, lessee of the tithes belonging to the Warden and Fellows. Carter and Williams were already at law with each other, and soon were both to be at loggerheads with Dee and his laudable desires to set the tangled affairs of the college straight. Carter was one of the moderators of the monthly lecture in Manchester, had great influence, and seems to have been unprepared to welcome a Warden of Dee’s reputation.

“July 31st. The Countess of Warwick did this evening thank her Majestie in my name, and for me, for her gift of the Wardenship of Manchester. She toke it graciously and was sorry that it was so far from hense, but that some better thing neer hand shall be fownd for me; if opportunitie of time would serve, her Majestie wold speak with me herself. I had a bill made by Mr. Wood, one of the clerks of the signet, for the first frutes forgiving by her Majestie.”

So at length there was something tangible in prospect. Things had to be settled up at Mortlake and preparations made for the journey northward. We may be sure that Dee's gratification at receiving a post of some sort, after a lifetime of waiting, was mixed with regret at quitting the place that had been his home for so long. His “yong coosen, John Aubrey, came in May to recreate himself for a while,” and stayed nearly a month.

On August 14, Jane's youngest child, a girl, was born. She was baptised at Mortlake as Margaret Dee on the afternoon of August 27; godfather, the Lord Keeper; godmothers, the Countesses of Cumberland and Essex, all three represented by deputy. The Countess of Essex was Walsingham's only daughter and heir. She had been Sidney's widow, and was now married to Essex.

Dee was now entertained often by Lord Derby at Russell House, once to meet some German guests. On October 9 he dined with Sir Walter Raleigh at Durham Place. This palace in the Strand had seen many vicissitudes before it had been given to Raleigh by the Queen. Originally the residence of the northern bishops, it had been seized by an earlier king. Lady Jane Grey had been wedded there. Her too ambitious father-in-law had gone thence to the Tower and the scaffold. Catholic plots against Elizabeth had been hatched by Spaniards in this, her own house, and now the great seaman, fresh from far Guiana, was housed in a little turret, overlooking the river and the ships.

Dee was anxious to reclaim, before going to his new home, an Arabic book lent to some friend in Oxford. He had written to Mr. Harding and Mr. Abbott several times for its return about a year and a half before. Now, on October 20, he sent his man Richard Walkden to Oxford to find and bring it. The man returned from a fruitless errand, but on November 19 “my Arabic book was restored by God's favour.” His gratitude expressed itself in a practical manner to the trusted Richard:

“I delivered unto Richard Walkedyne my man, Mr. Robert Thomas his fustian dublet, for 10 shillings of his wages. I gave him more when he was to ride down with my wife: 10s., whereof 6s. 4d. was due to him that he had layd out for me. The other 3s. 6d. was of his wages.”

A portion of goods and furniture had already been despatched towards Manchester by a carrier named Percivall, and on the 26th Jane and her children all set off by coach towards Coventry, a usual half-way halting place on the high-road to Lancashire. A last piece of business was transacted on December 23 with John Norton, stationer, to whom Dee owed money, perhaps for printing: “I payd him ten poulds in hand and was bound in a recognisance before Doctor Hone for the payment of the rest, 10 poulds yearly, at Christmas, and Midsummer 5 poulds, tyll 53 poulds 14s. 8d. more were paid.” The same day he received 30 poulds in part payment of 100 poulds for the house at Mortlake, which he had lent to Mr. Paget.

CHAPTER XXI

MANCHESTER

“He hath, my lord, wrung from me my slow leave,
By laboursome petition; and, at last,
Upon his will I sealed my hard consent.”

— Shakespeare, Hamlet

The Collegiate Church, now the Cathedral of Manchester, was founded about 1420 in this already ancient town by Thomas de la Warre, baron and priest, rector or parson of St. Mary's, Manchester, and lord of the manor. The flourishing town of woollen industries, introduced by the Flemings a hundred or more years earlier, demanded a new and more capacious church; and De la Warre, the last of his noble house, determined to provide buildings in which a Warden, priests or Fellows, and choristers, should be continually resident, as well as to found a new church. He gained the consent of his parishioners to the appropriation of estates belonging to the existing rectory, as an income for the college, and supplemented it from his own lands in the district. He also obtained a charter of foundation from Henry V., dated May 9. The college was dissolved by Edward VI. and refounded by Henry VIII.; but by the time of Elizabeth its lands had been plundered, sold or leased, she herself becoming a sharer in the profits of spoliation until there was hardly any clear property left. At the instance of Dean Nowell, an inquiry was instituted, with the result that the college was granted a new charter in 1578, as Christ's College, to consist of a Warden, four Fellows, and two chaplains, with choristers. Nowell and Oliver Carter were two of the first Fellows. The second Warden was Dr. Chadderton, who had been Leicester's chaplain, and was Bishop of Chester. Under him the Catholics were relentlessly persecuted, Manchester prisons were filled, and the famous Marprelate printing press was discovered and seized. Chadderton's promotion to the see of Lincoln in 1595 made an opening for our persistent place-beggar to be disposed of at last.

Dee arrived in Manchester on Monday afternoon, February 15, 1596, and took up his abode in the college. On the following Saturday he was installed in the Wardenship, between nine and eleven o'clock, as he tells us. He has unfortunately left no account of the ceremony. His first business was to become acquainted with the tenants of the college lands, and the owners of tithes which constituted its revenue. On April 2, he says Sir John Byron and his son, Mr. John Byron, dined with him at the college. This family, although Newstead had been acquired some forty or fifty years previously, were still often resident on their Lancashire estates. Clayton, near Manchester, was in fact then their chief residence. A little later in the month, Dee records the courts kept for the manor of Newton, in Manchester parish, of which the Warden and Fellows were lords. The Dean and Canons, the present representatives of Warden and Fellows, still hold a court leet twice a year for this manor.

There is an interesting letter from Dee to Robert Bruce Cotton, the antiquary, dated in May this year, throwing light on his relations with the people in his employ — copyists, assistants or apprentices. He had brought with him from

Mortlake Antony Cowley, who had formerly been in Cotton's service. Dee was anxious to know if he had departed from the employ of his late master with his good will.

"Truely, for my part, I will receyve none to my simple service (man or woman) unleast they come from theyr Masters or Mistresses with theyr well liking of suche their departure from them. Therefore, I wold, by this bearer, gladly receyve your answer herein, by word of mouth or by your letter. And so shall I be free from all offence giving to your worship, or any els in this cause: as I am most free from coveting, desyring or longing after my neighbour's wife or any servant of his. If I might have a thousand pounds to sollicite or procure any mans servant to forsake his master or mistress, and to come to me or any other, I wold not do it, God knowes."

In about three weeks Dee received a reply to this considerate letter, evidently not entirely satisfactory, for on June 3 he paid Antony Cowley 20s. and discharged him. Next day "Antony went forth early from my house, I know not whither."

Dee now began to direct his whole attention to his charge: the college and the college lands. A royal commission was appointed to sit and examine its internal affairs. On June 18 "the commission for the college was sent to London to be engrossed in the Duchy office." Dee was a layman; he had always stipulated he should have no cure of souls attached to whatever benefice he might hold. For the daily services at Manchester he employed a succession of curates (mostly unsatisfactory), to whom he paid "wages 50s. for three months." He was far more interested in the temporal than the spiritual welfare of his college, and indeed his desire for such an appointment seems rather to have been solely prompted by the selfish, if necessary, wish for an income and means to pursue his own studies in peace. He was to find neither in Manchester.

In June he received a visit from Mr. Harry Savile, the antiquary, of the Bank, Halifax, and by him he sent a request to Christopher Saxton, of Dunningley, near Halifax, to come and arrange a survey of the town of Manchester, and consult about the parish boundaries. Saxton was a well-known character of the time, the holder of a patent from the Queen, whose arms appear upon the maps he made of the three counties of Chester, York and Lancaster. They were the first maps of Britain made from actual survey, and had been issued as an atlas in 1579, most of the maps having been engraved in 1577. His visits to Dee lasted over three weeks; notes are entered of his measuring the township and visiting Hough Hall, the seat of Nicholas Mosely, the Lancashire clothier who, two or three years later, became Lord Mayor of London and was knighted by Queen Elizabeth. The boys, Arthur and Rowland; the two faithful assistants, Crocker and Walkden accompanied Dee and Mr. Saxton on the peregrination. Harry Savile seems to have made one of the party also. Unfortunately, Saxton's Manchester survey is not now known to be in existence.

A surprise visit was paid to the Warden on June 26 by his landlord, the Earl of Derby, and a large party of ladies and gentlemen, including Lady Gerard, wife of the Master of the Rolls; her daughter Frances, and her husband, Sir Richard Molyneux, of Sefton, a former member for the county of Lancaster. Their son-in-law, Mr. Richard Hoghton, of Hoghton Towers, and others, also accompanied the Earl. The

Warden says: "They came suddenly upon me after three of the clock. I made them a skoler's collation, and it was taken in good part. I browght his honor and the ladyes to Ardwick Green toward Lyme, to Mr. Legh his howse, 12 myles off." Mrs. Legh was Lady Gerard's second daughter, so it was altogether a family party that descended so unexpectedly on the Warden, and no doubt ate merrily of his "scholar's collation." The only absence from Manchester recorded by the Warden (except the two years in London) was on August 13 this year, when he says that he "rid toward York and Halifax, returning from York on the 20th."

On September 1, Mary Goodwyn came "to govern and teach" the two younger children, Madinia, aged six, and Margaret, one year old. There was a field or two let with the College House, and the Warden now turned farmer, getting a small drove of seventeen head of cattle up from his kinsfolk in Wales to graze the pasture. They were brought up by the "courteous Griffith David, nephew to Mr. Thomas Griffith, and were a present." Dee had to visit Sir John Byron about the college tenants.

"Who pretended that we have part of Faylesworth Common within our Newton Heath, which cannot be proved, I am sure. We wer agreed that James Traves (being his bayly) and Franis Nutthall, his servant for him, shold with me understand all circumstances, and so duly to proceed."

The close of the year was marked by an episode which might have gone far towards clearing Dee's character from the aspersions still being cast upon him. Nowhere was superstition and belief in witchcraft more prevalent than in Lancashire, and in November and December of this year he seems to have been applied to for advice as regards a woman and seven children, said to have become demoniacally possessed through the influence of one Hartley, a "conjurer." Dee's curate, Matthew Palmer, happened to go in as Hartley was praying over the woman in a fit. He demanded what he was doing.

"`Praying.'

"`Thou pray! thou canst not pray,' quoth he. `What prayer canst thou say?'

"`None,' saith he, `but the Lord's Prayer.'

"`Say it,' quoth he, the which as I remember, he could not say."

Dee "utterly refused to meddle with the affair, and advised the father to consult with godlye preachers and appoint a private fast." Perhaps he remembered that when he asked, long before, if he had done well concerning Isabel Lister, vexed of a wicked spirit, the angel's reply had been "Friend, it is not of thy charge." He sent for Hartley, and "so sharply rebuked him that the children had more ease for three weeks after." The devils were finally exorcised by a godly preacher, John Darrell, or, as we suspect, by the children's release from Hartley's attentions, who was hanged soon after. Dee's library, a good part of which he must have moved to Manchester, was constantly in request at this time. It was rich in books on demonology and possession, and Lancashire justices of the peace who had to deal with these cases of witchcraft brought before them seem to have resorted to such works, for and against the persecution and annihilation of witches, as the *De Praestigiis Daemonum* (Basle, 1566) of John Wier, the *Fustis Daemonum* and the *Flagellum Daemonum* of the monk Hierom Menghi (Frankfort 1582, Boulogne 1586). All these Dee records lending to Mr. Edmund Hopwood, of Hopwood, a deputy- lieutenant and ecclesiastical commissioner, as well as a J.P. Wier or Weier was very likely known

to Dee at Louvain. He was one of the earliest apologists for these unfortunate folk, and pleaded that, their brains being disordered by melancholy, they merited pity, not punishment. His book contains the first account of "The Pied Piper of Hamelin," from the archives of the town of Hamelin. A Spanish grammar was lent to Mr. Barlow for his son. Mr. Matthew Heton was the borrower of theological works, including the *Concordantiae Bibliorum* (1555) of Robert Stephens, the illustrious printer of the New Testament; and a Calvinistic treatise, *De Coena Domini*, written by Dr. Pezel, who had, we remember, commemorated Dee's departure from Bremen in 1589 by verses. Dee lent Heton books, but Heton lent Dee ten pounds on a bill of hand. To John Cholmeley "I lent my Latyn booke in 8vo, *De Morbis Infantum*."

The disputes over tithes and lands belonging to the college naturally affected the Warden's income, and Dee found himself compelled to borrow small sums as before. Finally he was reduced to raise money on his plate, and especially on the handsome double gilt tankard, with a cover, which was the christening gift of the Countess of Hertford to her god-daughter Frances. It weighed 22 ounces, and Dee tells how he delivered it to Charles Leigh, one of the college "singing men," to lay in pawn in his own name with Robert Welsham, the goldsmith, "till within two days after May-day next. My daughter Katherine and John Crocker [the old servant], and I myself [John Dee], were at the delivery of it and waying of it, in my dyning chamber. It was wrapped in a new handkercher cloth." All that was obtained on the tankard was 4 pounds of the current value.

In the spring of 1597, Dee records, on May 4, the last of the Rogation days of the year, a very interesting topographical event, viz., the perambulation of the bounds of old Manchester by himself, the curate, and the clerk.

Away in the south-eastern corner of England, in the little village of Bourne, near Canterbury, about this very time, Richard Hooker, the saintly scholar, was performing a similar perambulation, of which Izaak Walton has left us the immortal picture. A homily was prepared for the service, a psalm sung, and the malediction pronounced, "Cursed be he that removes his neighbour's landmark." Izaak Walton tells us that Hooker, to look at, was an

"Obscure harmless man in poor clothes, his loins girt in a coarse gown or canonical coat; of a mean stature and stooping, yet more lowly in the thoughts of his soul; his body worn out, not with age, but study and holy mortification. Yet he would by no means omit the customary procession; persuading all, both rich and poor: if they desired the preservation of loe and their parish rights and liberties, to accompany him in his perambulation; and most did so. In which perambulation, he would express more pleasant discourse than at other times, and would then always drop some loving and facetious observations, to be remembered against the next year, especially by the boys and young people; still inclining them, and all his present parishioners, to meekness and mutual kindnesses and love, because love thinks no evil, but covers a multitude of sins."

The Warden of Manchester has not left us such an impression of the ancient antiquarian custom performed as a holy rite of devotion, but as an exact topographer and mathematician he has given a highly valuable record: —

1597. "May 4. I with Sir Robert Barber, curate, and Robert Tilsley, clerk of Manchester parish church, with diverse of the town of diverse ages, went in

Perambulation to the bownds of Manchester parish: began at the Leeless Birche against Prestwicke parish, and so had vew of thre corner stake, and then down tyll Mr. Standysh new enclosure on Thelmore, wher we stayed, and vewed the stake yet standing in the back of the dich; [it] being from the corner eleven measures of Mr. Standley's stik, then in his hand, and 2 fote more; which stik I did measure afterward, and it did conteyn in length: feet 5, ynch 3. The total mesure: fete 69, ynches 9. At which place Teblow, servant to Mr. Ashton of Chaderton, did meet us. The survey geometricall of the very circuits of Manchester parish wer ended in this, being the sixth day of my work folks doings."

In the Chetham Library is a holograph letter from Dee to the rector of Prestwich, William Langley, dated two days before this perambulation, informing him of the project for making a chart of the parish bounds, and inviting him,

"As one side of our parish in Thielmore doth border upon some parts of your parish of Prestwicke, to request some one or two of the auncient of your parish to be also beholders of our bounds, notifying toward your parish in that place. My neighbours do intend to come on Wensday next, in the morning about 9 or 10 of the klok, to that part that is by Goodman Smehears't's house, and so toward the birche tree that is called the Leeless Byrche, and thereabouts, for a little space; to beggyn the vew of the bownds and meres of Manchester parish: by the order of an enjoyned work by the higher powres, for avoyding of undue encroaching of any neighbourly parish one on the other. You understand me sufficiently well, I dowt not. Pardon my boldness so bluntly to borde you with so homely a sute.

"Your wurships sincere

"Wellwisher in Christe,

"John Dee, Warden."

John Crocker and several other men were occupied for some weeks in marking the boundaries of the manor; they met with extraordinary opposition from the landowners, and on June 14 Dee alludes to a riot that took place at Newton, Captain Bradley and others endeavouring to hinder the college employees in their labour. What with opposition abroad and difficulties with his curate at home, Dee was finding the coveted appointment no bed of roses. He records another of his characteristic dreams — the dreams of a bibliophile, to whom books are treasures as dear almost as his children: —

"This night I had the vision and shew of many bokes in my dreame, and among the rest was one great volume, thik, in large quarto, new printed, on the first page whereof as a title in great letters was printed Notus in Judaea Deus. Many other books methought I saw, new printed, of very strange arguments. I lent Mr. Edmund Hopwood of Hopwood my Malleus Maleficarum to use till New Year's tyde next, a short thik old boke, with two clasps, printed anno 1517."

It was now early August. So Hopwood, who was bent on mastering the subject of witchcraft, was to have about four months to study The Hammer for Witches, a book first issued in 1489, after the Bull against sorcery of Pope Innocent VIII., by the three sorcery inquisitors. It was translated into German,

Hexenhammer, and formed the text-book of procedure against witches in Germany. Its authors give emphasis to their learned observation that witch-craft is more natural to women than men, because of the inherent wickedness of their hearts! In mediaeval times there appeared, alas! no safe and inconspicuous path for ordinary women. The entire sex consisted apparently of either angels or devils.

On a Sunday in August, Dee entertained the Earl and Countess of Derby at a “banket at my loding at the College, hora 4 1/2.” They had newly taken up their residence at Alport Park, which had been the college property before the dissolution of the monasteries. It is now in the heart of the city, somewhere near the Midland Railway works.

There was scant time for literary labours amid so much entertaining topographical work and litigation; but in September Dee sent to his former friend, now Sir Edward Dyer, a treatise he had some time written on “The Queen’s Title Royal and Sea Sovereignty in St. Georges Channel and all the Ocean adjoining to England, Scotland and Ireland.” He quotes in it so freely from his British Monarchy (see ante, p. 39) that he encloses a copy of that work, written twenty years before, in case his correspondent does not possess one handy. The letter gives such a graphic picture of the state into which the college affairs had fallen, and of the characteristic energy with which Dee set about to try and reform them, that it must be quoted at some length. When the accompanying volume and manuscript have been fully discussed, the writer passes on to the

“intricate, cumbersome, and lamentable affairs of estate of this defaced and disordered college, whereunto not only I am assigned for my portion of mayntenance, for me and all myne, but also, by college oath, bownde to see unto the right and dignitie thereof. Which hat bred unto me already, both wonderfull care of mynde and no little payne taking, ever since my entrance, and daylie doth and will brede me more and more. And hath browght me likewise in great debt, by reason of the pore Revenue of my stipend (of only iiij s. a day for me and all myne), and that in these tymes of very great dearth here, yea, so great, that unleast (in his most fatherly Providence) the Almighty God had stirred up some mens hartes to send me, this present yere, from Dantzic, some barrells of kye; from Wales some cattall, and from Hull some fish for Lent: God knoweth that it passed all our wittes and habilitie to devise or use any other meanes, sufficient to the preserving of the lives of me and my familie together, being now but of eightene persons, most nedefull: I my wife and our children, being the one half of them. So hard and thynne a dyet, never, in all my life, did I, nay was I forced, so long to use: Neyther did ever any household servants of myne have so slender allowance at their Table. And yet all that hath not so much pynched me inwardly as the cares and cumbers for the college affaires have done, for they have altered, yea barred and stayed my whole course of life, and bereaved me of my so many yeres contynued Joyes, taken in my most esteemed studies and exercises.

“But as it pleaseth the king of heven and earthe thus to deale with me: So I beseche him to give me grace to like best of this his long leading of me per multas tribulationes. And Beside all the rest, This encreaseth my grief: that I know no one as yet of her Majesties most honorable Privy Counsaile, who willingly and comfortably will listen unto my pitifull complainte and Declaration: How this Colledg of Manchester is almost become No College, in any respect; I say in any

respect, forr I can verifie my wordes to[o] manifestly. But why do I cumber yr wurship (thus abruptlie) with such my colledg cumbers? Pardon me, I pray you, the pang of my mynde, half amazed, when the multitude of these cumbers and of the confused and intricate causes of this Colledge, do russh at once into my fantazie. But, undowtedly, either God will give me grace sufficient and send me might help (tempore opportune) to end them, or else they will help to hasten my deliverance from these and all other vayne and earthly Actions humayne.

“Sir, how well (and that hartily) not onely I, but my paynfull Jane, and my children of discretion, allso do, at God’s handes, wich unto yr wurship, you my easily gesse, for it is our duetie.

“And so, I beseche your wurship undowtedly to perswade your selfe of us. Manchester, September 8, A. 1597.

“Yor wurships in fidelitie and sinceritie,

“John Dee.”

A new steward of the college was appointed: Humphrey Davenport, who afterwards became Chief Baron of the Exchequer, and as such delivered judgment upon ship money in Hampden’s case. Very few allusions to domestic and family matters occur in the diary for these Manchester years, but in November, 1597, an accident is recorded to Arthur, who was at home for a time. He was amusing himself by fencing with Edward Arnold, one of Dee’s men and his usual messenger to London, when the foyne or thrust of the rapier of his opponent damaged his left eye. The lad was now about seventeen, probably already entered at Christ Church, Oxford.

Correspondence with friends in London, as Dr. Julio, a well-known physician of the time, and Dr. Caesar (afterwards Sir Julius Caesar and Master of the Rolls), both of Italian origin, sometimes relieved the Warden’s tedious and tiresome disputes with the Fellows, the tenants and the tithe owners of the college.

To Caesar, as Master of the Requests, Dee wrote on October 2, 1596, on behalf of William Nicholson, about an action he had brought against two persons for enclosing moor and mine land at Reddish. Some idea of the lawless proceedings of the time may be gathered from Dee’s description of the injuries the plaintiff had received in having his barns pulled down and his corn and hay, “to the quantitie of a great number of loads, cast out of doors, which some of my family beheld.” Dee adds pointedly: “I shall be forced ere it be long to fly to your direction and help in causes Judiciall”; and ends by a reference to Caesar’s recent marriage, six months earlier, to a Manchester lady (Alice, daughter of Christopher Green): “God bless you and your new Joye.”

Oliver Carter was more troublesome than ever, and lawsuits were instituted by the Warden both against him and George Birch, another of the Fellows. On Sunday, September 25, Dee writes: “Mr. Oliver Carter, his impudent and evident disobedience in the church.” There was evidently a scene, though not, as Mr. Halliwell has it, caused by Carter’s “dissoluteness in the church.” There was no house for the Warden, but the fines of the Fellows for absence were by the last charter to be devoted to its provision. If they did not pay, Dee had to meet the rent himself. At the beginning of 1598 there were four lawsuits on the Warden’s hands, but he records that he “stayed” them all, for one cause or another, one until Sir John Byron returned. In Januaru the college gate and a large piece of the wall fell down at

midnight, so there were repairs to be made. He had a letter from John Pontoys, the friend who had sent him twenty-one loads of Dantzic rye, very useful for consumption. Another welcome contribution for domestic use arrived at this time, viz., “two lings and two haberdines from Mr. Harry Savill, from Lichefield.” Haberdines are dried and salted cod. He records an eclipse of the sun on February 25, with the comment that although it was a cloudy day there was great darkness about half-past nine.

In March, the entries in the diary end abruptly, and are not resumed again till June, 1600, a period of more than two years, of which there appears no record. The time was apparently spent in London or at Mortlake; the purpose of the journey was no doubt to represent to the Privy Council or other authorities the terribly involved state of affairs in Manchester, where the college had become almost “no college.”

CHAPTER XXII

COLLEGE AFFAIRS

“I came among a people who relied much on dreams. And I told them except they could distinguish between dream and dream they would mash or confound all together. For there were three sorts of dreams. For multitude of business sometimes caused dreams; and there were whisperings of Satan in man in the night season; and there were speakings of God to man in dreams.”

George Fox, Journal

The Warden was apparently absent from his charge at Manchester for two years and a quarter, between March, 1598, and June, 1600. When he resumed his diary to chronicle his return, it appeared that he had been very busy in London, arranging for a special commission to sit in the college chapter house, to inquire into encroachments made upon the manor of Newton. His wife and two elder sons, Arthur and Rowland; Mary Nicholls, daughter of his old friend and pupil, Francis Nicholls; all travelled with him from London. What became of the younger children we can only guess. The party set out on the 10th and arrived in Manchester on June 18. Rowland was then seventeen, a Grammar School boy on Bishop Oldham’s foundation in Manchester. Early in the following December, he obtained an exhibition at Oxford from the school. Dee, as Warden, was charged with certain official visits of inspection of the Grammar School, and was by no means always pleased with the result. He says, for instance, on August 5 of this year, “I visited the Grammar Schole, and fownd great imperfections in all and every of the scholers, to my great grief.” Of an earlier visit he says it was “to see the ower, &x., for Mr. Heton,” i.e., to see the clock.

Dee had almost completed his seventy-third year, and had maintained his bodily strength on the whole remarkably well. This summer he observed that for the first time in his life his pulse assumed the well-known symptom of intermittent beating, or pulsation. With all his usual exactitude, he records that his pulse kept on missing a pulsation after the fifth, or the seventh, or eleventh beat, although it was for the rest strong and equal. He mentions a great many sleepless nights. “Nocte Amaritudo mea,” “Circa mediam noctem Amaritudo mea,” are entries that occur with some frequency. On July 7, he says, “This morning, as I lay in my bed, it

came into my fantasy to write a boke: De differentiis quibusdam corporum et spirituum.” His views on this subject are again sometimes noted. If they are not about books, they concerned that long-frustrated hope of his life, that he might actually one day, and by no fraud or trickery, stumble on the secret which Kelley had professed to know. By this time, Dee must have been assured of Kelley’s knavery, and yet his faith in the possibilities of alchemy remained unshaken to the end. “I had a dream after midnight,” he says, “of my enjoying and working of the philosopher’s stone, with other. My dream was after midnight, toward day.” Alas! this pleasure he was never to enjoy in the flesh. Next night: “I dreamed that along betwene Aldgate and the postern on Tower Hill did men stand in a lane, with pikes in theyr hands, as though more should come to them, or that they wayted for somebody. But theyr regard and looking was directly to Y Towre, where certeyn great personages dyd stand; and one of them as upon a stage did declare with a loud voice to the pikemen, matter of importance, very loud.”

The description of the topography of his dream, given by this Londoner born, is very exact. The gate of Aldgate, taken down in 1606, was the eastern postern of the City, not far from St. Botolph’s Curch. So the lane of pikemen was a very long one, or seems so to us, who know the distance covered with hundreds of buildings and a network of streets.

There was little time now for him to devote to alchemy by day. His work lay in a more practical direction: —

“July 17. I willed the Fellows to com to me by nine the next day. July 18. They cam. It is to be noted of the great pacifications, unexpected of man, which happened this Friday; for in the fore-noone (betwene nine and ten) when the Fellows were greatly in doubt of my heavy displeasure, bu reason of their manifold misusing of themselves against me, I did with all lenity interteyn them, and shewed the most part of the things that I had brought to pass at London for the Colleg good; and told Mr. Carter (going away) that I must speak with him alone. Robert Leghe and Charles Legh [the singing men] were by. Secondly, the great sute between Redich men and me was stayed, and by Mr. Richard Holland, his wisdom. Thirdly, the organs, uppon conditions, wer admitted. And fourthly, Mr. Williamson’s resignation granted, for a preacher to be gotten from Cambridge.”

Richard Holland, of Reddish and Heaton House, was a man of some note in Manchester, a feoffee of the Grammar School, and three or four times sheriff of the county. The “preacher gotten from Cambridge” to succeed the last unsatisfactory curate was William Bourne, a Fellow of St. John’s. “July 31. We held our audit, I and the Fellows, for the two yeres last past in my absence: Olyver Carter, Thomas Williams and Robert Birch, Charles Legh, the elder, being receyver.” This entry in the diary seems to make it plain that Dee was absent from Manchester during the whole of the two years of which we have no account. In July, too, Dee records the loan of his second part of Holinshed’s Chronicle to Mr. Randall Kemp.

In September, the commissioners appointed by the Bishop of Chester again met, and called Dee before them in the church, “about thre of the klok after none, and did deliver to me certain petitions put up by the Fellows against me to answer before the 18th of this month. I answered them all eodem tempore; Yet they gave me leave to write at leisure.” The commissioners were Richard Holland and

William Langley, both of whom we have met before, with the rector of Stockport, Richard Gerard. Things perhaps were set on a little better foundation for a time. Points of dispute were referred to the steward, Humphrey Davenport, "Counsayler, of Grays Inn," and Oliver Carter, the contentious Fellow, died within three or four years.

The last troublous years in Manchester must be briefly passed over, and indeed the material for them is scanty. Dee had to borrow money on more plate, "double gilt potts with cover and handells," "bowles and cupps with handles," from Edmund Chetham, the high master of the Grammar School; and he had not been able to redeem them when Chetham's father and executor made his will in March, 1603. He says in it that Dee delivered to his son "six severall parcells of Plate to be kept as a payne or pledge for the same [loan], which by reason of my said executorshippe are now come into my possession," and he wills the ten pounds lent upon them to his other sons Humfrey and Ralphe. When, if ever, the pieces were redeemed, does not appear. Another valuable article — "a silver salt, dubble gilt, with a cover, waying 14 oz.," had to be deposited with Adam Holland in January 1601, for a loan of five pounds for one year. Dee's store of plate, though large, was being heavily drained and irrevocably scattered in this way. The old man doubtless saw his treasures, the gifts of friends and patrons of half a century, disappear with feelings of deep chagrin and disappointment, mingled with memories of past triumphs, and little light upon the future. A piece of the plate came to light at the Tudor Exhibition in the New Gallery in 1890, when a silver cup, the property of Mrs. John Hookham Frere (said to be Dee's great-great-niece), was exhibited. Writing of this cup to her son Bartle Frer, about the end of the eighteenth century, Mrs. Frere says, "My great thrice- great uncle, John Dee, because he was a wise man, was taken for a conjurer. I have his silver cup now here with me, and you may drink of it, but I know no story in the family that he ever divined by it. It serves me here for a sugar basan." Evidently Mrs. Frere took an entirely rational view of the powers attributed to her famous ancestor.

Perhaps in these sad days he looked back regretfully to the glorious visions and promises made him by those angelic visitors in the years when he and his skryer lived in the Courts of kings and emperors, and were consulted and deferred to as seers and wise men. Even the thoughts of suspicions harboured; of secret and open foes, at home and abroad; the recollection of heart burnings and passionate scenes with the incalculable Kelley, must have seemed dazzlingly brilliant as compared with these grey hopeless years. It is little wonder that he began to seek among his assistants and friends another skryer, through whom he might renew some glimmer of the former days. Mr. Francis Nicholls, who had come to Mortlake in 1593 to learn astrology, seems to have been tried. He was frequently with the Warden, and his daughter Mary stayed for two or three months with the Dees in Manchester on their return from London. She would be a companion in age for Katherine, and the Warden tells how the two girls, his wife and himself, partook of the sacrament together on August 10, 1600. Bartholomew Hickman was more successful as a medium than Mr. Nicholls, and yet at first not always to be trusted. Dee had learned by now to be very discriminating, and he found many of the "reports of sight and hering spirituall," obtained through this skryer, so untrue that he made a bonfire of all the writings on Michaelmas Day, before his wife; Mr. Nicholls; his brother, William Nicholls, and a Mr. Wortley. "A copy of the first

part, which was afterward fownd, was burnt before me and my wife.” The revelations afterwards transmitted through Bartholomew were not so treated, and were evidently considered by Dee to be genuine messages from the unseen. His visitors left the next day after the Michaelmas bonfire, the Warden accompanying them on foot as far as Deansgate, where they parted. On his return home a surprise awaited the old man.

Dee’s servants, many of them, attached themselves to him for life, as we have seen. They, at least, regarded him without suspicion. He was no invoker of devils or conjurer of evil spirits to them. No master could be kinder, more gentle, considerate or more strictly honourable. In whatever straits he found himself, he always contrived to pay, and faithfull record in his diary the payment of, their wages. We have seen how he writes to Sir Edward Dyer of their diet. It will be remembered that one of his early apprentices, Roger Cook, left him after fourteen years, jealous that another man should be admitted to processes from which he was excluded. This was over twenty years ago, nor had his name ever been mentioned in the diary since. Now, Roger Cook reappeared in Manchester, quite unsought, offering and promising

“his faithful and diligent care and help, to the best of his skill and powre, in the processes chymicall, and that he will rather do so than be with any in England; which his promise the Lord blesse and confirm! He told me that Mr. Anthony (his late master) considered him very liberally and frendely, but he told him that he had promised me. Then he liked in him the fidelity of regarding such his promise.”

A week or two later, on November 1, Dee writes that R.C. began to distil. Afterwards there seems to have been cause for suspicion that Roger had spread false reports about his former employer, but the mistake was generously acknowledged; matters were cleared up, and peace once more reigned: —

“Feb. 2. Roger Cook, his supposed plat laying to my discredit was by Arthur, my sone, fownd by chaunce in a box of his papers, in his own handwriting, circa meridiem, and afternone about 1 1/2 browght to my knowledg face to face. All was mistaken and we reconcyled godly. Feb. 5. O libera nos a malo. Feb. 10. Reconciliation between us, and I did declare to my wife, Katherine my dowghter, Arthur and Rowland, how things were mistaken.”

In October, Sir George Booth, High Sheriff of Cheshire, came to Manchester to see the steward of the college, Humphrey Davenport, of Gray’s Inn, about some of the college property in Cheshire, which he held. Booth had been knighted since his last visit. After all parties had been interviewed, they came to a mutual agreement that the Warden and Fellows would accept the arbitrament of the steward on the point in question, his decision to be delivered after the lawyer had paid his next visit to London. Davenport’s clerk, John Radclyffe, and Mr. Dumbell were at the college at the time, but Dee says “they hard not our agreement, we were in my dining room.”

He received a kind letter from the Bishop of Chester (Richard Vaughan), recommending Mr. Thomas Billings to him for a curacy. He does not say if the spiritual ministrations of Mr. Billings were accepted. The commissioners were still

sitting, and in November they made an award against Mr. James Ashton, of Chadderton, for holding the manor or property of Nuthurst while its title belonged to the college. There was a final scene with Oliver Carter in the college, before Mr. Birch, Robert and Charles Leigh. At the college audit on December 2, Dee was allowed his portion of 7 pounds yearly for house rent up to the Michaelmas before. A grant was now made to Arthur of the chapter clerkship, but the holder, Owne Hodges, was only going to relinquish it on condition of 6 pounds being paid for his patent. So more silver had to be pledged to meet a loan.

The last entry made by Dee in his diary is on April 6, 1601, when he made "Mr. Holcroft, of Vale Royall, his first acquaintance, at Manchester, by reason of Mr. William Herbert, his servant. He used me and reported of me very freely and worshiply."

For the concluding seven years of the old man's life there are only a few scanty outside records on which to rely, beside two or three fragmentary entries printed in the end of the Book of Mysteries. In such a practised and ready writer as our aged mathematician and astrologer, the failure to set down records seems to betoken failing strength of both intellect and body.

CHAPTER XXIII

LAST DAYS

"If I read aught in Heaven,
Or Heaven write aught of fate, by what the stars,
Voluminous or single characters
In their conjunction met, give me to spell,
Sorrows and labours, opposition, hate
Attends thee; scorns, reproaches, injuries."

— Milton, *Paradise Regained*

A few days after the diary closes, Dee's fourth son, Theodore, died. The boy was just over thirteen, perhaps at the Grammar School. Michael, we remember, had died at Mortlake seven years before, so the only sons left were Arthur and Rowland, both now grown almost to man's estate. Within about a year, Arthur married, and soon embarked on his successful career as a physician in London, Manchester, Moscow and Norwich, to which we can return later.

Arthur's wife was Isabella, daughter of Edmund Prestwich, Justice of the Peace, of Manchester, a member of a family whose name is perpetuated by a large district of the town. The marriage took place in 1602, when Arthur was twenty-four, his bride just under twenty. The young couple settled with or near his parents at first, and Dee had the joy of seeing grandchildren grow up around him. Four of Arthur's twelve children were born during the old man's life, and he pleased himself by drawing a horoscope for two of these, Margarita 1603, and Jane 1605, on the vellum leaves of a small square manuscript volume which still fills us with wonder at his boundless industry. It contains an anatomical drawing of the human body and tables of astrological signs for its different parts, aphorisms, studies of medicine, the actions of metals, and other hermetic notes. Arthur's horoscope, drawn and expounded by his father in the same book, is sufficiently remarkable,

with its prophecy that he should have good fortune from a prince, and die abroad, a violent death. In the centre of the figure, Arthur himself has added the words “sententia patris mei de mea nativitate erat. Magna bona cum multis malis.” Arthur only added one horoscope, that of his seventh child, Isabel, born 1614; otherwise, as they appeared almost annually (twelve in eighteen years), he contented himself with simply writing names and dates on leaves of coarse paper, added to the beginning and end of his father’s little commonplace book, which has been rebound roughly in cheap modern cloth.

Beyond these events, there is nothing to tell of the next three years, which are without a single jotting of his own in any of his diaries; but the old prejudices and suspicions must have revived in a very active and bitter form. The aged student could endure them less patiently than before. He had lost hope of outliving them; he had lost his Queen, who, though she had held out to him promises of preferment as unsubstantial as a mirage of the desert, had ever been friendly and kind; had constantly welcomed, nay, invited, him to her presence; and had apparently maintained her faith in him to the last. Burleigh’s death in 1598, and now the Queen’s, left him without patron and protector. Elizabeth died at Richmond on March 23, 1603, but Dee, presumably, was far away in Manchester, and not near at hand at Mortlake, even had he been required. The course of the magnificent life was run, and no prognostications of her astrologer could put hope into the physicians and courtiers watching around that royal deathbed. The Queen was seventy, and had reigned for fifty-three years.

From King James there was nothing to be hoped for Dee, the man familiar with occult sciences. The Scotsman felt himself a special expert on the subject of witches, demons and magic. Had he not attended the infamous trials of 1590 and 1591? And was he not the author of a book intended to shatter the doubts of those who were still unconvinced of the infamy? He was aghast at the new and unorthodox views of apologists like Wier and Reginald Scot, and upon his accession promptly ordered *The Discoverie of Witchcraft* (1584), by the last named, to be publicly burned. James’s *Demonologie* is a strange piece of reasoning, a plea, in fact, for the devil, with whom he seems to be on particularly intimate terms. “God’s hangman” — that is the title awarded him — is, according to King James, able to return and reanimate any dead body. He announces his faith in the power of conjurers to invoke the devil when they choose, and to invest others with his spirit. He adjures all pious people to unite in exterminating and utterly destroying all persons so possessed: a somewhat unkind request, since he has previously allowed that such objects of reprobation are permitted to exist in order that the godly may be warned!

The first Parliament of James met on March 19, 1604. On the 27th a new and more stringent Act against Witchcraft was brought into the House of Lords. It was referred to the bishops, who discovered it was imperfect, and had a fresh one drawn. On June 9 the execrable Act that disfigured our statute book for 150 years became law. This haste, it was supposed, was used to meet offences exposed by the Scottish trials, now again evidently revived and much talked of in England. It is significant to remember that Shakespeare finished writing *Macbeth* in 1606. In what way Dee felt himself specially involved, unless by the publication, in 1603, of Harsnet’s tirade against impostures and exorcists, it is hard to conjecture, but the times were ripe for him to make, at this identical moment, a passionate appeal to the King and

Parliament. On June 5 he presented to James, in the Palace at Greenwich, a petition couched in the strongest and most piteous terms that any man could devise.

He urged upon the King

“to cause your Highnesse said servant to be tryed and cleared of that horrible and damnable, and to him most grievous and dammageable sclaunder, generally, and for these many yeares last past, in this kingdom raysed and continued, by report and Print against him, namely that he is or hath bin a conjurer or caller or invocator of divels.”

He went on to relate how he had published many times his “earnest apologies against the slander [one we remember in his preface to Billingsley’s Euclid in 1570, and another, the letter to the Archbishop in 1595, he had republished in 1599 and 1603], and yet this ungodly and false report, so boldly, constantly and impudently avouched,” has been uncontrolled and unpunished for so many years; and, moreover, in spite of all, some writer, either a “malicious forraine enemy or an English traytor to the flourishing State and Honor of the Kingdom,” on January 7, 1592, had called him, John Dee, in print, “the conjuror of the Queen’s Privy Council.” It seems, therefore, very needful that the suppliant shall be brought to trial, for the credit of the Lords of the Privy Council as well as for his own. “Therefore he offereth himself willingly to the punishment of Death, yea eyther to be stoned to death, or to be buried quicke, or to be burned unmercifully, if by any due, true, and just meanes, the name of conjuror, or caller, or invocator of Divels or damned Sprites, can be proved to have beene or to be duely or justly reported and told of him (as to have been of his doing) were true, as they have been told or reasonably caused any wondering among or to the many-headed multitude, or to any other whoseever else.”

Dee’s sympathies were so strongly with the unfortunate, persecuted, so-called witches, that he was willing to throw in his lot with them and share the same fate. He ends this extraordinary petition with “a great and undoubted hope” that the King will “soon redress his farder griefs and hindrances, no longer of him possibly to be endured, so long hath his utter undoing, by little and little, beene most unjustly compassed.”

Following up this petition, the poor man, grown desperate, three days later (June 8) presented an address in verse to Parliament, begging them to pass “an Act Generall against slander, with a special penal order for John Dee, his case.” He was far too much in earnest to be suspected of any humorous intention, but a thought of the needful reformation such an Act might have wrought in the country by this time cannot be suppressed. Certainly it would have been a more creditable piece of legislation than the Act which afforded such wicked and cruel pretext for espionage and terrorism, and for putting unfortunate lunatics — called witches — to death by hanging, burning and stoning by a mob.

It seems as if Dee’s ruined and beggared condition, the long procession of disappointments he had patiently borne, had entirely destroyed the sense of proportion in his mind between personal and public affairs. Continual brooding over the thought of the neglect, the suspicion, that his undeniable talents had undergone, the obstinate slander, ignorant incredulity, or flat denial of things in which he most truly put his faith, all distorted by his natural vanity and good

opinion, seems to have convinced him that his crushed and melancholy fate was little short of a national disaster. This feeling had become an obsession.

There was unfortunately nothing in his halting verses to induce Parliament to pay any heed to a tiresome old petitioner, a survival from the last century and the last reign, who had outlived every contemporary inclined to believe in him, and whose course was now nearly run.

Nor did James respond in any way to his heartbroken petition. Robert Cecil, and all who wished to stand well with him, took their cue from the King, and Dee in his old age was left forsaken and alone.

The following is the address to Parliament: —

“TO THE HONORABLE ASSEMBLIE
OF THE COMMONS IN THE PRESENT PARLIAMENT.”

“The Honor due unto you all,
And reverence to you each one,
I do first yeeld most speciall;
Grant me this time to heare my mone.

“Now (if you write) full well you may,
Fowle sclandrous tongues and divelish hate,
And help the truth to beare some sway
In just defence of a good Name.

“In sundry sorts, this sclander great
(Of conjurer) I have sore blamde:
But wilfull, rash, and spiteful heat,
Doth nothing cease to be enflamde.

“Your helpe, therefore, by Wisdom’s lore,
And by your Powre, so great and sure,
I humbly crave, that never more
This hellish would I shall endure.

“And so your Act, with Honour great
All Ages will hereafter prayse;
And Truth, that sitts in Heavenly sear,
Will in like case your comforts rayse.

Most dutifully in all humilitie at your commandment, John Dee,
servant and Mathematician to his most royall Majestie.

An. 1604. Junij 8.”

Dee’s good name was one of his dearest possessions, but he had long seen it shadowed and dimmed. Another treasure — his “painful” Jane — the wife who had loyally cleaved to him through good and ill report, was to be the next of which he was to be bereft. She was so much his junior that he might reasonably have expected her to tend his declining years and to survive him. But it was thoroughly

in keeping with her unselfish character and devoted life that her death came as a sacrifice to duty. In the spring of 1605, a terrible scourge of plague visited Manchester. She nursed her children safely through the epidemic, but fell a victim to it herself. She died and was buried on March 23 in the collegiate church of St. Mary. The old man had no heart to take up his pen and record her death. The bare fact is all we know, from another source; and the fate of all Jane's children, save Arthur, is wrapped in a like mystery. At her death, Jane was a month under fifty years old; the twenty-seven years of her married life had been crowded years, the one thought in them all to watch over and ward her great childlike, learned, marvellous husband and her children. Now she passed the task on to her daughter Kate, who faithfully fulfilled it.

A few fragments of angelic visions, which after nearly twenty years were once again vouchsafed, are all that remain to tell of the last two years of the old man's life.

Bartholomew Hickman was the skryer, and Dee was in London, "at Mrs. Goodman her house," very ill. On March 20 and 29, Raphael appeared, to comfort him as regards his alarming symptoms of haemorrhage, and bade him use the medical skill that God had given him. Dee, in utter dejection, owned that he was beaten in his "great attempt to make the council privy of my beggary, and to offer the Earl of Salisbury such my duties as I may perfect to his account." He was right to hope nothing from the great Burleigh's little-minded son. Robert Cecil lacked almost everything that had made William Cecil great, even a great sovereign to serve.

In July Dee was again in London, this time staying in Westminster, at the "Three Kings" in King Street. Katherine was with him, his devoted daughter, now a woman of twenty-six, apparently unmarried. Two companions or servants, Patrick Saunders and Thomas Turner, were in attendance. On the 9th, the angel Raphael came to the sad and broken old man of eighty, holding out promises and hopes that seem cruelly delusive. But Dee was still wrapped in that inviolable armour of faith or credulity that had already withstood so many severe shocks. Whether he now actually beheld Raphael, whether he still with his ears heard the angel's voice, or whether only within his spiritual consciousness he felt the impulse and the message, is quite immaterial. But it is noticeable that there are now no descriptions of Raphael as an apparition. The message is all he heeds. As he is sinking slowly down into his grave from natural decay, there is a double and figurative meaning to be read into the angel's words. Raphael bade him first believe that his perishing bodily frame shall be restored and made sound, for, however reluctant he at his great age may feel, he is to go shortly on a long journey to friends beyond the sea, where the secrets of wisdom, the philosopher's stone, the book of St. Dunstan, and "that Jewel that was delivered," shall be made known to him. He is not to go alone, for his good friend, John Pontoys, will come from Dantzic to be his stay and helper. "Therefore set thy things in order for thy Wardenship, and all thy other worldly affairs, as shortly as thou canst, by all means possible." He is not to mistrust because of his physical weakness, for he shall have long life like Hezekiah, and instead of living in want or beholden to those who love him not, he shall be provided for where he shall be able to do God service. He shall enjoy fame and memory to the end, and Raphael will accompany him, as he did the young Tobias, on his journey. Perhaps Dee remembered the mystical words of Gabriel, used to him at Cracow in April of 1584, —

“Happy is he that hath his skirts tied up and is prepared for a journey, for the way shall be open unto him, and in his joynts shall there dwell no wearinesse. His meat shall be as the tender dew, as the sweetness of a bullock’s cud. For unto them that have shall be given, and from them that have not shall be taken away. For why? The burr cleaveth to the willow stem, but on the sands it is tossed as a feather without dwelling. Happy are they that cleave unto the Lord, for they shall be brought unto the storehouse, and be accounted and accepted as the ornaments of his beauty.”

[The old man penned on a slip of paper some notes to aid his failing memory when next he should see his instructor. In two days, on July 11, he was able to put the questions.

What country shall he go to?

The answer is, where he will. “Thou hast been a great traveller, and it is referred to thy own choice,” subject to divine approval. Dee suggests Germany, and receives consent.

Whom shall he take with him besides John Pontoys? What about his daughter Katherine, and the young man, Patrick Saunders?

The answer is very emphatic. It shows how dependent the old man had become upon this elder daughter of his old age. “John Dee, thou of thyself dost best know that without thy daughter, thou canst not be without her.”

Certainly he could not part from Katherine, even with Pontoys as his “special comfort and aid,” and the “honest and well-disposed young man,” Saunders, who had been sent on purpose to go with him.

What about books and appurtenances? Is Mr. Bardolf to go? What shall Arthur do in his intended travel? “Shall I ever return to England, and shall I keep a title to enjoy my house when I do return?” Will the King grant a licence, or will it not be another disappointment, like so many that have gone before?

It is all a vain and illusory and impossible chimera. The only journey left for the old man to take was the one to “that undiscovered bourne from whence no traveller returns.” Still, the wonderful visions perhaps brought him ecstatic hours. His brain was yet strong and clear, less worn out than his body, but like all old people, he lived over again and loved to dwell upon the past. A few days later he sat talking after dinner to Bartholomew “of divers my doings with Mr. Kelley.” He had forgotten little of these dazzling experiences, and perhaps to while away the time he read his precious diaries over and over again. But of later events his memory was failing: “I asked Bartholomew if he had ever seen my jewel that was brought since it was set in gold [this had been done more than twenty years before], and he thought that he had not seen it.” Surely tactful politeness on Bartholomew’s part. “Whereupon I went speedily to my chest, unlocked it, and took it out, and undid the case and set the stone in his due manner.”

Soon Raphael appeared in the stone, and Dee heard his voice, promising that the powder (i.e., Kelley’s powder) which he was keeping — “the which thou dost make account of as no better but dust” — should be turned to its right use.

Is it possible that the old belief in the golden secret had at last been killed? The powder was now but dust, as the old man would soon become, and as all his fixed dreams of projection had ever been.

The last entry in the spiritualistic diary was made on September 7, 1607, but whether Dee was at Mortlake or in London cannot be said. Pontoys had arrived. He was anxious to know if he would be thought fit to serve Dee in Bartholomew's absence. Also he earnestly desired to know his guardian angel, and he would fain hear also "the end of the Polish troubles."

Captain Langham, it is hoped, is going to lend 100 pounds; if not, Pontoys will set to work "to win some help for money by distillations and alchemical conclusions." Poverty is again stretching her gaunt fingers over this fond dreamer of gold. He had missed his "silver double gilt bell salt" and many other things from his house. He is "bereaved of his own goods." The truth was that Arthur had secretly taken them away to sell or pawn, in order to provide necessities for the family. Dee has been expecting a sum of money from the Emperor Rudolph, how much he does not know. But Raphael tells him to "let it go and speak no further of it. The Emperor of all emperors will be thy comfort. Thou hast no more need of him [Rudolph], only to keep good will and friendship betwixt him and thee." [Then Raphael fades into the eternal invisible, and the last word of the angelic visions is written.

In the private diary, kept in the almanack from Venice throughout this last year, there is little beside the bare stroke marking the months off into weeks, as was Dee's usual habit. The strokes are continued beyond the month of his death, December, 1608. The last written entry is on December 19, and is almost illegible. It is in the old man's hand and appears to read "tonitrum a Corffe."

On which day at the death of the old year, Dee's spirit joined those others that had always been so near to him, we do not know, or on what precise date he was buried in the chancel of the church standing so close to the house at Mortlake which had been his home for thirty years. The parish registers for five years are missing, and the stone which Aubrey says marked his grave has long since disappeared.

Fifty years later, John Aubrey talked to Goodwife Faldo, an old woman of eighty who had known him, and was shown a slab from which the brass had disappeared. She said that her mother had tended him in his sickness before he died in his own house in Mortlake, "next the house where the tapestry hangings are made." Evidently his last days were passed in the cottage which he had purchased many years before to add to the larger house, inherited from his mother. The old woman's gossip was interesting to Aubrey, for he was a grandson of Dee's cousin and neighbour, Dr. William Aubrey, the Master of Requests who had helped Dee to the Manchester post. She was full of marvellous stories, of course, for Dee's reputation for "magic" was impelled to survive him. But they were harmless stories enough: he had "layed a storm for Sir Everard Digby"; he had recovered a basket of clothes which she as a girl, and one of his younger daughters of her own age, had negligently lost together; he had bidden a butler who had lost his master's plate on a boat coming down from London by water to go back on a certain day, and he would see the man who had taken the wrong basket by exchange: the butler had done so and had found his plate; he had told a woman that she laboured under the evil tongue of an ill neighbour; he would not recover some lost horses, though he was offered several angels. He used to distil egg-shells, and kept a great many stills going. He had given and built the gallery to the church at Mortlake, and Goody Faldo's father was the carpenter that worked on it. "He was a great peacemaker, and

if any of the neighbours fell out, he would never let them alone till he had made them friends.” “A mighty good man he was.”

The old woman remembered that he entertained the Polish ambassador not long before he died, and showed to him the eclipse of the sun, in a dark room. She could call to mind the stone upon his grave: it was between the tombstones of two other servants of Queen Elizabeth, Mr. Holt and Mr. Miles, upon both of which were brasses. The children, she said, dreaded him because he was accounted a conjurer, and yet whenever they strayed into the church, they would run straight to play upon his gravestone. There were steps at the upper end of the chancel when he was buried, but the minister laid them plain in Olver's days, and then the stone that covered Dr. Dee was removed. She could recall his appearance: a man tall and slender, clad in a gown like an artist's gown, with hanging sleeves and a slit.

These garrulous reminiscences give us a picture of the old philosopher's end more valuable than any mere formal entry of the date. Some day, however, it may be possible to recover that.

Meanwhile, Dee's memory may be entrusted to the kinder judges of to-day, who will be more charitable because more enlightened and less impregnated with superstition. They may see in him a vain, presumptuous and much deluded person, but at any rate they must acknowledge his sincere and good intentions; his personal piety; his uncommon purity of thought and mind. If, in his thirst for knowledge of the infinite unknowable, he pushed back the curtain farther than was wise or justifiable, did he harm any one's reputation beside his own? Did he not suffer all the penalty in his own miserable failure, so far as comfort and prosperity in material things were concerned? In all the vague hopes held out by him to Queen, Princes and Emperors, of enriching them through his alchemical skill, he was no conscious charlatan, playing a part to lure them on, but a devout believer in man's power and purpose to wrest scientific secrets from the womb of the future. Can we look back upon the discoveries of three hundred years and feel his certainty was vain? The powers of electricity, the training to our uses that marvellous and long concealed agency and light; the healing virtues of radium, should be worth more to us than much manufactured gold.

APPENDIX I

THE DESCENDANTS OF JOHN DEE

When the aged mathematician died at Mortlake in 1608 he left to survive him five or six out of his eight children. Michael, born at Prague, had died on his father's birthday in 1594. Theodore, born at Trebona, died at Manchester 1601. Arthur and Rowland were left. Katherine was his companion to the end. The three younger girls, Madinia, Frances and Margaret, had, for anything we know, survived the plague which was so fatal to their mother, but there is no trace of either of them after that event in March, 1606. Aubrey, indeed, did hear from Goody Faldo of a daughter, whose name he thinks was Sarah, married to a flax dresser of Bermondsey. Dee had no daughter Sarah, and Aubrey does not suggest a name for the problematic husband.

Arthur, the eldest son, we have followed through a childhood of accidents to his selection and setting apart with a solemn rite to be his father's "skryer" in the

magic crystal, in the eighth year of his age. We have traced the failure of that ill-advised choice, and have seen the lad of thirteen sent off to Westminster School with a little trunk and his mother's blessing. The next events in his life recorded by his father are his being wounded by a foyne while fencing with Edward Arnold, and the grant of the chapter clerkship of Manchester, in 1600.

He married in 1602, lived for a while in Manchester, and began practising medicine. Wood says he spent some time at Oxford, but his name has so far not been found in any college admissions. In his will he is described as "Doctor of Physic." Probably he took his degree abroad. His marriage to Isabella Prestwich, daughter of a well-known Manchester justice of the peace, took place when he was twenty-two, and it is to be presumed that he continued living on in Manchester until his father left that city some time in 1605 or 1606, after the sad death of his wife. Arthur set up a practice in London some time about that year, although precise dates are not obtainable. He seems to have followed the common usage of hanging outside his door a list or "table" of medicines, and their excellent therapeutic properties, which were said to effect certain cures of several diseases. This attracted the attentio of the censors appointed by the Royal College of Physicians, who proceeded against him forthwith, under the powers granted them against empiricks, which they had exercised since the foundation of the College in the early years of Henry VIII. The learned members of the college esteemed this "crime" such an "intolerable cheat and imposture," that they summoned Arthur Dee to appear before them with his remedies that they might impose a due penalty upon his presumption. The rest of the story is unrelated, and we cannot say what fine or order was his reward.

He seems, either through inflence or talent, to have made his mark as a doctor. In July, 1614, he was recommended by the Archbishop of Canterbury and the Lord Chancellor to be elected physician of Thomas Sutton's newly founded hospital, the Charterhouse, and we may presume the appointment was made. In May, 1627, Charles I. recommended him as physician to the Emperor of Russia, and in June it was agreed to send letters out by him or his agent, the stipulation being made that he must sail at once, "or not have passage this year."

He took up his abode at Moscow, if not in the splendour and riches offered to his father, at least sufficiently provided for to maintain his huge family in comfort. Four or five of his twelve children died in infancy; the complete list of them, as given in his father's book of horoscopes in the British Museum, is as under: —

Margaret	born	April 4, 1603.
Jane	"	March 31, 1605.
John	"	July 24, 1606 (died).
Arthur	"	March 16, 1608.
Maria	"	February 24, 1612.
Rowland	"	September 8, 1613.
Isabel	"	September 5, 1614.
Frances	"	October 25, 1615.
William	"	August 27, 1617.
John	"	March 30, 1619.
Edmund	baptised	August 27, 1620.
	buried	September 23, 1621.

Anna born

January 15, 1622.

Arthur's wife, Isabella Dee, died July 24, 1634. About this time he returned to England and settled in Norwich, near his friend, Sir Thomas Browne, who was then busily engaged in writing down the ethical and theological conclusions which he called the *Religio Medici*. Browne was, of course, the younger man. Writing in 1658, a few years after Arthur's death, to Elias Ashmole, Sir Thomas tells of the many talks about the doings of Dee and Kelley that he had with "my familiar friend, sonne unto old Doctor Dee, the mathematician," who had "lived many years and died in Norwich." Browne sent to Ashmole "the scheme of Arthur's nativity, erected by his father, Dr. John Dee," a copy from the original, made by Arthur himself, with comments added by a Moscow astrologer, Franciscus Murrerus.

Dr. Arthur, in spite, or perhaps because, of his early environment, retained until his dying day a devout belief in the possibilities of alchemy to make projection or transmutation. He had grown up in the fixed idea that the ever-exclusive secret would soon be found out. In fact, he was persuaded that divers workers had indeed discovered the art. The child of seven or eight, who had played with quoits or playthings, which he understood had been turned into gold upon the premises, was likely to retain this conviction. To doubt it would be to cast a slur upon his father's memory. Of Kelley his recollections — the recollections of a boy under nine — could be but dim and hazy, untouched with any possible scepticism or critical judgment. After the February day when Kelley rode off to Prague in 1588, neither Arthur or his father had ever set eyes on this adventurer again.

He had succeeded in convincing his old friend of the truth of these recollections, for Browne writes of him as "a persevering student in hermetically philosophy, who had no small encouragement, having seen projection made, and with the highest asseverations he confirmed unto his death that he had ocularly, undeceivably and frequently beheld it in Bohemia. And to my knowledge, had not an accident prevented, he had, not many years before his death, retired beyond the sea and fallen upon the solemn process of the great work."

Continuing the correspondence six months later, when additional matter rises to mind, Sir Thomas writes again to Ashmole, in 1675, with more particulars of the "solemn process."

"I was very well acquainted with Dr. Arthur Dee, and at one time or another he has given me some account of the whole course of his life. I have heard the doctor say that he lived in Bohemia with his father, both at Prague and in other parts. That Prince or Count Rosenberg was their great patron, who delighted much in alchemie. I have often heard him affirme, and sometimes with oaths, that he had seen projection made, and transmutation of pewter dishes and flaggons into silver, which the goldsmiths at Prague bought of them. And that Count Rosenberg played at quoits with silver quoits made by projection as before. That this transmutation was made by a powder they had, which was found in some old place, and a book lying by it containing nothing but heiroglyphicks; which book his father bestowed much time upon, but I could not hear that he could make it out. He said also that Kelley dealth not justly by his father, and that he went away with the greatest part of the powder, and was afterwards imprisoned by the Emperor in a castle, from whence attempting to escape down the wall, he fell and broke his leg, and was imprisoned again. That his father, Dr. John Dee, presented Queen Elizabeth

with a little of the powder, who having made trial thereof, attempted to get Kelley out of prison, and sent some [persons] to that purpose, who, giving opium in drink unto the keepers, laid them so fast asleep that Kelley found opportunity to attempt an escape; and there were horses readie to carry him away; but the business unhappily succeeded as is before declared. Dr. Arthur Dee was a young man [he was a boy of eight] when he saw this projection made in Bohemia, but he was so inflamed therewith that he fell early upon that study, and read not much all his life but books of that subject; and two years before his death, contracted with one Hunniades, or Hans Hanyar, in London, to be his operator. This Hans Hanyar having lived long in London and growing in yhears, resolved to return into Hungary. He went first to Amsterdam, where he was to remain ten weeks, till Dr. Arthur came to him. the Dr. to my knowledge was serious in this businesse and had provided all in readiness to go, but suddenly he heard that Hans Hanyar was dead.”

During his residence in Moscow, Arthur compiled a book of alchemical notes and extracts, which was published at Paris in 1631 under the title of *Fasciculus Chemicus*, etc. Ashmole, among his early enthusiastic labours upon alchemical authors prosecuted under the name of “James Hasolle,” translated this into English in 1650. While the book was at press in the beginning of the year, he wrote to Arthur, apparently as a stranger, informing him of his occupation, and putting at the same time a question or two upon his father’s books.

Arthur’s reply, dated Norwich, January 31, 1649 [50], now in the Bodleian Library, begins by expressing regret that “you or any man should take pains to translate any book of that nature into English, for the art is vilified so much already by scholars that daily do deride it, in regard they are ignorant of the principles. How then can it any way be advanced by the vulgar? But to satisfie your question, you may be resolved that he who wrote Euclid’s Preface was my father. The *Fasciculus*, I must cofess, was my labour and work.” He ends by saying that he will be in London that day week, and if Ashmole wants to see him, he may hear of him in Butler’s Court at the end of Lombard Street, at his son Rowland Dee’s warehouse. The writing, and especially the signature of this letter, are good testimonies to the care bestowed by William Camden of Westminster School on the boy’s handwriting. His father, as we remember, had asked for special supervision of the roman hand, since matter, poor in itself, but set down in a good style, did, in his opinion, often receive more attention than good material badly written and expressed.

Browne had received from Arthur a complete catalogue of all his father’s writings, both finished and intended. But there was one not included, viz., the *Book of Mysteries*. Sir Thomas, writing in 1675, says he never heard him say one word of “the *Book of Spiritts* sett out by Dr. Casaubone, which if hee had knowne I make no doubt butt hee would have spoake of it unto mee, for he was very inquisitive after any manuscripts of his father’s, and desirous to print as many as he could possibly obtain.” He goes on to say that Arthur understood that Sir William Boswell, the English Resident in Holland, owned a number of Dee’s MSS., which he had collected and kept in a trunk in his Dutch home. Boswell refused many applications from Arthur for leave to print some of these, which the famous mathematician’s son considered should not be locked up from the world. Boswell announced his intention of printing them himse, which of course he never did.

Nor did the Book of Spirits see the light of day during Arthur's lifetime. Perhaps had Casaubon appealed to him as Ashmole had done, it would never have been issued at all. A son would certainly have remonstrated against this revelations, this tearing down the veil from the inner tabernacle of his father's soul.

Arthur died in the autumn of 1651, eight years before Casaubon published his book. He made his will on September 17, describing himself as Doctor of Physick, of the city of Norwich, and leaving a small legacy of twenty shillings to the poor of the parish of St. George Tombland, in which he had lived.

Only three sons out of his seven, and three daughters of the six are named in the will, all the others being dead, unless it was Arthur, the eldest, who had been a merchant in Amsterdam. There is a legacy of twenty pounds to his wife.

The second son, Rowland, was established, as we have seen, in Lombard Street as a merchant. To him Arthur had already given his father's portrait, now in the Ashmolean Museum and reproduced as the Frontispiece to this book; and a painted coat of arms. Sir Thomas Browne, who had often seen it, speaks of an addition made to the coat by grant of the Emperor Rudolph in the shape of a mathematical figure; probably the delta which Dee always used for his name in the spiritual diary. To Rowland's wife there is a legacy of twenty pounds.

"To John Dee, my youngest son," Arthur left one hundred pounds and his gold seal ring with the coat of arms cut in a sapphire. John was a Russia merchant.

There is no mention of his eldest child and daughter, Margaret, who is said to have married another Russia merchant named Abraham Ashe.

To three sons-in-law, "my son Grymes;" "my son Anguish" (this was the husband of his youngest child, Anne); and "my son Fowell," he leaves respectively a plush coat; a saddle and pistol; and a black gown and plush suit.

To each of his three daughters, their wives (none of them mentioned by name), he gives 20 pounds; and to the two elder, his two iron-barred sealskin trunks with long cushions and foot carpets, feather bed, blankets, bolsters and coverlets. He appoints his friend John Toley, of Norwich, his executor, and gives him his watch and silver chain, with a square box of cypress wood, double-leafed, with drawers. His servant, John Sergeant, is to have all the contents of his extensive wardrobe, consisting of his coloured cloth suit and and cloak; black suit and cloak lined with rough bayes (Norwich was the seat of the bay and say industry); his winter pair of boots, and two pairs of summer boots; his "hatts;" his "stokins whatsoever;" his black satin doublet; shirts; six of his "worst-falling bands and ruffs;" and forty shillings due for wages at the Michaelmas following.

Arthur Dee died before October 16 of the same year, 1650, when the will was proved by John Toley.

Rowland, Arthur's fourth son, married and died in 1687, when his wife was executrix of his will. Rowland's sons by this wife Jane (d. 1698) were Rowland, born March 25, 1646, married October, 1675; Elizabeth Gardiner of Aldersgate (d. September, 1698); and Duncan, born November 3, 1657. Both were educated at Merchant Taylors' School on the Bishop of Peterborough's foundation (see below). Duncan went on to St. John's College, Oxford, and entered the legal profession. He was chosen Common Serjeant of London in 1700. He defended Dr. Sacheverell for four days of his trial in the House of Lords in 1710; died in 1720, and was buried in St. Mary Aldermanbury. By his wife Mary (d. Stoke Newington, March 24, 1728) he left a son Henry (d. 1725), others having died young.

David Dee, born in Shropshire, of St. Mary's Hall, Oxford, rector of St. Bartholomew the Great, Smithfield, 1587 — 1605, is said to have been a grandson of Bedo Dee. If so, he must have been either brother or cousin of John Dee of Mortlake, who, strange to say, alludes nowhere in his diary to any relation of the name of Dee, although he speaks often of his Welsh kinsfolk, and of his cousin Aubrey. As he died at Mortlake in 1608, aged eighty and a half, David, who survived him twelve years, must have been his junior. David Dee was deprived of St. Bartholomew, "for what," says Newcourt, "I know not"; but he was brought back there to be buried on February 3, 1620. By his wife Martia, daughter of John Rogers, David Dee had three sons, of whom Francis, the eldest, was educated at Merchant Taylors' School and St. John's College, Cambridge. He entered the Church, held various livings in London and elsewhere, and four years before his death was consecrated Bishop of Peterborough. By his will (dated May 28, 1638), he gave his rectory of Pagham, Sussex, to found two fellowships and two scholarships in St. John's College, one of which was to be held for ever by "one of my kindred or of my name, from either Merchant Taylors' School, London, or from Peterborough School." We have seen that two of John Dee's great grandchildren were sent to Merchant Taylors', and one, Duncan, proceeded to St. John's, probably on this foundation. The Bishop's eldest son, Adrian Dee, Canon of Chichester, died unmarried, but his younger sons, John and Daniel, left descendants.

APPENDIX II

BIBLIOGRAPHY

The principal authorities for Dee's Life are his own Diaries, already frequently cited in the foregoing pages, viz.: —

(1) The Private Diary. The original notes comprising this are in two 4to almanacks in the Bodleian Library, Oxford, numbered Ashmolean MSS. 487, 488. They were transcribed and printed for the Camden Society (1842), with numerous omissions, by Mr. J.O. Halliwell [-Phillipps]. The Manchester portion of this Diary, covering the years 1595-1601, was edited with much local knowledge and care by Mr. J. Eglington Bailey, and privately printed; only twenty copies (1880). Mr. Bailey also reprinted from Notes and Queries (May, 1879) his paper on Dee and the Steganographia of Trithemius.

(2) The Spiritual Diary, or Liber Mysteriorum, divided by Dee into separate books, each dealing with a special epoch. The first five books, with an appendix to the fifth — dating in all from December 22, 1581, to May 23, 1583 — are comprised in Sloane MSS. 3188, at the British Museum. The remaining books, actually twelve but not consecutively numbered, were printed by Dr. Meric Casaubon in The True and Faithful Relation, etc., 1659, fol. Three of them are entitled "Libri Mystici Apertorii Carcoviensis Sabbatici"; three "Mysteriorum Pragensium Confirmatio"; and the two last "Liber Resurrectionis" and "Mysteriorum divinatorum memorabilia." This ends on May 23, 1587. About a dozen pages of occurrences taking place in 1607 are printed by Casaubon at the end of his book, from stray papers.

Dee's autobiographical Compendious Rehearsall ranks next in importance. The original MS. was partly burned in the fire in the Cottonian Library, but a transcript made by Dr. Thomas Smith (author of a life of Dee, see below) was printed

by Hearne in the Appendix to *Johannis Glastoniensis Chronicon* (Oxford, 1726). This printed version was collated with Ashmole's transcript of the original (Ashmolean Ms. 1788), and edited by James Crossley for the Chetham society, in *Autobiographical Tracts of Dr. John Dee, Warden of the College of Manchester*, 1851. In his preface, the editor promises another volume of correspondence and selections of Dee, which never appeared.

The Latin life of Dee, *Vitae Eruditissimorum et Illustrium Virorum*, by Dr. Thomas Smith (1707); the article in the *Biographia Britannica*, edited by Kippis (1778, etc.), largely based upon the foregoing, and upon Strype's *Annals* (1725, etc.); some account in Wood's *Athenae Oxoniensis* (Bliss), i. 639, 640, and *Fasti*, i. 143; in Foxe's *Acts and Monuments*, ed. Townsend, vii., 77, 85, 349 n., 638, 641, 642, 681, 734, 756, 783, 784; and in Ashmole's *Theatrum Chemicum Britannicum* (1652), pp. 478-483; with Aubrey's *Lives*, ed. by Dr. A. Clark (1898); and *A Treatise of Religious and Learned Men* (1656), by Edward Leigh, are further sources. For the Manchester years, Hibbert and Ware's *Foundations of Manchester* (1833) is useful; and for Dee's descendants, see a *General Account of Families derived from Bedo Dee*, by H.B. Wilson (1815) and his *History of Merchant Taylors' School* (1812-14). Later writers who have descanted more or less at large upon the romantic episodes of Dee's partnership with Kelley, as apart from any other achievement of his long life, are William Godwin, in his *History of the Necromancers* (1834); Charles Mackay, *Memoirs of Extraordinary Popular Delusions* (1841); Isaac Disrael, *Amenities of Literature* (1841); W. Cooke-Taylor's *Romantic Biography of the Age of Elizabeth* (1842); A. E. Waite in his *Lives of Alchemical Philosophers* (Edinburgh, 1888), *Studies in Myticism* (1906), and *The Alchemical Writings of Edward Kelley* (1893); Thomas Seccombe, *Twelve Bad Men* (1894); Adelung's *Geschichte der Menschlichen Narrheit* (1785-9); Lenglet de Fresnoy's *Histoire de la Philosophie Hermetique* (1742); Manget's *Bibliotheca Chemica Curiosa* (Geneva, 1702), and Louis Figuier's *L'Alchimie et les Alchimistes* (1856).

Purely fictitious accounts are those in John Dee, *Astrologer of Queen Elizabeth*, by "Hippocrates, jun." (1899), and "John Roby's" *Traditions of Lancashire* (1906).

For the study of witchcraft in the sixteenth century the following may be consulted: George Gifford, *Subtle Practices of Witches* (1587); T.A. Spalding, *Elizabethan Demonology*, etc. (1880); James I., *Demonologie* (1603); Meric Casaubon, *Treatise on Spirits, Witches, etc.* (1672); Reginald Scot, *Discoverie of Witchcraft* (1584, 3rd edition 1605); Sir Walter Scott, *Letters on Demonology and Witchcraft* (1830); Henry Howard, Earl of Northampton, *Defensative against Poyson* (1583), and many other kindred works.

For the history of crystal gazing see Caspar Peucer, *Les Devins* (Antwerp, 1584); M.A. del Rio, *Disquisitionum Magicarum*, 1599; Pierre de l'Ancre, *L'Incredulite et Miscreance du Sortilege* (Paris, 1622); Guido Bonatus, *The Astrologer's Guide* (1866); Andrew Lang, in *Psychical Research of the Nineteenth Century* (1901), and *Introduction to Northcote's Crystal Gazing* (1905); Mrs. de Morgan, *From Matter to Spirit* (1863); Sir William Crookes, *Psychic Force and Modern Spiritualism* (1871), and his *Researches in the Phenomena of Spiritualism* (1874); Miss Goodrich Freer's *Essays in Psychical Research* (1899), where she compares the revelations of the spirits to Dee with the work "of a lady novelist of the eighties"!; M. Camille Flammarion's popular and numerous works; F. W.

Myers' *Phantasms of the Living* (1886) and his *Human Personality* (1903); with the *Proceedings of the Psychical Research Society*, will all afford information upon psychical and spiritualistic progress. The consummate description of John Inglesant's tragic and pregnant vision of his brother's murder, seen before hand in the crystal, as related by J.H. Shorthouse, will occur to everyone.

Dee's own writings were extraordinarily numerous. In his *Rehearsall* he enumerated forty-nine. There is a list of seventy- nine in Cooper's *Athenae Cantabrigensis*, vol. ii., pp. 505-509; but some of these are doubtful: e.g., No. 66, *Treatise of the Rosicrucian Secrets*, etc.; for the Rosicrusians only came into existence about the time of Dee's death. Others are but notes from among Ashmole's manuscripts. One (No. 75) is the horoscope or nativity of Kelley, drawn or erected by Dee, which Ashmole has printed in his *Theatrum* (p. 479). To add to Mr. Cooper's list there are some Latin verses in Henry Perry's *Egluryn Phraethineb* (1595).

All the printed books by Dee are extremely rare. There is much information about them in Ames, *Typographical Antiquities* (e.d Herbert). Copies of thirteen are in the British Museum Library, including those of other writers to which he contributed prefaces, additions and notes, as *Recorde's Grounde of Arts* (many editions); Billingsley's *Euclid*; Roger Bacon's *de Secretis operibus artis et naturae*, etc. and various *Ephemerides*. There are three copies of the *General and Rare Memorials pertaining to the Perfect Art of Navigation*;" and both the enditionsof his *Letter...Apologeticall*, etc., addressed to the Archbishop as a protestation and plea for the course of "the philosophicall studies and exercises of a certaine studious gentleman" (1599, 1603). The petitions addressed to the House of Commons and the King are printed on broadsides (1604). There are also three copies of Casaubon's *True Relation* in the British Museum, one of them collated with the original MS. by William Shippen, of Stockport, 1683.

No adequate idea of the remarkable doings of Dee and Kelley over the crystal can be entertained without a study of Dee's manuscript "Book of Enoch" in Sloane MSS., 663, 120, and 2,599, 1-45; and his "Claves Angelicae," 3191 in the same collection. the diagrams of complicated arrangement of letters and figures, their neatness of execution, mathematical precision and etymological intricacy are no less amazing than the clear bold text in which the descriptions are written in printing hand. Regretfully it was decided not to reproduce an example, owing to the lack of pictorial value.

The Portrait of Dee, now in the Ashmolean Museum at Oxford, reproduced as Frontispiece to this volume, was painted when he was 67; it belonged to his grandson, Rowland Dee, and at his death it passed to the possession of Elias Ashmole and was by him bequeathed to the University of Oxford. It has been engraved by Scheneker and W.P. Sherlock. Engraved portraits of Dee and Kelley, by Francis Cleyne, are included, with Roger Bacon; Paracelsus; the prophet Mahomet; and Apollonius of Tyana, on the title-page of Casaubon's volume. Dee's is the same as an anonymous engraving in the Print room, British Museum, from a younger (German) portrait, in a furred gown and peaked cap; the globe and compasses are in his right hand.

A number of stones and crystals, purporting to be Dr. Dee's, have from time to time been exhibited. Two were at the Tudor Exhibition; another was sold at Sotheby's in 1906, and is now in Dresden. That formerly in the possession of Lord

Londesborough (once Horace Walpole's) appears to have been actually the Doctor's; also the globe of smoky quartz now in the British Museum.

The Pedigree which Dee made, tracing his descent from the mythical times of King Arthur, and showing Queen Elizabeth, through her Welsh ancestry, as related to the same source, is illuminated with coats of arms and a small coloured profile portrait of "John Dee, philosophus," in a cap and furred gown. He here (Cotton Charter, xiv. 1) describes his grandfather, Bedo Dee, as a soldier fighting under the Emperor Maximilian I., in 1512; his father, Rowland Dee, armiger, as gentleman sewer to King Henry VIII.; and himself as a philosopher.

Lemegeton, Clavicula Salomonis: --

Or
The Little Key of Salomon which Contains All the
Names, Orders and Offices of all Spirits that Ever
He Had any Converse with; with their Goals or
Characters Belonging to Each Spirit; and
The Manner of Calling them forth:--
As Appearance in five parts--

Called Books

- 1 The first part is A Book of Evill spirits Call Goetia; showing how he bound up
those spirits, and used them in severall things whereby he obtained great fame
- 2 The second part is A Booke of spirits partly good and partly Evill
which is Called Cheurgia. and being a ~~part~~ of the Arts. -----
- 3 The third part is of spirits concerning the planets, and what spirits
belonges to Every Degree of the Signs, and planets in the Signs called the
- 4 The fourth part of this B. is 12 L. of Salomon Con-
taining 20 Charge spirits which governs the 4. Attitudes of the 360 Degrees of the
Heaven and Signs &c. and of 2 last orders of spirits, is of good and is
Called the true Cheurgia and is made gooder after by Divine benediction

The fifth part is of the 12 L. of Salomon
The Author of this Booke was a Jew who lived in the time of King David
to Jerusalem by the Holy Angels of God. who he wrote the Booke containing
briefe notes written by the fingers of God, which were bestowed on him by the
said Angel with a Chamber. One part of it is in Hebrew and the other
translated to his great knowledge. for by the Angels of God he knew the
Science of both good and Evill, from those that were created by the Holy Angels.

In this Booke is a
Book that is said to be the 12 L. of Salomon. This Booke is
they be filled with good and Evill. The 12 L. of Salomon
last is, which is called the Book of the Holy Angels.

Lemegeton; Clavicula Salomonis

These books was first found in the Chaldean, and Hebrew Tongues at Hierusalem, by a Jewish Rabbi, and by him put into the Greek Language, and from thence into the Latin. As it is said, &c.

Here beginneth the Book

Of the Art Goetic

1 The first principall spirit is a King Ruling in the East Called Baell: He maketh men good Invidious; he ruleth over 66 Legions of Inferiours. He appeareth in divers Shapes sometimes like a Cat, sometimes like a Toad, and sometimes like a man; and sometimes all these formes at once; he speakes very hoarsly, &c. His Character which is to be worn as a Lamen before him who calls him forth or Else he will Not Doe you homage.

Baell His Seal

2 The second spirit is a Duke Called Agares; he is under the power of the East, and cometh up in the forme of a faire, old man riding upon a Crocodile, very mildy; Carrying a Goshawk on his fist, he maketh them run that stand still, and maketh back the runnaways, he can touch all Languages or Tongues, presently, he hath power also to destroy dignities both Supernatural & Temporal, and can make earthquakes; he was of the order of Vertues, he hath under his Government 31 Legions, &c. and this is Seal or Character which is to be worn as a Lamen as before.

Agares His

3 The third spirit is a Duke Called Itha; he is under the power of the East, and cometh up in the forme of a faire, old man riding upon a Crocodile, very mildy; Carrying a Goshawk on his fist, he maketh them run that stand still, and maketh back the runnaways, he can touch all Languages or Tongues, presently, he hath power also to destroy dignities both Supernatural & Temporal, and can make earthquakes; he was of the order of Vertues, he hath under his Government 31 Legions, &c. and this is Seal or Character which is to be worn as a Lamen as before.

4 The fourth spirit is a Duke Called Itha; he is under the power of the East, and cometh up in the forme of a faire, old man riding upon a Crocodile, very mildy; Carrying a Goshawk on his fist, he maketh them run that stand still, and maketh back the runnaways, he can touch all Languages or Tongues, presently, he hath power also to destroy dignities both Supernatural & Temporal, and can make earthquakes; he was of the order of Vertues, he hath under his Government 31 Legions, &c. and this is Seal or Character which is to be worn as a Lamen as before.

Lemegeton; Clavicula Salomonis

5 The 5th spirit is Called Marbas; he is a Great president, & appears at first in the forme of a great Lyon, but afterwards putteth on human shape at the request of the Master; he knoweth truly of things hidden or secret; he can teach Divines and breeth them againe; and gives great wisdom and knowledge in Mechanical Arts, and Changeth men into other shapes, he Governeth 36 Legions of spirits, his seal is this

Marbas his Seal

Conjuration of Salomon

I Invoke Conjure and Command you Spirit N: to Appear and show your self visibly before this Circle in faire and comely shape without any deformity or Tortuosity by the Name and in the Name y. & u. which Adam heard and spoke; & by the Name Joth, which Jacob heard from the Angel wrestling with him; and was delivered from the hands of Esau his brother; and by the Name of God Agla which Lot heard; and was saved with his family; and by the Name Anpheneton which Aron heard; and spoke and became wife; and by the Name Schems Amathia, which Josua called upon; and the sun stood still; and by the Name Emanuel, which the 3 Children Sidrach upon; and the sun stood still; and by the Name of the firey Furnace; and was delivered by Misach & Abednego Sung in the midst of the firey Furnace; and was delivered by the Name Alpha & omega, which Daniel named; and destroyed the bel the Dragon; and by the Name Zebaoth, which Moses named; and all the Rivers & waters in the Land of Egypt were turned into blood; and by the Name Ecerchie-oriston which Moses named; and all the Rivers brought forth frogs; and they went into the houses of all the Egyptians; destroying all things; and by the Name Elion, which Moses called upon; and there was the Great haile; such as never was since the Creation of the world to that day; & by the Name Adonai which Moses named; and there came by Locusts through out all the Land of Egypt; and devoured all that the hails had left; and by the Name Hagios; & by the Name of Adonai; & by the Name Ictas Athanas peractos & by the 3 holy & sacred names Agla on Tetragrammaton & by the dreadfull judgment of God & by the uncertain name of glass which is before the face of the divine Majesty who is mighty & most powerful & by the 4 beads before the throne having eyes before & behind & by the four Round about the throne & by the holy Angels in heaven & by the mighty wisdom of God & by the name of Baudath & by this name primoumaton which is named & the spirit mentioned in the book of Puthan & Abiram that you make faithful answers to all my demands & to perform all my desires so far as in office you are capable to perform therefore come ye presently visibly & affably unto me without delay & without what I desire speaking with perfect & clear voices intelligible & to my understanding

if they do not yet come at the Rehearing of the 2 former conjurations but without doubt they will say in as followeth it being constrained
that spirit (N) by all the most glorious & efficacious names of the
I conjure thee O Lord God of hosts that you come quickly without delay to me

part & place of the earth & world were over you are to make rational answers to my demands & the visibly & affably speaking with voices intelligible to my understanding as aforesaid I conjure & constrain you spirit (N) by all aforesaid & by those names which wise Salomon bound thee & thy fellows in a vessel of brass Adonai Ictas Tetragrammaton Anophoneton Inssonfaloal -
Palthumon & Itemon that you appear here before this Circle to fulfill my will in all things that shall seem good unto me & if you be so disobedient & Refuse to come I will in the power & by the power of the name of the Supreme & everlasting Lord God who created both you & me & all the world in six days & what is contained in it Eye Saray who by the power of this Name Primoumaton which commandeth the whole host of heaven unto you & deprive you of your office joy & place & bind in the depth of the bottomless pit their to remain unto the day of the last judgment & I will bind you in the eternal fire & into the lake of fire & brimstone unless you come quickly & appear here before this Circle to do my will therefore come ye in & by the holy name Adonai Zebaoth Amiorom come ye Adonai command you
If you come far & have yet do not appear you may be sure he is sent to some other place by his King & cannot come & if it be to invoke the King as followeth to send him but if he do not come still then you may be sure he is bound in chains in hell & he is not in the custody of his King if so you have a desire to call him from thence you must Rehearse the spirits chain

How to Invoke the King say as followeth
O you great mighty & powerful King Amaymon who bears rule by the power of the Supreme God over all spirits both superior & inferior of the infernal order in the dominion of the East I invoke & command you by the especial & true name of God & by God that you worship & by the seal of your creation & by the most mighty & powerful name of God Jehovah Tetragrammaton who cast you out of heaven with all other infernal spirits & by all the most powerful & great names of God who created heaven & earth & hell & all things contained in them & by their powers & virtues & by the name primoumaton who commandeth the whole host of heaven that you cause informed & compel the spirit N. to come to come unto me here before this circle in a fair & comely shape without doing any harm unto me or any other creature to answer truly & faithfully to all my requests that I may accomplish my will & desires in knowing or obtaining any matter or thing which by office you know is proper for him to perform or accomplish through the power of God El who created & disposeth of all things both celestial Ayriel & Terrestrial & infernal
After you have invoked the King in this manner tried or tried over then conjure the spirit you would call forth by the aforesaid conjurations Rehearsing those several times together & he will come without doubt if not at first or second time Rehearsing but if he do not come add the spirit's chain to the end of the aforesaid conjurations & he will be bound & come if he be bound in chains for the chains must break off from him & he will be at liberty

The general curse called the spirit's chain Against all spirits that Rebel
I then would put & Disobedient N because thou hast rebelled & disobeyed me & refused my commands & I have been a glorius & incomprehensible number of the true God maker & creator of you & me & all the world & by the power of the names which no creature is able to resist or escape you are the depth of the bottomless pit & there to remain unto the day of the last judgment & I will be in chains of fire & brimstone unless you presently appear here before this circle in this true shape & I will & therefore come ye quickly & reasonably in & by those names of God Adonai Zebaoth Amiorom I command you to come & by the name of Kings or Adonai command you

When you have said so far & he does not come or he comes but does not answer or he answers but does not obey or he obeys but does not do such like things that bower a thinking small & then bind the boy forward with a strong cord & bind it in your hands & bind it over the fire of Pharaoh & say to the fire first it be my place command that you take the spirit N. & I conjure thee first by him that made thee & all other good creatures in this world that thou come not before me but my spirit N. everlastingly because thou art disobedient & obeyest not my commandment nor respect the precept of the Lord thy God

When you stand with your face to the East when you desire to call them or the spirits of the East who hath 1000 great Dukes & 100 lesser Dukes under him & 500000 of his spirits which is more inferior than the Dukes who of we shall make no mention but only 12 of the chief & their seals because they are sufficient for practise

The Conjunction

I Conjure the 18 Dukes & potent Princes Baruchas, &c. In this place we are to give you the understanding of the 18 Dukes & potent Princes; with their servants, which we understand by the 18 Dukes in the Type & never continueth in one place, &c. whereof one of the Chief & first is called Geruel, who hath 18120 Servants to attend him, for he hath no Dukes nor Princes; therefore he is to be understood alone, but when he is called, there comes a Great Number of his Servants with him, but more or less according to the Hour of the Day or Night he is called, for in the 2 first Hours of the Day (according to the Planetary Motion) and the 2 second Hours of the Night there comes 470 of his Servants with him.

(26)

Lemegeton Clavicula Salomonis

And in the 2 second houres of the Day; & the 2 third houres of the Night
 there Comes 590; of his. Servants with; & in the 2 third houres of the Day
 And 2 fourth hour of the Night there Comes 930. of his Servants with him
 And in the 2 fourth hours of the Day; & 2 fifth hours of the Night there Comes
 1360. of his Servants; &c. — And the 2; 5th hours of the Day, and 2.6th
 houres of the Night there Comes 13710 of his Servants. & the 2 sixth
 or last hour of the Day there Comes 930. & in the 2 first hours of Night
 there Comes 1360. of his Servants, &c. — they are all Endeferent good
 by Nature. and will. obey In all things willingly; &c. —

The Conjuraton

I Conjure thee o thou Mighty and Potent prince Geradiel, who wan-
 dreth here and there In the Ayre; with thy Servants; I Conjure
 thee Geradiel that, thou fourth with Appeare with thy Attendance in
 this first hour of the Day here before Me in this Christal Stone, in
 (or here before this Circle) &c. —

the 12 Dukes

The Next of theses wandring Princes is Called Buriel, who hath many
 Dukes and other Servants, which doth Attend on him to doe his will.
 they are all by Nature Evil; And is ruled by all other Spirits; they
 Appear Reddish; & in the forme of a Serpent, with 4 biggens head, and
 3p. both with mans body; they are to be Called in the Night, (be-
 cause he is to be Called in the Night) and in the Planetary hours where of we shall
 mention in the 12th (these Dukes that Attend on him to the 12 Planetary
 hours of the Night who hath 880 Servants to Attend on them
 in the Night (Amongst them) their Names is as followeth; &c.

The Conjuration to the Wandering Princes
I conjure thee O thou mighty & Potent Prince Bijdiel who wanderest here & there in the Air with thy Dukes & other thy servants spirits I conjure thee Bijdiel that thou forthwith appear with thy attendances in this first hour of the Day here before me in this Crystall Stone (or here before this Circle) in a fair & Comely Shape to do my Will in all things that I shall desire of you & note this mark  in the Conjuration following & go on there as it followeth

The Conjuration of the Princes that govern the Points of the Compass
I conjure thee O thou mighty & Potent Prince Rameriel who Rulest as King in the Dominion of the East under the great Emperor Camatiel I conjure thee Rameriel that you forthwith appear with thy attendances in this first hour of the Day here before me in this Crystall Stone (or here before this Circle) in a fair & Comely Shape to my will in all things that I shall desire of you & observe this  in the Conjuration & go on as followeth

The Conjuration to the 4 Emperors
I conjure thee O thou great & mighty & Potent Prince Camatiel who is the Emperor & Chief King Ruling in the Dominion of the East I conjure thee Camatiel that thou forthwith appear & observe this mark  & go on there in the following conjuration

To the Wandering Dukes how to call them forth or any other Dukes that doth not wander only leaving out (Wandering here & there) and only for Princes say Duke
I conjure thee thou mighty & Potent Duke N who wanderest here & there with thy Princes & other his & thy servants in the Air I conjure thee N that thou forthwith appear & observe this mark  & go on there in the following conjuration

The Conjuration to those Dukes that do not wander but belong to the Princes that govern the Points of the Compass
I conjure thee thou mighty Duke N who Rulest under the Prince N in the Dominion of the East I conjure thee N that thou appear forthwith  alone or with thy servants in this first or second hour of the Day here before me in this Crystall Stone (or here before this Circle) in a fair & Comely Shape to do my will in all things that I shall desire of you or Request of you  I conjure thee & Powerfully command you N by him that said the word & it was done & by all the holy & powerful names of God who is the only Creator of heaven and earth and hell & what is contained in them Adonay El Elohim Elohim Ezerchis Zebaoth Jah Tetragrammaton Sadai the only Lord

only Lord God of hosts that you forthwith appear unto me here in this Crystall Stone or here before this Circle in a fair & Comely Human Shape without hurt to me or any other creature that the great God Jehovah hath created & made but come ye Peaceably visibly and Affably without delay Manifesting what I desire being Conjured by the name of the Eternal Living & true God Heliom Tetragrammaton Inexperton & fulfill my commands & I swear unto the God I conjure Command & constrain you spirit N by Alpha & Omega & by the name primematon which commandeth the whole host of heaven & by all those names which Moses named when he by the power of those names brought great plagues upon Pharaoh & all the people of Egypt Zebaoth Ezerchis Orison Elohim Adonay primematon & by the name Schemata Madhia which Joshua called upon & the Sun stayed his course & by the name Hagios & by the Seal of Adonay & by Aglaon Tetragrammaton to whom all creatures are obedient & by the dreadfull judgement of the most high God & by the holy Angels of heaven & by the mighty wisdom of the omnipotent God of hosts that you come from all parts of the world & make rational answers to all things that I shall ask of you & come ye Peaceably & visibly & Affably speaking to me with a voice intelligible & to my understanding therefore come come ye in the name of Adonay Zebaoth Adonay Ramicham come why stay ye hasten Adonay Sadai the King of Kings Command you

When he appears show him the Seal & portacle of Solomon saying behold the Portacle of Solomon which I have brought before your presence & as is shewed in the first book Gostia at the latter end of the Conjurations also when you have had your desire of the spirit bid him to depart as is shewed there in the book Gostia &c
So endeth the second Book called Theurgia Gostia

Here beginneth the Book called the Art Pauline of Solomon the King & this is divided into two parts the first the Angels of the hours of the Day & night the second the Angels of the signs of the Zodiac as hereafter followeth
The Nature of the 24 Angels of the Day & night changeth every day & their offices is to do all things that is attributed to the 7 Planets but that changeth every day also as for example you may see in the following treatise that the Angel Samuël Ruleth the first hour of the Day beginning at Sun Rising supposing it to be on a Monday in the first hour of the Day that is attributed to the Moon And you call Samuël or any of his Dukes there offices in that hour is to do all things that is attributed to the Moon but if you call him or any of his servants Dukes on a Tuesday morning at Sun rising being the first hour of the Day there office is to do all things that is attributed to Mars & so the like Rule is to be observed in the first hour of every day & the like is to be observed of the Angels & their servants that ruleth any of the other hours either in the Day or night although there is an observation to be observed in making the Dials of the 24 hours according to the time of the year day and hour that you call the Angel or his servants in to do your will but you cannot mistake Inquire if you do but observe the example that is laid down in the following work the being all fitted for the first day of March according to the day in the year 1641 according to the old reckoning to know what is attributed to the 7 Planets I desire you to the Books of Astrology whereof large volumes hath been written

When the Seal is made according to the former direction of the table that it comes with the character in it the Seal is to be made in your hand in the like Seal & by the Conjuration that is at the latter end of this third part for it is written for all truly the angels that are according to the form you work

The table of Practise

The Perfumes is to be made of such Things as is attributed to the 7 Planets &c

Note ♂ is lord of the Ascendant every first hour of the Day whilst the sun goes through Aries & Scorpio so is ♀ Lady of the Ascendant every first hour whilst the ☾ goes through ♋ & ♊ so the like of the Rest

The 24 hours of the Day & night
The first hour of the Day is ruled by an Angel called **Samael** who hath under his command many Dukes & 100 servants whomof we shall mention 3 of the chief Dukes which is sufficient for practise who hath 444 servants to attend them their names is as followeth (viz) Ananiel Charon Darasiel Munasiel Bruniel Nestoriel Chremas Meresijel
Note to be made use of for any of these 8 Dukes or their chief officers Samael do as followeth first write the character of the Lord of the Ascendant & ordain the name after wards the Rest of the Planets after that the character & sign that stands upon the 12 house in that hour as it shal be in the sigill following which is fittid for the 10th Day of March in the year of our Lord 1641 being on Wednesday & that first hour of the Day

The 2nd hour of the Day is called **Elechin** & the Angel that governs that hour is called **Vachmiel** who hath 10 chief Dukes & 100 lesser Dukes besides many servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser who hath 5550 servants to attend them their names are these (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration
The 3rd hour of the Day is called **Genphorim** & the Angel Ruling that hour is called **Samiel** who hath 10 chief Dukes & 100 lesser Dukes besides many other inferior servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser who hath 5550 servants to attend them their names are these (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration
The 4th hour of the Day is called **Hemarim** & the Angel governing that hour is called **Barquiel** who hath 10 chief Dukes & 100 lesser Dukes besides many other servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser who hath 5550 servants to attend them their names are these (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration
The 5th hour of the Day is called **Yammin** & the Angel that governs the same is called **Osmadiel** who hath 10 chief Dukes & 100 lesser Dukes besides many other servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser who hath 5550 servants to attend them their names are these (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration

The 3rd hour of the Day is called **Danior** & the Angel thereof is called **Vequaniel** who hath 20 chief Dukes & 200 lesser Dukes & a great many servants to attend them whomof we shall mention 4 of the chief Dukes & 8 of the lesser Dukes who hath 1700 servants to attend them their names is as followeth Ananiel periel murnal Zoetiel Drolmoch Sadinel to the Day & hour of the year as this is for the time before mentioned & you cannot err then say the conjuration

The 4th hour of the Day is called **Elechin** & the Angel that rubeth that hour is called **Vachmiel** who hath 10 chief Dukes & 100 lesser Dukes besides many servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser Dukes who hath 5550 servants to attend them their names is as followeth Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration

The 5th hour of Every Day is called **Tealech** & the Angel Ruling it is called **Sasquiel** he hath 10 chief Dukes & 100 lesser Dukes & many servants whomof we shall mention 5 of the chief & 10 of the lesser Dukes who hath 5550 servants to attend them their names is (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here given you an example of for the Day aforesaid & year 1641 when you have made it lay it upon the table as you was before directed & say the conjuration

The 6th hour of the Day is called **Genphorim** & the Angel Ruling that hour is called **Samiel** who hath 10 chief Dukes & 100 lesser Dukes besides many other inferior servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser who hath 5550 servants to attend them their names are these (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration

The 7th hour of the Day is called **Hemarim** & the Angel governing that hour is called **Barquiel** who hath 10 chief Dukes & 100 lesser Dukes besides many servants whomof we shall mention 5 of the chief Dukes & 10 of the lesser who hath 5550 servants to attend them their names are these (viz) Ananiel Amiel Maroch Serapiel putrsiel jameriel futoniel Enader they being sufficient for practise in this hour of the Day then make a seal suitable to the time of the year as I have here made one for the time aforesaid then lay it on the table as you was before directed & say the conjuration

The 9th

A circular diagram with '4 v' in the center. The outer ring contains several symbols: a crescent moon at the top, a cross at the top-left, a circle with a cross at the bottom, and a circle with a cross at the bottom-left. There are also some other symbols that are partially obscured or less distinct.

1. st. high for
 2. etymologically
 3. Thank you
 4. 3. a frame for
 5. closed to give
 6. in the new thing
 7. the or that in
 8. mind at all
 9. a plain full un
 10. which call you
 11. in proportion
 12. in Hippias
 13. of no avail
 14. says finally &
 15. perfectly

21

44	
----	--

4.

A horizontal number line with arrows at both ends. There are tick marks at 0, 1, 2, 3, 4, and 5. A point is marked with a dot at the position of 1, and it is labeled with the letter 'a' below the tick mark.

Handwriting practice lines with a small musical note on the first line.

Appareth in the form of an Angel carrying in his hand a fann or flag having the picture of a white cross upon it his body being wrapped round with a fair cloud & his face very fair & bright & a crown of Rose flowers upon his head he ascends first upon the superscription of the Almadel as if it were a mist or fog then must the Exorcist have in readiness a vessel of earth of the same colour as the Almadel is of & the other of his furniture & being in the form of a Basin & put therein a few hot Ashes or coals but not too much least it should melt the wax of the Almadel & put therein 3 little grains of Mastick in powder so that it may burn & the smell go upwards through the holes of the Almadel when it is under it & as soon as the Angel smelleth it he beginneth to speak with a low voice asking what your desire is & what you have called the prince & governors of this Altitude for then you must answer him saying I desire that all my requests may be granted & what I pray for may be accomplished for your office maketh it appear & declareth that such is to be fulfilled by you if it please God & being further the particulars of your Request praying with humility for what is lawful & just & that you shall obtain from him but if he do not appear presently you must then take the Golden Ball & make with it 3 or 4 Marks upon the candle by which means the Angel will presently appear as before & when the Angel departeth he will fill the whole place with a sweet & pleasant smell which will be smelt a long time & note the Golden Ball will serve & is used in all the operations of all the 4 Altitudes the colour of the Almadel belonging to the first Altitude or Chora is Lilly white the 2^d Chora appereth Red Rose colour the third Chora is to be a green mixt with a white Silver colour the 4th Chora is to be black mixt with a little green or a Sea colour

Of the Second Chora or Altitude

Note all the other 3 Altitudes with their signs & Princes Power over goods & Riches & can make any man Rich or poor & as the first Chora gives merchaunt & maketh fruitfull so these gives decrease & Barrenness & if any have a desire to operate in any of these 3 following Choras or Altitudes they must do it in die Solis in the manner as above is shewed but do not pray for any thing that is contrary to the nature of their office or that is against God & his laws but what God giveth according to the custom or course of nature that you may desire & obtain all the furniture is to be used is to be of the same colour the Almadel is of & the prince of this 2^d Chora is named (viz) Aphiriza Genon Geron Armon Geronimon & when you operate & stand before the Almadel with clothes of the same colour in a closet hung with the same colour also for the holy apparition will be of the same colour & when he appareth put an earthen vessel under the Almadel with fire or hot Ashes & 3 grains of Mastick to perfume as before said & when the Angel smelleth it he turneth his face towards you asking the Exorcist with a low voice why he hath called the prince of this Chora or Altitude then you must answer as before & desire that my requests may be granted & that 3 things thereof may be accomplished for your office maketh appear & declareth that such is to be done by you if it please God & you must not be fearful but speak humbly saying God command me my self wholly to your office & I pray unto you prince of this Altitude that I may enjoy & obtain all things according to my wishes & desires & you may further express your mind in all particulars in your prayer & do the like in the other 2 Choras following

The Angels of the second Altitude appareth in the form of a young Child with clothes of a Satin & of a Red Rose colour having a crown of Red Lilly flowers upon his head his feet looketh upwards to heaven & is of a Red colour & is comparable round about with a bright splendor as the banner of the host & before he departeth he maketh unto the Exorcist saying I am your friend & brother & illuminateth the air round about with his splendor & leaveth a pleasant smell which will last a long time upon those heads

Of the 3^d Chora or Altitude

In this Chora you must do in all things as you was before directed in the first & the Angels of this Altitude is named (viz) Ephraimael Gelomiro Godolnai Saranava & Glorigia they appar in the form of little children or little women dressed in green & Silver colours very delightfull to behold & a Garson of boys besett with white & green colours upon their heads & they seem to look a little downwards with their face & they speak as the others do to the Exorcist & leaveth a mighty sweet perfume behind them

of the

Of the Fourth Chora or Altitude

In this Chora you must do as before in the other & the Angels of this Chora is called Barchiel Gadiel Dohiel & Captiel they appear in form of little men or boys with clothes of a black colour mixt with a dark green & in their hands they hold a fire which is naked & their heads compassed round with a bright shining of divers colours they leave a sweet smell behind them also but differs from the others something

Note there is 12 Princes betwix those in the 4 Altitudes & they distribute their office amongst themselves every one Ruling 30 days every year now it will be in vain to call any of the Angels unless it be those that govern them for every Chora or Altitude hath its limited time according to the 12 signs of the Zodiac & in that sign the Sun is in that or those Angels that belong to that sign hath the government as for example suppose I would call the 2 first of the 5 that belong to the first Chora then those the first Sunday in March after the Sun hath entered Aries & then I make an Experiment & so do the like if you will the next Sunday after again & if you will call the 2 second that belong to the first Chora that Sunday after the Sun enters in April but if you will call the last of the 5 then you must take those Sundays that is in May after the Sun is entered in II to make your Experiment in do the like in the other Altitudes for they have all one way of working but the Altitudes have a name formed severally in the substance of the heavens over a character for when the Angels hear the names of God that is attributed to them they hear it by virtue of that character therefore it is in vain to call any Angel or spirit unless he knows what name of God to call him by therefore observe the form of this conjuration or invocation following

The Invocation

O thou great blessed & glorious Angel of God (N) who rulest and is the chief governing Angel in this first Chora or Altitude in the service of the highest the same your God Adonai Holom & pine whom you do obey & is the distributor & disposer of all things both in Heaven earth & Hell do I invoke & conjure & intreat you (N) that thou forthwith appear in the virtue & power of the same God Adonai Holom & Pine & I do command thee by him whom you do obey & is set over you as King by the divine power of God that you forthwith descend from thy orders or place of abode to come unto me & show thyself plainly & visibly here before me in this Crystall House in thy own proper shape & glory speaking with a voice intelligible to my understanding & thou mighty & powerful Angel (N) who art by the power of God ordained to govern all Animals vegetables & minerals & to cause them & all creatures of God to spring increase & bring forth according to their kinds & natures I the servant of the most high God whom you obey do intreat & humbly beseech that as soon as you shall hear me & know unto me all things I shall desire of you to be done & if you will & if God permit to the same & then I shall desire of me (N) I do humbly intreat & beseech that you will be so kind to show of your God Adonai Holom Pine & I do also intreat you in & by his most full name Adonai Holom that you will be so kind to be so virtuously & plainly in your own shape & glory in & through this Crystall House that I may see by his grace & his light hear you speak unto me & that I may have the blessed & glorious mystical instruction in which I stand in need of instruction & instruction both now & at all times to improve & rightly instruct me in my ignorance & I do intreat judgment & understanding & to assist me both here & in all other truths other than this heavenly Adonai the King of Kings the giver of all good gifts that his bounty full & fatherly mercy do graciously please to bestow upon me & his servants & his Angels (N) be so kindly unto me so far as God shall give you power & presence to appear that I may sing with his holy Angels Omappa la man Hallohiah Armon & when he appears give him or them kind & courteous entertainment & thank what is just & lawful & that such is proper & suitable to his office & you shall obtain it

So Endeth the 4th Book called the Almadel of Solomon the King

The mighty Oration

By the Most great & Almighty power of Alpha & Omega Jehovah & Emanuel & by him that divide the Red Sea & by that great
 power that turned all the waters & Rivers of Egypt into blood & turned all the Dust into live & blains & by that great power
 that brought frogs all over the land of Egypt & entered into the Kings Palace & Chambers & by that great power that terrible
 thunder & lightning & hail stones mixt with fire & sent locust weh did destroy all green things in the whole land of Egypt &
 by that great Power that destroyed all the first Born of the land of Egypt both of man & beast & by that great power that
 divided the hard Rock & Rivers of waters issued out of the same in the Wilderness & by that great power that led the children
 of Israel into the land of Canaan & by that great power that destroyed Sennacherib's great host & by that great & almighty
 power of him that walked on the Sea as on dry land & by that almighty power that raised dead Lazarus out of his grave &
 by that almighty power of the blessed & holy & glorious trinity that did cast the devil & all disobedient Angels out of heaven
 into hell that thou their Return immediately & restore the goods again weh thou hast stolen away therefore in & by the names
 of the Almighty god before Rehorsa I charge thee thou thief to restore the goods again immediately or else the wrath of
 god may fall upon thee & force thee to come immediately. Amen.

John Dee's
Conversations
with Angels

Cabala, Alchemy, and the End of Nature

Deborah E. Harkness

John Dee's Conversations with Angels

John Dee (1527-1608/9) was a Cambridge-educated natural philosopher who served Queen Elizabeth I as court astrologer and who wrote works on many subjects including mathematics, alchemy, and astronomy. His most prolonged intellectual project, however, was conversations with angels using a crystal ball and a variety of assistants with visionary abilities. Dee's angel conversations have long puzzled scholars of early modern science and culture, who have wondered how to incorporate them within the broader contexts of early modern natural philosophy, religion, and society. Using Dee's marginal notes in library books, his manuscript diaries of the angel conversations, and a wide range of medieval and early modern treatises regarding nature and the apocalypse, Deborah Harkness argues that Dee's angel conversations represent a continuing development of his natural philosophy. The angel conversations, which included discussions of the natural world, the practice of natural philosophy, and the apocalypse, were conveyed to audiences from London to Prague, and took on new importance within these shifting philosophical, religious, and political situations. When set within these broader frameworks of Dee's intellectual interests and early modern culture, the angel conversations can be understood as an attempt to practice natural philosophy at a time when many thought that nature itself was coming to an end.

Deborah E. Harkness is an associate professor of history at the University of California, Davis. She is the recipient of the Renaissance Society of America's Nelson Prize and the History of Science Society's Derek Price Award. Professor Harkness has also received fellowships from Fulbright, the National Science Foundation, ACLS, and the Huntington Library/NEH. Her articles have been published in journals such as *Renaissance Quarterly* and *Isis*.

Acknowledgments

The research and writing of this book was done over several years, and many libraries, institutions, agencies, and individuals played a role in its completion. I would like to thank all who provided assistance during those years.

Financial support for the research and writing of the study was provided by the Jacob K. Javits Fellowship Program; the William Andrews Clark Memorial Library of UCLA; the University of California, Davis; the Fulbright Commission; the National Science Foundation; and Colgate University.

Many individuals generously offered their time. Sandra J. K. M. Feneley of the Centre for Medieval and Renaissance Studies, Oxford, provided me with expert bibliographic assistance and help with the intricacies of early modern astrology. Rebecca Saad of the Huntington Library's Publications Office supplied much needed materials. Jonathan Smith of Trinity College, Cambridge, shared his expertise concerning the early statutes of the college. Sandy Stout and the staff of the Office of the Dean of the College of Humanities and Social Sciences at the University of California, Riverside, helped to keep open the lines of communication between a graduate student and a very busy reader. A. V. Simcock of Oxford University's Museum of the History of Science provided information about their copy of Dee's "holy table." Alison Corbett, of the Fulbright Commission, London, was a great ally and supporter during my tenure as a graduate fellow. At the University of California, Davis, Cheri Sutton of the Graduate Division and Debbie Lyon, Eteica Spencer, Elizabeth Johnson, Karen Hairfield, and Charlotte Honeywell of the History Department all provided administrative assistance above and beyond the call of duty, responding with good grace and patience to all of my extraordinary (and frequent) requests for their help.

The archival work took place in over a dozen libraries, and the staff of each one processed many requests for books and bibliographic assistance. In the United States, I am indebted to the staffs of the William Andrews Clark Library and the Folger Shakespeare Library. In Great

Britain, I owe gratitude to the following: the staff of the North Reading Room and the Manuscript Reading Room of the British Library, London; the Reverend Canon A. E. Harvey, Mrs. E. Nixon, and Dr. Tony Trowles of the Muniment Room and Library of Westminster Abbey, London; Geoffrey Davenport, Librarian, and the staff of the Royal College of Physicians Library, London; the Archivist of Corpus Christi College, Oxford; the Librarian, the Sub-Librarian, Miss N. Aubertin-Potter, and the staff of the Codrington Library, All Souls' College, Oxford; the Cambridge University Library, especially the staff of the Rare Book Room; David McKitterick, Ronald Milne, and the staff of Trinity College Library, Cambridge; the Librarian and staff of the Library of Emmanuel College, Cambridge; and the Librarian, Assistant Librarian, Mrs. E. M. Coleman, and the staff of the Pepys Library, Magdalene College, Cambridge. The Bodleian Library of Oxford University deserves special mention, for it was there that the bulk of my extensive requests for books were made, and the staff of Duke Humphrey's Reading Room and the Upper Reading Room were gracious and helpful. Julian Roberts, the Keeper of Rare Books at the Bodleian Library, generously lent his considerable expertise to me when I located *The Book of Soyga*.

Two institutions hosted me for extended periods of time during the research stages of the project, and they both gave me an atmosphere that any scholar would envy. The William Andrews Clark Memorial Library of UCLA provided me with a room of my own while my ideas were still being formed, and I thank Thomas C. Wright and his staff for those productive days. Dr. John E. Feneley of the Centre for Medieval and Renaissance Studies, Oxford, also provided me a room of my own, first as a Fulbright Fellow and then as Junior Dean. The faculty, staff, and students of the Centre offered support, criticism, and welcome interruptions for over eighteen months, and this book would not have been possible without their generosity.

Colleagues gave me support, constructive criticism, and advice at all stages of the project; they include Katharine Anderson, Samantha Meigs, Bruce Janacek, Jennifer Selwyn, and Kathleen Whalen. My friends suffered through the process of writing and helped me keep my perspective: Pat, Brynn, and Dana Herthel; Jeffrey Baines; Laura McAlinden; and Catherine VanNevel. At Colgate University I was fortunate to have Jonathan Lyon as a research assistant who lent his superb historical sensibilities to the manuscript and ferreted out every bit of information available on a wide range of topics.

I was fortunate to have the opportunity to work with Alex Holzman and Cambridge University Press during the publication process. Alex took on Dee and his angels with enthusiasm and good humor. Helen

Wheeler steered the manuscript through its final stages, and Barbara W. Folsom was an expert copyeditor. I am grateful to them all for the efforts they took on my behalf.

My committee was a source of information, inspiration, and encouragement, and I must thank Brian Copenhaver, Maggie Osier, and Ann Blair for their contributions. Maggie and Ann both were especially generous in stepping into the project during a very difficult time. Paula Findlen encouraged me from the very beginning of my research, and it was with her guidance that my first tentative steps into the wonderful world of angels took place.

Karen Halttunen, partner and friend, cast her careful eyes over the manuscript and opened her sympathetic ears to the author in good times and bad. Without her unshakeable faith in me and her unflagging interest in my ideas, this book could not have been completed. I thank her for her love and support.

Finally, Betty Jo Teeter Dobbs profoundly influenced this book. Few students are fortunate enough to work under the supervision of so wise and generous an adviser. For six years Jo encouraged my enthusiasm for things occult, provided constructive criticism, and gave me the intellectual latitude to consider every possible idea - no matter how remote - that might help to explain Dee's interest in angels. During that time her support and enthusiasm never wavered. She was a formidable scholar, an inspiring teacher, a generous spirit, and a treasured friend; I will miss her.

It is to Jo, and to my parents (who have given me more than I can ever fully acknowledge), that this work is dedicated.

Quotations

When quoting from the angel conversations, I have retained the original spelling, punctuation, and capitalization. Any marks of emphasis that appear are Dee's own. Carets indicate text that has been inserted above the line in the manuscript. Additional letters have been supplied in square brackets when Dee's spelling might lead to a misreading of the text.

Dates

Based on the evidence from the angel diaries, Dee began each new year as we do, on the first of January. When he was on the Continent from 1583 to 1587, Dee began gradually to incorporate the new calendar into his entries, noting both "stylo novo" and "stylo veteri." For clarity of reference, the date that Dee recorded in his diary entries has been maintained, even though this may cause some chronological confusion.

Items from Dee's Library

When reference is made to one of Dee's books, a notice is made of the number assigned to it by Roberts and Watson. Bibliographic details are thereby kept as brief as possible, and readers are directed to Roberts and Watson for more information on a given title, multiple editions, present location, shelfmark, and so on. For Dee's books that contain marginalia cited in this work, full bibliographic information, including current location if known, is included in the Select Bibliography.

Introduction

We know in part, and we prophesy in part. But when that which is perfect is come, then that which is in part shall be done away.

When I was a child, I spake as a child, I understood as a child, I thought as a child:

but when I became a man, I put away childish things.

For now we see through a glass, darkly;

but then face to face: now I know in part;

but then I shall know. . . .

I Corinthians 13:9-12

Between 1581 and 1586, and again in 1607, Elizabethan England's most highly regarded natural philosopher, John Dee, talked with angels about the natural world and its apocalyptic end. With the aid of an assistant, or "scryer," and a crystal called a "showstone," Dee attempted to see through the dark days of his own time and into what he hoped was a bright and promising future. Scattered through several manuscript collections in the Bodleian and British Libraries,¹ Dee's records of these conversations now represent one of the early modern period's most enduring intellectual mysteries: why would a Cambridge graduate who boasted the title "the Queen's philosopher" engage in such a seemingly fruitless, apparently groundless, and enormously time-consuming activity? Was Dee a gullible fool?² Had he suffered a mental breakdown?

1. Dee's angel diaries are now British Library Sloane MSS 3188, 3189, 3191; British Library Add. MS 36674 and Bodleian Library MS Ashmole 1790.
2. See Frances A. Yates, *The Theatre of the World* (Chicago: University of Chicago Press, 1969), pp. 5-18, for a sensitive but still guarded interpretation. John Heilbron, in his introduction to John Dee's *Propaedeumata aphoristica*, demonstrated less sensitivity to medieval and early modern beliefs, describing Dee's latter years as a balance of "more lucid moments," when the natural philosopher attempted to "clear himself of charges of invoking spirits," and less lucid moments spent conversing with angels. J. L. Heilbron, "Introductory Essay," in *John Dee on Astronomy: Propaedeumata aphoristica*, ed. and trans. by Wayne Shumaker (Berkeley: University of

Given these serious reservations about Dee and his conversations, historians of science have wondered if the angel diaries can yield any useful information to scholars specifically interested in the practice of natural philosophy in the late sixteenth century or illuminate the cultural and intellectual world of Elizabethans more generally.³

The answers to these questions can be found, but not exclusively within the pages of Dee's manuscript angel diaries. The diaries offer only pieces of the puzzle, fragmentary remnants of a vast intellectual undertaking. Today, only a small number of them remain; the greater proportion were destroyed by Dee and by a zealous seventeenth-century kitchen maid who used the pages from the volumes to line her employer's pie plates.⁴ But even were the diaries complete, we would still not find all of the answers we seek. Like the transcripts of court trials or the written inventory of a library, the diaries that remain are full of telling silences and ellipses, devoid of the nuances of voice and gesture that could tell us so much about what happened when Dee looked into his showstone.

We still, however, can look for further clues into Dee's mysterious project. First, we can examine the treasures of his extensive library to

California Press, 1978), p. 15. Shumaker interpreted the angel diaries as evidence that Dee was gullible to a fault, pointing out that "even in his own period few men were so susceptible to the portentous" (Wayne Shumaker, "John Dee's Conversations with Angels," in *Renaissance curiosa* 15-52. [Binghamton, NY: Center for Medieval and Early Renaissance Studies, 1982] p. 48). But he was forced to admit that Dee appeared entirely rational throughout, noting he "does not lose control, he does not rave, but transcribes the visions and conversations reported by his scribes with sober accuracy" (*ibid.*, p. 22).

3. While Clulee pointed out the important links between Dee's studies and the natural philosophers who preceded him, he was still unable to reconcile these traditions with Dee's interest in the angel conversations. Dee's angel diaries remained an intellectual aberration to Clulee, one that "cannot be considered as science or natural philosophy," despite their inclusion of concepts from the cabalistic and alchemical traditions (Clulee, p. 203). Christopher Whitby's analysis of the earliest angel diaries, the history of crystal gazing, and biographies of the chief participants in the conversations remains the cornerstone of scholarship on these matters. See John Dee, *John Dee's Actions with Spirits*, ed. with intro. by Christopher Whitby, 2 vols. (New York: Garland Publishing, 1988), *passim*.
4. For Dee's description of the destruction of his manuscripts, see Dee, in C. H. Josten, ed. and trans., "An Unknown Chapter in the Life of John Dee," *Journal of the Warburg and Courtauld Institutes* 28 (1965): 223-257 hereafter cited as Dee in Josten, and Dee, PD, entries for 1607. For Ashmole's introduction see Dee, A WS II: 2-4.

see if we can piece together his intellectual rationale for the conversations. Frances Yates believed that the intellectual richness of the Renaissance was contained within Dee's library, and its contents have recently been studied and every attempt made to account for the volumes he owned and to make them accessible.⁵ Not only do the authors of Dee's books offer us further insights into why he undertook to talk with angels; Dee himself left a trail for us to follow in the marginal comments he made in his books.⁶ Underlined passages, references to other authors, and accounts of his own life experiences lead like a path of footprints to the angel conversations, helping to contextualize and ground them.

We can also cast our eyes beyond Dee's intellectual training and his personal experiences and try to situate his conversations with angels in the broader cultural context of the second half of the sixteenth century. This period was vital and chaotic: deepening religious divisions, sharp political disagreements between England and her European neighbors, a renewal of apocalyptic fervor, and the growth of print culture all helped to make it so. Information from newly discovered lands fostered a sense of crisis among the intellectual elites, as they tried to reconcile new worlds with old texts.⁷ Cities like London struggled to accommodate the growing number of people seeking employment, anonymity, or religious refuge within their bursting walls. Those who could not be so accommodated began to cross the Atlantic. Spies and intelligencers of every stripe traveled the countryside, gathering news of religious radicalism, political conspiracy, and heresy. Dee's contemporaries were often pessimistic about what they perceived as a chaotic state of affairs and thought that the end of the world was certainly near.

The marginalia in Dee's library, when tracked through the late-sixteenth-century belief that the world was coming to an end, lead straight to his angel conversations. These conversations did not represent

5. Yates, *Theatre of the World*, pp. 1-19. Dee's final extant library catalogue was completed in 1583 just before his trip to Europe with Edward Kelly. Roberts and Watson argue persuasively that the 1583 list contains annotations indicating which books were selected for Dee's traveling library. Roberts and Watson, pp. 53-54.
6. For two different interpretations of the marginalia and their significance, see William Sherman, *John Dee: The Politics of Reading and Writing in the Renaissance* (Boston: University of Massachusetts Press, 1995), and Deborah E. Harkness, "The Scientific Reformation: John Dee and the Restitution of Nature," Ph.D. diss., University of California, Davis, 1994.
7. See Anthony Grafton, *Defenders of the Text: The Traditions of Scholarship in an Age of Science 1450-1800* (Cambridge, MA: Harvard University Press, 1991).

a break in Dee's natural philosophy or intellectual development; instead, they furthered and supported Dee's interest in the natural world while taking into account the particular challenges presented by the times in which he lived. In particular, the angel conversations confirmed Dee's belief that the natural world was analogous to a text. But the Book of Nature was not a reliable text; it was an imperfect, corrupt, and decaying text that could not be read properly. The angels gave Dee the exegetical and restorative tools to read, understand, and rectify the Book of Nature. The angel conversations thus represent Dee's attempt to practice natural philosophy at a time when many thought that nature, time, and the world as they knew it were approaching their end.

The angel conversations reveal Dee's belief that a key aspect of his role as a natural philosopher practicing his art at the end of nature was to communicate - with angels, with patrons, and the public - information about the Day of Judgment that was near at hand. The first chapter describes the conversational and communicative qualities of Dee's enterprise, shifting attention away from the angel *diaries* as static texts and focusing instead on the personalities and properties that were involved in each conversation. Chapter 1 also examines the ways in which Dee's angel conversations were perceived by the people who took part in them, from the king of Poland to scryers. Few of the individuals who experienced the conversations expressed doubts about them, though some questioned Dee's ability to serve as an apocalyptic prophet.

Chapter 2 considers the genesis of the angel conversations. Drawing on information from Dee's library as well as his own published natural philosophical works, this chapter argues that for some time Dee had been looking for a way to close the gap between the perfect, immutable heavenly spheres and the corrupted Book of Nature. Manuscript marginalia in his books reveal his search for a universal science that would be capable of understanding, perfectly and with certainty, the mysterious workings of the natural world. In each of Dee's works we can see his struggle to extend a ladder from the deteriorating world to the heavens.

As Chapter 3 explains, Dee's frustration over his failure to construct a universal science, given the natural philosophical methods available, led him to a new course of action: the angel conversations. Dee's marginalia are particularly important to our understanding of how he arrived at this decision, for he left no single synthetic analysis of angels and their place in the Book of Nature. Scattered notes, underlinings, and marks of emphasis must instead tell us what Dee found most compelling about angels in the many books he owned and studied. These annotations clarify his belief that angels comprised the perfect intermediary between God and humans, celestial and terrestrial, sacred and mundane. Inter-

mediary agencies had long fascinated Dee - he discussed the intermediary potential of everything from mathematics to hieroglyphics to light in his published works - but it was not until he constructed an optically grounded method for communicating with angels that his efforts generated satisfactory results.

Dee's excitement about the angel conversations becomes understandable only when seen through the lens of Reformation culture. Although England had embarked on its own religious path when Dee was a child, common beliefs fueled most sixteenth-century reform movements, both Protestant and Catholic, as Chapter 4 outlines. A belief in eschatological signs, for example, fostered a sense that the current human condition was nearing its end and would soon be replaced by the New Jerusalem, where people would live in peaceful harmony with a perfect knowledge of the world and its mysteries. From accounts of rains of blood to monstrous births, the early modern literate public had an insatiable interest in cataloguing and contesting signs of the end of nature appearing around them. One eagerly anticipated eschatological sign was increased communication between the celestial and terrestrial levels of the cosmos. Angelic messages had preceded many events of cosmic importance, such as the birth of Christ, and angels were harbingers of the end of days in the prophetic biblical revelations of Saint John. Before the Fall, Adam had enjoyed communication with God and the angels in Paradise. Dee's conversations with the angels thus conformed to a contemporary sense that God, through his intermediary angels, would alert some select individuals to imminent events.

Dee still had to grapple with the problem of interpreting the decaying Book of Nature, however. The angels revealed an interpretive tool that would further his efforts: the "true cabala of nature." Chapter 5 describes this angelic cabala and explains how it is similar, and dissimilar, to the Jewish and Christian cabala of the early modern period. Like many other aspects of Dee's angel conversations, the cabala of nature was not entirely compatible with existing early modern systems of thought. Such incompatibilities tell us a great deal about the methodological limitations facing a natural philosopher like Dee as well as his aspirations to apply natural philosophical techniques to some of the most pressing problems facing society.

After interpreting the Book of Nature, Dee was expected to heal the corrupted text by using an angelically revealed "medicine." In Chapter 6 the angels' medicine is put in the context of Dee's alchemical studies and the alchemical beliefs of his contemporaries. Alchemy was one of the most promising, as well as most frustrating, early modern natural philosophical enterprises. Few alchemists dared to boast of success in

transmuting base metals into gold, and even fewer believed that they had achieved the highest goal of all: the transmutation of the human body from mortal and corruptible flesh to incorruptible quintessence. Dee and some of his contemporaries thought that their failures were due in part to the flawed methods they employed; others, that their own imperfections hampered their efforts. Dee hoped, through the information imparted to him by his angelic "schoolmasters," to practice a restored alchemy that would finally yield positive results.

With the Book of Scripture in hand and the Book of Nature before him, Dee was attempting to refashion the identity of the natural philosopher to include a reinterpretation of knowledge, a universal reform of institutions, and a restitution of nature and all things. In his angel conversations, the Old Testament prophet receiving revelations from God merged with the New Testament magus responsible for interpreting nature. This combination provided a new direction for natural philosophy that eventually shaped the aspirations of many seventeenth-century natural philosophers. At the same time, however, Dee's approach remained faithful to the ideas of the past. Just as his angel conversations served as a liminal exchange between celestial and terrestrial, so Dee emerges from this study as a liminal figure between medieval and modern, magical and scientific, Protestant and Catholic.

PART I

Genesis

And certainly He to whom the whole Course of Nature lyes open, rejoyceth not so much that he can make Gold and Silver, or the Divells to become Subject to him, as that he sees the Heavens open, the Angells of God Ascending and Descending, and that his own name is fairely written in the Book of Life.

—Elias Ashmole,
"Prolegomena" to the *Theatrum Chemicum Britannicum*
(1652)

1

The Colloquium of Angels

Prague, 1586

A learned and renowned Englishman whose name was Dr. De[e]: came to Prague to see the Emperor Rudolf II and was at first well-received by him; he predicted that a miraculous reformation would presently come about in the Christian world and would prove the ruin not only of the city of Constantinople but of Rome also. These predictions he did not cease to spread among the populace.

—Lutheran Budovec,
*Circulo horologi lunaris*¹

Lutheran Budovec lived in Prague in the latter half of the sixteenth century, and when he noted in his journal the activities of John Dee he profiled a man far different from the "magus of Mortlake" with whom we are familiar.² An ambassador, a popular prophet, and a religious rebel - all are suggested in Budovec's brief remarks, but the natural philosophical persona we have come to associate with Dee is absent. The link between Dee's personae, as outlined by Budovec, is *communication*, a side of Dee's life and activities explored only recently but which is emerging as an important feature of his enigmatic intellect. Recently described as an "arch-communicator" of ideas, Dee is beginning to be seen as both a contemplative natural philosopher and a vocal participant in the intellectual and cultural life of late-sixteenth-century Europe.³

1. Quoted in R. J. W. Evans, *Rudolf II and His World* (Oxford: Clarendon Press, 1973), p. 224.
2. The most reliable and comprehensive recent biographies of Dee are Peter French, *John Dee: The World of an Elizabethan Magus* (London: Routledge and Kegan Paul, 1972), and Nicholas Clulee, *John Dee's Natural Philosophy: Between Science and Religion* (London: Routledge, 1988). See also Charlotte Fell Smith, *John Dee (1527-1608)* (London: Constable and Company, 1909).
3. See William H. Sherman, *John Dee: The Politics of Reading and Writing in the English Renaissance* (Amherst and Boston: University of Massachusetts Press, 1995).

Such a combination of activity and contemplation can be seen vividly in the records Dee kept of his conversations with angels as well as the events that surrounded them. Throughout, we see Dee the "arch-communicator" in a new light: as a natural philosopher prepared to engage in conversation with all levels of the cosmic system in an effort to come to terms with the intricacies of natural philosophy and the state of the natural world.

On 10 April 1586, John Dee made an account of the hum of activities in his household, which had temporarily relocated to the central European city of Prague. It was a time of crisis, when Dee believed a "great catastrophe" was "overhanging the world." His life and career were at a critical juncture.⁴ His local patron, the Holy Roman emperor Rudolf II, was angry and frustrated. Though Dee had arrived in the city nearly two years earlier, he had not been as useful in the emperor's alchemical experiments as Rudolph expected. In Rome, the center of European Catholicism, word of Dee's prophecies about a "miraculous reformation" reached the ears of the pope, who became so concerned that officials launched an inquiry into Dee and his activities. Dee's assistant, Edward Kelly, was threatening to part company and was, in any event, a difficult, troublesome man. Kelly, unlike Dee, was absorbed with the emperor's alchemical problems and wanted more time to devote to them. He had, in addition, started to confess his myriad sins to the nearby Jesuits, thus increasing Catholic awareness of Dee and his household. As if this were not enough to worry England's foremost natural philosopher, Dee's wife was annoyed with him too. Their family and household had been on the road since the autumn of 1583, their children had to be fed and cared for, and she detested Edward Kelly and his disruptive presence.⁵ But although the crisis facing Dee varied in its manifestations, the root of all the problems could be found in a single place: his conversations with angels.

The crisis of April 1586 marks the beginning of the end of Dee's best-documented efforts to communicate with angels. Though this seems an odd moment at which to enter into the challenging mental and cultural

These remarks, and a single conversation also dated 10 April 1586, were separated from the other diaries that contain Dee's angel conversations. Now Bodleian Library Ashmole MS 1790, ff. 1-10, they can be found in "Dee in Josten." Dee in Josten, p. 226.

For a detailed description of the Dee household and the important role of Jane Dee in its management, see Deborah E. Harkness, "Managing an Experimental Household: The Dees of Mortlake and the Practice of Natural Philosophy," *Isis* 88 (1997): 242-262.

world of Dee and his contemporaries, it is often this later image of the angel conversations which makes the deepest impression: the slow deterioration of an intellectual project with implications too vast for its audience to comprehend, too difficult for its participants to sustain. Interpersonal conflict, suspicion, patronage difficulties, notoriety, and a confusion of purpose have come to characterize what most scholars dismiss as evidence of John Dee at his most gullible, of Edward Kelly at his most deceptive, of Jane Dee at her most exasperated, and of Rudolf II at his most skeptical. Such a characterization, as the next chapter will discuss, is inaccurate and misleading. Still, it is useful to begin the angel conversations when they were at their most volatile and complicated, when all that Dee was struggling to keep coherent was about to dissolve into chaos.

Orienting oneself in the complex, multivalenced, and densely populated world of John Dee is not easy, and no one moment in the conversations can serve as a guide to the entire body of evidence now at our disposal. The solitary magus that so many conjure up when thinking of Dee is particularly difficult to find in the angel diaries, with their records of conversations with angels, court officials, alchemical assistants, papal nuncios, Jesuits, and household members. This chapter serves as a general introduction to Dee's complicated world - the people, angels, and properties that appear throughout his angel conversations. With this information, we will be in a position to retrace our steps and go back to the earliest surviving conversations from this more familiar juncture in the life of John Dee.

Throughout the chapter, Dee's interaction with the angels will be referred to as *conversations*. Though some scholars refer to the conversations as "spirit actions," and others focus on the "angel diaries" that record them, Dee himself described his experiences as the "colloquium of angels." To Dee the conversations were a group discussion, an ongoing attempt to reconcile what was known about the natural world with the unknown and mysterious. Emphasizing the conversational nature of the events makes their dynamism more apparent. Like most conversations, Dee's angel conversations can abruptly stop in the middle of an important exchange or contain allusions to people and places outside the parameters of the recorded conversation. Dee was not intent merely on contacting angels, nor in keeping detailed diaries of those conversations. He was determined, as his own designation implies, to communicate and discuss his concerns about the natural world and its future with the angels, his associates in the conversations, and, as Budovec reminds us, with a broad popular audience.

Dee's audiences for the conversations would have been receptive to

his visionary experiences - at least in theory. But the tangled policies of the Reformation and Counter-Reformation made authentication of such experiences difficult and dangerous. In Dee's case, his travels through Europe compounded both the difficulties and the dangers because the angel conversations had to be authenticated by Protestants and Catholics with divergent beliefs concerning miracles, the relevance of private revelations to public reform, and the extent to which people outside of church control could and should enjoy visionary activity. Nonetheless, Dee divulged the contents of his conversations to "the worthy, namely to those . . . pious, humble, modest, sincere, [and] conspicuous in Christian charity."⁶ Dee's faith in his angelic guides and their messages was unshakeable, and he believed that whenever his conversations were "recited in public, every later age will rejoice with unbelievable exultation, because the strength of divine truth, wisdom, and power is invincible."⁷ Comprehending the breadth and complexity of Dee's "colloquium of angels" and the roles of its many participants is crucial to our understanding the content of the revelations.

John Dee, Natural Philosopher

The most important single person who took part in the angel conversations was John Dee. Because the accidents of history have helped to make Dee into a lonely and somewhat idiosyncratic figure wedged historically between the medieval genius of Roger Bacon and the modern foresight of Francis Bacon, we are no longer steeped in the intellectual traditions that shaped him and find ourselves at a loss to understand what he took for granted about the natural world and his place in it. In his own time, however, Dee was one of England's most sought-after scholars, who held valued opinions on a wide range of topics. For example, he was offered a position as a lecturer at Oxford University, for example, which he declined. He was consulted about the most astrologically auspicious day for Elizabeth I's coronation. He entertained guests including Sir Walter Raleigh, the earl of Leicester, and the Dutch geographer Abraham Ortelius at his home outside of London on the river Thames. At Mortlake, Dee was generous with his expertise and with the unparalleled resources of his famous library. For visitors unable to make the journey to Mortlake, Dee would interrupt his work to go to them, as he did on 23 February 1581, when the French ambassador,

6. Dee in Josten, p. 226. 7. Ibid., Josten, p. 227.

Michel de Castelnau, introduced him to Jean Bodin in the royal Presence Chamber at Westminster.⁸

The relationships Dee had with the intellectual and political elite of his own country were matched, if not exceeded, by those he enjoyed on the European continent. He made his mark there while still in his twenties, lecturing at Paris, studying at the University of Louvain, and meeting fellow scholars and potential patrons in Italy, the Low Countries, and the Holy Roman Empire. Peter Ramus, the famous French humanist and methodologist, considered Dee one of two learned men in England.⁹ The Italian mathematician Federico Commandino described Dee to his patron, Francesco Maria II of Urbino, as "a man of excellent wit, and singular learning."¹⁰ Even late in his life Dee was not entirely forgotten by his colleagues abroad but was in communication with natural philosophers like Tycho Brahe, who sent him a copy of *De mundi aetherei recentioribus phaenomenis* (1588).¹¹

The heights that Dee reached were somewhat unusual - though not completely unique - for a man born into the gentry during a period when upward mobility was enhanced by education and the acquisition of minor positions at court or in great households. Born on 13 July 1527 to Rowland Dee, a Welsh gentleman server to Henry VIII, and his English wife, Jane (sometimes Joanna) Wild, young John Dee was educated as carefully and thoroughly as his parents could afford. He was sent to Chelmsford Grammar School, Essex, around 1535 and became "well-furnished with understanding of the Latin tongue."¹² Furnished

with the essential linguistic foundation on which all subsequent humanistic scholarship would rest, Dee was well prepared to enter St. John's College, Cambridge, in November 1542 at the age of fifteen. His family provided all the funds necessary for Dee to satisfy his intellectual and personal needs, including his desire to begin collecting a scholarly library.

In the 1540s St. John's College was a vibrant, intellectually stimulating atmosphere.¹³ Distinguished alumni and instructors included Bishop John Fisher, Edward VI's tutor John Cheke, Elizabeth I's tutor Roger Ascham, and the queen's future Lord Treasurer and Secretary of State, William Cecil. Dee's curriculum, for the most part, was based on the traditional subjects (Aristotle, ancient languages, rhetoric, and some mathematics), although lectures on the Scriptures in both Hebrew and Greek, music, higher mathematics, and philosophy were also available.¹⁴ Dee was awarded the bachelor of arts degree early in 1546, and was appointed a fellow of the college shortly thereafter. By the end of the year, however, he was elected as one of the original fellows and under-reader of Greek at Trinity College, Cambridge University's newest foundation.¹⁵ At Trinity, Dee entered a more mature, and more adventurous, stage in his intellectual and professional life.

During the summer vacation of 1547, before taking up his position at Trinity, Dee first traveled to Europe. According to him, the purpose of the visit was "to speak and confer with some learned men . . . chiefly Mathematicians." The individuals Dee mentions - Gemma Frisius, Gerard Mercator, Johannes Caspar a Mirica, and Antonius Gogava - all

were associated with the University of Louvain, which was gaining a reputation for natural philosophical and occult studies.¹⁶ This visit made such an impression on Dee that he returned to Louvain in 1548 after he received his master's degree from Trinity, visiting Antwerp, Brussels, and Paris. During his 1548 journey he was introduced to intellectuals including Abraham Ortelius, Peter Ramus, and Jean Fernel.¹⁷

Trips to the Continent and associations with foreign natural philosophers and scholars became a common feature of Dee's intellectual life, and it is clear that he influenced, and was influenced by, an extraordinarily rich and varied group of scholars, navigators, politicians, and patrons. His working habits mirrored this cosmopolitan profile. Far from being a solitary figure, Dee rarely worked in isolation; a number of his intellectual projects were undertaken in partnership with other scholars. With Federico Commandino, for example, he prepared an edition of *De superficierum divisionibus*, a work by Euclid wrongly attributed to Machomet Bagdedine.¹⁸ With Henry Billingsley, Dee worked on the first English edition of Euclid's *Elements*.¹⁹ His alchemical experiments required assistants, and his most notorious scribe, Edward Kelly, served as his associate not only while communicating with angels but also in the alchemical laboratory.²⁰ Dee's *Monas hieroglyphica* was prepared in the house of a Dutch printer, Willem Silvius, with whom Dee lived from 1562 to 1564.²¹ These intellectual connections support William Sherman's contention that Dee was not a solitary magus engaged primarily in contemplation but an active member of European intellectual circles.²²

Part of Dee's communicative impulse extended to posterity, and the difficult events surrounding 10 April 1586 precipitated a typical re-

sponse: he wanted to record how and why he communicated with angels so that his contemporaries and future generations would not misunderstand.²³ Despite his utter faith in the authenticity of the angel conversations, Dee was sensitive to the ways in which they might be perceived by the surprisingly large number of people who knew of them. In a document intended for a readership beyond his immediate circle, Dee listed some of the charges that could, and indeed had, been leveled against him and his associates. Should "somebody . . . dare to assert that we are most subtle impostors," Dee wrote, or that the angel conversations

were fabricated by us and that for that reason we should be deemed pernicious citizens in the Christian polity ... or that we are overcredulous or doting fools . . . drawn and driven into error ... by some very astute evil spirit... or if somebody should wish to maintain . . . that, in our time and in the present condition of the world, all revelation by divine communication has ceased,

then Dee was prepared to offer compelling evidence to support his angel conversations.²⁴

Dee and His Scryers

Dee conversed with angels about a variety of topics ranging from natural philosophy and politics to the end of the world and the best treatment for his wife's illnesses. Each of Dee's angel conversations involved an assistant, technically referred to as a "scryer." Scryers traveled about in early modern England, making a living through their reputation for visions and trying to maintain a balance between the economic necessity of adopting a public persona as a practicing seer and an interest in maintaining secrecy for purposes of self-preservation.²⁵ Dee obtained the services of at least four scryers: Barnabas Saul, Edward Kelly, his own son Arthur Dee, and Bartholomew Hickman. In addition, it is highly probable that Dee employed at least one additional scryer prior to 1581.²⁶ Typically, Dee met his scryers through the agency of patrons,

23. These remarks, and a single conversation also dated 10 April 1586, were separated from the other collections of Dee's angel conversations. Now Bodleian Library Ashmole MS 1790, ff. i-io. See Dee in Josten, pp. 223-257-

2.6. See Whitby, AWS I: 52-54 for his analysis of possible scryers, including William Emery, Roger Cook, and Robert Gardner. Scholarly consensus is

scholars who used his library, and people intimate enough to know of his interest in contacting angels. Bartholomew Hickman, for example, was introduced to Dee in 1579 by one of Queen Elizabeth I's favorites, Sir Christopher Hatton. Dee and Hatton met at Windsor in 1578 when Hatton was knighted, and the two men struck up a friendship that led to Hickman's introduction to Dee.²⁷ From Barnabas Saul to Edward Kelly and on to Bartholomew Hickman, Dee maintained a relationship with a scryer for the latter third of his life with no significant break in the quality or quantity of the angel conversations.

Scrying was already an ancient method of divination in the sixteenth century, for the practice of looking into a shiny or reflective object to aid in prophecy had a long history extend back to the Greeks.²⁸ At the same time, this form of divination is not consistent with later spiritualistic practices, and Dee's scryers were not mediumistic in the Victorian sense. Spirits of the dead did not speak through them, and the angel conversations cannot properly be called seances.²⁹ Instances in the angel conversations when the scryer heard a voice without consulting the showstone were uncommon, and Dee's use of a specific physical object to facilitate visions was part of the tradition. Scryers were the skilled laborers who made such an inquiry into the mysteries of nature possible.

Barnabas Saul is the first scryer who can be positively identified from the surviving records. He took part in the first extant angel conversation, which occurred on 22 December 1581 (Figure i). The conversation's format in the diary closely resembles all subsequent conversations, regardless of the specific scryer involved. Dee first sets the scene in a descriptive note, marking his role in the conversations with his personal hieroglyph, the delta. The angel's responses are marked by a two-letter abbreviation of its name - here "An" for the angel Anael. Dee continued his practice of making marginal notes in his library books in the angel diaries, with asides, later notes, illustrations, and additional remarks all

that William Emery was Dee's earlier scryer. See Clulee, pp. 140-141, and Roberts and Watson, p. 47.

crowded into the margins and inserted interlineally into the body of the diary entry.

Dee later described this conversation as one of their final conversations, but provided no information to suggest when the relationship had begun. Christopher Whitby argues that Saul began to scry for Dee in 1579 when a new prayer was put into use for contacting the angels.³⁰ Saul's known contact with Dee went back as far as 8 October 1581, when he was mentioned in Dee's private diary as a member of the household. Saul's place in Dee's household was clearly connected to inquiries into the occult properties of nature, and he might have gained his entree specifically because of his reputation for seeing visions. On 9 October 1581, for instance, Dee recorded how "Barnabas Saul, lying in the . . . hall was strangely trubled by a spirituall creature abowt myd-night."³¹ These visitations soon ended amid legal tangles and problems. Saul, like many of Dee's scryers, had trouble with the authorities and was taken to Westminster to face criminal charges on 12 February 1582.³² A few weeks later the charges were dismissed and he returned to Mortlake to sever his scrying partnership with Dee. At that time Dee wrote that Barnabas Saul "confessed that he neyther h[e]ard or saw any spirituall creature any more."³³ Despite the cessation of spiritual activity, the break between Dee and Saul was never complete; intermittent entries in the personal diaries after March 1582 refer to Saul.³⁴

In April 1586, while enmeshed in his troubles in Prague, Dee was coming to the end of his association with his second scryer, Edward Kelly. The two had been partners since March 1582, and angel conversations with Kelly dominate the existing diaries. Their first conversation took place on 10 March 1582, and their final extant conversation was dated 23 May 1587. Whether Kelly continued to scry between 23 May 1587 and Dee's departure from central Europe in the spring of 1589 is

33- *Ibid.*

34. Saul's name was noted next to the date 19 February 1583, for example. This remark was omitted from Halliwell's edition of the diary. See Bodleian Library Ashmole MS 487, entry for February 1583.

Figure I (*opposite*). The first page of John Dee's surviving angel diaries, 22 December 1581. On the right side of the page, Dee drew a sketch of his stone, supported by a frame. On the left, the delta, or triangle, designates Dee; the angel's name, Anael, is marked "An." The scryer for this conversation was Barnabas Saul. British Library, Sloane MS 3188, f. 8^r. Reproduced by permission of the British Library.

not clear. During that time Kelly was under increasing pressure from Rudolf II to perform lengthy alchemical experiments, and the time he could have devoted to the angel conversations would have been limited.³⁵

The facts surrounding Kelly's life are obscure. Various biographies assert that he studied at Oxford under the name "Edward Talbot," trained as an apothecary, had his ears cropped at Lancaster for forgery, and was a secretary to the bibliophile Thomas Allen.³⁶ Kelly, or "Edward Talbot" as he was then known to Dee, was first introduced into the household on 8 March 1582, only two days after Barnabas Saul removed himself from Dee's service.³⁷ Kelly was introduced to Dee by "Mr. Clerkson," who had been to the house a week before bearing a copy of a work by the medieval magus Albertus Magnus. Dee, Clerkson, and Kelly dined together, and during the meal Kelly questioned Saul's reliability as a scribe,³⁸ informing Dee that a "spiritual creature" told him how Saul publically "censured" both Dee and Clerkson.³⁹ From their very first meeting, Kelly presented himself as someone in communication with the occult levels of the cosmos and in possession of impor-

35. Dee remained familiar with Kelly's alchemical work, and it is impossible to determine the extent to which he was a guiding force in the experiments. Several references to alchemical results obtained by Kelly appear in Dee's personal diary during this time: 15/25 January 1586; 25/5 September/October 1586, 12/22 October 1586, 23/2 October/November 1586, 17/27 December 1586, 25/4 December/January 1586/1587, 2/12 January 1587, 19/29 January 1587. These entries have all been omitted from the Halliwell edition. See Bodleian Library Ashmole MS 488, entries for January 1586 and September 1586-January 1587.
36. A summary of the biographical details of Kelly's life appears in Whitby, *A WS I*: 43-51. Thomas Allen, one of the seventeenth century's great collectors, came into possession of at least twelve Dee manuscripts and may have employed Edward Kelly before he entered Dee's service. Count Albert Laski invited Allen to Poland in 1583, but, unlike Dee, Allen chose to remain in England, where he continued to share intellectual interests with Henry Percy, the earl of Northumberland. See Andrew G. Watson, "Thomas Allen of Oxford and His Manuscripts," in *Medieval Scribes, Manuscripts and Libraries. Essays Presented to N. R. Ker* (London: Scolar Press, 1978), pp. 279-316; Roberts and Watson, pp. 58 and 65.
37. Contrary to earlier beliefs that "Edward Talbot" and "Edward Kelly" were different people, modern historians have adopted the position that one of the two names was an alias. See French, *John Dee*, p. 113, n. 2, and Clulee, p. 197. The earliest remarks concerning "Talbot" are in Dee, *PD*, pp. 14-¹⁵.
38. Dee, *PD*, pp. 14-15. 39. *Ibid.*, p. 15.

tant information about the natural world and Dee's often precarious place within it. Two days later, Kelly asked Dee for an opportunity to demonstrate his skill at "spiritual! practise."⁴⁰

Kelly acted as Dee's scryer at regular intervals until 4 May 1582, when an abrupt gap appears in the angel diaries and only a terse comment in Dee's personal diary helps to explain the disruption: "Mr. Talbot went."⁴¹ Entries in the angel diaries do not resume until 15 November 1582. At some point during this period Kelly stopped being known under his alias, "Edward Talbot." Though the details of how Kelly's identity was uncovered are not known, one barely legible entry in Dee's personal diary from 6 May 1582 indicates that Jane Dee was in a "mervaylous rage" about Mr. Clerkson's reports of "cosening" or deceit - but the name of the individual concerned cannot be discerned. It is likely that it was Kelly, not only because of his relationship with Clerkson, but also because other barely legible notes in the personal diary during that period refer to him, including one where only "Talbot falsly" is legible.⁴² Dee and Kelly reconciled on 13 July 1582 when the scryer visited Mortlake, still traveling under the name "Edward Talbot." Dee reported that the two men shared "some wordes of unkendnes" but "parted frendely."⁴³ The last reference to "Edward Talbot" appears in Dee's personal diary on 10 November 1582, but it was ruled out.⁴⁴ "Edward Kelly" emerged on 15 November 1582, when Dee began a new volume in his angel diaries entitled the "Quartus Liber Mysterioru[m]." On the title page Dee noted that the conversations took place after his reconciliation with Kelly.⁴⁵

The long history of Dee's relationship with Kelly was no less troubled than his scryer's introduction into the household. Considering the disruptive effect Kelly had on Dee, his family, and the Mortlake community, the length and extent of their partnership is puzzling. Kelly stormed off in a rage at apparent insults, and Jane Dee was openly hostile to his presence.⁴⁶ Nonetheless, Dee was generous with personal and financial support for his scryer. The relationship between Dee and Kelly is even more difficult to fathom when we consider the agreement they made in 1587, at angelic behest, to share all things between them. This agreement specifically included the sharing of wives, which placed an unbearable strain on the already difficult relationship between the two men. Scholars

have speculated whether or not such sharing actually took place, but Dee wrote a brief, pointed entry in his personal diary - "Pactu[m] factu[m]" - suggesting that the agreement to share wives, bizarre as it was, was indeed physically consummated.⁴⁷ "Within days of the pact the angel diary entries ceased, and the Dee-Kelly partnership was formally dissolved in December 1588. There was no bitterness on Dee's part, only disappointment. On n March 1589, Dee left his household in Trebona and traveled to Nuremberg while Edward Kelly remained in Prague.

Kelly's fortunes took steep upward and downward turns due to his alchemical expertise, which won him a permanent, though troubled, place at Rudolf II's court.⁴⁸ Alchemical ideas attributed to Kelly appeared in Bohemian alchemical manuscripts of the period, and specific experiments and processes bore his name as far away as Hungary.⁴⁹ Kelly's alchemical notoriety even led to the publication of *The Stone of the Philosophers* in 1590. This work indicated familiarity with the classic texts of early modern alchemy - the *Turba philosophorum* and works associated with Hermes Trismegistus, Arnold of Villanova, and Saint Dunstan - as well as the philosophical writings of Aristotle and Plato, and it is possible that the work represents the alchemical ideas of both Dee and Kelly. Dee certainly believed that *The Stone of the Philosophers* was not entirely Kelly's intellectual property, for he informed the archbishop of Canterbury on 13 July 1590 that he had certain rights "to the treatise of Sir Edward Kelley his Alchimy."⁵⁰

Kelly's difficult personality ultimately proved his undoing: he was imprisoned in May 1591 in a castle near Prague for his reluctance to disclose alchemical secrets to Rudolf II.⁵¹ After his arrest he continued to exercise an influence on Dee, whose sleep was troubled by dreams of his former scrier.⁵² When Kelly's confinement was eased in 1593, Dee recorded the event in his personal diary: "Sir Edward Keley set at liberty by the Emperor."⁵³ Correspondence between the two men resumed, and Kelly reported that the emperor would once again welcome Dee's presence in Prague.⁵⁴ Kelly also had associations with the highest levels of English government during this period, for Dee received a "letter of

E.K." on 18 May 1594 that had passed through the hands of Queen Elizabeth.⁵⁵

Kelly's death, like his life, is obscured by legends. It is possible that he was imprisoned again in 1595; he was not killed in an attempt to escape by jumping out of a tower window, though this story is often repeated. Although Dee received "newes that Sir Edward Kelley was slayne" on 2,5 November 1595, recent evidence suggests that reports of Kelly's death were greatly exaggerated.⁵⁶ According to R. J. W. Evans, he "was definitely alive in 1597 at the castle of Most," and there were reports of his activities as late as 1598.⁵⁷ A firm date for his death has yet to be established.

During the breakdown of his relationship with Kelly, Dee tried to use his son, Arthur (b. 1580), as a scryer. Arthur was first drawn into the angel conversations on 15 April 1587, after Kelly's repeated assertions that he no longer wished to scry for Dee.⁵⁸ Arthur's youth and virginity - two attributes traditionally prized in scryers - did not yield satisfactory results, however.⁵⁹ Despite an initial success when Arthur perceived two crowned men in the stone, Dee was frustrated by the lack of information his son was able to receive from the angels through the showstone. The rich sights and sounds Dee was accustomed to from Kelly's scrying were replaced by straightforward images - "squares, lines, pricks" and a few letters.⁶⁰ Three days after they began, Arthur and John Dee admitted defeat. No further suggestion was ever made regarding Arthur's scrying, nor is Arthur known to have commented on it in his later life.

Dee's final scrying relationship involved a long-standing acquaintance, Bartholomew Hickman (b. 1544).⁶¹ Hickman is one of the angel conversation's most enigmatic figures, for if, as the evidence suggests, he scryed for Dee between 1591 and 1607, then it was he, not Kelly, who was Dee's most significant assistant. So few of the conversations involving Hickman survive, however, that it is impossible to get a full sense of the angels' revelations to Dee during the final years of his life. Their first

extant conversation, dated 20 March 1607, comes several decades after Dee mentioned Hickman in his private diary. Hickman first visited Dee on 22 June 1579 with his uncle and a friend, again on 12 July 1581, and then is not mentioned again until 1591, a few years after Dee returned from the Continent. Dee's personal diary contains regular references to Hickman up until 1598.⁶²

Dee's relationship with Hickman was governed by Dee's belief that the summer of 1591 marked the beginning of a period of waiting and conversing with angels that was to last nine years and several months, and would culminate in a marvelous revelation or reward.⁶³ When the nine years and three months milestone was reached, Dee lamented that the period of waiting had been "co[n]futed as vayne."⁶⁴ On 29 September 1600 Dee manifested his disappointment by burning the angel diaries that he had kept during those nine long years. Despite this sobering incident, Dee and Hickman remained in close contact until the end of Dee's life, as is evident from the few angel conversations which Dee recorded in his aging and almost illegible hand and which still survive (Figure 2).

Although we may decide that Dee's relationships with all of his scryers - and especially Kelly - were based on chicanery and fraud, he nonetheless needed their assistance if his angel conversations were to succeed. Because scryers were an accepted, if sometimes frowned upon, part of the Elizabethan cultural landscape, there was no reason for Dee not to accept their services once he had decided to communicate with angels. That the angelic revelations changed little from one scryer to another confirms that it was *Dee* - the central participant - who lent coherence to the enterprise.⁶⁵ Without his influence and interests, which will be outlined in the following two chapters, the angel conversations would have collapsed from a lack of focus. Dee's natural philosophical interests

62. These references appear on 31 July 1591, 7 September 1592, 3 April 1593, 4 June 1593, 20 September 1593, 16-23 March 1594, 24-26 June 1594, 21-26 March 1595, 24 June 1595, and 26 October 1595. provided the critical links between various scryers and the many other mutable aspects of the conversations.

Settings **and** Properties

Just as there were changes in the personnel who assisted Dee in his angel conversations, so there were also changes in the household arrangements surrounding them. The angel conversations took place in over a dozen locations, including Dee's permanent residences in Mortlake, Manchester, and London, and his temporary homes in central European cities such as Prague and Trebona. Even during Dee's long journey to Prague the conversations continued in the English port at Queenborough, in Holland at Briel, and in the towns of Dokkum, Bremen, Lübeck, Rosstock, Stetin, Lasko, and Cracow. Little can be determined about the arrangements Dee made in many of these towns, but what we can deduce about the situations in Mortlake and Prague tells us a great deal about the parameters of his angel conversations and the many difficulties associated with them.

One of the chief problems facing Dee was where in his house the conversations should take place. The Dee household was bustling with activity, and unheralded visitors could stop by at any time for astrological consultations or to use the library.⁶⁶ At Mortlake, Dee's home until his departure for the continent in 1583, the angel conversations took place in his "private study."⁶⁷ The room was set off from the rest of the house by a set of double doors, which muffled sounds and provided varying degrees of privacy. When both doors were closed, it was a signal to the rest of the household that strict privacy was desired; when only one door was closed, those inside could be interrupted. Dee sabotaged this neat system because he often forgot to close both study doors, as on 20 March 1582, when the angels had to remind him that he "had left the uttermore dore" open.⁶⁸

Despite these precautions, Dee's study was still in a well-trafficked location in the house, and he was frequently interrupted by his wife's

66. For Dee's diary of astrological consultations, see Bodleian MS Ashmole 337, ff. 20-57. His clients included such well-known figures as Lord Herbert and Lady Blount, ff. 49v and 50v. For a discussion of the role Dee's library played in the intellectual life of England and the visitors there, see Sherman, *John Dee*, especially pp. 38-41.

67. See Dee, AWSII:i7, 218, 301, and 326. 68. *Ibid.*, p. 63.

calls to dinner and by unexpected visitors. On one occasion, a messenger from the court burst into the private study in the middle of an angel conversation. Dee, "fearing his rash opinion afterward of such things, as he could not perceive perfectly what my Companion [Edward Kelly] and I were doing," anxiously asked the angels for advice on how to minimize any possible damage to his reputation.⁶⁹ Privacy remained of grave concern to Dee and his associates throughout the angel conversations, and Dee asked the angel Michael on 4 May 1582 if he and Kelly might use the "furdermost little chamber . . . yf the bed be taken downe" instead of the private study.⁷⁰ This arrangement would have helped to diminish interruptions as well as safeguard Dee's reputation from charges of conjuring, since the chamber in question was the last room in a series of linked rooms and thus more completely removed from the household.

The quiet and relative isolation Dee craved was an important feature of many early modern natural philosophical programs. Isolation was especially important in the angel conversations because of the traditional belief that solitude was necessary for communication with God - or, at the very least, that solitude increased the likelihood that such communication would take place. Yet Dee, like most early modern natural philosophers, was eager to acquire a battery of noble patrons and financial sponsors. Such individuals could not be found in Dee's study or his "furdermost little chamber"; rather, potential patrons gravitated from their country estates to the court, and Dee's home at Mortlake provided an ideal rest stop between the great estates in the south and west of England and the royal palaces on the river Thames such as Greenwich and Whitehall. Incidents like those described - from the interruption of servants to the possible misinterpretation of events by those not as erudite as himself - demonstrate some of the difficulties associated with Dee's attempts to reach a compromise between the contemplative life that his angel conversations demanded and the active, political life of a court-sponsored natural philosopher upon which his financial well-being depended.⁷¹

Dee continued to grapple with the tension between public and private throughout his life and employed a number of strategies to help accommodate the special needs of a contemplative, financially solvent Christian

69- *TFR*, p. 23. 70. Dee, AWS 11:137.

71. For a detailed interpretation of these conflicting ideals in a slightly later period, see Stephen Shapin, "The Mind Is Its Own Place": Science and Solitude in Seventeenth-Century England," *Science in Context* 4 (1990): 191-218.

natural philosopher.⁷² One strategy involved a small oratory - a place for private devotions and contemplation - next to the study.⁷³ Dee retreated to his oratory before each angel conversation to pray for divine favor and guidance. This space was probably similar to Heinrich Khunrath's oratory as depicted in the *Amphitheatrum sapientiae aeternae* (1602). In Khunrath's study, which contained everything from alchemical vessels to musical instruments and books, the prominent placement of the oratory in the foreground of the illustration implies that prayer was integral to the work of alchemy. The angel conversations demanded a similar space for contemplation and meditation.⁷⁴

At no time were the problems associated with blending the active and contemplative lifestyles more apparent than when Dee was traveling in Europe from 1583 to 1588. During this period the physical arrangements surrounding the angel conversations were changed frequently, and finding suitable accommodations was especially difficult. Any potential residence had to have isolated rooms for the conversations, rooms suitable for alchemical experiments, and a location that was accessible to both the Court and suppliers of alchemical materials. When Dee first arrived in Prague in August 1584 he was able to lease such a house from another natural philosopher, Tadeas Hajek. Though Hajek is best known today for his astronomical work, he was also interested in alchemy and was a notable figure at Rudolf's court. Among its other attractions, Hajek's house contained a study decorated with alchemical friezes. Dee believed it to have been "in times past. . . the Study of some Student. . . skilfull of the holy stone."⁷⁵ A name - "Simon Baccalaureus Pragensis" - was inscribed on the walls in silver and gold, and among the pictures Dee mentioned "very many *Hieroglyphical Notes Philosophical*, in Birds, Fishes, Flowers, Fruits, Leaves, and six Vessels, as for the Philosophers work." Two literary inscriptions within the friezes described the alchemical art.⁷⁶

72. See Deborah E. Harkness, "Managing an Experimental Household: The Dees of Mortlake," *his* 88 (1997): 242-262.

73. The oratory was a separate room rather than a secluded place within the study. One of the participants in the angel conversations was able to exit from the study by passing through Dee's oratory. *TFR*, p. 23.

74. See the illustration of his "Laboratium oratorium" in Heinrich Khunrath. *Amphitheatrum sapientiae aeternae* (Hanau, 1609).

75. *TFR*, p. 212.

76. *Ibid.* Verses over the door read: "Immortale Decus par gloriaque illi debentur/Cujus ab ingenio est discolor his paries." A longer passage was written on the uppermost portion of the south wall of the study:

Hajek's house proved too small for the growing number of people and activities associated with Dee's projects, and in January 1585 Dee moved to a house on Salt Street near the Old Market in Prague. This house was better designed for the complexities of Dee's natural philosophical practices as it had two studies where the angel conversations could take place: a "mystical study," and a "secret study."⁷⁷ Once again the household's activities proved distracting, and by April 1586 Dee had withdrawn to an even more isolated location in the house's tower when he wished to communicate with angels. The tower contained an "oratory ... at the top ... a small heated room, truly elegant and commodious."⁷⁸ The oratory or private space for prayer thus remained a vital component of the changing environments where the angel conversations took place even after Dee left Mortlake.

Despite the mutability of the angel conversations' larger environment, their integrity depended upon a more easily defined, portable set of properties: the showstone, the Holy Table, and the Holy Books. For Dee, the focus of his angel conversations was not his library, alchemical laboratory, study, or oratory, but his showstone. He used at least three showstones in the angel conversations: a "great Chrystaline Globe," a "stone in the frame," and a stone Dee believed had been brought by the angels and left in his oratory window at Mortlake. The last was the most powerful, and only Dee was allowed to touch it.⁷⁹ He set this

Candida si rubeo mulier nupta sit marito: Mox complectuntur, Complexa concipiuntur. Per se solvuntur, per se quandoque perficiuntur: Ut duo quae fuerant, unum in corpora riant: Sunt duae res primo, Sol cum Luna, Confice, videtis, sit ab hiis lapis quoque Rebus.

Lunae potentatu, peregit Sol Rebis actu: Sol adit Lunam per medium, rem facit unam. Sol tendit velum, transit per ecliptica Caelus: Currit ubi Luna recurrit hunc denuo sublime. Ut sibi lux detur, in sole quae retinetur. Nee abiit vere, sed vult ipsi commanere: illu irans certe defunctum copus aperte: Si Rebus scires, quid esset tu reperires. Haec ars est cara, brevis, levis atque rara. Art nostra est Ludus puero, labor mulierum; scitote omnes filii artis huius, quod nemo potest colligere fructus nostri Elixiris, nisi per introitum nostri lapidis Elementati, et si aliam viam quaerit, viam nunquam intrabit nee attinget. Rubigo est Opus, quod fit ex solo auro, dum intraverit in suam humiditatem.

77- The "mystical study" is mentioned in *TFR*, p. 367; the "secret study" is mentioned months later, in *TFR*, p. 409. It is possible, but unlikely, that the two studies were actually the same space.

78. Bodleian Library MS Ashmole 1790, ff. i-io. Dee in Josten, p. 240.

angelically delivered stone in gold and intended to wear it around his neck.⁸⁰

A fourth "stone" associated with Dee's angel conversations is the black obsidian mirror currently owned by the British Museum. Based on the evidence from the angel diaries, this mirror was not used in the angel conversations. Frequently, Dee made sketches of the stones in the margins of his manuscripts, none of which, however, portrays the black obsidian mirror (see Figure i). What is more, there is no direct evidence that the mirror belonged to Dee. The legend associating the black mirror with the angel conversations was based on the 1748 catalogue of Horace Walpole's collection of curiosities. In the catalogue, the mirror was described as "a speculum of kennel-coal, in a leathern [*sic*] case. It is curious for having been used to deceive the mob by Dr. Dee, the conjurer, in the reign of Queen Elizabeth."⁸¹ Here, Dee's angel conversations are not even mentioned. It was in the nineteenth century that Francis Barrett reported, in his compilation of magical materials entitled *The Magus* (1801), that "six or seven individuals in London . . . assert they have the stone [used in the conversations] in their possession."⁸² Somehow the two legends intertwined and the stories reporting Dee's use of the obsidian mirror in the conversations have been repeated for several centuries on the basis of only "very circumstantial" evidence.⁸³

Dee's use of the showstone represented the most traditionally occult aspect of his angel conversations.⁸⁴ Dee noted some of its connotations in a presentation copy of selected angel conversations, *De heptarchia*

80. *TFR*, p. *40. A current provenance for the stone is not available, but it is probable that such a precious object was buried with him.
81. Quoted in Hugh Tait, "The Devil's Looking Glass," in *Horace Walpole: Writer, Politician, and Connoisseur*, ed. Warren H. Smith (New Haven and London: Yale University Press, 1967), pp. 195-212; see p. 200.
82. Francis Barrett, *The Celestial Intelligencer* (London, 1801), p. 196.
83. Goldberg, for instance, repeats the long-standing belief that Dee used the obsidian mirror in the conversations. See Benjamin Goldberg, *The Mirror and Man* (Charlottesville: University of Virginia Press, 1985), pp. 17-18. Whitby is more cautious and posits that the mirror might have been owned by Dee, and perhaps even used in the conversations, but that there is no evidence to support this contention. See Whitby, *AWS I*: 138-141.
84. See Goldberg, *The Mirror and Man*, especially pp. 3-162. Relevant medieval and early modern ideas concerning stones and their relationship to magic and astrology are discussed in Carla de Bellis, "Astri, Gemme e Arti Medico-magiche nello "Speculum Lapidum" Di Camillo Leonardi," in *// Mago, Il Cosmo, Il Teatro degli Astri: Saggi sulla Letteratura Esoterica del Rinascimento*, ed. Gianfranco Formichetti, with an introduction by Fabio Troncarelli (Rome: Bulzoni Editore, 1985), pp. 67-114.

tnystica. In this volume, he noted the work of Ephodius and Epiphanius on precious stones, as well as an unspecified "book received at Trebona."⁸⁵ He also drew attention to Epiphanius's remarks about "Adamanta," a stone "in which diverse signs are given for responding to God," and to the Jewish belief that the original laws given to Moses on Mount Sinai "were expressed in sapphires."⁸⁶ The Jewish mystical text *Zohar* supported this belief, recounting the story that the original tablets of the law were constructed from a divine sapphire that served as the foundation of the cosmos after being cast down from heaven by God. Moses destroyed the original sapphire tablets and copied them into rough stone before sharing them with his people. Thus, whereas the original sapphire tablets conveyed the pure, eternal truths of God, Moses' tablets were only imperfect imitations of that truth.⁸⁷

In Dee's conversations the showstone clearly served as a locus for divinity, a sacred space capable of representing the world in microcosm. Dee noted that "the whole world in manner did seme to appeare, heven, and erth. etc." within the stone.⁸⁸ At times, a more specific microcosm - the study where the conversation took place - appeared in the crystal showstone, along with Dee and his scryer. This microcosm within a microcosm would quickly evaporate, yielding to a representation of the "whole world."⁸⁹ The angels made explicit references to the safe, sacred nature of the showstone, for it served as a protective device to keep potentially evil spirits at bay. The angels assured Dee that, within the showstone, "No *unclean* thing shall prevayle."⁹⁰ Instead, the stone could contain only true, holy angels.⁹¹

85. A printed edition of this work is available. See John Dee, *The Heptarchia tnystica*, edited and annotated by Robert Turner (Wellingborough, Northants.: Aquarian Press, 1986), p. 64. There is no reference to a work by "Ephodius" in the Roberts and Watson catalogue; Dee did own Epiphanius's work on the breastplate of Aaron, contained in a 1565 collection of works on stones and gems including Johannes Kentmannus's *De fossilibus* and other tracts by authors such as Conrad Gesner. See Roberts and Watson, #765; this volume has not been recovered, and was part of Dee's continental traveling library.

86. Dee, *Heptarchia tnystica*, p. 64.

88. Dee, AWS 11:48. Caret marks indicate where Dee has inserted text above the line.

89- TFR, p. 115. 90. Dee, AWS 11:247 (Dee's emphasis).

91. Simon Forman, one of Dee's contemporaries and a natural philosopher with an interest in the occult sciences, noted similar ideas about the sacrosanct nature of stones used to contact angels in his book of angelic experi-

Dee's ability to communicate with angels through his sacred showstone might have been linked by contemporaries to his expertise in alchemy because of analogies drawn between the showstone and the closed vessel of an alchemical experiment. Dee believed that the showstone was linked to his alchemical success and noted in his copy of Marcus Manilius's *Astronotnica* (1533) the associations between the extraordinary new star of 1572, his alchemy, and the angel conversations:

I did coniecture the biasing star in Cassiopeia appering a° 1572 to signify the fynding of some great Thresor or the Philosophers stone. . . . This I told to Mr. Ed. Dier. at the same tyme. How truly it fell out in a° 1582 Martij 10 it may appere in tyme to come ad stuporem Mundi.⁹²

The date - 10 March 1582 - marked Dee's first angel conversation with Edward Kelly. Yet there is no mention of alchemy in that conversation. The connections Dee made between these seemingly disparate events suggest that an existing, perhaps oral, tradition supported the connection. After Dee's death Elias Ashmole (1617-1692), a seventeenth-century scholar interested in both alchemy and Dee's angel conversations, wrote in his *Theatrum Chemicum Britannicum* (1652) that the elusive philosopher's stone, when subjected to even higher and more mystical processes, yielded "vegetable," "magical," and "angelic" stones, each characterized by its own specific properties and powers.⁹³ The most exalted, the angelic stone, was a substance so subtle it could not be seen, felt, or weighed, but only tasted. Ashmole described the stone in some detail:

It hath a *Divine Power*, *Celestiall*, and *Invisible*, above the rest; and endowes the possessor with *Divine Gifts*. It affords the *Apparition* of *Angells*, and gives a power of conversing with them by *Dreames* and *Revelations*: nor do any *Evil Spirits* approach the *Place* where it lodgeth. Because it is a *Quintessence* wherein there is no corrupt-

ments. Forman recorded a warning not to use the same crystal stone to converse with both holy angels and simple (possibly evil) spirits, writing that "ye must never call any spyritte into that Stone you call Aungells into." See Forman, "Magical papers," British Library, Add. MS 36674, ff. 47-56% f. 56'.

92. Marcus Manilius's *Astronomica* (Basel, 1533), book V. Dee's copy is now University College, London Ogden A.g. For more information, see Roberts and Watson, #251.

93. Elias Ashmole, "Prolegomena," *Theatrum Chemicum Britannicum* (London, 1652), sig. A4^V.

*ible Thing: and where the Elements are not corrupt, no Devil can stay or abide.*⁹⁴

Ashmole believed that Hermes had knowledge of the angelic stone which he refused to share with anyone, and that the only other people to possess it were Moses and Solomon.⁹⁵ Thus, the connections Dee made between alchemy and angels were not unique but part of an extant tradition that helped to join the two main intellectual projects in Dee's later life: his alchemy and his angel conversations.

A stone as sacred and significant as Dee's required a proper setting, so he used a special table and wax seals to further delineate the sacred space surrounding his showstone. Though the showstone was not dependent upon its environment to function properly, it was nonetheless a holy object to be revered and set apart from the mundane world. Because the stone was so crucial to Dee's angel conversations, the diaries record specific information about the furnishings, personal items, and books that complemented it. During each angel conversation Dee placed the showstone on a large wax seal, which was itself resting on a "Holy Table." Together, these items provided a larger sacred space with increased religious and occult connotations. Dee's use of a wax seal, for example, was related to medieval and early modern Solomonic magical practices involving the use of sigils and talismans, and his "Holy Table" served as an altar adorned with figures and inscriptions.⁹⁶ The designs for these objects did not come from standard occult references but from the angels themselves.

The "Holy Table" was, after the showstone, the most important property Dee used in the angel conversations. The angels gave initial designs for the table early in the conversations, on 10 March 1582.⁹⁷ As in the case

94. Ibid., sig. B^v.

95. Ibid., sig. B2'. I was unable to find any mention of this stone in the texts of the Hermetic corpus; see the translation by Brian P. Copenhaver, *Hermetica: The Greek "Corpus Hermetica" and the Latin "Asclepius"* (Cambridge: Cambridge University Press, 1992), passim.

96. E. M. Butler, *Ritual Magic* (Cambridge: Cambridge University Press, 1949), contains a detailed discussion of the Solomonic magical tradition on pp. 47-99. Richard Kieckhefer's *Magic in the Middle Ages* (New York: Cambridge University Press, 1990) discusses the medieval use of sigils and talismans on pp. 75-80. For the possible influence of Solomonic magic on Dee, see Stephen Clucas, "John Dee's *Liber Mysteriorum* and the *ars notoria*: Renaissance Magic and Medieval Theurgy," in Stephen Clucas, ed., *John Dee: Interdisciplinary Studies in Renaissance Thought* (Dordrecht: Kluwer Academic Press, forthcoming).

97- Dee, AWS 11:22-23; Whitby, AWS 1:150-154. To make a composite description, Whitby used information from both the angel diaries and the

of most of the material objects Dee was ordered to make, a complete understanding of the table's construction and use is not available. It is not known who made the table for Dee, and he struggled to clarify the angels' instructions for some time. He was particularly concerned about how to replicate divinely mandated objects in the imperfect sublunar world. Finally the angels soothed some of Dee's anxieties, telling him that the table used in the angel conversations was only an earthly representation of a divine, celestial table, which the angel Uriel explained was "A Myserie, not yet to be known."⁹⁸ The perfect, holy table shown in the angels' revelations was only symbolized by his personal table, and he may have conceived of the other objects used in his angel conversations in a similar fashion - as earthly representations of eternal, divine objects.

Once the table was made, Dee faced another problem: how to transport it to the court of Rudolph II. Because the table was the largest object used in the conversations, hiding it from curious eyes was difficult. Actually carrying it might have been still more challenging. Dee considered having a new table made in each city, but this potential solution was discarded for reasons of time and secrecy." Instead, the table was especially designed for travel. When Elias Ashmole saw Dee's "Holy Table" in the seventeenth century, it was actually a portable, flat tabletop enclosed in a protective wooden case with iron locks. When in use, the table rested on a wooden frame that raised it a little over two and half feet from the ground.¹⁰⁰ Apparently Dee had a new frame built in each city because, after some time traveling, he became concerned that to have a new base made for the table in each location still jeopardized his entourage's safety. Once they reached their patron's estates in Lasko, Dee asked the angels if he could take the base being made there to Cracow, "both to save time, and to have our doings the more secret."¹⁰¹

Although the angels did not satisfy Dee's requests for more detailed instructions regarding the table's base, they did give exact specifications for the tabletop. The angels told Dee to make the tabletop from a four-foot-square piece of sweet wood (though Ashmole claimed the table he saw in Cotton's library was only about three-foot square).¹⁰² The tabletop might have been painted by the painter and engraver Richard Lyne (fl. 1570-1600), with whom Dee conferred around the time of the

testimony of Elias Ashmole, who saw the table in John Cotton's library in the seventeenth century. I have drawn from his synthesis in these paragraphs. There were actually two sets of instructions delivered to Dee concerning the table. The earlier ones, given on 10 March, were later labeled "false," and new instructions followed on 26 April 1583.

98. Dee, AWS 11:2.i. 99. *TFR*, p. 69. 100. Whitby, AWS I: 151.

101. *TFR*, p. 69. 102. Dee, AWS II:2i.

table's construction.¹⁰³ The top was decorated with a large central square containing letters representing angelic names drawn from a mystical alphabet the angels had shared with Dee. A pentagram and seven smaller emblems known as the "seven Ensigns of Creation" surrounded the central device.¹⁰⁴ According to the angels' initial instructions, the "Ensigns of Creation" were to be inscribed in tin and placed on the table, but later Dee was permitted to paint them on the surface using blue, red, and gold pigment.¹⁰⁵ Characters from the angels' mystical alphabet provided a blue border for the table, with gilding at the corners for extra ornamentation. The completed table must have looked like an altar, with its central, elevated showstone and magnificently decorated surface.

The altarlike appearance of the table was accentuated by Dee's use of cloth draperies and wax seals. The angels instructed him to place red silk under the table legs and to position another piece of silk on top of the table, covering the wax seal and frame positioned under the showstone.¹⁰⁶ This arrangement elevated the showstone above the rest of the table, increasing the distance between the divine showstone and the more mundane materials used in the angel conversations. Like the showstone, the wax seal was a physical link between the divine and the human, the celestial and terrestrial, and the angel Uriel instructed Dee to look upon the seal with "great reverence and devotion."¹⁰⁷ The large wax seal was known as the "Sigillum Dei," whose proper name, the angels told Dee, was "Emeth" (Figure 3).¹⁰⁸ *Emeth*, the Hebrew word for "truth," was one of the seventy-two names of God in the cabalistic tradition.¹⁰⁹ Be-

103. Ibid., p. 352. In a discussion with the angel II on the significance of proportion, Dee referred to "master Lyne" and asked whether he could "serve the turn well?" before he showed the angel a rough draft of the letters to be painted around the table's edge. Lyne had connections - as did Dee - to Cambridge University and Dutch intellectual circles, and was well known for his maps, genealogical tables, and portraits. See the *DNB*, vol. 12, p. 342, and Francis Meres, *Palladis Tamia* (London, 1598), p. 287-.

104. Christopher Whitby believes the pentagram and ensigns related both to the seven days of God's creation and to the seven stages of alchemical transformation. Whitby, AWS 1:134-135.

105. Ibid., pp. 134-137; Dee, AWS 11:383-384.

106. Dee, AWS 11:22. The angels later altered these instructions, requesting that Dee procure a "changeable" or shot silk. See *ibid.*, p. 379.

¹⁰⁷- Ibid. p. 21.

¹⁰⁸- Ibid., pp. 32-33; Whitby, AWS 1:118-119. Dee made a marginal note to remind him to investigate both Reuchlin and Agrippa for this name, and specifically mentioned Agrippa's *De occulta philosophia* III, chap. n.

¹⁰⁹- Agrippa, OOP, p. 227.

Figure 3. The Sigillum Dei, which was inscribed and used as a support for Dee's crystal showstone. British Library, Sloane MS 3188, f. 30'. Reproduced by permission of the British Library.

tween 10 and 21 March 1582. the angels instructed Dee to make the seal from undyed beeswax and to inscribe the seal with a heptagon, letters from the angelic alphabet, names of the angels, and the secret names of God.¹¹⁰ On the reverse, a cruciform symbol was inscribed with the word "AGLA." In the Middle Ages AGLA was one of the names of God used in exorcisms, healing magic, and divination.¹¹¹ The mediating and protective function of the larger wax seal was enhanced by four smaller versions of the "Sigillum Dei." Each was encased in a metal canister and placed under one of the legs of the Holy Table. Each angel also conveyed his personal seal or talisman to Dee.¹¹²

The showstone, the table, and the wax seals were the central physical features of the angel conversations. They demarcated Dee's "angelic laboratory" where divine communication could take place. Dee's own person was also important to the integrity of the conversations, and the angels described objects he was to wear, including a ring and a triangular "lamine," or breastplate, inscribed with symbols. In addition to the ring and lamine, the angels told him to make a special rod named "EL." But, according to the angel diaries, Dee's use of the ring, lamine, and rod was never central to the angel conversations in the way that the stone, table, or seals were.¹¹³ Instead, they were objects that sanctified Dee, symbolized his role as a conduit for divine influences, and protected him from evil. The angels described no objects that the scryers were to possess or wear, and their absence underscores that it was Dee, rather than his assistants, who played the crucial role in the conversations.

Dee received detailed instructions for both the ring and the lamine. According to the angel Michael, the ring was to be made of precious metals and inscribed with the name "PELE."¹¹⁴ Dee made a note to check for the name "PELE" in his most authoritative Christian cabalistic text, Johannes Reuchlin's *De verbo mirifico*.¹¹⁵ PELE did not appear

- no. See Whitby, AWS 1:119-1x3 for a complete discussion of how to decode the names hidden within the seal.
- in. Kieckhefer, *Magic in the Middle Ages*, pp. 73, 85, and 89.
- H2. Like the use of the word "AGLA," the tradition of angelic seals or sigils was long-standing in occult texts. An English manuscript dated 1562, for instance, included a seal containing the names of six angels: Armediel, Darionel, Ramaniel, Gabriel, Carbrael, and Ranael. Cambridge University Library, MS LI.I.IZ, f. 21'. Of these angels, only Gabriel appears in Davidson's *Dictionary of Angels*; the rest are idiosyncratic, like many of Dee's angels.
- H3- Whitby, AWS 1:131. This assertion must be qualified, for, as in the case of the angelic stone set in gold, Dee may well have been buried with the objects.
- H4- Dee, AWS 11:31-33. 115. Ibid., p. 32.

there, but could be found instead in Agrippa's *De occulta philosophia*. Dee went on to insert PELE in the margins of Dionysius the Areopagite's "Divine Names" next to a passage that mentioned the "wonderful 'name which is above every name.'" ¹¹⁶ Dee's interest in the ring increased when the angel Michael asserted that its design had not been "revealed since the death of Salomon," the archetypal biblical figure of wisdom. ¹¹⁷ Michael went on to describe how Solomon's ring enabled him to perform his "Miracles, and divine works and wonders." ¹¹⁸ Similarly, Dee needed the ring to perform the tasks God would set him. "Without this [ring]," Michael told Dee, "thow shalt do nothing." ¹¹⁹

The "lamine," or breastplate, was a companion piece to the ring. First described on 10 March 1582 as a thin, triangular, metal plate of gold inscribed with sigils and worn around the neck, the heritage of Dee's lamine, like the wax seals, can be found in the medieval talismanic tradition associated with Solomon. In the case of the lamine, however, the angels' instructions suggest a closer link to traditional amulets used against illness, evil spirits, and bad fortune, since the angel Uriel told Dee that it would protect him from danger. ¹²⁰ The lamine's design was more symbolically charged for Dee than the ring. First, the shape was significant. Dee had been using the triangle as a personal hieroglyphic for some time, because the Greek delta or letter D provided a reference to his name. In addition, the triangular lamine was a symbolic reference to the Holy Trinity of the Father, Son, and Holy Spirit, which enhanced its divine connotations. Dee also related his angelic lamine to the Urim and Thummim that ancient Hebrew priests and prophets used for divination in matters important to the community (Exodus 28:15-30; Leviticus 8:8; Numbers 27:21). ¹²¹

116. See *ibid.* Whitby, AWS 1:131; Dionysius the Areopagite, Roberts and Watson, #975, p. 146: "Ac veluti ab omni eum divini nominis cognitione abduce[n]tem dixisse cur de nomine me interrogas quod *est mirabile*. An vero istud non est *mirabile* nomen: quod est super omne nomen, quod est sine nomen, quod omne exsuperat nomen . . ." (Dee's emphasis). Against this passage, Dee noted "Pele."

117. Dee, AWS 11:31. 118. *Ibid.* 119. *Ibid.*, p. 32; Dee's emphasis.

120. "Sigillum hoc in auro sculpendum, ad defensione[m] corporis, omni loco, tempore et occasione. et in pectus gestandum." Dee, AWS 11:19. See also Whitby, AWS 1:129-131, and Kieckhefer, *Magic in the Middle Ages*, pp. 77-80.

121. See also Dee's emphasis marks in his copy of Sebastian Muenster, *Messias Christianorum et Iudaeorum Hebraice & Latine* (Basel, 1539), Roberts and Watson, #1616. "Fuerunt pr[a]etera & aliae quinq[ue] res in te[m]plo primo, quae non fuerunt in secundo, nempe h[a]e area cum propiciatorio

Other objects of crucial importance to Dee's angel conversations were his angelically delivered books, which can be divided into two broad categories. First, Dee recorded the day-to-day angelic revelations in notebooks he maintained chronologically, here referred to as "angel diaries." These contain information about events that took place in the household during the angel conversations, as well as the angels' revelations. The second class of books - the revealed books - were given to Dee in the course of the conversations, and they were always meant to be extracted from the chronologically recorded diaries and maintained as separate books. Dee's extant copies of the revealed books - the *48 Claves angelicae*, *Liber scientiae auxilii et victoriae terrestres*, *Tabula bonorum angelorum invocationes* [sic], *De heptarchia mystica*, and *Liber Logaeth* - were finely executed in his most polished handwriting.¹²² Their quality of presentation suggests that they were intended for reference and possibly as gifts to patrons and associates, rather than being rough notes of the angel conversations.

As with most of the objects associated with Dee's angel conversations, his "holy books" represent a mixture of natural philosophical, occult, and religious traditions, a unification made possible because of the power associated with language in Judeo-Christian creation accounts in which God used speech to craft the cosmos. During Dee's lifetime, Protestant reformers extended the living power of God's speech to include books of scripture, which they argued should be revered as if they contained the spoken word of God. The sixteenth-century theologian John Calvin remarked that "all of Scripture is to be received as if God were speaking," and any records of divine speech, such as the angels' revelations to Dee, would have been considered authoritative.¹²³

The Scriptures were not the only powerful texts, however. In the Judeo-Christian and Islamic traditions "holy books" containing divine and angelic revelations were equally powerful. The tradition of holy

8c Cherub, ignis coelitus missus, *spiritus sanctus*, *Urim & thumim*, idest, *mysteria qu[a]eda[m] sacra in pectorali summi sacerdotis*." For an early modern translation, consult Sebastian Muenster, *The Messias of the Christians and the Jetves*, trans. Paul Isaiah (London, 1655).

122. These volumes were found in a secret compartment of a storage chest belonging to Dee. They are now bound as British Library, Sloane MS 3191. A published edition of these texts appears as John Dee, *The Heptarchia mystica* edited and annotated by Robert Turner (Wellingborough, Northants.: Aquarian Press, 1986), *passim*.

¹²³- Quoted in William A. Graham, *Beyond the Written Word: Oral Aspects of Scripture in the History of Religion* (Cambridge: Cambridge University Press, 1987), p. 143.

books in these religions can be traced back even further to Near Eastern and Mediterranean examples. Typically, ancient holy books took one of several forms: books of wisdom, books of destinies (containing the knowledge of human lives and history in the future), books of works (recording human deeds in anticipation of final judgment), and books of life (containing the names of the elect to be saved at the final judgment).¹²⁴ Dee viewed all holy texts - be they scriptural authorities or private revelations - as having inherent power, highlighting in his copy of Azalus's encyclopedia that magic existed even in the written accounts of the Christian patriarchs.¹²⁵ He considered his diaries a set of similar, extracanonical revelations that could be consulted, along with existing books of holy scripture contained in the Bible, for answers to his questions about nature and the world.

Within the occult tradition books possessed additional powers, from the *Clavicles* associated with Solomon to practical magical manuals known as *grimoires*. Studying these texts contributes little, however, to an explanation of Dee's detailed diary entries.¹²⁶ Some grimoires were simply catalogues of rituals and prayers, for example, while others contained technical descriptions of materials, diagrams of talismans and sigils, and detailed procedures. Still other early modern occult books consisted of long lists of beneficent and maleficent spirits, including the forms they took, their powers, and their attributes.¹²⁷ Even other contemporary records of conversations with angels, spirits, and demons are not analogous to the diaries that record Dee's angel conversations. Most comparable were the rituals employed by Dee's contemporaries "HG" and "Jo. Davis" on 24 February 1567, when a holy book was used to facilitate visions of angels in a stone who revealed additional sacred books.¹²⁸ Though occult practitioners had been calling spirits into the world for centuries to look for buried treasure and act on their wishes, few asked those spirits for information about the way the world worked, or how and when God would reorder it according to a divine plan. In Dee's angel conversations, by contrast, these are central concerns.

Dee's angelically revealed books were delivered in a sequence that

went from grammatical and linguistic basics to complicated matters of religious doctrine. The first revealed book conveyed to Dee and Kelly was the *Liber Logaeth*, or "the Book of the Speech of God."¹²⁹ It conveyed the angelic language and emphasized the role that language would play in perfecting the world and returning it to its original state. The *Liber Logaeth* consisted of forty-nine "calls" or prayers and ninety-five tables containing small square spaces filled with letters (Figure 4). The angels delivered additional prayers as a preamble to the *Liber Logaeth*, but they are not included in the finished text.¹³⁰ The angels instructed Dee to complete the book forty days after 29 March 1583, a period of time that had both biblical and alchemical significance.¹³¹ The angels promised that the book and the Holy Table would, when used at God's appointed time, bring about the apocalyptic redefinition of the natural world.

The second book the angels revealed, *De heptarchia mystica*, was a reference summary of information conveyed to Dee before he departed for the Continent in 1583.¹³² It contained prayers to specific angels that were to be repeated at different times of the day and on different days of the week, as well as the seals for forty-nine elemental angels with powers over aspects of the natural world.¹³³ Because the angels delivered this information at various points throughout the angel conversations, Dee would have found it difficult to find specific instructions. By drawing the materials together in a separate volume, however, Dee provided himself with an encyclopedic survey of key information revealed in the conversations. Although Whitby contends that the book provided "Dee with ready access to all that he needed for the practical summoning of these spirits," there is no evidence that Dee ever used the prayers in his daily practices.¹³⁴ Instead, he used traditional, orthodox prayers at the beginning and conclusion of each angel conversation. The prayers in the *De heptarchia mystica* may have had a role in the religious life of the world to come, but Dee's translation of the calls has been lost, and neither their contents nor their ultimate purpose is known.

The angelic "keys," the 48 *Claves angelicae*, resemble apocalyptic

Figure 4. A page from the *Liber Logaeth* showing numbers and letters inscribed in a table. The central circle contains the name of one of Dee's angels, Bornogo. British Library, Sloane MS 3189, f. 17r. Reproduced by permission of the British Library.

biblical passages in tone and content. They are remarkably similar to this example:

Behold sayeth your God, I am a Circle on Whose hands stand 12 Kingdomes: Six are the seats of living breath: the rest are as sharp sickles: or the horns of death wherein the Creatures of ye earth are to are not [*sic*] Except myne own hand which slipe and shall ryse. In the first I made you Stuards and placed you in seats 12 of government giving unto every one of you powre successively over 456 the true ages of tyme to the intent that from ye highest vessells and the Corners of your governments, you might work my powre: powring downe the forces of life and encrease, continually on the earth. Thus you are beco[m]me the skirts of Justice and Truth. In the Name of the same your God Lift up, I say, your selves. Behold his mercies floesh, and [his] Name is beco[m]me mighty amongst us. In whome we say I move, Descend and apply your selves unto us as unto the partakers of the secret wisdom of your Creation.¹³⁵

Here the status of the angels' revelations as a new scriptural authority is clear, and the revealed books' stylistic relationship to the Bible is evident. The 48 *Claves angelicae* contained verses in both English and the angels' language, and Dee translated the keys with the angels' assistance. His finished copy of the work contained the keys in both languages.¹³⁶

Information of a different kind concerning the angelic governors of various geographical areas and their true names could be found in the *Liber scientiae auxilii*.¹³⁷ The angels delivered this volume and its companion, the *Tabula bonorum angelorum*, which consisted of tables of letters and numbers much like those found in the *Liber Logaeth*, to Dee in central Europe after 1584. Though the books which Dee used in the angel conversations, when compared to the extant early modern grimoires and books of experiments, are more striking in their differences than in their similarities, the *Liber scientiae auxilii* is most reminiscent of traditional occult practices due to the formulaic nature of its contents.¹³⁸ Names of particular angels were plugged into standardized prayers, much like the invocations common in early modern books of magical experiments, and these prayers do not have the tone of scriptural authority struck in the 48 *Claves angelicae*.

*35- British Library, Sloane MS 3191, f. 4'.

¹³⁶ The 48 *Claves angelicae* are now part of British Library Sloane MS 3191. A modern edition of this text is contained, with some alterations in format, in Dee, *The Enochian Evocation of Dr. John Dee*, pp. 65-102.

¹³⁷- Whitby, AWS I: 142.

*38. The *Liber Scientia* is now British Library MS Sloane 3191, ff. i4^r~3i^r and 52^r-80^v. See also Dee, *The Enochian Evocation*, pp. 103-177.

In addition to these surviving books, there were other revealed books destroyed by angelic command in Prague in 1586. During an episode when the angels claimed that all the earth had to be cleansed in preparation for the unfolding of God's divine plan, they instructed Dee to place the revealed books and his angel diaries in his oratory furnace. Later, Dee rediscovered many of his books in the garden outside his house (apparently returned by angelic means), but a few were missing, including forty-eight companion books to the 48 *Claves angelicae*, an English translation of the 48 *Claves*, and a short book Dee referred to as the "Mystery of Mysteries and the Holy of Holies." Dee had not yet deciphered this last work, which he believed "contained the profoundest mysteries of God Himself and of the Almighty Divine Trinity that any creature will ever live to know."¹³⁹ The loss of such a valuable work caused Dee great distress, although he took it stoically and remained convinced that, at some future date, he would understand its contents even if it was no longer in his possession.

Another book from Dee's library collection, the *Book of Soyga*, has been connected to his angels even though it was not revealed by them. The book was first mentioned in Dee's personal diary on 17 January 1582 and in the angel diaries on 10 March 1582, when Dee asked the angels, "ys my boke, of Soyga, of any excellency?"¹⁴⁰ The angel Uriel replied that it was a book that "God's good angels revealed to Adam in Paradise."¹⁴¹ Dee was absorbed in interpreting his "Book of Soyga" and asked the angels for help, but Uriel demurred, reporting that he could not help Dee understand the text any further because the angel Michael was its "interpreter." The book was discredited by the angels and was lost or stolen around 18 April 1583. Decades later, on 19 December 1595, Dee recovered the work. The manuscript resurfaced in the seventeenth century when Elias Ashmole reported that "the Duke of Lauderdale hath a folio MS. which was Dr. Dee's with the words in the first page: 'Aldaraia sive Soyga vocor.'"¹⁴²

The long-lost *Book of Soyga* became, in modern scholarship on Dee, a "missing link" that had vanished along with any hope of really understanding the remaining angel conversations.¹⁴³ The recent discovery of

139. Dee in Josten, p. 249.

140. The reference to the "Book of Soyga" was omitted from Halliwell's edition of Dee's diary. See Bodleian Library Ashmole MS 487, entry for January 1582. In the angel diaries, see Dee, AWS 11:17.

141. "Liber ille, erat Ada[m]ae in Paradiso revelatus, per Angelos dei bonos." Dee, AWS II: 17.

142. Whitby traces the history of this book in Whitby, AWS 1:146-147.

143. See, for example, *ibid*.

two copies of it has not shed any further light on the angel conversations, however.¹⁴⁴ Its Latin and English contents appear to belie Dee's description of the book as "Arabik." The work is astrological in focus, though it does contain tables of letters and numbers - much like the revealed *Liber Logaeth*.^{TM5} One provocative similarity between the *Book of Soyga* and Dee's angel conversations, for example, are the tables of repeating letters that resemble, in some cases exactly, the tables of letters revealed by the angels in their mystical books.¹⁴⁶ Nor do ownership marks permit its certain placement in Dee's collection, but marginalia and provenance suggest that the copy now in the British Library belonged to Dee, while the copy now at the Bodleian Library was copied from Dee's manuscript when he sent the *Book of Soyga* to Oxford for expert advice.¹⁴⁷ To add to the confusion, the *Book of Soyga's* antecedents are puzzling, as is Dee's intense interest in the work and his conviction that it was somehow connected to his angel conversations. Further study of the *Book of Soyga* may yet yield insights into the angel conversations and Dee's views on astrology and magic.

144. I located two copies of the work, one at the Bodleian Library and one in the Sloane Collection of the British Library: Bodleian Library Bodley MS 908 and British Library MS Sloane 8. I am indebted to Julian Roberts and Andrew Watson, who generously took the time to discuss the works with me after their discovery.

145- Dee, AWSII: 331-332.

146. For this information, I am indebted to Jim Reed who generously shared with me his analysis of the tables' structure and their relationship to the contents of Sloane 3189. See J. Reeds, "John Dee and the Magic Tables in the *Book of Soyga*," in Stephen Clucas, ed., *John Dee: Interdisciplinary Studies in Renaissance Thought* (Dordrecht: Kluwer Academic Press, forthcoming).

147- The British Library copy probably passed from Lauderdale's hands into those of Sloane. The Bodleian Library copy (which may have been copied from Dee's in the late sixteenth century by a member of Oxford University) was received from William Dun, along with four other manuscripts, in 1605. See William Macray, *Annals of the Bodleian Library Oxford* (Oxford: The Bodleian Library, 1984), p. 422. Dun may have been the "Mr. William Dunne . . . doctor of phisick and late felowe of Exeter College" to whom William Marshall left his medical books. See *The History of the University of Oxford*, ed. James McConica (Oxford: Clarendon Press, 1986), 3:241. Further references to Dunne can be found in *Alumni Oxoniensis I*, Boase's *Register of Exeter*, p. 46, and Munk's *Roll of the College of Royal Physicians*, 1:102. For more information, see Roberts and Watson, *John Dee's Library Catalogue: Additions and Corrections* (London: Bibliographical Society, 1995).

The Angels

Dee, his scryers, and the many objects they used represent only part of the story of the angel conversations - though admittedly a central and vivid part. Though Dee's scryers and their sordid reputations eclipse the other features of the angel conversations, he did believe that their revelations came from the mouths of angels. Dee took the angels seriously and obeyed their commands to the letter - even when the tasks the angels assigned to him, such as denouncing the Holy Roman emperor for his sins, lacked courtly sensitivity. The angels, oddly enough, have been almost completely ignored by scholars, yet without some introduction to their individual and collective attributes the full significance of the angel conversations remains elusive.

Dee communicated with a dizzying array of angels during his conversations, both the well known and the obscure, all of whom possessed individual personalities, appearances, and demeanors. Though the majority of the angels appeared as men, a few angels important to the evolution of the conversations appeared as women. Dee's tendency not to concern himself with the angels' fixed places in the cosmic hierarchy further complicates the situation. Rather than focusing on their discrete place in the universal system, which might help us to understand how they coincide with those of other traditions, he took a more cabalistic approach and focused on their proper names, and on the particular task each fulfilled in the natural world. To the modern mind, so far removed from a worldview where celestial hierarchies of angels mediate between humanity and divinity, Dee's interest in contacting such a wide variety of angels may seem bizarre, and his complete willingness to perform any task they set before him even more inexplicable.

The most pressing question for most modern scholars remains that of Dee's intentions in the angel conversations. Did he intend to speak only with *angels*, God's divine messengers, or would he have been content to contact lesser spirits or demons? The question is complicated by Dee's interchangeable use of the words "angel" and "spirit," a common usage in his time. Cardano, for example, explained that both terms shared a common linguistic root: "the Greeks are wont to call these [beings] angels, nevertheless the Latin word is *spiritus*."^{14*} Dee not only used "angel" and "spirit" for his divine messengers; he also used the Aristotelian category of "intelligences," which he believed were actually "the

148. Girolamo Cardano, *The Book of My Life (De vita propria liber)*, trans. Jean Stoner (London: J. M. Dent & Sons, 1931), p. 240.

angels of God."¹⁴⁹ While it is tempting to consider Dee's angels lesser spirits - especially those whose names are unfamiliar - he believed they were divinely sent messengers, with the exception of "wicked or illuding spirits" that occasionally crept into the conversations and were quickly recognized and dismissed.

Dee's celestial communicants, whether referred to as "spirits," "intelligences," or "angels," were important, divine members of the cosmic structure. The best-known angels in Dee's conversations are the archangels of the Judeo-Christian tradition: Gabriel, Michael, Raphael, and Uriel. Their names, unlike many others which appear in the conversations, should be recognizable to anyone familiar with the Bible, with the possible exception of Uriel, who appears mainly in the now apocryphal book of Esdras. Their primary function was to serve as messengers between God, other members of the celestial hierarchy, and humanity. In addition, Gabriel, Michael, Raphael, and Uriel, according to Dee and his predecessor Agrippa, presided over the four corners of the heavens and thus had a panascopic view of the created world.¹⁵⁰

Gabriel first appeared in the angel conversations on 22 June 1583.¹⁵¹ The angel of annunciation, resurrection, and revelation, he guarded Eden and would remain vigilant at the entrance to Paradise until the restitution of the natural world.¹⁵² Some of Dee's other authorities, such as Trithemius and Azalus, regarded Gabriel as the guardian of the moon.¹⁵³ Agrippa further elaborated upon the correspondences between

149. The passage appears in Dee's copy of Pompilius Azalus's *De omnibus rebus naturalibus* (Venice, 1544), p. 17. The passage reads: "Caelum enim nee sensum habet, nee intellectum, nee aliquam congitionem, nee voluntatem, nee a seipso movet[ur], sed ab Angelis Dei, quos Aristoteles intelligentias vocat, volvitur, ac in suos fines regulatur" (Dee's emphasis).

150. Dee, AWS 11:7; Agrippa, *OOP*, p. 24. 151. *TFR*, p. 24.

152. Gustav Davidson, *A Dictionary of Angels, Including the Fallen Angels* (New York: Macmillan, 1967), pp. 117-119. Davidson's work, though written in a popular style, is nonetheless a valuable reference tool that draws upon a wide variety of sources (theological, occult, and traditional). Davidson always refers to his sources, though not often as precisely as one might wish.

153- Azalus, *De omnibus rebus naturalibus*, p. i7^r; Johannes Trithemius, *Steganographia*, ed. Adam McLean, trans. Fiona Tait, Christopher Upton, and J. W. H. Walden (Edinburgh: Magnum Opus Hermetic Sourceworks, 1982), p. 96. Dee was so fascinated by Trithemius's *Steganographia* that in 1563 he wrote to William Cecil from Antwerp and asked to prolong his stay there so that he could finish copying the book from a manuscript in circulation in the city. See J. E. Bailey's edition of the letter in *Notes*

Gabriel and the moon by linking the angel to the mineral crystal and the metal silver.¹⁵⁴ Dee's understanding of the etymology of Gabriel's name was "the growing power or mightiness, or increasing strength of God."¹⁵⁵ A prominent figure in Islamic as well as Christian angelology, Gabriel was responsible for dictating the Koran to Mohammed and had an established connection to holy books and writing. The Jewish mystical tradition of the cabala, for instance, often featured Gabriel as the angel who delivered the cabala to humanity because of his identification with the "man clothed in linen" bearing a writing case, in Ezekiel 9:2-ii. As the angel of the Annunciation, Gabriel's function as messenger to the Virgin Mary (Luke 1:26) occupied an equally important place in the history of Christianity. Early modern authors were especially intrigued by the angel Gabriel, perhaps because in Trithemius's *De septem secundeis* the historical period overseen by him began in A.D. 1525; Dee and his contemporaries were thus living in the age of Gabriel.¹⁵⁶ Gabriel also fulfilled a healing function in the angel conversations, embodying a "medicine" sent by God to heal Dee's wife, Jane, a role commonly associated with Raphael in orthodox Judeo-Christian traditions.¹⁵⁷

Michael also features prominently in Dee's angel conversations. In the Jewish, Christian, and Islamic traditions the archangel Michael occupied a focal point in religious life and literature.¹⁵⁸ Guardian of Jacob, guiding angel for the nation of Israel, and the chief angelic agent in the apocalypse of Saint John the Divine, Michael was frequently represented by Christian artists. His chief attributes were his scales, which he would use to weigh human souls at the Last Judgment, and his sword of justice, which related to the meaning of his name: "strength of God."¹⁵⁹ According to Trithemius, Michael was the guardian of the sun, while in

159. Dee, AWSII:7.

Agrippa, Michael was guardian of the metal quicksilver.¹⁶⁰ Both authors gave him important alchemical connotations by equating him with this metal and the planet Mercury. Dee's experience of the angel Michael fit neatly into this traditional framework. Michael first appeared, holding his sword of justice, on 14 March 1582.¹⁶¹ At that time he told Dee that he would reveal secrets of the Book of Nature that he had not revealed to Solomon.

The angel Raphael was introduced into the angel conversations at an early point in the relationship between Dee and Kelly on 15 March 1582, just five days after Kelly's first scrying session.¹⁶² He was not as frequent a guide as Gabriel and Michael but was the only angel known to have participated in the conversations that took place late in Dee's life. Raphael, whose name can be translated as the "healing power of God," is typically accorded the role of the angel of medicine. In Jewish mysticism, the *Zohar* charged Raphael with healing the earth and humanity.¹⁶³ Raphael was also the angel of knowledge in most angelologies, which stemmed from his position as the guardian of the Tree of Life in Paradise.¹⁶⁴ In the Jewish and Christian traditions, for example, Raphael guided Tobit's son on his journey from Nineveh to Media and revealed many secrets about the future of the earth and its peoples.¹⁶⁵ One of Raphael's key revelations in Dee's angel conversations was the "true cabala of nature," which related specifically to his role as the angel of knowledge.¹⁶⁶ Knowledge of the future was also often associated with Raphael, and in both Trithemius and Azalus he was one of the seven angels of the apocalypse.¹⁶⁷

Another, lesser-known archangel, Uriel, had a particularly important role in the surviving angel conversations. He was the first angel to speak with Dee during Kelly's tenure as scryer and shared many prophecies and detailed, alchemical parables with them. In the course of the conversations, Uriel explained the terrestrial significance of the angels' revela-

tions and solved problems and answered questions that cropped up during the revelations. Dee believed that the etymology of "Uriel" was the "light of God," and Uriel obligingly clarified the derivation of his name in their conversations.¹⁶⁸ Though Uriel appeared as the angelic guide to Esdras in the Bible, he was more prominent in the Jewish tradition; most of the treatises mentioning him were extracanonical in the Christian West by Dee's lifetime. In cabalistic lore, Uriel transmitted knowledge of the cabala to humanity, as well as the art of alchemy, which might explain why he conveyed alchemical parables to Dee.¹⁶⁹ Trithemius mentioned Uriel in his *Steganographia*, where Uriel was called a "great prince" and played an important role in his system of angelic communication.¹⁷⁰

The angel Anael appeared in the only conversation to survive from Dee's relationship with Barnabas Saul, but conversations with this archangel might have been extensive. Anael was traditionally one of the seven angels of creation, having guardianship over various kings and kingdoms on earth, and he was popular in occult texts of the medieval and early modern period.¹⁷¹ In Dee's conversation with Anael the archangel confessed that he had power over all things, good and evil, and guardianship over the planet Venus. Etymologically, Dee believed that Anael's name denoted "the favored, wretched misery of God."¹⁷² Dee considered the archangel Anael the "Chief governor Generall of this great [historical] period, as I have Noted in my booke of Famous and rich Discoveries," which differed from the scholarly consensus that the early modern period was under the governorship of Gabriel.¹⁷³

The mighty and relatively well-known archangels were not the only ones to appear in Dee's angel conversations; there was also a host of other angels who appeared nowhere else in Jewish, Christian, or Islamic angelologies. Because of their idiosyncrasy and mischievous natures, Calder concluded that they were fairies or daemons.¹⁷⁴ But Dee considered the other spiritual beings who appeared in his showstone as members of the lowest and most numerous order of the celestial hierarchy: the angels. Angels, according to the Christian authority Dionysius the Areopagite, were "more concerned with revelation and . . . closer to the

world" than the higher orders of archangels.¹⁷⁵ This description was supported by the offices the lesser angels held in Dee's conversations. The angel Salamian, for example, was the angel of the sun in Dee's system. Och, the angel of Dee's "direction" or purpose in life, appeared as the guardian of the philosopher's stone and alchemy in other early modern occult systems.¹⁷⁶ Other angels, such as the angel Nalvage (who helped Dee with the angelic language) and the angel Ilemese (who revealed several prayers to Dee), were frequent participants in the angel conversations.

Dee's Audience

Although the majority of Dee's angels were unknown to his contemporaries, the same cannot be said of the illustrious patrons and participants who comprised their immediate audience. Because the divine plan for the terrestrial levels of the cosmos must reflect the same ordered hierarchies as the celestial levels of the cosmos, the angels told Dee to share his angelic revelations with some of the most powerful people in early modern Europe. Dee's conversations with angels had never been entirely private, and in the city of Prague they became public and, according to some observers, dangerous. Lutheran Budovec's assertion that Dee was prophesying among the people of the city has been impossible to substantiate, but if he was accurate, then Dee would have been seen as threatening, not only because of the content of his messages, but also because he was delivering them to a public audience without elite mediation. It is clear from Budovec's remarks that news of the angels and their messages had escaped from the control of aristocrats with an immediate knowledge of the conversations. Finally, Dee had caught the attention of a wider audience.

Dee's angel conversations were meant to be shared so that the "worthy" could fulfill God's intentions and purpose. "We were expressly instructed," he wrote, "from the very first beginning of that our vocation and function, and we have known ever since, that it is in accordance with our duty and most agreeable to the Divine Majesty to show those mysteries in passing, to relate them compendiously, or to give a very brief account of an action ... to the worthy. . . ,"¹⁷⁷ The prescribed au-

dience for Dee's angel conversations included members of the nobility, rulers, and religious officials both in England and abroad. A smaller subset of people actually witnessed the conversations, and their reactions ranged from skepticism to enthusiastic endorsement.

Dee's noble patrons were especially important to the perpetuation of the angel conversations, for without them he could not have gained the attention of rulers or religious officials. One of the first admitted to the colloquium of angels was Adrian Gilbert, the well-connected half-brother of Sir Walter Raleigh. Gilbert, like Raleigh, was interested in navigation and first became associated with Dee during efforts to chart the Northwest Passage with the British navigator John Davis. The two men were mentioned in Dee's private diary on 18 October 1579.¹⁷⁸ At that time Gilbert was entangled in a dispute with William Emery, who most believe was Dee's first scribe.¹⁷⁹ The first mention of Gilbert in the angel diaries appears on 23 March 1583, when the angels recognized him as an important third member of the colloquium.¹⁸⁰ In the angels' revelations, Gilbert was chosen to fulfill a missionary role among "the infidels" prior to the apocalyptic restitution of the world.¹⁸¹ Gilbert and Kelly were openly antagonistic, however, and even Dee was plagued with doubts about Gilbert's appropriateness for such an important task, given his worldliness and irresponsibility.¹⁸² Despite these difficulties, Gilbert remained a frequent visitor to the Dee household at Mortlake, and he might have participated in other angel conversations for which no written record now exists.

Gilbert's privileged role in the conversations did not last, and he was replaced by a Polish visitor to England, Count Albert Laski (1536-1605). The Palatine of Sieradz, Laski was close to both John Dee and Edward Kelly, a relationship possibly fostered by his interest in alchemy.¹⁸³ Described by Evans as a "strong though unorthodox Catholic," his entree into elite English circles was facilitated by visits his relative, the Protestant reformer Johannes a Lasko, made to England between 1548 and 1553.¹⁸⁴ Count Laski first arrived in England in the

spring of 1583, when Elizabeth I entertained him with all the ceremony due an important visiting nobleman, including visits to the University of Oxford to hear disputations in which another European natural philosopher, Giordano Bruno, was participating.¹⁸⁵

Laski was first introduced to Dee on 18 March 1583 through correspondence, and the two men were able to meet personally on 13 May 1583 in the rooms of the earl of Leicester at Greenwich.¹⁸⁶ The association between Dee and Laski was cordial from the beginning, and on 18 May 1583 Laski visited Dee at Mortlake.¹⁸⁷ Laski honored Dee with a more extensive visit on 15 June, accompanied by "Lord Russell, Sir Philip Sydney, and other gentlemen."¹⁸⁸ After the party left Mortlake, Dee spoke with the angels, who mentioned Laski in their prophecies for the first time.¹⁸⁹ The count visited Mortlake again on 19 June 1583, when he stayed overnight and took part in his first angel conversation.¹⁹⁰ Many of the angels' remarks to Laski predicted his political triumph over his king, Stephen of Poland, who later also participated in the angel conversations.

The final meeting between Dee, Laski, and Kelly prior to embarking for the Continent took place on 2 August 1583. In September, the group traveled to Laski's estates in Poland, where they remained until August 1584, when Dee and Kelly departed for Prague after the angels instructed them to tell the Holy Roman emperor, Rudolf II, about their revelations. Laski remained in close contact with Dee and the angels throughout their stay in central Europe, although he was not as highly esteemed by 1586 as he had been in 1583. In 1586 and 1587 the angels cast doubts on Laski's faith in their revelations, despite his ongoing financial support of Dee and Kelly.¹⁹¹

In Prague, Don Guillen de San Clemente, the Spanish ambassador, acted as an intermediary between Dee and Rudolf II. The ambassador provided Dee with his formal introduction to the emperor in September 1584 and facilitated their initial exchange of letters.¹⁹² San Clemente was sympathetic to Dee's interests and confided that he was descended from the Spanish mystical philosopher Ramon Lull. Such a confession might

185. Further connections between Bruno and Dee have remained conjectural. See Frances A. Yates, "Giordano Bruno's Conflict with Oxford," *Journal of the Warburg and Courtauld Institutes* 2 (1939): 227-242; John Bossy, *Giordano Bruno and the Embassy Affair* (New Haven and London: Yale University Press, 1991), pp. 23-27.

have elicited Dee's trust, and he showed the ambassador the fourth book of the angel diaries on 25 September 1584. San Clemente did not participate in any of the angel conversations which survive, but he was in contact with Dee throughout his time in Prague. The ambassador even took part in the christening of Dee's son Michael in 1585.¹⁹³

Another nobleman, Vilem Rozmberk, was elevated to an important position in the plan for the restitution of the natural world in the autumn of 1586, following Laski's fall from favor. A patron of alchemists in central Europe second only to Rudolf II, Rozmberk was a natural choice for inclusion in the angel conversations as they became increasingly charged with alchemical overtones.¹⁹⁴ He sponsored a number of alchemists, including Heinrich Khunrath of Leipzig (1560-1605), whom Dee met on 6 June 1589 in Bremen.¹⁹⁵ The angels requested Rozmberk's presence at an angel conversation on 1 May 1586, but the first extant conversation involving Rozmberk is dated 14 October 1586.¹⁹⁶ At the time, Rozmberk was acting as peacemaker between Rudolf II and Dee, but his efforts were in vain. The contents of the angel conversations involving Rozmberk were primarily concerned with the angels' knowledge of alchemy, and they lend further credence to the belief that the rift between Dee and the emperor stemmed from alchemical disputes and difficulties rather than from the angels.

Many of Europe's rulers were also concerned with Dee's angelic revelations. Queen Elizabeth I apparently knew of his efforts to communicate with the angels, though there is no evidence that she participated in any conversations. Dee recorded on 10 March 1575 that the queen "willed [me] to fetch my glass so famous, and to show unto her some of the properties of it, which I did."¹⁹⁷ As no scribe was present, Dee must have exhibited only the stone's superficial, optical properties. Later, after his return from central Europe, Dee delivered a "he[a]venly admonition," which we can assume was angelically revealed, to the queen on 3 May 1594 in the privy garden at Greenwich, which the queen received "thankfully."¹⁹⁸ The details of their conversation were not noted.

193. Evans, *Rudolf II and His World*, pp. 222-223. ¹⁹⁴⁻ Ibid., p. 212.

197. Dee, *CR*, p. 17. Whitby does not believe that this glass could have been one of the angelic showstones, but was instead a mirror (see Whitby, *AWS* 1:140). The reference is not sufficiently clear to rule out the possibility that Elizabeth saw one of the showstones.

198. Dee, *PD*, p. 49.

In Europe, the highest-ranking individual associated with the angel conversations was Rudolf II, the Holy Roman emperor. Dee publicly expressed his own interest in the Hapsburgs in 1564 when he dedicated the *Monas hieroglyphica* to Rudolf's grandfather. Rudolf II's deep interest in the spiritual, mystical, and occult properties of nature would have given Dee confidence that he would be welcome at the Emperor's court.¹⁹⁹ At first, Dee and Kelly enjoyed a positive reception, probably due to Dee's alchemical reputation rather than his conversations with angels. Once in Prague, he waited over a month before requesting an audience from Rudolf II. On 3 September 1584 Dee's request was granted, and during their interview he rebuked the emperor for his sins and demanded that Rudolf put total faith in the angelic revelations.²⁰⁰ "If you will hear me, and believe me, you shall Triumph," Dee told Rudolf, but "If you will not hear me, The Lord, the God that made Heaven and Earth . . . will throw you headlong down from your seat." Few monarchs would have suffered such remarks with good grace, and Rudolf II declined to take part in the conversations.

Another monarch, Stephen of Poland, was introduced to the angel conversations on 27 May 1585.²⁰¹ The old enmity between Laski and his king was put aside, and additional audiences followed. King Stephen, unlike Rudolf II, did agree to communicate personally with the angels, though he was not predisposed to believe in the conversations, as he understood that direct revelations were unlikely now that corruption and disorder reigned in the world.²⁰² While there is some evidence to suggest that Dee shared Stephen's belief that magic and miracles were less likely to occur in their troubled times than in the past, he argued strongly for the divinity of his angelic revelations.²⁰³ Dee made three specific points in his disputation. First, while conceding that the race of

199. See Evans, *Rudolf II and His World*, passim, especially pp. 196-242.

200. *TFR*, pp. 230-231. 201. *Ibid.*, pp. 404-406.

202. *Ibid.*, pp. 404-408.

203. Dee's rationale might have derived from his reading of Avicenna; Roberts and Watson, #395, p. 100^r. In Dee's copy of Avicenna's *De almahad*, he underlined a passage regarding the decline in spiritual activity due to increases in understanding and wisdom: "**Ex** quibus patet, qualiter homines vexentur a detnonibus, & a spiritibus domesticis praedictis quia secundum hanc opinionem animae ignorantiu[m] & sapientium vitiosomm qui in hoc mundo tantum fuerunt occupati circa sensibilia mundana si fuerint bonae, aut malae retine[n]tur in hoc mundo inferior!, ut dictum est, 8c continuantur cum hominibus." In the margins Dee wrote: "This agreeth wth the walking of spirits that hath been wth in this 100 yere and before whan people wer more ignorant and simple, 8ctc."

prophets who had prepared for Christ's birth was extinct, he argued that new prophets and prophecies had arisen to take their place. Second, nothing in the angel conversations went against God: the conversations were a special type of revelation that would prevail until the world adopted a single faith. Dee's third and final point was that twenty-four works in Greek, Latin, and English supported the angel conversations, as well as the revealed books that he intended to submit to the king's scrutiny. Despite these assurances and his participation, Stephen failed to express serious interest in the angel conversations.

On a higher spiritual if not social level, Dee and Kelly were in contact with Catholic clergy, from bishops and papal nuncios to Jesuit confessors. Dee visited with several Catholic clerics in central Europe, including the Capuchin monk Annibale Rosselli, who published a multi-volume commentary on the Hermetic *Pimander*.²⁰⁴ Kelly confessed to a Jesuit professor of theology in Prague in April 1586, who took advantage of the opportunity to question him about the angels.²⁰⁵ The Jesuits in Prague appear to have been particularly intimate with Dee's household and with the details of the church's case against the natural philosopher and his angel conversations. It was their interest, as well as the interest of the papal nuncios, which caused Dee such anxiety.

Dee's serious troubles with the Roman Catholic church began in 1584 when Giovanni Francesco Bonomi, the bishop of Vercelli and apostolic nuncio, prepared to leave Prague. At that time Dee came into possession of a fragment of a letter sent from the bishop to Rudolf II that included details of a dinner conversation which cast doubt on his conversations with angels. Though the substance of the document was based in "various rumours," the contents were still damaging to Dee's reputation. Dee's difficulties with Rome stemmed from his offer to share the angel conversations with Rudolf II "of his own accord and without having made a request to those who have power and authority to determine [the verity of] an apparition of blessed spirits."²⁰⁶ These sentiments were echoed by Kelly's Jesuit confessor, who urged the scribe to submit the "matter of your revelations" to an "authority higher than mine."²⁰⁷

Far from arguing that Dee's angel conversations were fraudulent, the

204. Frances Yates, *Giordano Bruno and the Hermetic Tradition* (London: Routledge and Kegan Paul, 1964), pp. 179-180 and 188. Dee also received communion at the religious house where Rosselli was installed, though Yates overstates the case when she writes: "This shows us where lay Dee's true spiritual home - in religious Hermetism."

205. Dee in Josten, pp. 234-237. 206. *Ibid.*, p. 228.

207. *Ibid.*, p. 237.

church was concerned that the activities of Dee and Kelly were all too real, but might involve evil spirits rather than good angels. The church's position was based on the presumption that the "apparition of good angels . . . does not happen in a distinct shape which is perceived by human eyes, but is somehow vaguely encompassed . . . while ... in a state of ecstasy and rapture."²⁰⁸ The Catholic church's skepticism mounted because "Dr. Dee had a wife and was thus given to the cares of this life and to worldly matters." Therefore, the authorities argued, "it would hardly be possible for him to enjoy the intercourse of good angels, for that happened only to very holy persons, living far away from their married quarters, and to solitary hermits."²⁰⁹ Of equal - and perhaps greater - concern to the church were Dee's alchemical experiments, which cast further doubt on Dee's intentions and reliability. "I am indeed of the opinion," wrote the Bishop of Vercelli, "that they prefer one philosopher's stone to ten visions of angels."²¹⁰

Germanus Malaspina, the bishop of San Severe, assumed responsibility for the inquiries after the bishop of Vercelli left office in July 1585. Dee and Malaspina were introduced by a nobleman in Rudolf's court who told Dee that the bishop was eager to meet and befriend him. Dee was suspicious and believed that Malaspina "was preparing violence and laying in ambush for me."²¹¹ According to Dee, Malaspina's requests persisted for more than eight months until, in late March 1586, gracious invitations turned into threatening summons. After agonizing over the matter with Kelly, Dee and his scribe decided to call on the bishop on 27 March 1586.²¹² The audience opened with the bishop deploring the spread of heresy and the fragile safety of the see of Rome, which was only preserved by the king of Spain. Given the dangers of the time, the papacy had decided that "various revelations, illuminations, and consolations from the good angels of God and from God himself... are private, not public . . . [counsels of] reformation."²¹³ This was both a veiled warning that their messages might be tolerated if kept to themselves and a stratagem to cast doubts on Dee's claim that he and Kelly were required by God to share their revelations with others.

Malaspina went on to ask Dee and Kelly for help with "those evils affecting us all" since the Reformation.²¹⁴ Dee wisely demurred, saying that it was not his place to give advice on such great matters, especially as he had not "received . . . any express advice of God or admonition

208. *Ibid.*, p. 228. 209. *Ibid.*, p. 229. 210. *Ibid.*, p. 229.

from the angels" to do so.²¹⁵ Though Dee admitted that "the very great and very many mysteries and counsels of God are known to us ... which all human talents conjoined could not invent," they were nonetheless under a divine "curb of silence."²¹⁶ Dee explained that he and Kelly led a virtually monastic life, and only with reluctance "let such manifest evidence" of their angel conversations be shown.²¹⁷ Kelly was not so circumspect. After pointing out the excesses and faults of Rome, Kelly went on to voice his hope that "the doctors, shepherds, and prelates mend their ways; may they teach and live Christ by their word as well as by their conduct."²¹⁸ If these changes were made, Kelly assured the papal representatives, "a great and conspicuous reformation of the Christian religion would be brought about most speedily."²¹⁹

Not surprisingly, the Catholic authorities were suspicious, and Francesco Pucci (1540-1593?), one of Malaspina's associates, was drawn into the angel conversations. Pucci began participating in the conversations on 6 August 1585.²²⁰ Though he was not an enthusiastic member of the Catholic church when his contact with Dee and the angels began, an angelic message later prompted his reversion to Catholicism.²²¹ A lax Catholic known for his unorthodox religious beliefs, Pucci was not the most effective liaison between Dee and his critics; his close relationship with the mystic Christian Francken had already caused concern.²²² In fact, Pucci became one of the most destructive influences on the angel conversations, in part because of his role in the prophesied reformation as a "speaker" or communicator of the angel conversations to those lacking an immediate experience of the event.²²³

Nevertheless, the relationship among Dee, Kelly, and Pucci was productive until Pucci came under the influence of a third papal nuncio in Prague, Filippo Sega, the bishop of Piacenza. The bishop became alarmed at the behavior of the Dee-Kelly circle soon after he took

office in 1586.²²⁴ In May 1586 Sega invited Dee and Kelly to travel to Rome, where the angels' revelations could be examined by the Catholic authorities. Pucci supported the bishop, and Dee and Kelly quickly deduced that Pucci's loyalties had switched from the contents of the angelic revelations to the doctrines of the Catholic church. Dee declined to go to Rome, as he believed that "all pious and genuine sons of the Catholic Church . . . will own [up to] the efficacy and the diaphoretic celestial energy of our Illuminator and Comforter" and would "be enriched by the knowledge" of the angel conversations.²²⁵ This reply incensed the bishop, who accused Dee of necromancy and recommended that he be expelled from the city of Prague.²²⁶

In 1586, Dee's angel conversations began to stagger under the burden of too many patrons and suspicious eyes, too many angels and their individual personalities. The stresses placed on upon them reveal much about the complicated mechanics of the conversations. But the events of 1586 are not an ideal focal point to further our understanding of why Dee believed so strongly in the importance of the angels' messages. To delve deeper into the angel conversations and Dee's participation in them we must turn away from the last days of the Dee-Kelly collaboration and return to the origins of Dee's interest in communicating with angels, the roots of which can be found in a time long before Kelly became a part of the Dee household. In England, within Dee's library and his published works, we can find the first evidence that he was coming to terms with the problems of practicing natural philosophy in a world that he believed was coming to an end. While doing so, Dee began to seek a means to bridge the immense gap between the human and the divine through conversations with angels.

224. The bishop of Piacenza wrote, on 29 April 1586: "Giovanni Dii et. . . suo compagno sono in questa corte buon pezzo fa, et vanno camino di farsi autori d'una nuova superstitione, per non dire heresia, sono noti all'imperatore et a tutta la corte." Quoted in Evans, *Radolf II and His World*, p. 223.

Building Jacob's Ladder

The Genesis of the Angel Conversations

. . . and behold a ladder set up on the earth, and the top of it reached to heaven: and behold the angels of God ascending and descending on it.

—Genesis 28:12

One of the most striking biblical images is Jacob's ladder as revealed to him in a dream at Bethel. This passage promised that communication between heaven and earth was possible, articulated the links between the supercelestial and the terrestrial levels of the cosmos, and suggested that communication between heaven and earth could be reciprocal. The question that faced natural philosophers interested in bridging the gap between celestial and terrestrial was how to build and ascend such a ladder. John Dee, along with many of his contemporaries, searched a variety of authoritative treatises for information on how to ascend "Jacob's ladder" to learn the secrets of the cosmos, and then descend to share that information with a waiting world. Dee's library furnished him with the tools and materials that served as a foundation for his conversations with angels, and they provide us with the intellectual context for what he sought to accomplish.

Building a ladder that linked heaven and earth promised a natural philosopher like Dee the intellectual attainment of certain knowledge, as well as the moral achievement of spiritual salvation. Dee had been striving for both long before he became involved in his angel conversations. From his youth Dee attended lectures at the finest universities in Europe, discussed natural philosophy and theology with English and European scholars of high repute, and collected the greatest library in England. He established networks of patronage to support his work and family, and regularly, though not prolifically, published original treatises on natural philosophy. By 1581, however, none of these activities had provided him with the certain knowledge of the natural world or the moral salvation vital to his success in natural philosophy.

Dee was frustrated by this impasse, and he was not alone. Evidence

from Dee's library and marginalia, as well as the angel diaries, suggests that his personal intellectual situation was linked to the Renaissance humanistic crisis of intellectual authority that questioned the reliability of centuries of accumulated wisdom.¹ If the intellectual traditions on which most scholars relied were not to be trusted, as the humanists suggested, where could a natural philosopher like Dee search for reliable information? Dee continued to use his books as a starting point for his investigation of nature, but time and again his eyes were drawn upward to the immutable celestial spheres for answers to his questions about the natural world and its complex workings. In the process, Dee was influenced by esoteric scholarship regarding the natural world and its promise that divinely sanctioned natural philosophers could ascend to the highest levels of wisdom and understanding.

Two rich resources informed these developments: Dee's library and the intellectual exchange he enjoyed with scholars and philosophers throughout Europe. By the time Dee was engaged in the angel conversations he owned the largest private library in England.² The library was not only sizable, its holdings were also extensive: an examination of his library catalogue reveals that he possessed a wider range of texts than could be found in any other private, university, or college library in the country. Hebrew language texts, mathematics, magic, and alchemy jostled for primacy on Dee's bookshelves. The variety and richness of the collection are matched only by the extensive connections Dee had with other natural philosophers and intellectuals at universities and glittering European courts. Dee's studies began in earnest under the tutelage of John Cheke and the Cambridge humanists, from whom he learned Greek and rhetorical skills, and received an introduction to mathematics.³ On

the Continent, Gerard Mercator and Gemma Frisius helped Dee to master the basics of navigation, astrology, and astronomy.⁴ No stranger to the patronage opportunities and intrigues of royal courts, Dee spent time in Italy with the duke of Urbino and spoke with Ulisse Aldrovandi in Bologna.⁵

It was in Paris from 1550 to 1551, however, that Dee became familiar with proponents of universal science and religion such as Jean Fernel, Antoine Mizauld, and Guillaume Postel.⁶ Many universal sciences focused on a single field of natural philosophy, such as mathematics or mnemonics, but some sought to combine a variety of natural philosophies into a single science with a unified theoretical basis. Because attempts to craft a universal science diverged widely in substance, their common intentions are often buried under intricate and seemingly unrelated layers of discredited early modern systems of thought. Each universal science did possess, however, one common goal: to bridge the perceived gap between the imperfect, sublunar world and flawed human understanding and the perfect, celestial world and complete knowledge. A universal science, therefore, was thought of as an *intermediary* - a vehicle that could move its practitioner between heaven and earth. Dee's most cherished intellectual goal as a natural philosopher was to master a universal science so that he could climb to heaven like the angels in Jacob's vision at Bethel, achieve certain knowledge, and return to communicate his knowledge to others. Dee's commitment to a universal science can be detected as early as 1558, when the first edition of the *Propaedeumata aphoristica* was published. As time passed, his synthetic intellect became more intrigued with the possibility of a universal sci-

ence, which he explored in both the *Monas hieroglyphica* (1564) and the "Mathematical Preface" (1570).

Dee's conception of a universal science grew more inclusive over the years, and by 1580 he was casting his net widely to embrace optics, mathematics, cabala, angelology, eschatology, and alchemy. This seems like a bewildering variety, but if we recontextualize Dee and his work with insights from his library and from the work of his European colleagues, Dee's varied intellectual interests seem neither strange nor exceptional. A number of scholars who influenced him, including Johannes Reuchlin, Trithemius, Henry Cornelius Agrippa, Paracelsus, Guillaume Postel, Antoine Mizauld, Jean Fernel, and Cornelius Gemma were exploring an equally wide range of possible strategies for universal sciences. In addition, all were interested in both the manifest and the occult properties of the natural world, and all believed it was possible for a natural philosopher to understand and harness the powers inherent in that world. Their common caveat was that nature could be mastered and utilized only in accordance with the divine plan and God's approval.

God's original, ordered plan for the cosmos stood behind all of these natural philosophers and their universal sciences, lending coherence to what would otherwise have been chaos. The enormous range of ideas expressed in the universal sciences stemmed not from confusion but from a lack of consensus on how natural philosophers might gain access to God's divine blueprint for the created world. For Antoine Mizauld, as for Dee, the heavens offered one of the best avenues for a comprehensive, universal natural philosophy. For Reuchlin, it was the divine word of God, decoded with the assistance of a Christianized cabala. Guillaume Postel believed that a restoration of a single religion, under a single authoritative figure, with a common body of knowledge and a common language, would enable mankind to recover the divine plan and craft a universal science. Dee explored all of these theories, and many others, in the years leading up to his decision to converse with the angels about God's created world and the natural philosophy that would disclose its secrets.

Dee's decision to search for a universal science was not sudden but developed from his earlier studies in natural philosophy. We can delineate this development through book purchases, his published natural philosophical works, annotations in his personal diary and the margins of his books, and his increasing preoccupation with the occult properties of nature and the interpretation of prophetic signs embedded in the natural world. Dee's published work often yields the clearest sense of his developing interest in universal sciences and illuminates his gradual

adoption of the angel conversations as the most certain basis for a truly comprehensive natural philosophy. Topics discussed in the angel conversations - the divine language, mathematics, optics, universal science, the interpretation of natural and supernatural signs, and the apocalyptic future of humanity and the created world - all appeared in Dee's published works before they surfaced in the angel diaries, suggesting a development of his views rather than an abrupt transition between earlier "scientific" and later "magical" periods.

This chapter will argue that Dee journeyed in a step-by-step fashion toward his angel conversations. First, he lay the foundations for the conversations by studying two authoritative texts: the Book of Scripture and the Book of Nature. Second, Dee set out to observe the Book of Nature, which he explained in his *Propaedeumata aphoristica* (1558/1568). Observation proved an insufficient method for grasping the complexities of the created world, so Dee sought a way to decipher the Book of Nature in his *Monas hieroglyphica* (1564). Once the Book of Nature had been deciphered, however, Dee found that it was disordered and of limited use to a natural philosopher, so he relied on mathematics as a reordering principle, in his "Mathematicall Preface" (1570).

Laying the Foundations: The Books of Scripture and Nature

The foundations of Dee's universal science lie not in an arcane philosophical text but in the fundamental and widely held early modern belief that God expressed his will through three aspects of the creation. Often referred to as "books," these three manifestations of God's creative power were: the "book" of the human soul, through which salvation could be attained and which would be read at the Last Judgment; the Bible, or God's wisdom as it was revealed in the Book of Scripture; and the created world, or Book of Nature.⁷ Each book, scholars believed, offered insights into both the mind of God and the act of creation. While the book of the soul, constrained by the human tendency toward sin,

continued to preoccupy theologians, others turned their attention to the Bible and the Book of Nature for answers to pressing questions about the world and its future. The Books of Nature and Scripture became essential texts for early modern natural philosophers like Dee because they were "written" by God for humanity's benefit, and because they were accessible through study and contemplation.⁸ During the fifteenth and sixteenth centuries, however, the Books of Nature and Scripture became increasingly competitive in the struggle to establish intellectual authority.

For Dee, the Book of Nature was an especially important manifestation of God's divinity. Citing Paul's Epistle to the Romans, Dee wrote that the world had no excuse not to praise God's goodness, wisdom, and power "even if it had no written memorial of these [truths other] than that which from the Creation has been inscribed by God's own finger on all creatures."⁹ Dee's views predate Galileo's assertion in *The Assayer* that the Book of Nature was written in the language of mathematics with characters that were geometric in form.¹⁰ While this passage has become emblematic of the interest in nature and observation in the seventeenth century, the metaphor can be traced back to the Middle Ages and was certainly present in Dee's work. Ernst Curtius closely studied the evolution of the metaphor, confirming that "the concept of the world of nature as a 'book' originated in pulpit eloquence, was then adopted by medieval mystico-philosophical speculation, and finally passed into common usage."¹¹ Despite Dee's hearty endorsement of the Book of Nature as an authoritative text, and the belief of Galileo that the language of that text was mathematical, not even by the time of Isaac Newton had the Book of Nature's authority eclipsed that of the Book of Scripture.¹²

In practice, both the Book of Scripture and the Book of Nature were problematic texts. Replete with symbolism, allegories, analogies, and

inconsistencies, the two books presented an early modern natural philosopher with a serious obstacle: how were they to be "read"? A critical, humanistic stance already had been taken toward the Bible, but the Book of Nature presented additional problems. What language, natural philosophers wondered, had God used to inscribe the Book of Nature? What was the ordering principle of the text? Was the Book of Nature stable, or had it deteriorated since the Fall?

Theologians like Saint Cyprian had been grappling with these issues for centuries before humanistically trained natural philosophers turned their attention to them. In his "Epistle to Demetrianus" Cyprian wrote:

the world has now grown old, and does not abide in that strength in which it formerly stood; nor has it that vigour and force which it formerly possessed. This, even were we silent, and if we alleged no proofs from the sacred Scriptures and from the divine declarations, the world itself is now announcing, and bearing witness to its decline by the testimony of its failing estate.¹³

In Saint Cyprian and other early Christian authors the concept of a decaying world blended Hellenistic notions with ideas from the Old Testament, the Apocrypha, and the Pseudepigrapha.¹⁴ Biblical passages from Isaiah, the Psalms, and 2 Esdras are especially relevant to the development of these ideas about natural deterioration through their references to the Book of Nature's aging, or "wearing out," process. In Isaiah, the aging process was not limited to the earth but included the heavens: "The earth is mourning, withering, the world is pining, withering, the heavens are pining away with the earth" (Isaiah 24:4).

By Dee's time ancient and medieval authors' ideas about the instability of the Book of Nature were used by humanistic scholars to suggest that the created world was a text (like many others) in need of careful reading, rereading, and restitution.¹⁵ Though the cosmos had been or-

deily and the Book of Nature had been reliable at the time of the Creation, since that time both had declined. In the Christian West, the decay of the Book of Nature was related to the moral fall of humanity when Adam and Eve sinned and the perfect order of Paradise was disrupted. While in Paradise, Adam and Eve lived in an abundant garden, communicated directly with God, and led a life of ease and plenty. The Adamic lifestyle, characterized by a harmonious relationship between God, humanity, and nature, was God's intended plan. Once outside the garden, humanity's struggle to master the Book of Nature began, and all subsequent changes represented a deterioration from the Edenic ideal.¹⁶

While the details of the moral fall were peculiar to the Judeo-Christian tradition, the notion of a paradise or idyllic garden that provided a reference point of order and stability for the Book of Nature was not. Many ancient cosmologies and cosmogonies contained references to a time in the past when humanity, divinity, and nature had lived in harmony and concord. In pagan antiquity, this idyllic state was commonly referred to as the "Golden Age," a time of perfection that underwent a series of subsequent degenerations.¹⁷ Early Christian authors combined pagan accounts of the Golden Age with biblical ideas of Paradise, creating a conception of past perfection more complex than the discrete traditions from which it was made. Philo Judaeus, for example, believed that the perfection of the Edenic past was embodied in Adam himself. In Philo's works, Adam took on the proportions of a giant who was physically perfect and free from disease as well as intellectually gifted. Because Adam's intellect was linked to the divine, he was able to grasp "the natures, essences, and operations which exist in heaven," rather than being fettered by earthly restrictions.¹⁸ Augustine held a similar

Dee owned four works by Philo Judaeus: his *Antiquitatum libri* (Basel, 1527), Roberts and Watson, #101; the complete *Opera* (Basel, 1561), Roberts and Watson, #164; *Libri quatuor* (Antwerp, 1553), Roberts and Watson, #334; and *De mundo* (Basel, 1533), Roberts and Watson, #1052.

belief: that Adam was immortal and "had special knowledge which empowered him to give the animals the correct names."¹⁹

The expulsion of Adam and Eve from Paradise was not the only event to destabilize the Book of Nature. Of equal importance was a second disruption: the Flood. For sixteenth-century scholars and their predecessors the Flood hastened nature's deterioration and erased the last vestiges of Paradise from the world. In addition, the deluge of the waters and their receding caused physical changes within the Book of Nature. Land that had been flat and easily traversed became interrupted by mountains and valleys after the moral Fall and Flood. Earthquakes and storms had not afflicted Paradise, but emerged with the decay of the Book of Nature. Some believed that changing seasons and climatic shifts, including excessive rain and drought, were actually a result of the Flood.²⁰ One of Dee's contemporaries, Francis Shakelton, asked his readers to observe the Flood's all-too-visible consequences: "doe we not see the yearth to be changed and corrupted? Sometyms by the inundation of waters? Sometyms by fiers? And by the heate of the Sunne?"²¹

As Shakelton suggests, Dee's contemporaries were anxious about the disorder and instability of the Book of Nature. The chaos was so pronounced that many thought it could only culminate in the end of the world, as foretold in the Book of Scripture. English clergyman Hugh Latimer, in a sermon of 1552, pointed to the natural signs of deterioration and change - including rings around the sun and eclipses - "which no doubt signifies . . . that this fearful day is not far off."²² Such tensions only increased when, in 1572, a new star appeared in the heavens - the first new star since the star of Bethlehem that announced the birth of Christ.²³ A few years later, in November 1577, a comet blazed through the heavens.²⁴ After the comet appeared, Elizabeth I called on Dee to

22. Quoted in Tuveson, *Millennium and Utopia*, p. 49.

23. The best-known treatise on the subject of the new star was Tycho Brahe, *De nova Stella* (1573). For an English translation, see Tycho Brahe, *His Astronomicall Coniectur of the New and Much Admired * Which Appered in the Year 1572* (London, 1632).

24. Dee noted the event, drawing a picture of the comet across the top of his personal diary entries for the month of November. See Bodleian Library Ashmole MS 487, entries for November 1577. Halliwell mistranscribed this drawing to 22 November 1580.

soothe her anxious courtiers and to interpret the comet's potentially eschatological message.²⁵ Then, during the Easter season of 1580, a rare earthquake rocked London early in the morning, an event which Dee noted in his personal diary.²⁶

Astrologers of the period warned that another cataclysmic event loomed on the horizon, further threatening the stability of the Book of Nature: a conjunction of the superior planets Saturn and Jupiter. This was an astrological event of such rarity and importance that it was discussed in print for years before it actually took place in 1583.²⁷ Dee was well-versed in this literature, and by 1552 he owned Albumazar's important work on the significance of "grand conjunctions."²⁸ The predicted 1583 event was more than a conjunction; it also involved a shift from the "watery trigon" to the "fiery trigon." This shift is complicated but critical to our understanding of the importance Dee accorded to his angelic conversations as well as to the growing sense of decay and deterioration that people thought was affecting the Book of Nature. There were four celestial trigons, each related to the elements and signs of the zodiac. For example, the "watery trigon" was comprised of the

25. Dee, *PD*, p. 4.

26. Dee may also have been called to court to discuss this event, as on n April 1580 he noted that "I went to the court [and] ca[me] home again." Entries concerning the earthquake were omitted from the Halliwell edition of Dee's personal diary. See Bodleian Library Ashmole MS 487, entries for April 1580, including: "Terremotus hor .6. a meridie durabat p[er] duo minuta ..."

27. The literature on the conjunction and its significance includes Margaret E. Aston, "The Fiery Trigon Conjunction: An Elizabethan Astrological Prediction," *his* 61 (1970): 159-187; Bernard Capp, *Astrology and the Popular Press. English Almanacs 1500-1800* (Ithaca, NY: Cornell University Press, 1979), pp. 164-179; Germana Ernst, "From the Watery Trigon to the Fiery Trigon: Celestial Signs, Prophecies and History," in Paola Zambelli's *'Astrologi hallucinati': Stars and the End of the World in Luther's Time* (New York: Walter de Gruyter, 1986), pp. 265-280; Robin Bruce Barnes, *Prophecy and Gnosis: Apocalypticism in the Wake-of-the Lutheran Reformation* (Stanford, CA: Stanford University Press, 1988), pp. 141-181; Laura Ackerman Smoller, *History, Prophecy, and the Stars: The Christian Astrology of Pierre d'Ailly, 1350-1420* (Princeton, NJ: Princeton University Press, 1994); Ann Geneva, *Astrology and the Seventeenth-Century Mind: William Lilly and the Language of the Stars* (Manchester: Manchester University Press, 1995), pp. 118-140.

28. Roberts and Watson, #421.

three signs linked to water (Pisces, Cancer, and Scorpio), and the "fiery trigon" was linked to Aries, Leo, and Sagittarius. The trigons influenced the earth in a repetitive cycle from fiery, to earthy, to airy, to watery. As each new trigon became influential, it caused significant changes in the terrestrial sphere.

These changes were magnified when a conjunction of the superior planets closest to God - Saturn and Jupiter - occurred as they entered the sign of the zodiac that signaled a new trigon. Thus a "great conjunction" of Saturn and Jupiter occurred every twenty years, when Jupiter and Saturn entered one of the three signs of a specific trigon. "Greater conjunctions" were much rarer and more significant events, occurring once every 240 years, when Jupiter and Saturn entered into a completely new trigon. The rarest conjunction of all was the "greatest conjunction." This occurred once in roughly a thousand years when Jupiter and Saturn reentered the fiery trigon - the initial trigon in the cycle - in the sign of Aries.²⁹ Historians and astrologers agreed that there had been six "greatest conjunctions" since the creation: one during the life of the prophet Enoch; another with Noah's Flood; a third when Moses had received the Ten Commandments; the fourth during the dispersal of the ten tribes from Israel; the fifth at the birth of Christ; and the sixth coinciding with the reign of Charlemagne.

Few doubted that the "greatest conjunction" due to occur in 1583 would be the harbinger of a similarly monumental event, especially since discussions of the conjunction were often reprinted with new editions of Regiomontanus's fifteenth-century astrological predictions that the world would end in 1588.³⁰ Astronomer Tycho Brahe suggested that the potential effects of the entry of Jupiter and Saturn into the fiery trigon would be magnified by the new star he observed in Cassiopeia in 1572. Brahe decided that these celestial signs, when combined, foretold unprecedented changes in the Book of Nature.³¹ A Bohemian astrologer Cyprian Leowitz (1514?-1574) concurred and discussed the significance of the conjunction in his *De coniunctionibus magnis insignioribus superiorum planetarum* (1564).³² "Since ... a new trigon, which is the fiery,

30. Ibid., p. 160.

31. Ibid., p. 164; Brahe, *His Astronomical! Coniectur*, pp. 16-18.

32. Aston, "Fiery Trigon Conjunction," pp. 164-165. Dee's copy of this work is Roberts and Watson, #631; he purchased the work in the year it was published, 1564. Now Cambridge University Library R*-5.2i, it is annotated by Dee; for an analysis see Evans, *Rudolf II and His World*, p. 222.

is now imminent," Leowitz wrote, "undoubtedly new worlds will follow, which will be inaugurated by sudden and violent changes, for this has happened before when one trigon ended and another began, but especially if the watery trigon is being followed by the fiery."³³ Leowitz was sure that the upcoming conjunction announced "undoubtedly . . . the second coming of the son of God and man in the majesty of his glory."³⁴

Observing the Book of Nature: *The Propaedeumata Aphoristica*
(1558)

Although the Book of Nature was an unstable and unreliable text - never more so than in the years prior to 1583 - a natural philosopher could not afford to ignore the manifold signs that God had inscribed there, but had to practice a shrewd observation of nature. This represented the first step of ascent on the ladder of knowledge that could take a natural philosopher to a certain understanding of the cosmos. Dee explored the potential of observation in his first work, the *Propaedeumata aphoristica* (1558).³⁵ Modern scholarship has provided two very different conceptions of the work and its place in Dee's natural philosophy, both of which offer clues regarding the development of the angel conversations. Peter French, for example, argues that the *Propaedeumata aphoristica* infused magic into all parts of the cosmic system.³⁶ Nicholas

Leowitz's work was popular enough to warrant a second edition, printed in London in 1573 just following Brahe's observation of the new star in Cassiopeia.

33. Quoted in Aston, "Fiery Trigon Conjunction," p. 165.

34. Cyprian Leowitz, *De coniunctionibus magnis* (1564), sig. L3^v; quoted in Aston, "Fiery Trigon Conjunction," p. 166.

35. Readers who wish to explore the *Propaedeumata aphoristica* more closely should consult Wayne Shumaker's translation of the work, *John Dee's Astronomy* (Berkeley: University of California Press, 1978), with an introduction and supporting materials by John Heilbron; Nicholas H. Clulee, "Astrology, Magic, and Optics: Facets of John Dee's Early Natural Philosophy," *Renaissance Quarterly* 30 (1977): 632-680; and Clulee, pp. 43-73. The work was published twice, once in 1558 and again in 1568, because of Dee's dissatisfaction with errors allegedly made by the printer. Few substantive changes were made, and we shall be considering the first edition, unless otherwise noted.

36. French, *John Dee*, pp. 93-96.

Clulee, on the other hand, emphasizes Dee's adherence to mathematical principles of optics to create an "astrological physics" which was an integral part of a cosmos governed by natural law.³⁷ What both scholars suggest is that at a very early point in his career Dee was seeking to unify the basis of natural philosophy (though there is debate as to whether that basis was optical or magical), the first step in establishing a universal science.

When Dee wrote the *Propaedeumata apboristica* he was already worried about the instability of the Book of Nature and his ability to practice natural philosophy with the assistance of such an unreliable text. In the *Propaedeumata apboristica* Dee articulated the basic division between a disorderly, terrestrial realm and an ordered, celestial realm. He described the cosmos as being divided into two material parts that corresponded to the dichotomy between disorder and order: an incorporeal, spiritual realm; and his own terrestrial world, "composed of unstable elements" subject to corruption and decay.³⁸

Dee's *Propaedeumata aphoristica* evolved from such general cosmological concepts through more complicated, technical discussions of parallaxes, the behavior of light, and the specifics of astrological influence. Astrology was the root of natural philosophy during the early modern period, and its basic premises supported the dominant, Ptolemaic cosmology Dee adopted and provided theoretical mechanisms to explain processes such as growth and decay. Dee began to lay the universal, physical foundations for his conversations with angels in the *Propaedeumata apboristica* through a discussion of the "rays" that all things, both immanent and occult, dispersed throughout the universe. Later, Dee used his crystal "showstone" to capture and magnify the rays on which angels were said to travel into the natural world. Dee's ideas on the propagation of rays form the unified physical basis for his astrology as well as the unified metaphysical basis of the angel conversations and display as well his mastery of Baconian optics and the light metaphysics of Robert Grosseteste. More important, the optical theories that Dee outlines in the *Propaedeumata aphoristica* provided a way of observing phenomena that had both spiritual and physical significance, thus bridging the enormous gap between the terrestrial and the celestial parts of the cosmic system.

Another cornerstone of Dee's cosmology as expressed in the *Propaedeumata aphoristica* was the ancient belief that nothing in the cosmos stood in isolation, but rather possessed "order, agreement, and similar

37. See Clulee, pp. 43-73. 38. Dee, PA, p. 125.

form with something else."³⁹ Dee suggested that similar and harmonious parts of the cosmos imitated each other and moved together in what we might call "occult physics."⁴⁰ In Dee's system, higher levels of the cosmos "activated" lower levels of the system in such a way that the universe could be likened to "a lyre tuned by some excellent artificer, whose strings are separate species of the universal whole."⁴¹ It was through this kind of activation that "wonderful things can be performed truly and naturally, without violence to faith in God or injury to the Christian religion."⁴² The natural philosopher who knew how to touch the strings of the great, cosmic lyre "dexterously and make them vibrate would draw forth marvelous harmonies," Dee argued.⁴³

The key to such mastery, according to Dee's *Propaedeumata aphoristica*, was optics - the study of the behavior of light. A complete understanding of Dee's commitment to optics has been undermined because of the loss of several of his optical works, including 1557 and 1559 works on artistic perspective, a defense of Roger Bacon (the *Speculum unitatis*), and a treatise on burning mirrors or glasses. It is clear, however, that Dee's contemporaries knew, and relied upon, his optical ex-

39. Ibid.

40. I use the term "occult physics" to differentiate this idea of celestial *movement* from Nicholas Clulee's "astrological physics," which centers on celestial *influences* that cause changes in secondary qualities of motion and light. See Clulee, p. 40.

41. Dee, *PA*, p. 127. Dee was not the only natural philosopher to liken the world to a musical instrument whose strings, when plucked, caused "sympathetic" reverberations. For other important proponents of this image, including Robert Fludd, see Joscelyn Godwin, *Music, Magic and Mysticism: A Sourcebook* (London: Arkana, 1987).

42. Dee, *PA*, pp. 125-127.

43. Ibid., p. 127. Dee's use of the cosmic lyre brings to mind Marsilio Ficino's musical magic and medicine, as well as Ficino's belief in intermediary powers and cosmic harmony. The classic account of Ficino's philosophy is Paul Oskar Kristeller, *The Philosophy of Marsilio Ficino* (1943), trans. Virginia Conant (Gloucester, MA: P. Smith, 1964). For a specific analysis of Ficino's belief in intermediary agencies, see Michael J. B. Allen, "The Absent Angel in Ficino's Philosophy," *Journal of the History of Ideas* 36 (1975): 219-240. D. P. Walker's *Spiritual and Demonic Magic from Ficino to Campanella* (Notre Dame, IN: University of Notre Dame Press, 1975) also contains information on Ficino's spiritual philosophy. The most recent study dealing with Ficino's musical magic and medicine is Gary Tomlinson, *Music in Renaissance Magic: Towards a Historiography of Others* (Chicago: University of Chicago Press, 1992).

pertise. William Bourne reported that Dee was one of the pre-eminent optical philosophers of the period, ranking him above Thomas Digges. Bourne wrote to Cecil that "there ys dyvers in this lande, that... do knowe much more in these [optical matters] . . . then I: And specyally Mr Dee, and all so Mr Thomas Digges, for ... by theyre Learninge, they have Reade from many moo [more] auctors."⁴⁴

Dee's library catalogue provides ample evidence of the reading program to which Bourne referred. Early collection lists from 1556-1557 show that Dee purchased works from the medieval optical tradition as it descended from Robert Grosseteste and the Arabic philosophers down to Roger Bacon.⁴⁵ Dee consulted Bacon's major works and was familiar with rarer works as well, as he owned an abridged copy of Bacon's work on burning mirrors, *De speculis comburentibus*, of which there are only three other known copies.⁴⁶ Optics provided the foundation for Bacon's natural philosophy and theology as he worked toward a universal science. Bacon argued that understanding the behavior of light - God's first creation in Genesis - could lead to a complete understanding of nature.⁴⁷ Because the behavior of light could be understood with the assistance of geometry, mathematics was elevated to a central place in Bacon's practice of natural philosophy, as it had been derived from the work of Plotinus, al-Kindi, and Robert Grosseteste.⁴⁸

In the *Propaedeumata aphoristica*, Dee applied Baconian theories about the behavior of light to the central problems of celestial influence in astrology. While some celestial influences were sensible, others were occult and "penetrate in an instant of time everything that is contained in the universe."⁴⁹ The question facing Dee was whether the observable behavior of sensible rays could shed light on the invisible behavior of occult rays. In the fourth aphorism Dee began to address this dilemma when he explained that all things with an active existence, both manifest and occult, emit rays but that they were more pronounced among things which were "incorporeal and spiritual" rather than those "corporeal and composed of unstable elements."⁵⁰

50. Ibid., pp. 123-125.

Dee finally resolved the issue of the applicability of observable phenomena to occult phenomena through Bacon's contention that radiation was the root of all natural causation, and could explain both the manifest and the occult properties of light.⁵¹ Bacon's theories of radiation thus could account *physically* for the occult influence of celestial bodies in the terrestrial world.

Following Bacon, Dee likened radiation to the "emission of species." Bacon's "species" were themselves derived from al-Kindi's "universal force," which radiated from every individual thing in the cosmos and produced a variety of effects.⁵² Bacon argued, and Dee concurred, that both species and rays differed in their power to affect and cause effects.⁵³ Thus, the heavens could influence the earth more than the earth could affect the heavens, but the two were nonetheless linked through a web of radiation. Dee's understanding of the Baconian explanation of radiation and species was depicted on the title page of the *Propaedeumata aphoristica*. In the 1568 edition the title page was illustrated with Dee's alchemical *monas* symbol. Radiating from the center of the *monas* were six broken lines that extended to earth, water, the sun, the moon, heat, and humidity in the borders of the illustration. The rays on the title page were not directional; they did not depict either emanation from the center of the *monas* symbol or emanation from the natural world. Instead, they showed that the *monas* affected, and was affected by, natural radiation, thereby indicating the way in which nature both *received* and *emitted* radiation.

Dee was not solely interested in what we might call the physics of light; he was preoccupied as well with the metaphysics of light. His exploration of light metaphysics encouraged him to base his cosmology and astrology on the behavior of rays because of light's privileged position in the creation of the natural world. In Genesis 1:3, light was God's first creation, and in Genesis 1:14-19 God created specific "lights" in the heavens - the stars and celestial bodies - to separate day from night, to mark the seasons and years, and to shed light on the earth.⁵⁴ In the Gospel of John 1:1-9, divine light was equated with God, the Word of God, the creative principle, and the universal redemptive force. Dee could also have drawn on classical authors such as Plato and Plotinus

for insights into the mystical significance of light, but similar ideas were developed in the work of Robert Grosseteste.

Grosseteste's influence on Dee has not been adequately studied. Clulee accorded him a relatively minor position of influence in Dee's intellectual development, arguing that only Grosseteste's *De iride* could have been consulted prior to the completion of the *Propaedeumata aphoristica*, based on his consultation of Dee's 1556/1557 reading list.⁵⁵ This overlooks the possibility that Dee consulted works by Grosseteste sometime between 1557 and 1558, as well as Dee's ownership of several comprehensive manuscript collections of Grosseteste's works which are not dated and could be from this period. Dee owned at least sixteen works by Grosseteste, including works on astronomy, the behavior of light, mathematics, physics, devotional works, and romances.⁵⁶ Grosseteste and Dee had much in common: an interest in angels and celestial intelligences, a fascination with the works of Pseudo-Dionysius, a desire to decode natural symbols and biblical allegories, and a belief that the physics and metaphysics of light were crucial to any understanding of the cosmos and its divine plan.⁵⁷

From Grosseteste, Dee would have been led to believe that light represented the unity of God's creation, and that the metaphysics and physics of light provided a method for understanding the way God operated in nature.⁵⁸ The extent to which Dee was willing to subject the metaphysical properties of light to physical and optical investigations can be surprising. At one point in the *Propaedeumata aphoristica*, for example, he suggested that the supracelestial primum mobile was like a concave spherical mirror that drew every created part of the cosmos into

55. See, for example, French, *John Dee*, pp. 93-96, and Clulee, pp. 53-54.

56. See James McEvoy, *The Philosophy of Robert Grosseteste* (Oxford: Clarendon Press, 1982), p. 519, and Roberts and Watson, p. 217, for a complete list of Dee's titles and their relationship to Grosseteste's corpus.

57. For detailed discussions of Grosseteste's life and philosophy, see A. C. Crombie, *Robert Grosseteste and the Origins of Experimental Science, 1100-1700* (Oxford: Clarendon Press, 1958); Gunar Freibergs, ed., *Aspectus et affectus: Essays and Editions in Grosseteste and Medieval Intellectual Life in Honor of Richard C. Dales*, with an introduction by Richard W. Southern (New York: AMS Press, 1993); Richard Southern, *Robert Grosseteste: The Growth of an English Mind in Medieval Europe* (Oxford: Clarendon Press, 1986); and McEvoy, *The Philosophy of Robert Grosseteste*, passim. For a survey of medieval attitudes toward the metaphysics of light, see James McEvoy, "The Metaphysics of Light in the Middle Ages," *Philosophical Studies* (Dublin) 26 (1979): 124-143.

58. Southern, *Robert Grosseteste*, pp. 218-219.

itself.⁵⁹ Dee never defined the *primum mobile*, but it was common to assign it to a place in the created world beyond the fixed stars closest to God, and to make it ultimately responsible for the movement of the eight celestial spheres. The *primum mobile* was not, therefore, part of the created world, and scholars considered it beyond the powers of human understanding. Yet Dee, likening the *primum mobile*'s behavior to that of a concave spherical mirror, invited further analysis of its behavior through the application of optics. In Dee's natural philosophy, no facet of cosmology, including those that verged on theology, were exempt from an exploration of their physical behavior.

By the time Dee completed the *Propaedeumata aphoristica* he had already begun to take important steps toward the angel conversations. First, the *Propaedeumata aphoristica*'s emphasis on the ability of optics to provide a unified tool for the study of the Book of Nature - both its manifest and occult properties - foreshadows the role of the showstone in the angel conversations. Light was not only the universal natural philosophical principle; it was also the universal metaphysical principle. Light served, then, as an ontological intermediary between the divine, celestial spheres and the corrupt, sublunar world. Dee's interest in the power of such intermediaries only increased as his traditional studies yielded fewer and fewer certain results. Second, Dee had come to believe that a truly wise natural philosopher worked with nature, rather than against it, "forcing nature artfully" by means of "pyronomia," or alchemy.⁶⁰ In this description Dee recommended that the natural philosopher harness what God had already inscribed in the Book of Nature, rather than try to coerce nature or command supernatural powers. It was the job of the natural philosopher to hasten, delay, or better articulate natural processes - not to change, alter, or subvert them. These ideas were explored more fully in his next work, the *Monas hieroglyphica*.

Deciphering the Book of Nature: The Monas Hieroglyphica (1564)

While the *Propaedeumata aphoristica* offered a strategy for observing the Book of Nature and extrapolating theories about the occult from those observations, Dee's next work focused on deciphering and analyzing their significance. The method he used to approach these problems was linguistic: he wanted to find a better way to *read* God's messages in

59- Dee, PA, p. 135. 60. Ibid., p. 123.

the mysterious Book of Nature. Dee wrote that the "science of the alphabet contains great mysteries since He, who is the only Author of all mysteries, has compared Himself to the first and last letter" and inscribed the Book of Nature with his finger.⁶¹ The problems natural philosophers experienced when trying to "read" the unstable Book of Nature were more pressing during Dee's lifetime because Galileo's confident assertion that the language of the Book of Nature was mathematical and the alphabet comprised of geometric figures had not been established as a commonplace. Rather, scholars debated the role of language in the Creation, the identity of the language Adam spoke in Paradise, and whether any traces of that language were still in the world. For natural philosophers like Dee, the discovery or recovery of the language of the Book of Nature was a matter of serious concern. In addition, many believed that the language of Nature might well be the most valuable element of a universal science.⁶²

In the *Monas hieroglyphica* (1564) Dee made further attempts to unify the many branches of natural philosophy - optics, alchemy, astrology, cabala, mathematics, geometry, and astronomy. This time, however, he attempted to encompass their subtleties into a single glyph. Grammarians, mathematicians, geometers, musicians, astronomers, experts in optics, cabalists, physicians - even technicians called scryers who looked into crystals - would find their practices subsumed into the science of the *monas*. The *monas's* virtues were inexhaustible in Dee's eyes, as it contained the generation of all letters, rendered abstract numbers corporeal, conveyed the mysteries of squaring the circle, mimicked the celestial harmonies, displayed the orbits of the heavenly bodies, gave the parabolic formula for the construction of a burning mirror, contained medicinal proportions, and aided the perception of visions in crystal lamines or carbuncles.⁶³ Despite Dee's enthusiasm, the work was an enigma to most of his contemporaries. When Dee returned to England shortly after the *Monas hieroglyphica's* publication, he was obliged to explain it to Queen Elizabeth. Some years later Rudolf II, a student of the occult sciences and natural philosophy, confessed that the work was "too hard for his . . . capacity."⁶⁴ The intervening centuries have not served to make its contents less obscure.

An apparent contradiction in the Bible may provide some clues as to what Dee intended. Although Holy Scripture was divine revelation and should not contradict itself, passages in Genesis and Wisdom appeared irreconcilable on the subject of the language used by God to inscribe the Book of Nature. While Wisdom 11:21 attributed the ordering and creative principle of the cosmos to number, weight, and measure - in short, to mathematics - a passage in Genesis offered an alternative. In Genesis 1:3, God literally "spoke" the cosmos into being: "And God said, Let there be light: and there was light."⁶⁵ The linguistic ordering principle in Genesis emphasized the creative power of the Word of God, which was emphasized again in Psalm 148: "He spake the Word, and they were made; He commanded, and they were created." References to the power of God's Word were strengthened in Christianity through the belief that Christ was the Word of God, or Logos, made manifest for human salvation.

Given this scriptural contradiction - or, at the very least, ambiguity - it is not surprising that there was little consensus during the sixteenth century about the language God may have used to write the Book of Nature. John Dee, it is clear, did not embrace an explanation of the cosmos and its creation that was exclusively or even primarily mathematical. Instead, Dee was typical of his generation of natural philosophers, who sought to find a compromise between the mathematical creation described in Wisdom and the linguistic creation described in Genesis through a close study of ancient languages and the Jewish cabala. This course of study was promising, because so many ancient languages - Greek, Hebrew, Latin, and Chaldean - were alphanumeric. In alphanumeric languages each character represents both a phonetic sound and a numerical value, fusing language and mathematics, and suggesting that at one time mathematics and language were more closely linked. Early modern scholars tended to focus on Hebrew as the best avenue for exploring the mysteries of the Book of Nature, since it was thought that God had used a divine, uncorrupted form of Hebrew to create the cosmos, imparting an implicit mathematical order at the same time. Adam was believed to have shared this original and mathematically charged form of Hebrew with God, infusing the linguistic-mathematic sense of coherence into the created world when he gave all parts of nature their true names.⁶⁶

65. An overview of these biblical ideas and their treatment by subsequent commentators can be found in Roy Harris and Talbot J. Taylor, *Landmarks in Linguistic Thought: The Western Tradition from Socrates to Saussure* (New York: Routledge, 1989), pp. 35-45.

66. Eco, *Search for the Perfect Language*, especially pp. 73-116.

Humanistic study of the development of language and the transmission of ancient wisdom challenged the belief that the language of the Book of Nature was some form of Hebrew. As natural philosophers mastered an ever larger number of languages, they began to argue that European national languages (such as Dutch, Welsh, and Italian), ancient Oriental languages (such as Chinese, Aramaic, and Syriac), pictorial languages like hieroglyphics, and the language of mathematical symbols were actually older than Hebrew and therefore more likely to be the original language used by God to inscribe the Book of Nature.⁶⁷ Natural philosophers' preoccupation with the deterioration of the Book of Nature, when combined with the linguistic findings of the humanists, made them wary of any contemporary language that purported to be God's own. Surely, they reasoned, if God had used a form of Hebrew to create the world, it was far removed from the early modern, or even ancient, language. How, then, could an early modern natural philosopher hope to recover, learn, and utilize the original language with its inherent mathematical and creative powers and its special relationship to the Book of Nature?

Several options were deserving of consideration. First, a people could still be speaking a language not far removed from the language God and Adam shared in Paradise. This theory gained strength as Native American populations were encountered by European explorers, and was also a feature of European interactions with the Chinese.⁶⁸ Proponents of exploration perpetuated the notion that as yet "undiscovered" peoples

67. Efforts to reclaim God's original language were widespread and continued into the seventeenth century, despite what Eco describes as a systemic confusion over "universal" languages and the original "perfect" language. See Eco, *passim*, for these later debates and their Renaissance context; Allison Coudert, "Some Theories of a Natural Language from the Renaissance to the Seventeenth Century," in *Magia Naturalis und die Entstehung der modernen Naturwissenschaften* (Wiesbaden: Franz Steiner Verlag, GMBH, 1978); pp. 56-114; James J. Bono, *The Word of God and the Languages of Man*. These efforts preceded seventeenth-century plans for the creation of a universally intelligible language, as discussed in Vivian Salmon's "Language-Planning in Seventeenth Century England: Its Contexts and Aims," in *In Memory of J. R. Firth*, ed. C. E. Bazell et al. (London: Longmans, 1966); pp. 370-397, and James Knowlton, *Universal Language Schemes in England and France 1600-1800* (Toronto: University of Toronto Press, 1976). A more specific treatment of how efforts to understand and shape the universal language impacted on science is M. M. Slaughter, *Universal Languages and Scientific Taxonomy in the Seventeenth Century* (New York: Cambridge University Press, 1982).
68. Umberto Eco, *The Search for the Perfect Language*, pp. 72-116.

might be using the divine language and even suggested that Paradise might be found and restored.⁶⁹ These scholars argued that the Garden of Eden had survived the Flood but had been isolated by the deluge and was now protected by the angels and inhabited by the saints. Should Paradise be reclaimed, they argued, vestiges of the linguistic knowledge of Adam would be recovered. As more of the earth's surface was explored, however, even enthusiastic natural philosophers like Dee grew skeptical of such claims. Dee's knowledge of terrestrial geography even led him to argue with the angels about the impossibility of locating Paradise in an angelic lesson in 1584. When his scribe described the image of "a great place, about 300 mile [*sic*] long, like a Park, enclosed with fire," and enthused that it must be Paradise, Dee demurred. In spite of the angel's insistence that it was indeed Paradise, Dee replied that "Till 45 degrees, both Northerly and Southerly, all is known in the most part of the world: But of any such place there is no knowledge nor likelihood by any History of these dayes, or of old time."⁷⁰

In contrast with explorers who sought to reclaim Paradise and thereby the divine language, some humanistically trained natural philosophers maintained hope that a pure understanding of ancient languages - usually Hebrew - might be recovered through the same careful methods that had made progress in the accuracy of Latin and Greek.⁷¹ Natural philosophers acknowledged that, although the written form of a language might be stripped of its corruptions, it could not be restored to its original power, because there would not be a clear sense of how the language had been spoken - a major source of its potential efficacy. The significance of the spoken power of language was underscored in magical texts of the ancient and medieval periods. Michael Psellus (fl. eleventh century), for example, confirmed in his commentary on the Chaldaean oracles that there were "god-given names among all races, which have unspeakable power in magic rites."⁷² He noted, however, that an act as

69. Christopher Columbus, for example, encouraged by Pierre d'Ailly's early-fifteenth-century collection of astronomical and astrological texts *Imago mundi* (1483), believed that his explorations were playing a key part in the recovery of the lost Garden of Eden. Pauline Moffitt Watts, "Prophecy and Discovery: On the Spiritual Origins of Christopher Columbus's 'Enterprise of the Indies,'" *American Historical Review* 90 (February 1985): 73-102, pp. 74-75. John Dee's copy of d'Ailly is Roberts and Watson, #272.

simple as translating powerful words from one language to another could diminish their efficacy. For this reason, Psellus warned his readers, "Do not, therefore, *change* . . . [Hebrew words] into the Greek language, e.g. Seraphim and Cherubim and Michael and Gabriel. For these when uttered in the Hebrew form have unspeakable power in magic rites, but if changed into Greek words, they lose it."⁷³ Obtaining an ancient text in its original language was difficult, and the problems posed by incorrect pronunciation or translation became more troubling still as humanists underscored the myriad ways in which language could fall victim to inaccuracies, changes, and misunderstandings.

Despite these difficulties, the divine language of Creation remained a powerful, if elusive, lure in the sixteenth century. Guillaume Postel (1510? - 1581), one of Dee's associates in Paris, believed so strongly in the efficacy and power of the divine language that he made it the cornerstone of his universal science.⁷⁴ Postel's efforts informed Dee's attempts to build a universal science on a linguistic foundation. Dee acquired additional insights into the value of ancient languages from his purchase of Postel's works, as well as an Arabic grammar, historical works, and several cosmological treatises.⁷⁵ During his visit to Paris he became more acutely aware of the enormous potential, and the enormous difficulties, associated with the study of the natural world.

Dee's *Monas hieroglyphica* presented a universal emblem - the *monas* - through which the Book of Nature could be studied and natural philosophy could be mastered. The *monas* was constructed from traditional astrological symbols infused with "immortal life," "able to express their especial meanings in any tongue and to any nation." Dee's

combination of symbols represented a return to an older, purer language he believed was used by the ancient wise men or magi.⁷⁶ This led Clulee to argue that Dee believed he had reconstructed "the original divine language of creation that stands behind all human languages" when he conceived the *monas* symbol.⁷⁷

In part, Dee's achievements were humanistic in the *Monas hieroglyphica*: he felt he had restored the original characters of the divine language through minor modifications of contemporary astrological symbols. As he explained in the *Monas hieroglyphica*, the "external bodies" of the astrological figures were "reduced or restored to their mystical proportions" and thus attuned to their internal forms and God's original design. The fullest example that Dee gives of this restoration process and its effect appeared in his description of the "hieroglyphic" for Mercury, "the rebuilder and restorer of all astronomy . . . [who was sent to us] by our IEOVA so that we might either establish this sacred art of writing as the first founders of a new discipline, or by his counsel renew one that was entirely extinct and had been wholly wiped out from the memory of men."⁷⁸

In Dee's *Monas hieroglyphica*, humanistic impulses combined with his interest in ancient forms of writing, as evidenced in Dee's description of his *monas* as a "hieroglyphic," which had a number of important associations in the sixteenth century.⁷⁹ Western interest in hieroglyphics escalated in 1419 when Cristoforo de' Buondelmonti discovered the *Hieroglyphics of Horapollo* on the Island of Andros and took his prize back to Florence, where humanists added the manuscript to a growing number of works that purported to explain the meaning and significance of hieroglyphics.⁸⁰ Centuries before the Rosetta Stone enabled linguists to

decode the essentially phonetic nature of the Egyptian glyphs, early modern philosophers and philologists theorized that the language was both universal and divine. When this idea was adopted by Neoplatonists such as Ficino and Pico della Mirandola, philosophical circles emphasized the ability of hieroglyphics to instantly denote an idea or a series of ideas. It was the Neoplatonic interest in hieroglyphics as a symbolic system of communication that fostered the growth of the popular emblematic tradition, where a picture could indeed speak a thousand words and pithy conceits could be hidden from the eyes of the vulgar.⁸¹ Pierio Valeriano's *Hieroglyphica* (1556), with its self-conscious adoption and modification of hieroglyphics into erudite symbols for the learned to decode, became the authoritative early modern emblematic text.⁸²

While the search for the divine language of the Book of Nature provided the context for Dee's *Monas hieroglyphica* and the Neoplatonic interest in hieroglyphics provided its symbolic references, the cabala provided the exegetical method that placed the work more firmly within the natural philosophical tradition. Though Meric Casaubon argued in the seventeenth century that the *Monas hieroglyphica* proved Dee was a "cabalistic man up to the ears," the implications of his argument have not been fully explored.⁸³ The *Monas hieroglyphica* demonstrates Dee's belief that cabala was the province of divinity, and that within its doctrines the mystery of a mathematical creation enacted through speech could be explored. He could not credit human powers of invention to have "established out of such mystical principles that very stupendous fabric of the Hebrew letters and the Nekudoth [vowel points]." Instead, "an afflation of the divine power" must have been present in the Hebrew language when it was created.⁸⁴

Dee's interest in the cabala can be divided into two periods: the first prior to the making of his 1556-1557 library list; and the second coinciding with his trip to Antwerp in 1562, which culminated in the publi-

University Press, 1970); and Erik Iversen, *The Myth of Egypt and Its Hieroglyphs in European Tradition* (Copenhagen: GecCad Publishers, 1961).

82. Dee's copy of a 1567 edition of this work is Roberts and Watson, #114; it has not been recovered. Other emblem books which Dee owned are Roberts and Watson, #720, #843, and #2140.

83. The variety of interpretation can be seen by consulting longer analyses of the work, including Michael T. Walton, "John Dee's *Monas hieroglyphica*: Geometrical Cabala," *Ambix* 33 (1976): 116-123; Clulee, 77-142.

84. Dee, *MH*, p. 127.

cation of the *Monas hieroglyphica*. The interest he demonstrated during the first phase was characteristic of a Christian cabalist. Though Roberts and Watson assert that he showed little interest in cabala prior to the 1560s, Dee already owned the works of Reuchlin, Agrippa, Giorgi, and Trithemius - a comprehensive library of Christian cabala for the period.⁸⁵ Reuchlin's *De verbo mirifico*, the classic work of Christian cabala, would have provided an adequate grounding in its principles and techniques, while Agrippa's *De occulta philosophia, libri tres*, Francesco Giorgi's *De barmonia mundi*, and Trithemius's *De septem secundeis* were devoted to more esoteric applications of the art. Agrippa, for example, devoted much of his second and third books to the magical possibilities of the cabala and borrowed a great deal of his information from Reuchlin in the process. Giorgi, on the other hand, constructed his enormous cabalistic work (the table of contents alone covers twenty pages) on a foundation of cosmology, numerology, and angelology, and posited that the created universe was bound together by principles of emanation, musical harmony, and angelic intervention.⁸⁶

Between 1560 and 1562, Dee's earlier interest in the Christian cabala led him to study the Hebrew language. This occurred during another excursion to the Continent, when Dee was living with the printer Willem Silvius in the thriving city of Antwerp. A bibliophile like Dee would have reveled in the opportunity to come into contact with new works in Antwerp's richly textured intellectual community.⁸⁷ Specifically, An-

:85. See Roberts and Watson, pp. *n* and 29. Roberts and Watson fail to distinguish between Hebrew books about the cabala and books of Christian cabala. Dee did not begin to purchase Hebrew texts and grammars until the 1560s, at least several years after we have evidence of his first interest in the mystical aspects of the language.

86. Thorndike, VI: 450-453. Dee's copy of Giorgi's text has not been located. Evidence that Dee was well versed in Giorgi's theories can be found in his copy of Gesner's *Epitome*, p. 535. Against Gesner's discussion of the works of Orpheus, Dee wrote: "Ex Orphei Libro De Verbo Sacro aliquot carmina citat Franciscus Georginus Venetus, in volumine suo De Harmonia Mundi, pag. 10. fol. 10."

87. Dee went to Antwerp from Louvain, where he bought texts relevant to his Hebraic studies and made his only datable purchase of a work by Paracelsus. I concur with Roberts and Watson, who believe that Dee switched from the old year to the new on 1 January rather than in the spring. This is certainly borne out by the angel diaries. French, Clulee, and all other biographers have, by assuming that Dee followed English rather than European calendar practices, lessened Dee's stay on the Continent by a full year. See, for instance, French, *John Dee*, p. 36. For Dee's copy of Paracelsus, see Roberts and Watson, #1476.

twerp was home to the one of the largest communities of Jews and *converses* in Europe, and it is quite possible that Dee received lessons in Hebrew and cabala in the city where he was to begin writing the *Monas hieroglyphica* in January 1564.

Dee's book purchases underscore the importance of this second period of his cabalistic study. Of the six books we know Dee to have purchased in 1561 only one is not concerned with Hebrew. These five titles are the first indication that his interest in cabala had exceeded Christian limitations, no matter how comprehensive the treatment or reputable the author. If we expand our consideration of his known library purchases to 1562, we discover that, of the twenty-two works purchased over a two-year period, twenty were concerned with Hebrew or the cabala. This pattern represents a pronounced change from Dee's eclectic purchasing habits in earlier years.⁸⁸ Though only a fraction of Dee's Hebrew collection has been recovered, G. Lloyd Jones has determined that his library housed the largest collection of Hebrew language materials in England during the early modern period - greater than those of either Cambridge or Oxford University, despite their professors of Hebrew, and greater than that of any single college within either university.⁸⁹

Despite his unparalleled collection, Dee was never as competent in Hebrew as he was in Greek or Latin and later felt compelled to confess to the angels, "I am not good in the hebrue tung."⁹⁰ Dee's expertise certainly never eclipsed that of Reuchlin or Trithemius; his interest in Hebrew was not that of a Hebraic scholar but a cabalist. Dee's attempts to master Hebrew were made in an effort to come to terms with the intricacies of the cabala and to apply them to other intellectual projects such as the *Monas hieroglyphica* and, later, the angel conversations.⁹¹ A

88. Any analysis of the library contents is hampered by imperfect preservation, yet this confluence of cabalistic works is striking when compared to previous and subsequent years. While this may be an indication less of Dee's interest than of later preservation, the percentages are striking. There had been a slight increase in alchemical texts in proportion to other works between 1558 and 1562, for example, but the rise was not as dramatic as that which occurred between 1560 and 1562 in Hebrew texts. See Harkness, "The Scientific Reformation," for a detailed discussion of Dee's earlier purchasing patterns, pp. 75-132.

89. G. Lloyd Jones, *The Discovery of Hebrew in Tudor England: A Third Language* (Manchester: Manchester University Press, 1983), p. 168.

90. Dee, AWS 11=65.

91. Jones argues persuasively, for example, that Dee's interest initially stemmed from his "belief in the efficacy of the Hebrew alphabet for making contact with the spirits, and through them with God" (p. 176).

work we know made a deep impression on Dee during his stay in Antwerp supports this contention: Trithemius's treatise on cryptography entitled *Steganographia*. "Of this boke," Dee reported to Queen Elizabeth's secretary, William Cecil, "the one half, (with contynuall Labor and watch, the most part of x dayes) have I copyed out." Dee had been delayed in Antwerp because he was waiting for a Hungarian nobleman to finish copying the work in exchange for lessons on "some points of Science."⁹² During the interim, Dee requested permission to remain abroad, because "Such Men, and such boke are come to my knowledge . . . [regarding] the formerly] mentioned great sciences" of cabala that he was reluctant to leave.⁹³ Trithemius's *Steganographia* is one of the most curious works of the early modern period. It suggested a means of secret communication which employed angels to carry messages from sender to recipient. Dee thought that the book's usefulness was "greater than the fame thereof is spread," and might have brought it to Cecil's attention so that the queen's secretary could use its methods for matters of state.

From his reading Dee came to believe that there were two cabalas: the "vulgar cabala," based on Hebrew and centuries of Jewish tradition; and the "real cabala," which was based on divine messages embedded in the Book of Nature. The "vulgar cabala," according to Dee, was fundamentally linguistic and relied on letters written and maintained by mankind. The "real cabala," which Dee claimed he discussed in "aphorisms to the Parisians" (possibly a lost work of 1562 entitled *Cabbalae Hebraicae compendiosa tabella*), was "born to us by the law of creation" and was more divine than the "vulgar cabala" other scholars studied and employed. Despite Dee's distinction, he nonetheless defended the worth of the Jewish tradition. His separation of the "real cabala," or, as he described it, the cabala "of that which is," from the "vulgar cabala," or the cabala "of that which is said," is essential to an understanding of the *Monas hieroglyphica*.⁹⁴ As the remarks above indicate, Dee did not intend to devalue any form of the cabala, but instead to apply its techniques properly to "that which is," as encrypted in his *monas*. The *monas*, when subjected to cabalistic exegesis, thus became capable of explaining the most occult sciences, and even inventing new arts and sciences valuable to humanity.

Throughout the *Monas hieroglyphica* Dee applied cabalistic exegetical techniques to aspects of the Book of Nature and his own universal

92- John E. Bailey, "Dee and Trithemius's 'Steganography,'" *Notes and Queries*, (5th ser., n, 1879): 401-402 and 422-423; see p. 402.

93- Ibid., p. 402. 94. Dee, *MH*, p. 135.

symbol. He used "tzyrurh" [*zeruf* or *temurah*], "gematria," and "notar-iacon" [*notarikon*] to reveal and explore their hidden significance.⁹⁵ In *gematria*, the numerical values of Hebrew letters and words were calculated to reveal both hidden meanings within words and connections to other words with the same numerical value. In the *Monas hieroglyphica*, *gematria* was used to explicate the central cross representing the Roman numeral ten, two Roman numeral fives, and other more abstract numbers.⁹⁶ *Zeruf* or *temurah* involved the rearrangement of the letters within Hebrew words to form other words. This was the element of cabala which Dee used most heavily in the *Monas hieroglyphica*, combining and recombining the point, arc, and line of his *monas* to form astrological and alchemical symbols, Greek letters, alchemical vessels, and numbers.

Dee's most intriguing use of traditional cabalistic techniques involved *notarikon* - the expansion of a single Hebrew letter into a word. In the *Monas hieroglyphica*, he used the technique to suggest that components of the *monas* were abbreviations of other things found in the natural world.⁹⁷ Dee had used notariacal principles in the *Propaedeumata aphoristica*'s aphorism XVIII, when he referred to *notarikon* in connection with alchemical proportions, or "appropriate weights." These notariacal alchemical proportions, according to Dee, yielded insights into the creation of metals:

In the four separate great wombs of the larger world [the four elements] there are three distinct parts; these are . . . condensed, structured and regulated by their own appropriate weights and may now be called, by notariacal designation, AOS, or OSA, or SOA (for pyrologians will understand me if I speak so).⁹⁸

This aphorism has remained inscrutable, in large part because the "notariacal designations" could not be located in the typical cabalistic references of the period.⁹⁹ Yet Dee was an uncommon alchemist as well as an unusual cabalist, as is demonstrated both in the *Monas hieroglyphica* and also in his 1559 acquisition of Giovanni Pantheus's *Voarchadumia contra alchimiam* (1530), where he discovered an approach to alchemical transformation that united cabalistic theories with elemental doctrines, and which provides the reference to the notariacal designations that feature in the *Propaedeumata aphoristica*.^{wo}

97. Clulee, p. 93. 98. Dee, *PA*, p. 129.

99. Wayne Shumaker, in his notes to the *Propaedeumata aphoristica*, described this aphorism as "the most inscrutable of all the aphorisms" and was unable to locate the source for Dee's ideas. See Dee, *PA*, pp. 210-213.

100. References to AOS appear scattered throughout Pantheus, *Voarchadumia* (Roberts and Watson, #Di6), but their first appearance is on p. 18,

Dee's early exposure to the ideas of Giovanni Pantheus influenced his cabala, his alchemy, and also the *Propaedeumata aphoristica* and *Monas hieroglyphica*. Dee's copy of the work is heavily annotated - so heavily that blank pages were bound into the text - and he inscribed it repeatedly with his *monas*. The interleaved pages are not, however, Dee's notes. They are textual comparisons between the *Voarchadumia contra alchimiā* and Pantheus's earlier work, the *Ars transmutationis metallicae* (1518). Dee owned a 1550 Paris edition of both works, yet he still made a detailed and permanent comparison of the two treatises for his library.¹⁰¹ Because the comparative, transcribed passages appear exactly adjacent to the relative printed text, the notes from the *Ars transmutationis* must have been written on pages interleaved with the *Voarchadumia* after the text was bound. This careful work indicates that Dee had a serious and sustained interest in a cabalistic alchemy of "that which is."

The similarities between the work of Pantheus and Dee are worthy of further consideration. The most important similarity for understanding Dee's *Monas hieroglyphica* and the angel conversations lies in Pantheus's contention that a "cabala of metals" could be traced back to the Chaldeans and his assertion that the cabala of metals provided a means to restore alchemy.¹⁰² These are strikingly similar to the reforming aspirations of Dee's hieroglyphic *monas*.¹⁰³ Pantheus's notion of a "cabala of metals" is analogous to Dee's "real cabala," or the "cabala of that which is." In addition, whereas Pantheus's cabalistic manipulations were based on the fundamental, elemental level of creation ordered through numerical proportions and signified by letters of the alphabet, in Dee's work the science of alchemy was a mortal and terrestrial attempt to mimic the

where "A" designates "Materia prima artis," "O" designates "Lux maior," and "S" designates both "Ignis, i. Lux maior" and "Aer i. Lux minor."

101. Roberts and Watson, #1437.

102. For the reference to the Chaldeans, see Pantheus, *Voarchadumia*, pp. 9-10: "Quandoquidem hac in nostra tempestate studiosorum solertia in lucem venerit ac publicam noticia[m] Chaldaeae professio: qua diebus nostris facile patuit: quod antehac preosq[ue] latuit artis .s. purificationis Auri durarum caementationum perfectarum Inquisitores post ipsum (ut aiunt) Tubalcha'in primum ipsius Authorem Chaldaeos aut Indos potius extitisse." For *Voarchadumia* as a cabala of metals, see Pantheus, *Voarchadumia*, p. n: "...Voarchadumia est ars liberalis: virtute praedita: sapeintiae occultae: non avara: non vana: possibilis: verissima: necessarie: 8c p[er]sequenter perquirefnjda: quae metallorum Ca'bala nuncupatur. . . ."

103. Clulee, pp. 101-103.

divine work of creation. Dee utilized the cabalistic techniques of gematria, notarikon, and zeruf to expound upon the geometrical, mathematical, cabalistic, alchemical, and astrological significance of his *monas*.

Dee's *Monas hieroglyphica* represented a reformed universal science capable of mimicking the divine act of creation alchemically, mediating the cosmos numerically, and reading the Books of Nature and Scripture cabalistically - a seemingly comprehensive plan. Yet there were limits implicit in his universal science, which Dee alluded to in the last theorem. In theorem XXIV, he referred to the fourth chapter of Revelations, which begins with a door opening in the heavens and an angelic voice inviting John the Divine to see into the future as well as into the secrets of Heaven. This was a moment in Revelations just prior to the breaking of the seven seals and the unleashing of the four horsemen of the Apocalypse.¹⁰⁴ It can be argued that Dee's *Monas hieroglyphica* was his attempt to take mankind to that point in cosmic history and that level of cosmic ontology through a universal, exegetical science so that a door would open in the heavens and further marvels could be revealed.

As the *Propaedeumata aphoristica* had pointed out, however, a natural philosopher must observe before he interprets, and Dee believed that his ability to discern signs of decay in the Book of Nature was what enabled him to interpret their significance. But it was a rare natural philosopher, in Dee's opinion, who gave up the lure of earthly riches for such noble pursuits:

the republic of letters can muster only one man out of a thousand, even of those scholars who have entirely dedicated themselves to studies of wisdom, who has intimately and thoroughly explored the explanations of the celestial influences and events [as well as] the reasons of the rise, the condition, and the decline of other things.¹⁰⁵

There was another avenue to explore, however, before Dee was willing to give up traditions of human wisdom and resort to angels for assistance in this observational and interpretational work. Mathematics had become an implicit feature of his observational and exegetical works, but it was not until his "Mathematical Preface" to the works of Euclid that Dee faced the implications of a deeply mathematical natural philosophy.

104. J. A. Van Dorsten, *The Radical Arts: First Decade of an Elizabethan Renaissance* (London: Oxford University Press, 1970), p. 23. In his analysis of the *Monas hieroglyphica*, Van Dorsten writes that the work "leads but to a first degree of revelation, or initiation: the opening of a door in heaven before the seals of the book are opened."

105. Dee, *MH*, p. 117.

Ordering the Book of Nature: The "Mathematical Preface" (1570)

By the time Dee wrote the "Mathematical Preface" he was asking his readers to grasp how the mathematical sciences - rather than optics, alchemy, or the cabala - constituted the root of a universal natural philosophy and provided a reliable way to access the secrets of divinity and the intricacies of the natural world.¹⁰⁶ The possibility of a mathematical ordering principle offered another way for natural philosophers to circumvent the problems of decay and deterioration afflicting the Book of Nature. In his "Mathematical Preface," Dee discussed the mathematical underpinnings of several natural philosophical disciplines, including optics, astrology, navigation, and technology, providing his readers with another potentially universal science.

Although the biblical passage in Wisdom did much to perpetuate interest in the mathematical nature of the creation, the notion that the cosmos was created with numbers ultimately derives from theories attributed to the Pythagoreans. And, in important passages in both the *Republic* and the *Timaeus*, Plato echoed the Pythagorean belief that the cosmos was mathematically perfect.¹⁰⁷ Platonic and Pythagorean ideas were revived in the early modern period by Marsilio Ficino and other Neoplatonists. Dee was intrigued with the divinity of mathematics and the Neoplatonic conviction that the act of creation was essentially mathematical. Both ideas appeared in his preface to the first English translation of Euclid's *Elements*, where he included the Platonic argument that mathematics should be considered divine because of the mathematical

106. John Dee's "Preface" in Euclid, *The Elements of Geometry*, trans. Henry Billingsley (London, 1570). Dee's preface has been reprinted as *The Mathematical] Praeface to the Elements of Geometry of Euclid of Megara (1570)*, ed. Allen G. Debus (New York: Science History Publications, 1975), along with an introduction and notes. For a provocative analysis of the work, see Kenneth K. Knoespel, "The Narrative Matter of Mathematics: John Dee's Preface to the *Elements* of Euclid of Megara (1570)," *Philological Quarterly* 66 (1987): 26-46. For a comparison between the attitudes of Dee and another sixteenth-century natural philosopher toward mathematics that focuses specifically on Euclid, see Enrico I. Rambaldi, "John Dee and Federico Commandino: An English and an Italian Interpretation of Euclid during the Renaissance," *Rivista di Storia della Filosofia* 44 (1989): 211-247.

107. See Debus's "Introduction," in Dee, MP, p. 5.

nature of God's creative process.¹⁰⁸ Though Dee was not the only natural philosopher to explore the ramifications of these ideas in the sixteenth century, it was not until the seventeenth century that mathematics became the dominant language for discussing and describing nature.

In the opening remarks to his "Mathematical Preface" Dee argued that the importance of mathematics rested on numbers and the intermediary role they played between natural and supernatural levels of the cosmos. As intermediaries, numbers participated in everything from the divine to the mundane. Dee asked his readers to explore this mysterious duality rather than simply considering numbers and geometrical figures for their utilitarian value. For, while all numbers and mathematics shared essential traits, they were not indistinct. The highest and most abstract state of number was reserved for the Creator. A more mundane and natural state of number existed in every creature in the world. The third state of number, analogous to the intermediary, mathematical level of the cosmos, could be found "in Spirituall and Angelicall myndes, and in the Soule of ma[n]." Form and function intertwined in this level, with the angels serving as intermediary agencies between the divine and the terrestrial while occupying the intermediary level of the cosmos.

In his "Mathematical Preface" Dee referred to both "numbers numbering" that were in God and the angels and to "numbers numbered," in creatures occupying the terrestrial world. The pure numerical forms reserved for God, however, were totally immaterial, and therefore essentially distinct from the numbers that existed in the human spirit and the angels. Neither pure element nor Aristotelian quintessence, Dee stated, provided the true "matter" of these divine numbers, and not even the spiritual or angelic substance was immaterial enough to contain the numbers used by God in the Creation.¹⁰⁹ Dee based his arguments on traditional cosmological concepts already present in his *Propaedeumata aphoristica*, especially the ancient division of the cosmos into terrestrial and celestial levels. In the "Mathematical Preface," Dee developed this distinction, arguing that the natural world was comprised of things material, compounded, divisible, corruptible, and changeable. Thus, it was perfectly acceptable to judge things in the natural world by applying standards of probability and to reach decisions through conjecture.¹¹⁰ The natural world was, in Dee's eyes, inherently uncertain because of its corruptible and changeable nature and could not yield "true" or "certain" information. In contrast, the supernatural world was immaterial, simple, indivisible, incorruptible, and unchangeable. Instead of being

108. Dee, MP, sigs. ai^v, aiii^f, *i^f ~^v; discussed in Debus's "Introduction," Dee, MP, p. 10.

109. Dee, MP, sig. *j. no. Ibid., p. [i^v].

comprehended by the exterior senses through observation, the supernatural world could only be perceived by the mind. Literally above nature, questions about the supernatural levels of the cosmos formulated by the mind could not involve conjecture and speculation, therefore "chief demonstratio[n] and most sure science" could be deduced from them.¹¹¹

It was the supernatural that provided the natural philosopher with certainty and truth and perhaps, by extension, could help him to understand the workings of the natural, corrupt world. This absolute distinction would seem to rule out the value of observation and experimental science in the practice of natural philosophy. Mathematics, however, made observation more reliable, as Dee reminded his readers, because it participated in an intermediary level of the cosmic system. Located between the natural and the supernatural, mathematics occupied the middle ground between two cosmic extremes. Though the mathematical level of the cosmos included "thinges immateriall," they were still "by materiall thinges hable somewhat to be signified."¹¹² While mathematical forms were incorruptible and unchangeable, their images or signs were divisible and able to be manipulated and superficially altered. Dee marveled at the "strange participatio[n]" mathematics achieved "betwene thinges supernatural!, imortall, intellectual, simple and indivisible: and thynges naturall, mortall, sensible, compounded, and divisible."¹¹³

The mathematical philosophy of Proclus (fifth c. A.D.) also informed Dee's arguments in the "Mathematical Preface," as can be seen in his annotated copy of Proclus's commentary on the first book of Euclid's *Elements*.¹¹⁴ Proclus privileged mathematics in much the same way as Dee, and for many of the same reasons. Specifically, Proclus revered the numerical sciences because they could refer to the intangible and incorruptible as well as the sensible. Mathematics was more reliable, therefore, than any branch of natural philosophy that was based on perception.¹¹⁵ Proclus's philosophy differed from Plato's in the role

in. Ibid. 112. Ibid. 113. Dee, MP, n.p.

114. Proclus, *Primum Euclidis Elementorum librum Commentariorum ad universam mathematicam disciplinam principium eruditionis tradentium libri iiii* (Padua, 1560), Roberts and Watson, #266, pp. 1-30. Dee's annotations in Proclus's commentary appear primarily in the metaphysical and philosophical sections of the work. He made no comments on the passages where Proclus discusses the utility of mathematics and numbers or the qualities necessary in the mathematician. See also Clulee, pp. 157-159.

115. Dee's marks of emphasis in his copy of Proclus, p. 6: "nam id quidem ultra intelligentiam obtinent, ut quod evolutum est, & progrediendi vim habet conte[m]plentur: ea vero, quae in ipsis reperitur rationum stabilitate, qu[a]e etiam confutari non potest, opinionem superant. & quod

played by imagination in mastering the essential truths of mathematical philosophy. Proclus emphasized the imagination's intermediary position within the hierarchy of knowing, just as mathematics occupied an intermediary position between the tangible and intangible, of which Dee took note.¹¹⁶ In these annotations Dee demonstrated his fascination with the concept of mathematical mediation between the sensible and the intelligible, as well as expressing an interest in the ways in which imagination could function as a mathematically relevant feature of the intellect.

Dee resorted not only to pagan and late antique philosophy for the ideas in his "Mathematical Preface," however. He also studied the work of early Christian authors, many of whom were themselves influenced by Neoplatonic philosophy, to support the intermediary place of mathematics. Dee drew on Boethius (d. 524) as an authoritative source on the essentially mathematical nature of the Creation because he accorded mathematics a central role in the most arcane mystery of all: the precise moment of divine creation. Mathematics, Boethius believed, *ordered* the Creation. Dee agreed, as is clear when he quoted from Boethius: "All things (which from the very first originall being of things, have bene framed and made) do appeare to be formed by the reason of Numbers. For this was the principall example or patterne in the minde of the Creator."¹¹⁷ Boethius's writings gave Dee a way to reconcile contradictory passages in Genesis and Wisdom, for God thought of the Creation in mathematical terms and instilled that order into every level of the cosmic system through the spoken word.

Boethius's emphasis on pattern ensured that geometry was not altogether forgotten in Dee's "Mathematical Preface." Specifically, Dee be-

quidem *ex suppositione* ortum traha[n]t, id fortit[a]e sunt, iuxta prim[a]e scienti[a]e diminutione[m]: quod vero in iis formis constit[a]e sint, *que sine materia* existu[n]t, iuxta perfectiorem sensilium cognitionem."

116. Morrow, "Introduction," in Proclus, p. xxxv, and Dee's emphasis marks in his annotated copy of Proclus, *Primum Euclidis Elementorum*, p. 30: "At *phantasia medium* inter cognitiones obtinens centrum, excitatur quidem a sese, promittitque ide, quod sub cognitionem cadit: eo autem q[ue] extra corpus non est, ab ilia *vitae* impartibilitate ad partitionem, 8c intervallum, 8c figuram, ea, quae sub ipsius cadunt cognitione[m] deducit. Et ideo quicquid *novent, impressio quedam est, & forma intelligenti[a]e*. Circulum q[ue] una cum suo cognoscit intervallo, ab externa quide[m] materia immunem, *intellectilem vero, quae in ipsa est materiam habentem*. Atq[ue] idcirco *non unus tantum in ipsa est circulus*, quemadmodum neq[ue] in sensilibus. Simul nanq[ue] apparet distantia, maius q[ue], & minus, necnon circulorum, ac triangulorum multitudo."

117. Dee, MP, sig. *j.

lieved that geometry was divine because it provided the devout natural philosopher with knowledge of the everlasting forms which had been in the mind of God at the Creation. Geometry, therefore, could "prepare the Thought [of the natural philosopher], to the Philosophicall love of wisdom: that we may turne or convert, toward heavenly thinges [the attention] which now. . . we cast down on base or inferior things."¹¹⁸ The divine nature of geometry encouraged Dee to give up the ancient label of "geometry" for "megethology," which he believed more accurately captured the theological, metaphysical, and terrestrial uses for the science. "Megethologicall" contemplations, Dee thought, would permit the natural philosopher "to conceive, discourse, and conclude of things Intellectual, Spirituall, aeternall, and such as concerne our Blisse everlasting: which, otherwise (without Special privilege of Illumination, or Revelation fro[m] heaven) no mortall mans wyt (naturally) is hable to reach unto, or Comparse."¹¹⁹

Marvelous revelations were in store for the natural philosopher who devoted himself to the use of intermediary agencies such as mathematics and the imagination. In Dee's "Mathematical Preface" numbers became the specific focus of the natural philosopher's contemplative life and the meditative tool by which natural philosophers

may both winde and draw our selves into the inward and deepe search and vew, of all creatures distinct vertues, natures, properties, and *Formes*: And also, farder, arise, clime, ascend, and mount up (with Speculative winges) in spirit, to behold in the Glas of Creation, the *Forme of Formes*, the *Exemplar Number* of all things *Numerable*: both visible and invisible: mortall and immortall, Corporall and Spirituall.¹²⁰

This passage reflects Dee's ecstatic level of engagement with the essential, numerical components of the cosmos and his hope that the quest for wisdom could be fulfilled through the study of the mathematical sciences, as Plato had suggested when he wrote that wisdom could be attained by "good skill of *Numbers*." Dee elevated the science of arithmetic to a place just below theology in the hierarchy of knowledge because of its profound divinity and purity.¹²¹ "O comfortable allure-ment, O ravishing perswasion," Dee enthused, "to deale with a Science, whose Subject is so Auncient, so pure, so excellent, so surmounting all creatures, so used of the Almighty and incomprehensible wisdom of the Creator, in the distinct creation of all creatures."¹²²

Nevertheless, in the "Mathematical Preface" there is also a glimmer

118. Ibid., sig. aj^v. 119. Ibid., sig. aiij. 120. Ibid., sig. *j-*j^v.

121. Ibid., sig. aj^v. 122. Ibid., sig. *j.

of discontent, a sense that perhaps mathematics alone will not provide the universal science that Dee sought: the first mention of "archemastrie." Dee described archemastrie as a universal science that was experimental, revelatory, earthly, and divine.¹²³ Also, he stated his belief that the "chief Science, of the Archemaster, (in this world) as yet known, is an other (as it were) OPTICAL Science" - quite possibly the use of a stone to see angels.¹²⁴ In earlier common usage, the word *archemastry* derived from a corruption of the word *alchemy*, but in the sixteenth century the word came to be used for high skill or mastery of the applied natural sciences or mathematics. Dee considered his "Archemastrie" to be the unification of all branches of natural philosophy into a single discipline that explored the propagation of rays, employed mathematical aspects of optics, depended upon astrology to capture astral radiation, and utilized a highly refined stone resulting from an alchemical experiment. When used together, these natural philosophical skills and techniques would raise the natural philosopher from the contemplation of transitory terrestrial conditions to a state of communication with celestial truths.

Dee's "Archemastrie," the experimental science related to spiritual experience, divination, and natural philosophy, may indicate that he was already attempting to communicate with the angels.¹²⁵ As early as 1570, based on the evidence from the "Mathematical Preface," Dee's intellect was engaged with the possibilities of a new optical, experimentally based natural philosophy which he would later practice in his angel conversations. Steeped in the optics of his predecessors Bacon and Grosseteste, Dee formulated a means of contacting angels that did not rely on conjurations or binding spells, but on simple prayer and the use of a crystal stone to collect the occult rays which all major theological and philosophical authorities agreed were vehicles for angelic, as well as astral, influences. Dee's use of the crystal stone was more complex than we might initially perceive, due to both his expertise in optics and his inter-

Brian Vickers (New York: Cambridge University Press, 1984); pp. 57-71. Calder also makes this association between optics and Dee's mysterious "archemastrie," see I. R. F. Calder, "John Dee Studied as an English Neoplatonist" (diss., The Warburg Institute, London University, 1956), 1:781.

est in the metaphysics of light. The revelatory power of geometry in the "Mathematical Preface" echoes the revelatory power of the *monas* in the *Monas hieroglyphica* and the revelatory power of the celestial rays to awaken understanding and cause movement toward the divine in the *Propaedeumata aphoristica*. The "Mathematical Preface" also contains a prophetic glimmer of Dee's escalating interest in angelic communication during the 1570s. Angels were, after all, akin to mathematics in their intermediary nature and function. In grasping the valuable step toward divinity that mathematics provided, Dee became increasingly committed to all intermediary cosmic agencies - the mathematical, linguistic, optical, alchemical, and imaginative. The common point toward which all these interests drew him was the angel conversations. Rather than observing, deciphering, or ordering nature, Dee devoted himself to *understanding* the natural world as fully and completely as God would allow.

Climbing Jacob's Ladder

Angelology as Natural Philosophy

Unlike other things alive -
 Birds that wing their way through air
 Fish that in chill waters dive
 Beasts that tread the earth
 and leave their footprints there -
 Man, by reason made aware,
 Solely judges and discerns;
 Man approaches angels by the things he learns.

—Francesco Stelluti

in Galileo Galileo's *Assayer*, 1623

For a decade after the "Mathematical Preface" a veil falls over our knowledge of John Dee's interest in intermediary agencies, his commitment to ascending to the supernatural levels of the cosmos, his fascination with universal sciences, and his provocative "archemastrie." The veil lifts in 1581, just as Dee was about to enter into his collaboration with Edward Kelly, when he addressed a prayer to God explaining how and why he communicated with angels. Today it stands as the preface to the first surviving angel diary.¹ The preface captures another important moment in the history of the conversations, in this case not an ending but a beginning, a moment of reflection for Dee as he made a transition between two scryers and renewed his attempts to climb to the heavens and achieve certain wisdom. The political difficulties Dee would later experience in the Rudolphine court in Prague, the serious danger posed by his overexposure to so many curious eyes, and the struggles he would have with his irascible new scryer were all in the future. Dee's studies and publications supplied the materials for his ladder to the heavens and informed his outlook, but they were no longer sufficient. In 1581 Dee's long and painful intellectual crisis was drawing to a close,

1. Dee, A WS II: 8-12.

and its residue remains in the account he made of his intellectual despair and frustration.

The roots of Dee's intellectual crisis extend back to his early career as a scholar when he had studied "in many places, far & nere, in many bokes, & sundry languagis [szc]." Dee described how he had conferred "with sundry men" and had with his "owne reasonable discourse labored." This traditional course of study had failed him; it had not brought him the mastery of the Book of Nature he desired. He labored on, collecting his library and publishing his own natural philosophy, but at last he concluded he "could fynde no other way, to ... true wisdom" without the "extraordinary gift" of divine revelation. Though Dee confessed that he had been making "special supplications" to the angel Michael from 1569, these requests had failed too.² Dee fell deeper into despair, and might even have contemplated suicide, as is suggested in his resolution "to leave this world presently ... so, I might in spirit enioye the bottomles fowntayne of all wisdom."³ Something - perhaps contact with a scryer - saved him from a final desperate act, and he turned once more to his library for inspiration on how to circumvent his problems and achieve wisdom.

Dee was not looking for wisdom itself on his library shelves: he was looking for a new *method* to acquire it.⁴ In 1581, as he began to work with Kelly, Dee was reminded of passages in the Bible that told how God sent his "good angels" to Enoch, Moses, Jacob, Esdras, Daniel, and Tobit, "to instruct them, informe them, help them ... in worldly and domesticall affaires . . . and sometimes to satisfy theyr desyres, dowtes & questions of thy Secrets." Armed with these examples from the Book of Scripture, Dee drew on religious texts for a method to facilitate communication with God and His angels. The Bible and its theological commentaries prompted him to use a "Shewstone, which the high priests

2. A firm date for the inception of the angel conversations has yet to be established. While Dee records in Sloane MS 3188 that he began to pray to the angel Michael in 1569, Nicholas Clulee discovered in Psellus's "De Daemonibus," a place where Dee had noted the date "1567" in the margins alongside a passage on divination. This suggests that Dee made some attempt to contact spirits prior to 1569. See Clulee, p. 141, and Dee's notes in Ficino's *Index eorum*, p. 52% Roberts and Watson, #256.
- 3- Dee, AWS II: 341.
4. For a discussion of this distinction between the recovery of ancient wisdom and the recovery of ancient methods to achieve wisdom, see Peter Dear, *Discipline and Experience* (Chicago: University of Chicago Press, 1995), especially pp. 118-122.

did use . . . wherein they had lights and Judgements in their great dowtes." Because of its biblical antecedents, Dee's showstone allowed him to draw a sharp distinction between his conversations with angels and contemporary magical practices. With the Book of Scripture to support him, Dee could say sincerely that he had "allwayes a great regarde & care to beware of the filthy abuse of such as willingly and wetingly, did invoke and consult diverse sorts [of] Spirituall creatures of the damned sort." Instead, Dee used "harty prayer" and the skills of scryers like Edward Kelly who were capable of seeing "Spirituall apparitions, in Christalline receptacles, or in open ayre" which harked back to his optics and "archemastrie."⁵

Finally, Dee discussed the reasons he contacted the angels. First, he wanted to achieve "pure and sownd wisdome and understanding of ^Asome of^A thy [God's] truths naturall and artificiall." Dee's emphasis on "truths naturall and artificiall" is important because it links the contents of his angel conversations to natural philosophy and expresses his confidence that the angels could further those interests. Subsequent remarks indicate that there was yet a deeper purpose underlying the angel conversations: he wanted to communicate with angels so that God's own "wisdome, goodness and powre bestowed in the frame of the world might be browght, in some bowntifull measure under the Talent of my Capacitie." The acquisition of wisdom was not solely for Dee's benefit, but for God's "honor & glory, & the benefit of thy Servants, my brethren and Sistern." Here Dee reveals his belief that an angelically disclosed natural philosophy was not only possible, but desirable because it might restore humanity's once-privileged place in the natural world, harness the inherent powers of the Book of Nature for human benefit, and honor God.

These were lofty aspirations, and it is not surprising that Dee despaired of natural philosophy, given his grand expectations. As this chapter will explain, Dee believed that a reformation of the human sciences and human knowledge was needed to bridge the gap between his expectations and the decayed state of the Book of Nature and natural philosophy. The angel conversations not only converged with broader late-sixteenth-century cultural contexts such as humanism, they also correlated with a more specific intellectual context provided by the per-

5. For the broader cultural and intellectual context of Dee's angel magic, as well as a finer sense of why Dee made these distinctions, see D. P. Walker, *Spiritual and Demonic Magic: From Ficino to Campanella* (Notre Dame, IN: University of Notre Dame Press, 1975), *passim*, where the varieties of spiritual and demonic practices are outlined.

ceived inadequacies of natural philosophy during the period. Dee lived during the nascent years of the period now known as the "scientific revolution," when other sixteenth-century voices were also calling out for philosophical and methodological reform.⁶ Some natural philosophers clamored for order among the branches of natural philosophy - an impulse that culminated in the disciplinary boundaries of modern science. Others searched for the "pure" doctrines of natural philosophy possessed by the ancients, stripped of the corruptions, inaccuracies, and deterioration on which humanists focused their attentions. Others, like Dee, attempted to craft "universal sciences" that would combine ideas of doctrinal order and purity espoused by other reformers with changes in method and approach. Because Dee had not been able to make the climb upward using the natural philosophy available to him, he established a new, universal science based on optically facilitated conversations with the perfect, celestial world. Dee's "ladder" to the heavens - the angel conversations - enabled communication between separate parts of the cosmic system and offered the hope of intellectual and spiritual perfection to an increasingly frustrated and anxious world.

John Dee was not the first, nor the only, scholar of the period to aspire to certain knowledge of nature and experience frustration when he failed to achieve it. Henry Cornelius Agrippa underwent a similar crisis of intellectual confidence earlier in the century. Agrippa's *De incertitudine et vanitate scientiarum* discussed the inability of philosophers to reach wisdom through study of the existing arts and sciences.⁷ His critics pointed out that Agrippa's book disowned the very activities he had championed earlier in his career: humanism, scholarship, and critical inquiry. One of the most intriguing features of Agrippa's diatribe comes after a scathing review of all fields of human knowledge and applied reason, when he concludes that only "prophetical" divinity (revelation) and "interpretive" divinity (a study of God's scriptures), coupled with a

6. See Dear, *Discipline and Experience*, passim; Mark Greengrass, Michael Leslie, and Timothy Raylor, eds., *Samuel Hartlib and Universal Reformation: Studies in Intellectual Communication* (Cambridge: Cambridge University Press, 1994), passim.

7. Several English translations of this work were completed in the sixteenth and seventeenth centuries. All quotations here are from Henry Cornelius Agrippa, *Of the vanitie and uncertaintie of the Artes and Sciences*, trans. James Sanford (London, 1569). Calder noted a similarity in mind-set between Dee prior to his engagement with the angel conversations and the Agrippan crisis. See Calder, "John Dee as English Neoplatonist," 1:777. There is no record that Dee owned Agrippa's *De incertitudine*, though many other items from the Agrippan corpus appear in his library catalogue.

life devoted to God, can bring a philosopher certain knowledge and wisdom. Agrippa exhorted his readers to "descend into your selves you whiche are desirous of the truthe, departe from the clouds of mans traditions, and cleave to the true light: beholde a voice from Heaven, a voice that teacheth from above."⁸

Agrippa might have inspired Dee to *build* Jacob's ladder, and also to *climb* it and attend to voices teaching "from above," but he was not the only philosopher to help Dee conceptualize his angel conversations. A closer examination of the books Dee purchased and annotated between 1544 and 1581 reveals that an array of ancient and medieval ideas informed his specific strategy for communicating with angels. Ancient and medieval natural philosophers Dee held in high esteem, such as Roger Bacon and Raymond Lull, had already suggested that a universal science could provide the greatest insights into the problems of natural philosophy. Dee found that the most appealing option facing him was to resolve the intellectual difficulties posed by two competing, unstable, and unreadable "texts" - the Books of Scripture and Nature - through the medium of a completely new universal science. Whereas Bacon posited that a truly universal science must be based on optics and the behavior of light, and Lull felt a system of numbers and letters could clarify and organize the cosmos, Dee looked directly to the incorruptible celestial spheres for the strong foundation of his final attempt to craft a universal science - the angel conversations. Unlike his earlier attempts in the *Propaedeumata aphoristica*, the *Monas hieroglyphica*, and the "Mathematical Preface," Dee hoped the angel conversations would be capable of answering all questions posed by the Book of Nature, and would be authoritative in other branches of the arts and sciences as well.

Dee's Angelic Cosmology

Dee's decision to look to the angels and celestial spheres for answers to his natural philosophical questions is hardly surprising. A quick glance at the art, literature, and architecture of the early modern period reveals that angels were everywhere. They decorated the stained glass windows, interior beams, and exterior arches of great cathedrals and humble village churches while music-making angels adorned altars and choirstalls.⁹

8. Agrippa, *On the Vanitie*, p. 187".

Secular architects filled domestic spaces with ceilings and wall panels depicting the zodiac, classical gods and goddesses, and armies of winged creatures from majestic avenging angels to adorable putti.¹⁰ Angels appeared in the popular dramas based on Biblical stories known as mystery plays that were produced throughout Europe during the sixteenth century.¹¹ As God's cosmic helpers, angels appeared in tapestries on the walls of great houses and in the frontispieces of books, turning the great mechanical crank that kept the celestial spheres spinning in perpetuity.¹²

Dee's belief in the potential value of angelic guidance was shaped by his understanding of the structure and workings of the cosmos, which allowed for both natural laws and a providential deity, for both predictable and miraculous events. In his cosmology, angels were aspects of faith as well as significant intermediary features of the natural and supernatural worlds. What distinguished Dee's angel diaries from other early modern records of experiments involving angels was his familiarity with the traditional literature on angels, his fascination with the power of intermediaries, and his deeply held belief that angels were divine messengers.¹³

The sixteenth-century cosmos was hierarchical and stretched in a chain of influences from God through the angels and celestial spheres to the sublunar world of human beings, animals, and plants. Dee and his contemporaries were interested in angels because, in their cosmology, the most important relationships were those between God, the angels, and human beings. Human beings, hampered by Adam's original sin, were unable to communicate with God and His creatures and had to

struggle to emulate the angels, who were perfect and unaffected by original sin and the moral fall. In the world promised after the Apocalypse, angels and humanity would live in harmony with nature, in perfect communion with God and all levels of the cosmos.¹⁴

Dee's ideas derived not only from general cultural beliefs of the sixteenth century but also from well-defined intellectual traditions. Books concerning angels made up a significant part of his library, and as early as 1557 he had several texts which supported his later interest in communicating with angels. These included a collection of Neoplatonic and Hermetic texts edited by Ficino, the works of Dionysius the Areopagite, and four essential works on magic and the Christian cabala by Francesco Giorgi, Henry Cornelius Agrippa, Johannes Reuchlin, and Johann Trithemius. Although the latter four have not been recovered, Dee extensively annotated the texts edited by Ficino and the works of Dionysius. They provide helpful clues regarding particular aspects of angelology that interested him.

Dee's marginalia also suggest that he not only *read* most of the works on angels available in the sixteenth century, he *mastered* them.¹⁵ As a result, Dee seldom spent much time trying to recall which author discussed an idea relevant to his angel conversations, but was able to think of supporting texts quickly and, for the most part, accurately. He often noted the similarities between information that the angels revealed in the conversations and the work of early modern occultists like Trithemius,

14. Authors who have emphasized the importance of early modern cosmological beliefs include E. M. W. Tillyard, *The Elizabethan World Picture* (New York: Penguin, 1984); Arthur O. Lovejoy, *The Great Chain of Being: A Study of the History of an Idea* (New York: Harper and Row, 1960); C. S. Lewis, *The Discarded Image: An Introduction to Medieval and Renaissance Literature* (Cambridge: Cambridge University Press, 1967); and S. K. Heninger, Jr., *Touces of Sweet Harmony. Leslie (New York: Zone Books, 1993); James Miller, *The Cosmic Dance* (Toronto: University of Toronto Press, 1986); N. Max Wildiers, *The Theologian and His Universe: Theology and Cosmology from the Middle Ages to the Present*, trans. Paul Dunphy (New York: Seabury Press, 1982); Rene Roques, *L'Univers dionysien: Structure hierarchique du monde selon le Pseudo-Denys* (Paris: CERF, 1983).
15. His mastery might have encouraged Dee to write a book on the nature of angels and spirits, now lost, as Dee noted in his personal diary on 7 July 1600 that, "as I lay in my bed, it cam into my fantasy to write a boke, 'De differentiis quibusdam corporum et spirituum.' " Dee, *PD*, p. 62.

Agrippa, Reuchlin, and Peter d'Abano, displaying an encyclopedic command of the relevant literature.¹⁶ In addition, Dee kept works he frequently referred to in the study where the angel conversations took place, rather than in his more public library.¹⁷ When he left England for the Continent, he took a large portion of his great collection with him to central Europe. Dee marked for travel so many of the books that discussed angels - like Trithemius's *De septem secundeis* - we can only conclude that he found them helpful in his angel conversations.¹⁸

Dee also drew on less esoteric printed sources for his angelology, including the Bible.¹⁹ In the Bible, angels appear sparsely in the Old and New Testaments, and more regularly in the Apocrypha and Pseudepigrapha, which were still a part of printed Bibles during Dee's lifetime. Important to Dee's establishment of the angel conversations as a universal science was the long and authoritative biblical history of the role angels played in helping humans to understand God's plan through visionary revelations. From his Bible, Dee would have been familiar with angels as divine messengers, guides on revelatory journeys, and agents of the Apocalypse.²⁰

Biblical accounts provided later Christian commentators with ample

Julien Ries and Henri Limet, *Homo Religiosus* 14 (Louvain-le-Neuve: Centre d'Histoire des Religions, 1989), pp. 117-134; Joseph Ponthot, "L'Angelologie dans l'Apocalypse johannique," *ibid.*, pp. 301-312.
20. Although one of the most prominent examples of this tradition is the story of Jacob's ladder, there are also important references to angelic messengers in the New Testament. In Matthew 1:20, an angel allays Joseph's fears about Mary's pregnancy, and in Luke 1:26, the angel Gabriel foretells the birth of Christ to Mary. In the Apocrypha, angels typically function as guides on revelatory journeys, as in the case of Tobit (when the angel Raphael appears to Tobit to serve as his son's spiritual guide) and 2 Esdras (when the angel Uriel shows Esdras secrets about the created world). Throughout Revelations, angels play a more active role: announcing the end of days, bringing souls to judgment, and sealing Satan in the Abyss for a thousand years.

material for discussion, and Dee relied heavily on these works for their synthetic treatment of angelic natures. Some of the sources Dee used to inform his angelology were philosophical, some theological; and still others were concerned with specific properties of the Book of Nature.²¹ His most important source was undoubtedly Dionysius the Areopagite, on whom so many other Christian commentators had depended.²² Dee owned the entire Dionysian corpus, including a copy of his complete works with a commentary by Jacques Lefevre DEtaples (Venice, 1556), and an additional copy of *De mystica theologica* with a commentary by the German mystic Eck (Rome, 1525).²³ The copy of *De mystica theologica* is intriguing because it demonstrates that Dee was as interested in contemporary commentaries on the work of Dionysius as he was in the text itself.²⁴ But some contemporary commentaries were missing from Dee's collection, most notably Ficino's much lauded edition of the Dionysian corpus, which had been instrumental in the reintroduction of Platonic ideas into western Europe in the fifteenth century. Instead, the editions Dee owned contained more current, post-Reformation commentaries that blended Dionysius's ancient ideas with the most up-to-date humanistic scholarship and theology.²⁵

21. I. R. F. Calder includes a detailed exposition of possible sources for Dee's angelology in his two-volume thesis, which focuses on Platonic and Neoplatonic influences. Calder, "John Dee Studied as an English Neoplatonist," 1:739-833.
22. For Dionysius's influence on cosmology and theology, see Rene Roques, *L'univers dionysien*, and D. Knowles, "The Influence of Pseudo-Dionysius on Western Mysticism," in *Christian Spirituality: Essays in Honour of Gordon Rupp*, ed. P. Brooks (London: SCM Press, 1975), pp. 79-94, passim. Throughout the Middle Ages scholars and theologians believed that Dionysius was the disciple of Saint Paul who was responsible for converting the Athenians to Christianity. Dionysius's works were redated by Lorenzo Valla in the fifteenth century, making this an impossibility. However, this redating had little effect on scholarship for over a century. On Dionysius's association with Saint Paul, see Guntriam G. Bischoff, "Dionysius the Pseudo-Areopagite, the Gnostic Myth," in *The Spirituality of Western Christendom*, comp. E. Rozanne Elder (Kalamazoo, MI: Cistercian Publications, 1976).
23. Roberts and Watson, #975 and #271, respectively.
24. For an analysis of this commentary, and its associations with the theology of Nicholas of Cusa, see Georgette Epiney-Burgard, "Jean Eck et le commentaire de la *Theologie Mystique* du Pseudo-Denys," *Eibliotheque d'humanisme et renaissance* 34 (1972): 7-29.
25. See Karlfried Froelich, "Pseudo-Dionysius and the Reformation of the Sixteenth Century," in *Pseudo-Dionysius: The Complete Works*, trans. Colm

The Dionysian corpus was second only to the Bible and the works of Boethius in the number of translations, editions, and further commentaries it generated throughout the Middle Ages and the early modern period.²⁶ It was Dionysius, for example, who first elaborated the three hierarchical divisions of angels, each containing three separate orders, or choirs, of angels. The highest order was comprised of Seraphim, Cherubim, and Thrones, who surrounded God and sang his praises. On the next level Authorities, Dominions, and Powers directed their activities toward God, standing "with their faces to Him and their backs to us."²⁷ Finally, the angels who ministered to humanity were in the lowest order: the Principalities who guarded over nations, and the Archangels and Angels who delivered messages to humanity. The idea that angels (at least angels of the lowest level of the celestial hierarchy) were specifically created to communicate with human beings had a particularly strong appeal to subsequent scholars - so much so that Martin Luther, an opponent of Dionysius's Platonism and Neoplatonic mystical piety, encouraged his followers to "shun like the plague that 'Mystical Theology' of Dionysius and similar books" which "taught that humans can converse and deal with the inscrutable, eternal majesty of God in this mortal, corrupt flesh without mediation."²⁸

The possibility of direct communication with God was contested during the stormy days of the Reformation. Because angels were linked to human redemption and salvation and thus to the elect, references to angels appeared in Protestant as well as Catholic treatises. The importance of angels was magnified by their numerous appearances in the apocalyptic Revelation of John the Divine. Angels were expected to fulfill many roles in the final days, including communicating to the chosen, in advance, the full scope of the events. More important, however, the angels provided a model for exemplary human conduct. Stripped of earthly needs for food and sustenance and free from sinful human desires and impulses, the perfect, orderly lives of the angels provided a stable anchor in the confusion of the Reformation period. People interested in the ways angels could serve as models for human conduct needed to look no further than one of the many editions of the Dionysian corpus for guidance. In Dionysius's scheme, angels helped to redeem humanity "by prescribing roles of conduct, by turning them from wandering and

sin to the right way of truth, or by coming to announce and explain sacred orders, hidden visions, or transcendent mysteries, or divine prophecies."²⁹

The angels' function as role model was an important feature of sixteenth-century theological and cosmological beliefs, but the angels had also held positions of wider cosmological importance. Many of these roles had been expansively treated in the ancient, Arabic, and Jewish traditions - which only made them more problematic to orthodox Protestants and Catholics. When pagan, Jewish, and Arabic angels joined with Christian angels, they became omnipresent and necessary features of the cosmos on a structural-functional level as well as agents in human salvation. No longer limited to the functions of messengers or redemptive role models for humans to follow, angels became Christianized planetary intelligences responsible for moving the celestial spheres. Though some writers continued to try to separate angels and planetary intelligences, most found themselves unable to keep the two categories distinct.³⁰ Even Dee, who often took issue with inappropriate terminology, noted in his copy of Azalus's encyclopedia that planetary angels or "intelligences" moved the heavenly bodies.³¹

Once scholars had linked angels and celestial intelligences, further connections were made between angels and the Platonic "forms" some philosophers believed were embedded in the Book of Nature. The association of angels and forms, in turn, contributed to early modern occult systems of sympathy and antipathy that drew heaven and earth together.³² By Dee's lifetime, angels played a key role in the maintenance of cosmic order and were credited with creating the music of the spheres, grasping the divine language of creation and understanding the divine will. Finally, angels were materially related to the natural world and humanity through the soul and essential forms. By the sixteenth century, angels provided a vitalistic, cohesive principle for the cosmos similar to early ideas about gravity - anything that happened in the cosmos that

was inexplicable through mechanical or physical means was attributed to an angelic agency working at God's behest.

At the time Dee was engaged in his angel conversations this eclectic concept of an angel was firmly rooted in works of theology and natural philosophy. Angelology was particularly relevant to those who were attracted to the occult aspects of the Book of Nature, or their magical manipulation. This was the great danger of the syncretistic conception of angels, with its pagan and heretical roots: it could be construed as demonic. Given the range of authors who contributed to the hybrid, early modern Christian angelology, disagreement over this issue was prevalent - as were charges of sorcery, conjuring, and enchantment against those interested in communicating with angels. Natural philosophers interested in the cosmos's occult properties fueled the controversy surrounding the potentially demonic connotations of angelic communication by emphasizing the enormous possibility for knowledge and wisdom that existed precisely because of the angels' liminal, intermediary position between the created and spiritual worlds. One of Dee's contemporaries, the natural philosopher Francesco Giorgi, reminded his readers, in *De harmonia mundi* (1545) that, just as God descended to the world by emanation through the angels, so humans might use the angels as a ladder to ascend to God.³³ Such conclusions were bound to cause concern in a culture both fascinated and repelled by the idea of contacting spiritual beings. Giorgi was not alone in his conviction that angelic intermediaries could resolve many mysteries in the Book of Nature. Trithemius's *De septem secundeis* contained a similar mixture of astrology, cabala, and angelology.

Dee was interested in the redemptive possibilities of communication with angels, despite its dangers. The marginalia in his copy of Dionysius's works indicate that Dee adopted the celestial order or hierarchy filled with angels and was concerned with mastering the specific nuances of the system. He noted, for example, that the number of angels within each hierarchy was "innumerable," despite scriptural references to "a thousand times a thousand" or "ten thousand times ten thousand."³⁴ He

33- Quoted in Thorndike, V:45i. Dee's copy of Francesco Giorgi's *De harmonia mundi* (Paris, 1545) is Roberts and Watson, #221/891; it has not been recovered.

34- Dee's emphasis in Dionysius, *Opera* (Venice, 1556), Roberts and Watson, #975> P- 47^V [sig- F6^V]: "At hoc item spiritali [sic] discussione 8c magisterio dignufm] puto, quamobrem scripturae sanct[a]e traditio, de angelis loque[n]s millia millium esse dicat, & decies millies denamillia, supremos humanos numeros in seipsos involvent atque multiplicans, perq[ue] hos

emphasized that the celestial hierarchy was more than just an organizational scheme; it also represented different modes of active *participation* in the cosmic system. Some angels participated more fully in the divine plan than other angels, and all angels were more active in the cosmos than was humanity. Still, Dee believed that all members of the hierarchy, both divine and terrestrial, were "*fellow workmen for God and a reflection of the workings of God*"³⁵ because the hierarchical continuum ensured that all parts of the Book of Nature, high and low, were "*as like as possible to God*."³⁶ But the angels of the celestial hierarchy were "*images of God in all respects, . . . clear and spotless mirrors* reflecting the glow of primordial light and indeed of God himself" whereas human beings were not capable of such perfection.³⁷

Dee's interest in the Dionysian system was significant for his natural philosophy because angels could be linked to the vast web of correspondences that knit the cosmos together. The Dionysian celestial hierarchies could be incorporated into existing lists of sympathetic and antipathetic relationships, and in two places Dee listed correspondences between angels, the twelve signs of the zodiac, the ten spheres, the seven planets, the four elements, and the four winds.³⁸ These lists demonstrate his familiarity with angels from a variety of traditions, and also his belief that angels were linked to the natural world through occult connections and influences. Though the exact sources for his elaborations are difficult to trace - most early modern authors drew on a variety of authors for their ideas without citation - there are some notable exceptions where he credits an author or refers to a text.

Often, the authors are prominent in what we call the occult sciences. Occult natural philosophers occupied a special place in Dee's library and in the formation of his angelology, providing him with a synthesis of lore about angels drawn from Islamic, Jewish, and Christian authors. In

the angel diaries, Dee stated there were angels who governed particular professions, for example, and credited the doctrine to the occultist Agrippa.³⁹ Agrippa may not have been the first to think of such a relationship, but this example elucidates the many filters through which Dee's ideas about angels passed as he crafted his rationale for the angel conversations.

Dee found the works of another occult philosopher, Agrippa's teacher Johann Trithemius, deeply compelling, and he owned many of the abbot's works. Trithemius, who became engrossed with the works of Dionysius in 1496, depended on him for his ideas about angels.⁴⁰ The work of Trithemius provided Dee with information about the various levels of the cosmic hierarchy as well as ways in which angelic knowledge could be put to practical use by natural philosophers. Dee heavily annotated and underlined Trithemius's *Liber octo quaestionum* (1534), which was concerned with the spiritual life of humanity and the place of angels in the cosmic system.⁴¹ Dee owned another of Trithemius's works, *De septem secundeis* (1545), which contained specific information about the angels who governed the planets and argued for an angelically governed periodization of world history.⁴² In addition, Dee acquired a manuscript copy of Trithemius's *Steganographia* when he was on the Continent in 1563, believing that it was "so needfull and comodious, as in humayne knowledg [*sic*], none can be meeter."⁴³ The *Steganographia* introduced a method of long-distance communication based on the seven planets and their guardian angels "according to the tradition of the wise men of old."⁴⁴ To have utilized the system, the practitioner needed to master technical astrology, especially the exact motions of the planets.⁴⁵ Though Dee's interest in Trithemius's system has always been linked to his pos-

sible interest in cryptography, there is no evidence to suggest that anyone in Elizabeth's government considered the work anything but a curiosity.⁴⁶

It is clear from Dee's marginalia that he was fascinated by the works of the principal occultists of his time. His angelology was not, however, solely based on the work of occult philosophers. Pompilius Azalus's encyclopedia, *De omnibus rebus naturalibus* (1544), provided another source for Dee's angelology, and though it was not the most original work he consulted, it is indicative of the thumbnail sketches then available. Azalus's work contained, as the title suggested, a discussion of all aspects of the terrestrial and celestial worlds, and was intended to be a useful compendium of information about the cosmos rather than a sophisticated theological or natural philosophical treatise. Nonetheless, Azalus drew on sources from the Christian tradition such as Dionysius, as well as natural philosophical sources.

Dee's copy of *De omnibus rebus naturalibus* is heavily annotated in several sections - most noticeably in the two chapters on angels.⁴⁷ He was specifically interested in Azalus's remarks on guardian angels, noting that everyone had a guardian angel who watched over him, inspired him, and stimulated him to do good works.⁴⁸ This idea was far from novel, but it could be pressed into greater service by a natural philosopher interested in the role that angels played in the cosmic system. One of Dee's fellow natural philosophers, Girolamo Cardano, who met Dee on a dock in Southwark in late 1552 or early 1553, demonstrates how such an idea could be refined.⁴⁹ Cardano believed that guardian angels

46. Jim Reeds explores the cryptological significance of Trithemius's work in "Solved: The Ciphers in Book III of Trithemius's *Steganographia*," forthcoming. Luigi Firpo, using Dee's interest in Trithemius's *Steganographia*, suggests that Dee was an agent for the Crown, in "John Dee, scienziato, negromante e avventuriero," *Renascimento* 3 (1952): 25-84. I concur with French, who argues that any discernable veneer of cryptography was intended to hide the "cabalist-angel magic" that was the true focus of the work (*John Dee*, pp. 36-37).

47. Dee's copy of the work is Roberts and Watson, #134. Azalus's work was included in Dee's continental traveling library.

48. Dee's annotations in Azalus, p. i8^r.

49. Girolamo Cardano, *The Book of My Life (De vita propria liber)*, trans. Jean Stoner (London: J. M. Deut & Sons, 1931), pp. 240-247. Unfortunately, only one has been recovered.

had inspired the work of philosophers such as Socrates, Plotinus, and Synesius, and he argued that guardian angels influenced his own natural philosophy. Cardano enjoyed visions and instructions from his personal angel while in prison and remained confident that his angel "was a spirit of power" because some of his visions were witnessed by others.⁵⁰ Cardano even credited his angel with helping him escape from captivity.

From Dee's library, his marginalia, and the discussions later held with angels about their natures and abilities, we can determine the basic features of his angelology. Essentially, he believed angels were composed of two substances: one active, the other potential.⁵¹ Their duality of substance enabled them to participate with the divine and communicate with humanity without losing their intermediary place in the cosmic system. In accordance with their essential duality, angels were not limited by a material, corporeal form. Instead, they were spiritual and immortal.⁵² Angelic spirituality became important to Dee's angel conversations because the angels were not limited to human methods of corporeal communication. According to Dee, the angels "have no organs or instruments apt for voyce: but are mere spiritual! and nothing corporall: but. . . [they] have the powre and property fro[m] god [*sic*] to insinuate . . . [their] message or meaning to eare or eye . . . [so] that. . . they here [*sic*] and see . . . [the angels] sensibly."⁵³ The power to communicate through the imagination rather than speech was not the only supernatural ability enjoyed by the angels. They were also able to imitate divine thought processes, and their intellects were far superior to rational, human intellects.⁵⁴ Dee noted that the angelic intellect was greater and more powerful than the human, and their mental acumen was critical to his rationale for conversing with them.⁵⁵ Through their powerful intellects the angels had certain knowledge of the Book of Nature and,

Dionysius, "Celestial Hierarchy," p. 156.

55- Azalus, p. i8^v. Dee noted that the "intellectus Angelicus" exceeds even the "intellectum sapie[n]tissimi hominis."

because they could see God, were able to see all aspects of the created world through God.⁵⁶ This did not mean that the angels knew the Deity completely, or knew about all divine causes and effects, but Dee believed that they did have a mastery over the natural and supernatural worlds.⁵⁷

Such mastery was, by itself, insufficient reason for Dee's devotion to his angel conversations as a means for achieving natural philosophical aims. What raised Dee's hopes that the angels' knowledge would be communicated to him was his belief in guardian tutelary angels. A frequently employed trope in his angel conversations was the idea that he and Kelly were students in a "celestial school" with angelic "schoolmasters."⁵⁸ Dee's faith in tutelary angels was shared by others of the period. Cardano also believed that his best insights came from angelic guides, which he associated with the most subtle working of his intellect. First, Cardano believed he gained knowledge through the senses and observations. Second, he came to understand "higher things" by looking into their "beginnings." At this level, Cardano noted, he was "aided on many occasions by spiritual insight." The third, and highest, form of knowledge was "of things intangible and immaterial." Cardano arrived at this highest form of knowledge "wholly as a result of the ministrations of my attendant spirit."⁵⁹

Because the emphasis on tutelary angelic guidance brought natural philosophy very close to revealed theology, Dee's move away from observation toward a revealed understanding of the Book of Nature has made problematic the status of the conversations as a form of natural philosophy. The importance and certainty of angelic revelations in matters pertaining to the natural world were, in Dee's time, the most significant features of his angelology. In his copy of Dionysius, Dee noted that angels were granted divine enlightenment and became responsible for passing arcane information to the lower, human levels of the cosmic hierarchy according to God's will.⁶⁰ Dee believed that the information

shared by the angels would include divine law, revelations of future events, prophecies, and doctrines. What is more, he was convinced that he would be transformed by this process, as would the world.⁶¹ Once the purifying, illuminating, and perfecting light of God was mediated and transferred through the angels' revelations, Dee would be able to purify and perfect those around them.⁶² The purified would then be able to receive further revelations, and turn to raise those beneath them in the cosmic hierarchy "toward cooperation with God."⁶³

Dee faced a significant problem within his "celestial school": how to recognize the good angelic teachers from the demonic. He relied on visual cues and the angels' appearance for assistance.⁶⁴ He and Kelly always described even the most regular angelic participants - the angels Gabriel, Michael, Raphael, and Uriel - noting minute changes in their clothing or appearance. The appearance of angels was important in ancient and medieval angelology and in the Judeo-Christian tradition, where angels adopted visible, human forms.⁶⁵ Dionysius devoted an entire chapter of the "Celestial Hierarchy" to the ways in which angels appeared to humans, and Dee took note of the shapes, clothing, and attributes of the angels - from wheels of fire to flaming swords.⁶⁶ Yet the angels' appearance in a form legible to humans represented an abasement: "Angels abase themselves, to pleasure man by theyr instructions," Dee wrote, "when they tak[e] upon them, or use any sensible evidence of them selves or voyces, etc."⁶⁷

Dee took to heart the warnings of scholars, including Trithemius, that no good angels ever appeared in the form of women. Dee's ambivalence about female angels caused problems within the "celestial school" when the female angels Madimi and Galuah appeared in the showstone. In order to "stop the mouths of others" who would dispute their trustworthiness, Dee questioned Galuah closely about whether good angels could appear in female form. Galuah responded that angels were neither male

nor female, but "take formes . . . according to the discreet and appliable [*sic*] will both of him [God], and of the thing wherein they are Administrators."⁶⁸ Though Trithemius "spake in respect of filthinesse" in regard to women, and separated "the dignity of the Soul of women from the excellency of man," Galuah reported that the abbot could not be more wrong. Galuah added that Wisdom was always "painted with a womans garment," and so it was appropriate for angels to appear as women, since their messages revealed divine wisdom. Dee's doubts were thus satisfied that the angels' forms were symbolic images created to assist frail human minds in understanding the mystical and profound truths they offered.

Dee's interest in the nuances of angelology demonstrates his efforts to master what he believed was a new and promising universal science. The angelic "schoolmasters" who taught him natural philosophy were an answer to his intellectual crisis of confidence, and the culmination of his earlier efforts to create a universal science capable of deciphering the Book of Nature. The angels offered Dee a role model, and a wider perspective on the decaying world, and gave him the tools to address the difficulties associated with practicing natural philosophy at a time when the natural world seemed unreliable and mutable. What is striking about Dee's studies in angelology was his ongoing fascination with the power of intermediaries, first evident in the *Propaedeumata aphoristica*, the *Monas hieroglyphica*, and the "Mathematical Preface." In Dee's angelology the intermediary communication that angels provided between the mundane and the divine was of paramount interest. Dee's next challenge was to conceive of a method to further his ambitions for angelic communication that would neither comprise his status as a natural philosopher nor violate the religious tenets of his time.

Dee's Method: Optics and the Power of Prayer

Dee's interest in angels and angelology was fostered by his belief that a more accurate assessment of the Book of Nature would result. In addition, he viewed his communication with angels as a new form of religious devotion in a period when religious practices were hotly contested. Like many religious practices in the early modern period, Dee's angel conversations could be seen as magic just as easily as they could be seen as either natural philosophy or religion, and it is this tangle of religious, magical, and natural philosophical ideas that has proven so problematic

68. *TFR*, p. 13.

to modern scholars. Dee's angelic cosmology combined religious and natural philosophical precepts into a way of looking at the world that offered hope of greater communication and wisdom. After all, the presence of angels in the world was of little use to a natural philosopher such as Dee if he could not communicate with them. To do so he enlisted additional religious and natural philosophical ideas that verged on the magical, specifically optics and the power of prayer.

Dee combined prayer and the magnification of divine influences through a crystal stone to facilitate his conversations with angels. His use of a crystal stone is the clearest example of the ways in which natural philosophical principles informed his practices. The showstone was the focal point of the conversations; it ordered the physical space and drew on the optics so central to Dee's natural philosophy. Understanding the properties of the showstone was, in Dee's mind, his supreme achievement, because its use produced tangible results in the form of new information and angelic communication. Dee's cosmology, as we have seen, recognized the secret potentials embedded in the Book of Nature as well as more manifest evidence of God's power. Nowhere is this duality more marked than in Dee's interest in the physics and metaphysics of light. As a result of these studies, he could relate his showstone and its use to the existence and behavior of visible and, more important, *invisible* rays. If, as Nicholas Clulee has persuasively argued, "Dee's natural philosophy was based on a theory of astral radiation," then his use of the showstone can be seen as the culmination of his natural philosophy, and quite possibly his "archemastrie."⁶⁹

Although many occult practices, including divination, relied on stones or mirrors, Dee's utilization of the showstone was more optically sophisticated. In late medieval and early modern Europe stones were used in divination typically to locate stolen property, a practice decried by the church.⁷⁰ By the sixteenth century scrying had evolved into two interrelated traditions: catoptromancy, or the use of mirrors to see visions; and crystallogomancy, or the use of crystal stones (such as Dee's showstone) to

Nicholas H. Clulee, "Astrology, Magic, and Optics: Facets of John Dee's Early Natural Philosophy," *Renaissance Quarterly* 30 (1977): 678. I have used the assertions of this early article to contradict Clulee's later belief that the angel conversations were influenced by Dee's natural philosophy but "cannot be considered as science or natural philosophy in its own right." See Clulee, p. 203.

70. Benjamin Goldberg, *The Mirror and Man* (Charlottesville: University of Virginia Press, 1985), pp. 12-13; Keith Thomas, *Religion and the Decline of Magic* (New York: Charles Scribner's Sons, 1971), p. 215.

see visions. One of the differences between catoptromancy and crystal-lomancy is that accounts of the latter almost always mention angels or other spirits, while scrying texts involving mirrors do not always refer to a supernatural agency.⁷¹ Though catoptromancy and crystallo-mancy were the most common traditions, they do not represent the full spectrum of practices. Scryers could use cups of liquid to see visions (cycli-comancy), as well as rivers and ponds (hydromancy), and even the polished fingernails of virgins (onychomancy).⁷²

Commonly, scryers used mirrors. Even the polished fingernail of a child or virgin was more popular than a crystal showstone like Dee's.⁷³ Most natural philosophers interested in the occult sciences during the early modern period, and specifically those interested in communicating with angels and spirits, tended to use crystal stones however. Simon Forman's book of magic, for example, included instructions for engraving crystals to facilitate the appearance of spirits and angels.⁷⁴ When crystal stones were used, the manuscripts often mentioned ritualistic preparations such as fumigations or anointing, which Dee did not include in the descriptions of his practices.⁷⁵ Yet Dee was well versed in occult traditions and owned works containing such rituals by Agrippa and Peter d'Abano. How and why did Dee's use of the crystal showstone differ from the early modern norm?

Dee's angel conversations employed the physics and metaphysics of light to lend the authority of natural philosophy and theology to traditional scrying practices and distance his use of the showstone from common forms of divination. The light metaphysics of Grosseteste and Roger Bacon informed Dee's earliest published works, the *Monas hieroglyphica* and the *Propaedeumata aphoristica*, as well as the later "Mathematical Preface" and angel conversations.⁷⁶ In the *Propaedeumata aphoristica* Dee described the metaphysical connection between light and certain "spiritual species" that were able to "flow from things both

76. See Chapter 2 for a complete discussion of these developments.

through light and without light."⁷⁷ This connection, along with the privileged position Dee accorded to light, forged a metaphysical connection between light, perfection, and spirituality. Though the mention of Dee's angel conversations may conjure in our minds the image of darkened rooms and the curtained trappings of a Victorian seance, the vast majority of angel conversations took place after sunrise and before sunset - although a brightly shining sun in England or northern Europe might have been too much to expect. In the earliest surviving conversation, the angel Anael instructed Dee to communicate with the angels on "the brightest day, When the Sonne shyneth: in the morning, fasting, begynne to pray. In the Sonne Set the stone."⁷⁸ Dee adhered to these instructions as best he could, as may be seen in his notations of the time of each conversation, as well as the date.

Although the crystal showstone facilitated communication with angels, it was not sufficient to ensure it. Dee's other safeguard was prayer. Prayer was a sanctioned method of communicating with the divine, and Dee's optical knowledge and his faith in the power of prayer worked together to provide him with both a theory and a practice for rising above his limitations as a flawed human being in a decaying and corrupt world. Most important, however, prayer offered Dee a method of communication with the occult forces of the Book of Nature that did not - technically, at least - resort to invocation or the binding of spirits. Bishop John Fisher, one of the founders of Dee's undergraduate college, described the power of prayer as a

golden rope of chaine lett downe from heaven, by which we endeavour to draw God to us whereas we are more truly drawne to him. . . . This rope of golden Chaine holy S. Dionisius calleth prayer. . . . Lastly what other thing doth it, but elevates the mind above all things created, soe that att last it is made one spirit with God. . . .⁷⁹

Prayer was a way for people to rise to higher intellectual levels and to climb the cosmic ladder. Dee, however, took traditional theological arguments about the power of prayer and the existence of angels a step further with his conviction that communication with angels was not limited to mystics and theologians; it was also the prerogative of natural philosophers well versed in the Book of Nature.

77. Dee, PA, pp. 127-129. 78. Dee, AWS 11:15.

79. John Fisher, *A Treatise of Prayer and the Fruits and Manner of Prayer*, pp. 19-20 and 22; quoted and discussed in L. Kelly Faye, *Prayer in Sixteenth-Century England* (Gainesville: University of Florida Press, 1966), pp. 29-30.

Dee's "extra step," his belief that communication with angels represented yet another tool in the workshop of a natural philosopher, was not entirely idiosyncratic. Other natural philosophers interested in deciphering the Book of Nature were also interested in communication with the spiritual levels of the cosmos. Where they differed from Dee was in their reliance on binding spells rather than prayer to command spirits. For example, Thomas Allen (d. 1633), one of early modern England's greatest bibliophiles and collectors, owned a sixteenth-century manuscript that described how to invoke and bind simple spirits.⁸⁰ Another early modern manuscript collection included instructions for conjuring angels with the aid of a crystal and invocations and requiring them to perform spiritual "experiments." An interesting feature of this manuscript is the account of a "true experiment proved in Cambridge anno 1557 of 3 spirits to [be] don[e] in a chamber, whose names are Durus, Artus, Aebadel."⁸¹ Dee spent considerable time at Cambridge University, and this manuscript suggests the intriguing possibility of a link between these earlier, anonymous spirit experiments and Dee's later decision to pray for angelic guidance.

Calling upon God through prayer and summoning spiritual agencies through magical invocation are technically distinct, although the passage of time has made them less so. In prayer, the practitioner subjects himself to the will of God. In magical invocation, on the other hand, the practitioner subverts the hierarchical arrangement of the cosmos by asserting his or her will over a spirit and, through a subsequent binding spell, controlling a spirit's actions. Though prayer and invocation might have the same roots in early religious practices, by the sixteenth century the distinction between them was pronounced. Dee would have argued that his conversations with angels involved no hint of invocation but employed only prayer and his devout subjection to God's will and purposes.

80. Allen is a complex figure, who may have employed Edward Kelly before he entered Dee's service as a scribe. The connections between Allen and Dee do not end there. Count Albert Laski invited him to Poland in 1583 - when Laski extended a similar invitation to Dee - but Allen chose to remain in England and collaborate on intellectual projects with Henry Percy, the "Wizard Earl" of Northumberland. See Bodleian Library e. Mus. MS 238, *passim*. There are no marks on this manuscript to indicate that it ever passed through Dee's hands. See Andrew G. Watson, "Thomas Allen of Oxford and His Manuscripts," in *Medieval Scribes, Manuscripts, & Libraries. Essays Presented to N. R. Ker* (London: Scholar Press, 1978), pp. 279-316; Roberts and Watson, pp. 58 and 65.

81. Bodleian Library Rawlinson MS 0253, f. 50' and *passim*.

Dee had been sensitive to charges of conjuring and invocation since 1547, when he was alleged to have commanded spiritual agencies in a production of Aristophanes' *Pax* at Cambridge University. For the production Dee engineered a beetle that miraculously flew through the air "to Jupiter's pallace, with a man and his basket of victuals on his back."⁸² The sensation caused by the flying beetle was sufficient to start the first whispers that Dee had achieved his special effect, not by mechanics, but by magic. Years later, Dee was still lamenting the "vaine reportes spread abroad of the meanes how that [beetle] was effected."⁸³

The tension between prayer and invocation is linked to the larger problem of what constituted magic in the early modern period. Defining magic can be difficult, because neither early modern authors nor modern scholars can agree on how words like *conjuring*, *magic*, and *invocation* should be used.⁸⁴ Many modern scholars, following the lead of Frances Yates, see Marsilio Ficino's revival of the Hermetic corpus as the pivotal moment in the development of early modern magic.⁸⁵ Ficino's interest in the ideas attributed to the pre-Christian philosopher Hermes Trismegistus, they argue, helped to foster a conception of magic embedded both in the natural properties of the world and in the supernatural powers linked to those properties through sympathetic relationships. In the early modern period, however, the ideas of Hermes were pagan, even if he was attractive to humanists because of his great antiquity. While many, including Ficino, argued that the Hermetic corpus could be read and utilized by orthodox Christians because it contained prophetic references to Christ, other passages (such as fumigations and the activation of statues through astral and sympathetic magic) were contrary to church doctrines. Later, Yates emphasized her initial premise - that Hermeticism alone did not account for the early modern interest in the occult - but

84. Brian P. Copenhaver, "Natural Magic, Hermeticism and Occultism in Early Modern Science," in *Reappraisals of the Scientific Revolution*, ed. David Lindberg and Robert Westman (New York: Cambridge University Press, 1990), pp. 261-301. Instead of using specific terms like "hermeticism," Copenhaver suggests the alternative term "occultist" to describe early modern interest in the workings of the unseen forces of nature as it was manifested in demonology, magic, astrology, and other disciplines (p. 289).

85. See Frances A. Yates, *The Occult Philosophy*, p. i, and *Giordano Bruno and the Hermetic Tradition* (London: Routledge and Kegan Paul, 1964), pp. 62-83.

her efforts to return to a more varied conception of magic are often overlooked in favor of a purely Hermetic viewpoint.⁸⁶ In contemporary scholarship, Hermeticism is still considered the prime mover of early modern occultism and has become synonymous with magic as a result - an inaccuracy that undermines our analysis of early modern natural philosophy.

Whenever scholars have tried to classify Dee's angel conversations, they have quickly discovered that no single category such as Hermeticism can contain them. The conversations were explicitly separated from the Hermetic tradition, as the angels told Dee, in an allusion to Moses' contest with Pharaoh's magicians in Exodus 7:9-13, that the "Arts of the Egyptian Magicians" seemed to be powerful but were not.⁸⁷ Nor do the angel conversations fall easily under the constraints of "natural magic" in which properties of the natural world are manipulated and enhanced, as in the work of one of its leading proponents, Giovanni Battista della Porta.⁸⁸ Dee never contacted the devil or made any sort of pact exchanging his soul for information, so it is impossible to consider the angel conversations a form of black magic. Even demonic or spiritual magic, where a good or bad spirit is invoked, bound, and forced to do a magician's will, fails to characterize Dee's angel conversations. Nor can they be classified as ceremonial or "white" magic as Wayne Shumaker defines them, as Dee did not use the vital process of ritualistic invocation.⁸⁹

If today's scholars are confused about the precise nature of magic in the early modern period, they are not alone; it is clear that Dee and his contemporaries were not entirely sure what magic, religion, or natural philosophy were either. Though most individuals accused of being magicians were vehement about their innocence, early modern definitions of magic were diverse, incommensurable with each other, and internally incoherent. An example from the work of Francesco Giuntini (1523-1590), who lived in the French city of Lyons during Dee's visit there, illustrates the point. In his *Speculum astronomiae* (1573) Giuntini discussed the possibility that magic and necromancy might well be branches

of natural philosophy subordinated to astrology.⁹⁰ Giuntini based this opinion on the following argument: "[in magic and necromancy] demons operate nothing except by natural application of active forces to the appropriate and proportionate passive objects, which is the work of nature, and this at determined times and under determined signs, which is astrology."⁹¹ Though logically flawless, Giuntini's opinion was not shared by most of his contemporaries - especially in regard to necromancy, or conjuring with the dead, which remained the most objectionable form of magic in the early modern period. Giuntini went on to argue that magical abilities, if acquired through study or from a good angel, were completely unobjectionable no matter what their form or function.⁹² Giuntini's ideas might have been warmly received, especially by someone like Dee, but magic remained in a liminal and problematic place in early modern systems of knowledge.

Dee and his contemporaries drew fine - sometimes very fine - distinctions between magic, religion, and natural philosophy in an attempt to relieve the tensions among them. Often, authors of the period made a particular point of excepting communication with angels from other forms of magic, as did Giuntini. Prior to Giuntini, the positive results that might be had from communication with angels were suggested by Agrippa. In *De occulta philosophia* Agrippa outlined a system of occult beliefs and practices that was at once natural, spiritual, magical, and deeply religious. His system relied heavily on the fusion of mathematics and language present in the cabala, which became a chief element in Dee's angel conversations. But Agrippa placed a far greater emphasis on the wonder-working potential of names and their use in summoning spirits and angels. In addition, Agrippa was interested in the magical practices endorsed by Ficino's Hermeticism, such as fumigations and the use of magical sacrifices to draw and enhance occult powers in the natural world.⁹³ These practices were absent from Dee's angel conversations, too, and their absence suggests that he was adapting the angelic magic suggested by Agrippa and Giuntini in favor of a more streamlined approach that would defy fewer orthodox religious practices. This is evident in the absence of invocations and compulsions in Dee's angel

90. Dee owned three of Giuntini's works, including the *Speculum astronomia* (Paris, 1573), which he took with him to central Europe; it has not been recovered. See Roberts and Watson, #470, #739, and #1883.

conversations, both of which were prevalent in other spiritual and demonic practices, in favor of humble prayer and petitions. This absence led Clulee to argue persuasively that Dee did not see the angel conversations as "a type of magic but as a variety of religious experience sanctioned by the scriptural records of others to whom God or his angels imparted special illumination."⁹⁴

Dee used prayer to facilitate the angel conversations rather than spells and conjuring, but prayer could never be completely divorced from occult practices.⁹⁵ Sir Walter Raleigh drew on Plato to argue that the "art of magic is the art of worshipping God."⁹⁶ Dee emphasized in his copy of Azalus's encyclopedia that with the use of techniques such as prayer it was possible to communicate with angels without committing the sin of conjuring.⁹⁷ He relied on a prayer which *requested* that God send angels to communicate with him. There is no sense in the angel diaries that the angels were called to do Dee's bidding; they were present at the command of God to do His will. Even Meric Casaubon acknowledged, in his preface to *A True and Faithful Relation*, that Dee "could express himself very fluently and earnestly in Prayer," and that Dee's complete faith in God was impeccable - it was the godliness of his scryers that was in doubt.⁹⁸

The role of prayer in Dee's angel conversations reflected the place prayer occupied in post-Reformation Europe, where it was an important feature of theology and daily life. Through prayer and supplications, wishes were answered, requests for assistance were granted, and divine support was obtained - as long as God willed it. According to Keith Thomas, "there was no benefit which the pious Christian might not obtain by praying for it."⁹⁹ Communicating with the divine was a tricky business, however, and the difficulties of achieving perfect communication with God were often acknowledged. Recently, Cynthia Garrett revealed that prayer manuals in seventeenth-century England contained "a complex theory of prayer which acknowledges, at times even embraces,

the contingent and imperfect nature of communication with the divine."¹⁰⁰ While communicating with God could be fraught with tensions and even danger, it was nonetheless a positive experience.

Prayers were used throughout the Middle Ages, yet medieval prayers often relied on an intermediary - a saint, the Virgin Mary, or one of the angels - to facilitate the petition. In Dee's time, however, Reformation theologians placed a new emphasis on the ways in which prayer could foster an "unmediated relationship between the individual and God."¹⁰¹ Dee showed himself, in this respect at least, very much a Protestant, for he did not direct his prayers to intercessory agents, such as the angels or the saints.¹⁰² He communicated with God *directly*, and asked the Deity to send angels, who would then function as intermediaries in the transmission of divine knowledge. Simon Forman, in a prayer dated 1567, placed a similar emphasis on contacting angels to obtain knowledge through a Protestant supplication to God rather than an intercessory agency.

O god of Aungells, god of Arch aungells; god of Patriarches, god of Prophetts, god of us Sinners; O Lord be my helpe, that this my worke may proceede in good tyme, to thy glorie O God; and so learninge, and not aut else, that I would this day have. O my God be in my lounge, that I may glorifie the[e] in all workes, Amen.¹⁰³

After the angels revealed designs for the manufacture of wax seals, Forman's prayers continued with a request for protection against evil and the disclosure of information.

Let not [*sic*] evyll spyritt enter my mynde o God, nor nothinge else but all to thy glorie o God; for learninge is all my desior, lord thou knowest, even as yt was to thy servaunte Solomon; O lorde sende me som[m]e of his good hidden worke, that hath not been revealed to noe man. Then for that cause I desier the[e] O god to send at mee, that in these dier laste daies yt may be knowen.¹⁰⁴

The importance of God's "good hidden worke" to Forman, as in the case of Dee, was linked to his belief that the "dier last daies" of the world were at hand and that natural philosophers could play a role in the reordering of nature.

After the Reformation, the Protestant belief that the end of the world was approaching placed increased importance on prayer, since the Bible

suggested God would communicate with the elect as the Day of Judgment approached. Catholic theologians followed the example of their Protestant adversaries as apocalyptic fervor increased, and by the end of the sixteenth century most of Europe was trying to communicate more completely with God. Their attempts included more precise rituals on the part of Catholics and more precise language on the part of Protestants.¹⁰⁵ Reformed prayer was necessary because, like everything else in the Book of Nature, prayer had deteriorated since the time when the descendants of Adam and Eve first petitioned God. Still, as the medieval cleric and natural philosopher Roger Bacon noted in his *Epistolae de secretis operibus artis et naturae, et de nullitate magiae*, some prayers retained their original power. These prayers, "instituted of old by men of truth, especially those ordained to God and to the angels ... are able to retain their original virtue."¹⁰⁶

Praying correctly was only one of the problems facing a devout person in the sixteenth century. In addition, Dee and his contemporaries worried about their ability to decipher God's response. Theologians agreed that God always answered human prayers, though the response could be negative. The faulty interpretation of those responses was a real problem, however; humans often failed to "read God" correctly, as His responses were protected by layers of encoding and symbolism. Like many of the "imperfections" with which humans had to suffer, the unsatisfactory state of communication between heaven and earth stemmed from original sin. Because of the moral Fall, once perfect lines of communication between heaven and earth had deteriorated and God had to reveal His answers to prayers in signs rather than speech.¹⁰⁷ Most theologians believed that God's symbolic messages were particularly evident in the Book of Nature, where they took the form of comets and other marvels.¹⁰⁸

Dee's angel diaries indicate that prayer was a major part of his strategy

for communicating with the divine. In one conversation, an angel spoke at length about the virtues of prayer. "Prayer is the Key, sanctified by the Holy Ghost, which openeth the way unto God," the angel told Dee.¹⁰⁹ Michael told Dee that, without invoking the name of God, angels could do nothing in the terrestrial world, and that "*The key of Prayer* openeth all things."¹¹⁰ Most of Dee's diary entries opened with references to prayer, which preceded any references to visions in the showstone. Dee and his associates were instructed to share a "Conjunction of myndes in prayer" to communicate with God and receive angelic revelations.¹¹¹ Often the prayers were traditional: Dee frequently used one or more of the Psalms in the angel conversations, for example, and was told by the angel Uriel to use the seven penitential psalms to communicate with Michael.¹¹² At other times, the prayers were more personal: Dee wrote lengthy original prayers for himself and others. On one occasion he recorded how he was writing traditionally Catholic, intercessionary "prayers to good Angels . . . for A.[lbert] Lasky," when an angel suddenly appeared in the stone.¹¹³

Prayer was the most overtly religious feature of Dee's angel conversations, but it was by no means the only practice with religious connotations. In diary notes dated 22 December 1581, Dee recounted the angel Anael's instructions to fast, abstain from sex and gluttony, be clean and neatly groomed, say their prayers seven times facing each of the four cardinal directions, and be secretive about the angel conversations as evidence of their devotion.¹¹⁴ In addition, Dee was told not to engage in angel conversations on Sundays, to pray continually, wait for the time when God would "stir" him to conversation, and consider astrological influences on the conversations. "Work in the Sunshine, and from the change of the [moon] to the 14 day after," the angels told Dee, and "in increasing hours, which are from [sun] rise to Noone . . . let the Sun be well placed, & a good planet raining."¹¹⁵

Some of these instructions were similar to ideas found in the spurious fourth book of Agrippa's *De occulta philosophia*. In this work (believed authentic during Dee's lifetime), Agrippa pointed out that it was important for those engaged in communication with spirits to have been "religiously disposed for many days to such a mystery." Ideally, the partic-

ipants should be confessed of their sins, contrite of heart, and washed with holy water. They should be chaste and abstinent, and not preoccupied with secular business. In addition, participants should have fasted as much as possible for forty days, or one lunation.¹¹⁶ In the third book of *De occulta philosophia*, Agrippa emphasized that successful occult practices were based on a strong sense of faith rather than adherence to a grimoire or set of magical precepts. Faith distanced the natural philosopher from the perils of the world, and Agrippa reminded his readers that trusting too much in nature rather than in God was a sure way to communicate with bad demons instead of good angels.¹¹⁷

In 1586, when Dee was in Prague, the angels modified the practices associated with the conversations. The changes further complicate the portrait we have of Dee's angel conversations, because the new prayers relied on Roman Catholic liturgical forms that would have been acceptable in Prague. In later descriptions of the angel conversations, Dee emphasized his role as the "common advocate" for the group, serving his associates as a Catholic priest would serve a congregation, voicing the wishes and desires of the entire group before God. After crossing himself while saying "In the name of the Father, of the Son, and of the Holy Spirit," Dee recited the Lord's Prayer. He continued with the following prayer:

Almighty, Sempiternal, True and Living God, send out Thy light and Thy truth which may guide us safely to Holy Mount Sion and to Thy celestial tabernacles where we may praise and glorify you eternally and for ever and ever. Amen.¹¹⁸

Dee then silently repeated the Sixty-seventh Psalm three times:

God be merciful unto us, and bless us: and cause his face to shine upon us; Selah.

That thy way may be known up on earth, thy saving health among all nations.

Let the people praise thee, O God; let all the people praise thee.

O let the nations be glad and sing for joy: for thou shalt judge the people righteously and govern the nations upon earth. Selah.

Let the people praise thee, O God; let all the people praise thee.

Robert Turner (London, 1655), pp. 59-60. Dee owned a copy of the 1559 edition, Roberts and Watson, #743, which he took with him to central Europe in 1583. It has not been recovered.

117. Quoted in Shumaker, *The Occult Sciences*, p. 146.

118. Dee in Josten, pp. 240-241.

Then shall the earth yield up her increase; and God, even our own
God, shall bless us.

God shall bless us; and all the ends of the earth shall fear Him.

While Dee silently prayed, the rest of the participants waited for the angels' revelations.

In Dee's later conversations the tension between Catholic and Protestant traditions indicates his belief that the angel conversations signaled a new program of religious reform that would unite the religious factions of Europe. Like the proponents of a universal science, the advocates of "universal religion" hoped that a code of faith might be found, constructed, or reconstructed to end the uneasy religious climate of the Reformation era. Of special concern was the conversion of the Jews to this new universal religion, a much anticipated sign that the End of Days was approaching. The religious sect known as the Familists were one of the most outspoken groups to promote universal religion, and Dee might have come into contact with Familist ideas during his residence in Antwerp. Many of his friends there, including Ortelius, Mercator, the publisher Plantin, and Gemma Frisius, were associated with Familism, whose main tenets were religious toleration, outward conformity to state religions, and a deep spiritual adherence to the teachings of the religion's founder, Hans Nicolaes.¹¹⁹

119. The literature on Familism, or the "Family of Love" as it was known in England, is extensive. Many valuable insights into the connections between Familism and the leading proponents of literary and intellectual movements in the Elizabethan period can be found in J. A. Van Dorsten, *The Radical Arts: First Decade of an Elizabethan Renaissance* (London: Oxford University Press, 1970). In a more general vein, Alastair Hamilton, *The Family of Love* (Cambridge: James Clarke and Company, 1981), discusses Familism and its possible influence on Dee (passim, especially p. 113). Jean Dietz Moss has investigated the important early years of the Familist movement, as well as its English manifestations, in "Godded with God": *Hendrik Nicolaes and His Family of Love*, *Transactions of the American Philosophical Society*, vol. 71 (Philadelphia: The American Philosophical Society, 1981), and "The Family of Love and English Critics," *Sixteenth Century Journal* 6 (1975): 33-52. The most recent book on the subject is Christopher Marsh, *The Family of Love in English Society, 1550-1630* (Cambridge: Cambridge University Press, 1993). Three studies of important individuals associated with the religion (Benito Arias Montano, Guillaume Postel, and Christopher Plantin) also contain useful information. See B. Rekers, *Benito Arias Montano (1527-1598)* (London: Warburg Institute, 1972); Marion Leathers Kuntz, *Guillaume Postel, Prophet of the Restitution of All Things: His Life and Thought* (The Hague: Martinus Nijhoff Publishers, 1981); and Leon Voet, *The Golden*

In summary, Dee would not have considered his angel conversations a "magical" practice. Instead, like many of his contemporaries interested in the occult properties of nature, he was devoted to living a properly religious life. It is true that he would not have satisfied a strict early modern criterion for orthodoxy - his interest in the cabala alone would have raised eyebrows - for he had a broader conception of what devotion to God involved. Dee, a Christian natural philosopher, read the Book of Nature so that he could glorify God. His predecessor Agrippa had integrated natural philosophical and religious interests even further, seeing religion "as one natural force among others, though the most elevated of those forces."¹²⁰ Dee's last universal science, his angel conversations, was thus more than an attempt to provide a unified basis for natural philosophy. It sought to unify and make coherent all religious beliefs, natural knowledge, and ancient theory.

PART II

Revelations

Such will be the old age of the world: irreverence, disorder, disregard for everything good. When all this comes to pass ... he will restore the world to its beauty of old so that the world itself will again seem deserving of worship and wonder. . . . And this will be the geniture of the world: a reformation of all good things and a restitution, most holy and most reverent, of nature itself, reordered in the course of time. . . .

(—*Asclepius* 2.6 from the translation by Brian Copenhaver)

"Then Commeth the Ende"

Apocalypse, Natural Philosophy, and the Angel Conversations

John Dee's plan to converse with angels and gain insights into the Book of Nature emerged from his particular intellectual interests, which he pursued through decades of scholarship and inquiry. But the angel conversations also reflected the cosmology of his time, especially the late sixteenth-century conviction that the end of the world was at hand. When Dee began contacting the angels around 1569, European scholars and theologians believed they were caught up in the midst of events prophesied in the Bible's Book of Revelations that would ultimately turn the final page of the Book of Nature.¹ Citing the decay of the earth and the heavens, the reformation of the church, and a plethora of strange natural occurrences, Dee's contemporaries lamented the final days while looking forward to the restitution of peace, plenty, and

A Study of Apocalyptic in Judaism and Early Christianity* (1982) (London: SPCK, 1985).

prosperity. The years for which the records of Dee's conversations survive were periods of heightened eschatological fervor: in 1572 a new star had been observed in the constellation of Cassiopeia; in 1577 Dee spent three days at Windsor Castle advising the queen about the significance of a comet; at Easter in 1580 an earthquake rocked London; and in 1583 a grand conjunction was predicted in the constellation Aries.² The grand conjunction, which occurred just as Dee left for Prague, was perhaps the most significant and widely publicized sign. When it was accompanied by a particularly bright comet, the final days seemed assured.

Although earthly corruptions were further proof of the decay of the Book of Nature, Dee's contemporaries found the celestial changes more alarming. Discrepancies between ancient cosmological calculations and sixteenth-century studies of the heavens provided further evidence of the end of time. In 1580 Francis Shakelton consulted natural philosophers and discovered that "the constitution of the celestially worlde, is not the same that it hath been in tymes paste, for so much as the Sunne, is not so farre distant from us now, as it hath been heretofore."³ Shakelton went on to ask, "If there be so greate alteration in the superior worlde, what shall wee saie of the inferiour?"⁴

Shakelton believed that the disturbing changes in the heavens pointed to an even greater mutability and instability in the imperfect sublunar world, where "every part thereof doeth feeble some debilitie and weaknesse." Human corruption was proceeding apace along with nature's alarming deterioration. Andrew Golding confirmed that "mannes nature [is] growing dayly more and more into decay with the perishing worlde nowe hasting to his ende, is more subiecte too corruption, and less gyven too Godlynesse and vertue than ever it was."⁵ Learning and knowledge were also on the decline, which Dutch commentator Sheltco a Geveren saw as another "argument of the worldes consummation," since "al good Arts and learning, have these few yeares been so con-

temned, and Universities and schooles and scholasticall discipline ... almost in every place come to decay."⁶ It was in this world of anxiety and anticipation that Dee's angel conversations took place.

By the time eschatological fervor had reached its highest pitch, Dee was already in despair over his inability to practice natural philosophy in a corrupted world. The events of the 15708 and 15805 did little to alleviate his concern. Though a natural philosopher's interest in the end of the world may seem puzzling to us, Robin Barnes points out that apocalypticism and natural philosophy were often linked in the early modern period because people believed that both nature and the *end* of nature were instrumental in God's plan for the cosmos. Barnes does not find it surprising, therefore, that scholars interested in establishing a universal science and reviving the traditions of ancient wisdom held eschatological and prophetic beliefs.⁷ Dee's interest in the end of the world was evident in both his library and his published works.

Dee purchased nine works on the new star of 1572 and acquired the printed collection of letters exchanged by fellow Englishmen Gabriel Harvey and Edmund Spenser on the Easter earthquake of 1580.⁸ He was already aware, through the works of Regiomontanus, that something cataclysmic was bound to happen at the time of the grand conjunction.⁹

Dee's *Propaedeumata aphoristica*, his *Monas hieroglyphica*, and his "Mathematical Preface" all attempted to reform and redirect natural philosophy through a new universal science, but they fell short of reaching the top rungs of the ladder to the heavens.

Only angelic revelations could begin to satisfy Dee's hopes for attaining certain knowledge of the Book of Nature. Those conversations included detailed information about the unfolding of the *eschaton* or final days of the earth, including symbolic and verbal information about God's plan for the dissolution and restitution of the cosmos. The angels revealed two new natural philosophical tools for Dee's use: an exegetical tool (the cabala of nature, discussed in Chapter 5) and a redemptive tool (the medicine of God, discussed in Chapter 6). Together, this information provided Dee with the natural philosophy of the future when natural philosophers would no longer need to struggle through textual explanations of the Book of Nature, search through ancient authors for answers to their questions, or try to close the distance between humanity and divinity by observing the stars in the heavens. Most (if not all) of the insights into nature gained after the Fall and before its restitution were virtually useless anyway, except as a yardstick with which to measure how far things had deteriorated. When the heavenly Jerusalem descended and the world was restored to perfection, the angels told Dee he would *know* - in the same way as they did - about every character found in the Book of Nature.

Before the world was perfected, however, Dee had other tasks to perform. First, he was asked to interpret the decay of nature based on available natural signs. Aided by the angels' revelations and tools, Dee's interpretations would far surpass all others. This information would enable Dee to act as a prophet of the final days, spreading revelations among the people of the world. Gifted with divine revelation, Dee believed himself to be invested with special responsibilities of communication he shared with the great biblical prophets Elias, Enoch, and John the Divine. Communicating his angelic revelations to a wider audience was one of Dee's more problematic responsibilities, but he took it seriously and turned his attention to the angels for further information about the End of Days.

Interpreting the End of Days

Today we tend to group all beliefs that the world is ending under the rubric of "apocalypticism." In the early modern period, however, apocalyptic expression fell into several different categories: apocalypse,

prophecy, and eschatology. Neither the interest in the final days of the earth nor the response to that interest was homogeneous. While some speculation and divination was tolerated, other opinions met with considerable resistance. Still, the belief that the end of the world was approaching continued to flourish well into the seventeenth century, where it took on a new cast within shifting social, cultural, religious, and economic contexts. The lines dividing apocalypticism, prophecy, and eschatology were never so clearly demarcated as is suggested here, but it is important to distinguish among them because the distinctions can help us to understand why Dee was initially "well received" by monarchs and church officials yet later turned away when his angelic revelations became increasingly apocalyptic.

An apocalypse was a particular genre of speculation about the final days whose authors claimed to have received a direct revelation from a divine agency - either God, an angel, or a saint.¹⁰ Apocalypses were usually communicated to the world through prophets, as in the case of Girolamo Savonarola.¹¹ Prophecy was a dangerous business in early modern Europe; Savonarola's public execution in Florence in 1498 reminded everyone from common astrologer to exalted natural philoso-

10. For a discussion of the apocalypse as a specific genre and its distinct position in respect to other forms of eschatology, see Christopher Rowland, *The Open Heaven. A Study of Apocalyptic in Judaism and Early Christianity* (London: SPCK, 1982), pp. 9-58.
11. The literature on prophecy in the early modern period is vast, and I have chosen to distinguish it from the general studies of the end of the earth discussed above in note I. Marjorie Reeves produced a number of important studies, including *The Influence of Prophecy in the Later Middle Ages. A Study in Joachimism* (Oxford: Clarendon Press, 1969); "Some Popular Prophecies from the Fourteenth to the Seventeenth Century," *Studies in Church History* 8 (1971): 107-134; *Joachim of Fiore and the Prophetic Future* (New York: Harper and Row, 1977); and *Prophetic Rome in the High Renaissance Period*, Oxford-Warburg Studies (Oxford: Oxford University Press, 1992). Other studies that emphasize the prophetic and revelatory aspects of apocalyptic thought are: Robert E. Lerner, *The Powers of Prophecy: The Cedars of Lebanon Vision from the Mongol Onslaught to the Dawn of the Enlightenment* (Berkeley: University of California Press, 1983); Donald Weinstein, *Savonarola and Florence: Prophecy and Patriotism in the Renaissance* (Princeton, NJ: Princeton University Press, 1970); Ann Williams, ed., *Prophecy and Millenarianism: Essays in Honour of Marjorie Reeves* (Essex, 1980); Robin Bruce Barnes, *Prophecy and Gnosis: Apocalypticism in the Wake of the Lutheran Reformation* (Stanford, CA: Stanford University Press, 1988); Ottavia Niccoli, *Prophecy and People in Renaissance Italy*, trans. Lydia G. Cochrane (Princeton, NJ: Princeton University Press, 1990).

pher of the risks implicit in making predictions about the future that claimed to rest on divine directives. The interpretation of *signs* of the End of Days, or eschatology, was different from either apocalypticism or prophecy. Most apocalyptic writings in early modern Europe were not actually apocalypses but eschatologies.

Eschatologists like Gabriel Harvey who commented on natural disasters claimed no privileged and direct line of communication from God but instead pointed out the importance of natural signs. Early modern eschatological texts attempted to fit recent events into preexisting canons of apocalyptic signs, though some advanced radically new interpretations. Discussing and analyzing signs of the earth's predicted demise was a popular industry in medieval and early modern Europe.¹² The list of pamphlets and books on the new star, on the grand conjunction, and on hosts of natural marvels like monstrous births or rains of blood suggests that anyone might have his views on the subject published. Presses throughout Europe issued one apocalyptic interpretation of contemporary events after another to meet the seemingly insatiable demands of readers. Shelton's *Of the Ende of this Worlde, and the Seconde Commyng of Christ*, for example, was quickly translated by Thomas Rogers from its original Dutch into English and reprinted in London five times between 1577 and 1589.¹³ Printing facilitated the formulation of a widely recognized canon of eschatological signs ranging from natural and supernatural

12. Studies of early modern interest in the eschatology of the final days include: Norman Cohn, *The Pursuit of the Millennium: Revolutionary Millenarians and Mystical Anarchists of the Middle Ages* (New York: Oxford University Press, 1970), which includes information about the later period; Bryan W. Ball, *A Great Expectation: Eschatological Thought in English Protestantism to 1660*, *Studies in the History of Christian Thought*, vol. 12 (Leiden: E. J. Brill, 1975); Richard Bauckham, ed., *Tudor Apocalypse: Sixteenth Century Apocalypticism, Millenarianism, and the English Revolution* (Oxford: Oxford University Press, 1978); Katharine R. Firth, *The Apocalyptic Tradition in Reformation Britain 1530-1645* (Oxford: Oxford University Press, 1979); Heinrich Quistorp, *Calvin's Doctrine of the Last Things*, trans. events to military skirmishes, all of which mounted with alarming speed as the fifteenth century moved into the sixteenth. No longer was knowledge of surprising or unusual events confined to their immediate locales by the limits of word-of-mouth transmission. What this signified in practical terms was that the Catholic church was unable to control the spread of prophetic messages and guide their interpretation. At the Fifth Lateran Council convened in 1512, the Church officially renounced the popular enthusiasm for eschatological speculations that were being printed, circulated, and discussed by those outside its authority.¹⁴

Just as the printing press was challenging Catholic authorities in the cities of Europe, so the Reformation (whose main proponents made good use of the new printing technology) was establishing alternative forms of worship. The Reformation of the church, coming as it did in the midst of a series of eschatological signs, was given a weighty role in Protestant accounts of the world's progress toward redemption. The Catholic church responded with its own program of reform, claiming sole responsibility for leading humanity into the next spiritual age of restitution and rebirth. The jubilee year of 1600 became the focus for Catholic eschatologists. Among the Protestants, the exact time of the Second Coming was more imprecise; many thought that God might begin the next age between 1583 and 1588.¹⁵ This time frame was particularly potent because of its proximity to the great conjunction of 1583, and because prophecies often referred to miraculous events as happening 1,558 years after Christ's birth.¹⁶

Regiomontanus had been especially influential in raising popular consciousness about the potential import of 1588. Ludovico Guicciardini noted that Regiomontanus "speaketh more at large than the rest" about the eschatological significance of 1588, explaining that "if the wicked worlde shall not perishe, and the sea and Earth bee brought to nothing, at least governementes of kingdomes shall be turned upside downe, and there shall be great lamentation in all places."¹⁷ Elizabeth I launched a

17. Quoted from the English translation of the dedicatory epistle of Ludovico Guicciardini's *Houres of Recreation, of Afterdinneres* (London, 1576) in Camden, *Studies in Honor of De Witt T. Starnes*, p. 169.

halfhearted attempt to curb these eschatological speculations and even issued a formal proclamation against them. Unfortunately, the proclamation was not published until the beginning of the year 1589 and so did little to alleviate the buildup of tensions surrounding the year 1588.¹⁸

Dee's angelic teachers focused on the year 1588 as the beginning of the eschaton, although they adopted an air of mystery about the precise date after 1588 came and went without serious incident.¹⁹ Dee avidly recorded angelic predictions that the sun would move contrary to its normal course, the brightness of some stars would increase, other stars would fall, and rivers would run with blood.²⁰ This degree of specificity was fraught with potential disaster, for Dee could be seen as a false prophet or a poor natural philosopher incapable of deciphering eschatological signs if the events did not unfold as predicted. Some of the angels' prophecies proved to be eerily accurate, however. On 5 May 1583 the angels revealed that the beheading of Mary Queen of Scots and a great gathering of ships would soon take place. Four years later Dee looked over his diaries and noted with satisfaction that the foretold events had come to pass: "So she was A° 1587 at Fodringham Castell. And also the same yere a great preparation of ships against E[n]gland by the King of Spayn the Pope and other princis called Catholik."²¹

From the first recorded angel conversations, Dee was told that "days of tribulations" were afflicting the earth.²² More detailed information was given by the angelic Governors, who told Dee he was living in the "last tymes, of the *second last world*." Precisely when these "last tymes" were to conclude, chronologically speaking, was unclear, so Dee clarified this crucial point during a later conversation. When Uriel told him that it was the last of the "*Three last corruptible times*," Dee hastily interjected with his own understanding of the phrase. Dee understood the angels to mean that the first period "at *Noes flud* ended, the second [began] at *Christ his first coming* and this is the third."²³ The angels agreed, and Dee was content.

The angels tended to be more poetic and less specific in their description of the Book of Nature's decay. In an unusually long monologue, the angel Murifri told Dee that:

The Earth laboreth as sick, yea sick into death.
The Waters pour forth weepings, and have not moisture sufficient
to quench their own sorrows.
The Aire withereth, for her heat is infected.

18. Ibid., p. 168. 19. See *TFR*, pp. 233, 419-420. 20. Ibid., p. 233.

21. Dee, *A WS* 11:389-390. 22. Ibid., pp. 59-60.

23. Ibid., p. 386; Dee's emphasis.

The Fire consumeth and is scalded with his own heat.

The Bodies above are ready to say, We are weary of our courses.

Nature would fain creep again into the bosom of her good and gracious Master.

Darknesse is now heavy and sinketh down together: she hath builded her self, yea (I say) she hath advanced her self into a mighty building, she saith, Have done, for I am ready to receive my burden.

Hell itself is weary of Earth: For why? The son of Darknesse cometh now to challenge his right: and seeing all things prepared and provided, desireth to establish himself a kingdom; saying, "We are not stronge enough, Let us now build a kingdom upon earth, and Now establish that which we could not confirm above."

And therefore, behold the end.²⁴

When we try to hear these remarks as Dee would have heard them - as a natural philosopher who had spent most of his life trying and failing to understand the natural world - we can see that the impact of Murifri's words must have been considerable. Murifri's references to the "sickness," "infection," "sorrows," and general weariness of the world would have prompted two reactions in Dee: dismay over such ills and hope that the sickness could be cured, the infection driven away, and the sorrows turned into joys. Dee was convinced that he must take steps toward restoring the Book of Nature's condition. The angels explained that their revelations put him on a speedier path toward restitution than others, a path that represented "*new worldes, new peoples, new kings, &c* new knowledge of a new Government."²⁵ To fill in the gaps in the angels' revelations, Dee conversed with his scriber about the decay of nature and its relationship to biblical prophecies. In one of their discussions, Dee and Edward Kelly were talking "of the trubbles and misery foreshewd to be nere at hand."²⁶

An interest in the culmination of human and natural history had been a shadowy though persistent feature of Dee's natural philosophy for some time prior to the surviving records of the angel conversations. Two of his published works, the *Monas hieroglyphica* and the "Mathematical Preface," contained references to the decay of the Book of Nature. The "Mathematical Preface," for example, hinted at a link between the deterioration of the earth and God's decision to stop or slow down his process of "Continuall Numbryng." This was a complex idea related to Dee's understanding of the process of creation, which he believed oc-

24. *TFR*, p. 4. 25. Dee, AWS II:200; Dee's emphasis.

26. *Ibid.*, p. 342.

curred through an act of divine will and speech that continually imbued nature with numerical essences, giving each part a central core that was "Immateriall. . . divine, and aeternall." Since God's numbering of things was also "his Creatyng of all thinges," He could conceivably withdraw a thing's essential "number," decelerate the numbering process, or even stop the process entirely. Then, according to Dee, "that particular thyng shalbe *Discreated*."²⁷ Dee's treatise contained explanations not only of how things came to be but also of how parts of the natural world could cease to be, providing a natural-philosophic foundation for biblical prophecies about the end of the world. Unfortunately, Dee stopped his explanation there, being reluctant to place too much confidence in the abilities of human beings adrift in "these our drery dayes" to grasp the significance of his arcane ideas.²⁸

Dee focused on the deterioration of communication in the *Monas hieroglyphica*, where he mentioned the "deplorable times" facing natural philosophers in the second half of the sixteenth century.²⁹ Yet there is a tone of cautious optimism in the *Monas hieroglyphica*, his pessimism tempered by his faith that a natural philosopher did not have to sit passively by and watch the world fall apart around him. Dee's hieroglyphic monad was part of his strategy to find a solution to the problems affecting humanity. Claiming that his symbol "reduced or restored" the "quasi-barbaric signs" used by sixteenth-century natural philosophers "to their mystical proportions," Dee set himself up for veneration as that "singular hero" who had "intimately and thoroughly explored the explanations of the celestial events [as well as] the reasons of the rise, the condition, and the decline of other things."³⁰ The heroic aspect of a natural philosopher's identity was relatively novel in 1564 when Dee wrote the *Monas hieroglyphica*, though it became common in the next century after natural philosophers like Bacon, Galileo, and Boyle had affirmed the progressive nature of scientific knowledge.³¹

Dee made other contributions that he hoped would reverse, or at least arrest, the decay surrounding him. One example is his unpublished proposal in 1582 to reform the calendar, which he referred to as his "Ref-

Reidel Publishing Company, 1984), pp. 49-72, for an interpretation on the genesis of a progressive role for natural philosophers and scientists.

ormation of tyme."³² The inaccuracies plaguing the calculation of calendars concerned many scholars of the period.³³ Better observed data, when juxtaposed with accepted early astronomical theories, had resulted in chronological chaos, as the date for Easter crept further and further from the spring equinox and scholars and theologians despaired over their inability to predict the time of Christ's return on such a mutable calendar. Dee's rationale for calendar reform, however, was not founded on a belief that human skills at calculation had improved. Instead, he argued that it was the decline of the cosmos which had placed European astronomers and theologians at a disadvantage. Dee did not rely on events like the 1580 earthquake to justify his position but put forth quite precise and technical astronomical arguments. He noted a change in the declination of the sun since the time of Christ, when "yt was very nere 24 prime mynutes of a Degree more Northerly, and Southerly then now it is." The sun's zenith point had also moved from the time of Christ, as had its distance from the center of the earth.³⁴ These changes had necessitated a shift in the sphere of the fixed stars, which was forced to respond with "a propre ballancing motion eastward."³⁵

Additional information about Dee's beliefs surrounding the mutability of the heavens can be found in his "Mathematical Preface." There he endorsed the practice of astronomy because God had made "the *Sonne*, *Mone*, and *Stems*, to be to us, for *Signes*, and knowledge of Seasons, and for Distinctions of Dayes, and yeaes."³⁶ Dee repeated this paraphrased passage from Genesis on the beautifully rendered title page of his plan for calendar reform presented to Elizabeth I: "Let there be LIGHTES in the firmament of the heaven, that they may divide the Day and the Night, and let them be for Signes and Seasons, and for Dayes and yerres."³⁷ In the "Mathematical Preface," he went on to argue that

mathematics could be used to understand the natural signs mentioned in "Sacred Prophecies," admonishing his readers that it would be wiser to consult the Bible with an astronomical staff as a guide than with the more common reading guide used by schoolchildren.³⁸ Dee believed that restoring the calendar by bringing observations of the heavens in line with other calculations was one way for a natural philosopher to ensure that astronomical phenomena would correspond to God's revelations in the Bible. Human history, in Dee's view, represented an unfolding of events first prophesied in biblical revelation, and chronological frameworks were vital to predictions of Christ's return to earth.³⁹

Dee and the Prophetic Tradition

Despite excellent reasons for the "Reformation of tyme," Elizabeth I and her council rejected Dee's calendar, and Dee grieved that "her Ma^{tie} will not *reforme it in the best terms of Veritie*."⁴⁰ The angels encouraged him to turn from Elizabeth I and her court, and to focus on other potential patrons in Europe who would be more receptive to his reformatory aims. Dee's angel conversations were poised between apocalypse and eschatology, and their delicately balanced position had far-reaching consequences for his reception in the courts of Europe. By 1582 Dee was moving away from the interpretation of eschatological signs and toward a deeper and more dangerous role in the unfolding of the final days: the role of a prophet proclaiming revealed wisdom.

Dee's faith in his angelic protectors gave him the confidence to record and voice their divine revelations, which made him unlike other eschatologists in Protestant countries during the sixteenth century. While many Protestants claimed to speak to God through prayer - a founda-

38. Dee, "Mathematical Preface," sig. bii^v. The text refers to a "festue," a printing error for "fescue," a small stick used by children first learning to read.

39. Scaliger was also deeply engaged in predicting the fulfillment of biblical prophecies, as was Isaac Newton. For Newton's interest in chronology, see Betty Jo Teeter Dobbs, "From the Secrecy of Alchemy to the Openness of Chemistry," in *Solomon's House Revisited: The Organization and Institutionalization of Science*, ed. Tore Frangsmyr (Canton, MA: Science History Publications, 1990), pp. 75-94, especially 83-86. tion of Reformation theology - few received messages in return through multitudes of angels. Intermediaries, both saints and angels, were a feature of Catholic theology, and Protestant theologians tried valiantly, if vainly, to dissuade their congregations from relying on "popish" intercessors like priests or inhabitants of the celestial spheres. In fact, not many Protestants in the sixteenth century claimed to have heard God speak to them in any fashion, direct or otherwise: although claims of direct revelatory experience became widespread in the seventeenth century, Protestants had not yet embraced this possibility in Dee's lifetime.⁴¹ Instead, sixteenth-century Protestants relied on interpreting ancient biblical revelations and prophecies, and deploring the prophecies of contemporary Catholic mystics.

The Catholic church proved equally reluctant to endorse those who claimed to have received direct revelations. Though some mystics were tolerated and even supported, most of these were in holy orders, like Saint Teresa of Avila or Saint John of the Cross, and firmly enmeshed in the institutional hierarchies of the church. Ecclesiastical authorities were experienced in handling wayward and outspoken clerics like Joachim of Fiore and Savonarola: they launched inquisitorial proceedings against them and often preferred to execute them for heresy rather than to support their revelatory claims. Dee was obviously not in holy orders, and his marital state, as the Catholic authorities in Prague pointed out, made him an unlikely candidate for receiving revelations.

The content of the angels' revelations to Dee must have stunned the Catholic authorities in their specificity and unabashed criticism of sixteenth-century life, religion, and government. While other eschatologists talked vaguely about great astrological occurrences and their possible ramifications, Dee claimed to know, with divine certainty, the precise month and year in which miraculous events would occur. Nor did the angels limit themselves to religious matters such as the details of the Second Coming, the end of the world, and the establishment of the new

41. A selection of seventeenth-century prophetic and eschatological studies, many focusing on millenarianism, includes Keith Thomas, *Religion and the Decline of Magic* (New York: Charles Scribner's Sons, 1971), pp. 385-434; Ball, *A Great Expectation*, passim; Bernard Capp, *The Fifth Monarchy Men: A Study in Seventeenth-Century English Millenarianism* (Totowa, NJ: Rowman and Littlefield, 1972); Richard Popkin, ed., *Millenarianism and Messianism in English Literature and Thought, 1650-1800*, Clark Library Lectures, 1981-1982 (Leiden and New York: Brill, 1982); James Holstun, *A Rational Millennium: Puritan Utopias of Seventeenth-Century England and America* (Oxford: Oxford University Press, 1987).

Jerusalem. In remarks that would have been treasonable in most countries, the angels shared prophecies about the death of Queen Mary of Scotland; several invasions soon to face England; the deaths of Philip II, Rudolf II, and Elizabeth I; and the ascension of Dee's patrons Albert Laski, Stephen of Poland, and Count Willem Rozmberk to greater positions of power.⁴² Political prophecies had the potential to set off popular revolts, and even the most daring eschatological commentators knew better than to include clear predictions of their own sovereign's demise - though predications about the death of rival monarchs were often ignored. Dee should have known better from personal experience than to mix predictions with matters of state, as he had once been imprisoned for casting Queen Mary of England's horoscope.⁴³

In the final days, Dee's role was to be increasingly prophetic. The angel Uriel explained: "The Lord hath chosen you to be *Witnesses*, through his mercy and sufferance ... in the *offices* and dignities of the *Prophets* . . . wherein you do *exceed the Temples of the earth*: wherein you are become separated from the world. . . ."⁴⁴ Dee's prophetic role went hand-in-hand with his increased powers to see and judge the decay of the Book of Nature. The angels encouraged him to verbalize and publicize his insights outside the tight circle of the colloquia, and scolded him when they thought he should have made "a more ample declaration" of their remarks.⁴⁵ The angels dictated that Kelly, though also touched with the powers of prophecy, should limit himself to seeing visions in the showstone rather than sharing his visions with a wider audience - a wise course given Kelly's volatility. While the angels promised to make Kelly "a great Seer: Such an one as shall judge the circle of things in nature," they also told him that "heavenly understanding, and spiritual knowledge shall be sealed up from thee in this world."⁴⁶

Dee embarked upon his potentially dangerous prophetic activity because he believed himself heir to the prophetic biblical tradition of Enoch, Elias, Esdras, and John the Divine. The mention of these prophets in Dee's angel conversations gave his revelations a greater sense of authority and the prophecies concerning the final days a greater urgency. Each prophet enjoyed privileged communication with God or angels that resulted in a certain knowledge of the world as it was, or the world as it was to be after God's last judgment. Each prophet had served as a

"divine scribe," obediently recording the information received from God and the angels in books of wisdom. Though Esdras and John were important models for Dee, he found Elias and Enoch more fascinating. His interest in these two mysterious prophets was shared by other contemporary natural philosophers, including Guillaume Postel and Paracelsus.⁴⁷

In the Judeo-Christian tradition, Enoch's important position was based on a few lines in Genesis and Ecclesiasticus that related how Enoch "walked with God" and then "was no more, for God took him" (Genesis 5:21-24; Ecclesiasticus 44:16). Texts attributed to Enoch circulated in the early Christian centuries before disappearing.⁴⁸ Even with the loss of these precious texts, Christian commentators were quick to expand upon the references to Enoch, thereby bolstering his profile. The angels shared their knowledge of Enoch with Dee, information which happily corresponded to early modern perceptions of the prophet. To Dee, the greatest knowledge that Enoch possessed was his special, post-lapsarian ability to read the Book of Nature. Enoch's eyes, according to the angels, were opened by the Lord so "that he *might see and judge the earth*, which was unknown unto his Parents, by reason of their fall." In addition, Enoch was shown "the *use of the earth*" and was "full of the spirit of wisdom."⁴⁹ As Dee longed for mastery over the Book of Nature, it is not surprising that he was eager to discuss Enoch with the angels. Enoch's mysterious departure from the earth was equally intriguing. Most of Dee's contemporaries believed that God took the prophet to Paradise or heaven, where he lived free from sin in full knowledge of God. Since such communion with divinity was thought to occur only after death, Enoch's acceptance into God's grace was even more extraordinary.

According to scripture, Enoch was joined in Paradise by another figure prominent in the angel conversations: the prophet Elias (also known as Elijah), whose story was told in I Kings 17-19. Elias, like Enoch, was transported to heaven prior to death. He was especially revered in the Jewish tradition, because references in Malachi 4:5-6 suggested that

49- *TFR*, p. 174.

Elias would return from heaven before the Final Judgment to bring the Israelites to repentance.⁵⁰ Elias's association with the final days also meant that his return was one of the eagerly awaited signs that the eschaton was near. His imminent return was confirmed by the angels, who told Dee that soon the "Prophets of the Lord shall descend *from* Heaven." Dee connected this remark to Elias immediately, noting in the margins of his angel diaries that the prophets were "in Paradise, they were carried upward, especially Elias."⁵¹

Elias was an important figure in works concerned with the occult sciences as well as early modern eschatologies. Paracelsus (1493?-1541), the alchemical physician whose works appeared frequently in Dee's library, referred to Elias in his writings. Paracelsus drew on biblical ideas and commentaries to create *Elias artista*, who would return to the world and reveal occult aspects of the Book of Nature. Paracelsus linked the figure of *Elias artista* to his belief in a Utopian future for the world that would restore both the Book of Nature and humanity.⁵² Before Utopia could be achieved, however, *Elias artista* must return so that, through him, God could "reveal much that is strange, much that has not yet been uncovered and revealed to us, things of which we are all ignorant."⁵³ Paracelsus's fascination with *Elias artista's* secret knowledge helped to ensure that alchemists and occultists kept the tradition of Elias alive.⁵⁴

Guillaume Postel (1510?-1581) was also fascinated by the prophet; indeed, evidence suggests that he believed that he himself was *Elias artista*.⁵⁵ A female mystic known as the "Virgin of Venice" first associated Postel with Elias between 1546 and 1547, when she described a number of changes about to affect the earth, including the formation of a universal church and state, and humanity's return to a life of perfection.⁵⁶ This rebirth would begin with one "who lives and acts in the

spirit of Elias," who she disclosed was Guillaume Postel.⁵⁷ Postel's role in the restitution of nature and the world as revealed by the Virgin of Venice was nearly identical to the role the angels assigned to Dee.

In addition to the restitution of nature, Dee was expected to restore religious unity. Popular hysteria about the coming woes escalated as the religious divisions of Europe deepened, and most of Dee's contemporaries linked the two crises. English chroniclers John Stowe and William Camden both mentioned the desperate tenor of the times, religious discord, and the hoped-for reconciliation between Catholics and Protestants. "All Europe stood at gaze, vehemently expecting more strange and terrible alterations," wrote John Stowe, "than ever happened since the world began."⁵⁸ Protestant and Catholics alike looked forward to the day when their own religion would triumph and become the universal faith.

Where Dee's angel conversations and his role as prophet fit into this puzzle of eschatological and reformist ideas has always been difficult to fathom. Fully embracing Yates's belief in Hermeticism as the dominant intellectual framework within which any understanding of Dee must take place, French suggested that Dee believed in a "Hermetic religion of love" that would heal the divisions between Protestants and Catholics. Clulee described Dee's "rather flexible religious convictions" as a combination of a "Protestant view of salvation" with a "latitudinarian . . . acceptance of varying forms of religious observance." Both authors, however, also noted Dee's personal interest in reforming and restoring religion to its "true" sense and purpose.⁵⁹ Dee did not limit his audience to Protestants or Catholics, but believed that the prophecies were "to be (by us) published . . . all the World over."⁶⁰ The switches Dee made from Protestantism to Catholicism and back to Protestantism again have raised provocative questions about his "true" beliefs.

Instead of choosing between Catholic and Protestant faiths the angels told Dee that an alternative course was open to him: the establishment of a new, angelically revealed universal religion that would accompany his universally applicable natural philosophy.⁶¹ Dee was not willing,

therefore, to subject himself to the authority of the Catholic church, but he was not an advocate of the Protestant faith either. Perhaps his reluctance to adhere too closely to the new religion stemmed from Uriel's dire prophecies concerning Luther, Calvin, and "all that have erred, and wilfully runne astray" from the Catholic church, which was "by Peter brought to Rome, [and] by him, there taught by his Successors." All those who "erred" from the Catholic church were destined to be sent into the "Hell fire" by Christ's final judgment.⁶² Despite these remarks, the angels did not endorse Catholicism completely and made a special point of berating the clergy "that inhabit the holy City, and usurp the authority of the Highest."⁶³

Dee believed that all postlapsarian religious beliefs were incapable of restoring the church to what God had originally intended. His religious reformation, on the other hand, promised a return to a truly universal faith that would include the Jews and Muslims as well as Catholics and Protestants. Dee had been interested in the question of religious unity for some time. He joined the fray of early modern conversion debates with a book, now lost, entitled *De modo Evangelii Jesu Christi publicandi, propagandi, stabiliendi inter Infideles Atlanticos* (1581), a title which suggests a Native American orientation. Dee's inability to find a spiritual haven for himself in either the Catholic or the Protestant camp is clear in his plans for the distribution of the treatise. According to the *Compendius Rehearsal*, the work was first presented to Queen Elizabeth, then to other key figures in her government - a good strategy for a natural philosopher seeking a position within an officially Protestant country. The other recipients were the two preeminent Catholic powers in Europe: Philip II of Spain and the pope.⁶⁴ The angel diaries suggest that Dee did give the document to the king of Spain, as on 17 November 1582, the year after *De modo Evangelii Jesu Christi* was completed, he spoke with the angels about the "prayse and advancem' of Gods Glorie, with Philip the Spanish King."⁶⁵

More crucial to most early modern Europeans was the conversion of the Jews. Many of Dee's remarks about conversion in the angel conversations concerned them and combined a paradoxical though fairly common early modern blend of anti-Semitism with an intense interest in secret, mystical Hebrew knowledge. This combination was especially apparent when it came to the "lost books" that Dee believed that Jews possessed, especially those of Esdras. He earnestly asked the angel II

65. Dee, AWS II:174, and Whitby's remarks on p. 391, which also link these remarks to the lost work of 1581.

how he could "trust anything in the Jues hands," since they were "a stiffnecked people and dispersed the world over."⁶⁶ The angel replied with a vague prophecy about the number eighty-eight, which Dee interpreted as an indication that the year 1588 might bring about the Jews' anticipated conversion.⁶⁷ Despite these remarks, the angels took recourse in positive examples set by Old Testament Jews when Dee or his scribe misbehaved. On one occasion Edward Kelly asked if he could have the authority of the angels' revelations verified by his Jesuit confessor. An angel replied tartly that they possessed greater credibility than a "fleshly Priest." In addition, the angel reported: "If the Angels that have appeared unto you [Edward Kelly], had appeared also unto the Jews, saying, Crucifie not the Son of God, they would not have done it. For though they believed not man, yet would they have believed an angel."⁶⁸ Dee duly noted the rebuke in the margins of the angel diaries.

Dee continued to search for a sponsor for his conversion strategies throughout the period of the angel conversations. Neither Elizabeth nor Philip expressed any interest in his plans for religious conversion, but Dee was more successful in convincing Count Laski, who actually took part in the conversations, to accept his plans to unify the world under a single faith. The angel Jublandace prophesied that Laski would achieve "great victories, in the name, and for the name of his God," and that under Laski's leadership the "*Jews . . . shall taste of this Crosse: And with this Crosse shall he [Laski] overcome the Sarazens, and Paynims.*"⁶⁹ As we have seen, Laski fell from God's favor, and though both Rudolph II and Steven of Poland were invited to spearhead the angelic movement toward a single faith, both declined to assume an active role in Dee's reformed religion.

Despite these setbacks, Dee's interest in a unified faith remained unshaken, and he continued to believe that the angelic revelations provided the basis of a holy doctrine which could "restore, and . . . put in good order, the people and flock of God."⁷⁰ The tenets of the angelically revealed, "true" reformed religion represent a fascinating combination of Catholic and Protestant doctrines that promised to reconcile all religious factions of the early modern period. As an angelic voice told Dee

66. Ibid., p. 334. 67. Ibid., p. 336. 68. TFR, p. 386.

69. Ibid., p. 22; Dee's emphasis.

70. Dee in Josten, p. 244. I am indebted to Samantha Meigs for discussing the implications of Dee's complicated strategy for religious reform, and for generously sharing her knowledge about early modern popular religion and the Catholic and Protestant theological debates that took place during the period.

and his associates while they were in Prague: "Whosoever wishes to be wise may look neither to the right nor to the left; neither towards this man who is called a catholic [*sic*] nor towards that one who is called a heretic . . . but may he look up to the God of heaven and earth and to his son, Jesus Christ. . . ." ⁷¹

What this religious compromise actually meant, of course, was that Dee's new religion pleased no one. The angelic doctrine endorsed the power of prayer, for example - a dominant feature of Protestant theology - while reporting the dire consequences that had befallen Luther, Calvin, "and all that have erred, and willfully runne astray" from true Catholic church. ⁷² While the Roman Catholic church deserved Dee's loyalty, the pope did not; because the authority of the angels far outweighed that of the pope, Dee was told to consult only with the angels for spiritual advice and counsel. ⁷³

Dee's special status gave him the capacity to monitor and gauge the progress of humanity toward restitution, and this represented one of the most unorthodox and unique aspects of the new, reformed theology. ⁷⁴ The angels also revealed their understanding of election, free will, and predestination, blending Catholic and Protestant positions into an artful compromise. ⁷⁵ They confirmed repeatedly that Dee was one of the "elect," yet his election could be affected by his conduct. As the angels told Dee, "the elect and chosen may erre and go astray." ⁷⁶ Man, through free will, "draweth out of order, turneth from the mark, refuseth that which is good, and through the burden of his flesh, inclineth unto evil." ⁷⁷ The keys to salvation for the elect were perseverance and prayer, rather than confession and intercession.

One of the thorniest debates between Catholics and Protestants involved the celebration of the Eucharist, a crucial question the angels did not neglect. Dee and Kelly actually partook of the Catholic mass while they were in Prague. ⁷⁸ But before taking the sacrament in the Catholic church, Dee entered into a theological discussion with the angels about transubstantiation and gained a fresh understanding of the Eucharistic celebration and its role in the true religion. ⁷⁹ Dee's desire to seek angelic spiritual counsel underscores the ways in which his religious views and practices were being shaped by the angel conversations. His angelic advisers demanded that he "lay . . . religion aside" and "simply and

nakedly follow the steps of true *Faith* " as set out in the examples of the Apostles.⁸⁰ Dee was not at all clear what this entailed, and questioned the angels closely on the symbolism and significance of the Eucharist as Christ originally imparted it to His disciples. From Dee's questions, it is apparent that the Catholic authorities in Prague had demanded that the natural philosopher and his scribe acknowledge transubstantiation before taking the sacrament. The angels, once again, crafted an admirable middle course between Catholic and Protestant views on the subject that enabled Dee to take part in the Catholic ceremony while maintaining his role as the prophet of a new, universal religion that would also be acceptable to Protestants.

The angels told Dee that Christ had ministered "his true body" to his disciples, so that "the *Minister*, using the office and person of Christ. . . pronouncing the words, doth also give unto the people not Bread, *but the true body*."⁸¹ Up to this point, the angelic doctrine was decidedly Catholic, especially in its emphasis on the power of the priest's words to cause a change in substance from simple bread to the body of Christ.⁸² The Catholicism of the angelic doctrine was reinforced when Dee was told that the "body" of Christ was present in both the transubstantiated bread (which had become Christ's "flesh") and in the transubstantiated wine (which had become Christ's "blood"). Dee was relieved that Christ was fully present in both the bread and the wine, because the Catholic rite usually provided only bread to the laity. The angels assured him that "it is no offence to God, to receive . . . one [substance] . . . onely."⁸³ While these aspects of the angelic doctrine coincided with prevailing Catholic practices, the angels also placed a Protestant emphasis on the importance of each individual's faith in the act of receiving the Eucharist. Though irrelevant to Catholicism, in which the bread became a sacrament because of the actions of the priest, the angels told Dee that the Eucharist was sacramental only if the individual *believed* it was sacramental. Thus, Dee was free to participate in the Catholic mass because "by faith" he believed it was "the true body" of Christ.⁸⁴

This carefully charted and almost universally heretical angelic religion was difficult to adopt and practice, and, over time, Kelly became a vocal opponent of the angels' plans for the new faith. As he did every aspect of the angel conversations, Dee recorded the specifics of Kelly's displea-

sure, despite Dee's disagreement with his scryer's extreme outbursts regarding the "manifold horrible Doctrine." It is impossible to say why Dee's scryer felt obliged to make such comprehensive and damning statements, unless it was to clear himself in the event the apostolic nuncios did manage to take the pair into custody. Whether for self-preservation or self-vindication, Kelly condemned the angels' efforts to persuade him that various heretical ideas were true, including that "Jesus was not God," that "no prayer ought to be made to Jesus," that a "mans soul doth go from one body to another childes quickening or animation," that there was no Holy Ghost, and that "the generation of mankind from *Adam* and *Eve*, is not an History, but a writing which hath an other sense."⁸⁵ When and where the angels discussed these aspects of their doctrine with Kelly is not clear, for they do not appear anywhere in the extant angel diaries. With its Arian and Pelagian ideas, the angelic doctrine, as represented by Kelly, would indeed have been dangerous. But to Dee's great delight, Kelly was soon "converted" to the angelic doctrine and religion. Dee went on to address pointed prayers to Jesus and the Holy Ghost apologizing for Kelly's behavior, thereby divorcing himself through prayer from most of what his scryer had said.⁸⁶

Dee was neither a Catholic nor a Protestant, but was following his own religious convictions, which he believed might heal the deep divisions of Western Christianity and convert nonbelievers to the true faith. Many scholars have suggested that his religious vacillation between Catholicism and Protestantism was influenced by Familism. Any definitive association between Dee and the Familists will probably remain conjectural, but there are striking similarities between his angelic religion and Familism with its emphasis on revelation, universality, and communication. Hans Niclaes (1501-1581) founded Familism around the year 1540 after receiving a revelation from God calling him to found a new religion.⁸⁷ Like the doctrine outlined to Dee by the angels, Familism was a revealed theology that hoped to unite people of all faiths within a single, reformed religion. Also, it attempted to recall the prelapsarian relationship between humanity and divinity.⁸⁸ More specifically, the religion believed in the importance of faith over reason, the verity of revelation, and the ability of all people to become prophets because of their religious

experiences. Because Familists believed that religious and civil harmony should exist, they were allowed to adopt the official state religion of any country, as long as they adhered to the beliefs of Familism in their hearts. Thus, practicing Familists were not required to exhibit outward signs of affiliation to their church.

Most scholars believe that the Familist doctrines entered England from the Low Countries at the accession of Mary I in 1553 - the same year that Dee returned from Louvain. Dee's associates in Louvain and Paris - Ortelius, Mercator, Postel, and Frisius - were either Familists or knew of their teachings, so it is likely that he was introduced to their beliefs while in Europe in the 1540s and 1550s. This was not the only way in which Familist ideas might have filtered into Dee's angel conversations, however. The center of European Familism was Emden, a small town in East Frisia where Nicolaes settled and began to communicate his revelations to a wider audience.⁸⁹ The other religious leader in the town of Emden during this time was a Protestant reformer and friend of Erasmus, Johannes a Lasco. The reformer of Emden was related to Count Laski, a key member of Dee's colloquium of angels, and the association between the count and his reforming uncle might have helped to consolidate Laski's prominent position in the angels' revelations concerning the new religion.⁹⁰

Despite the aura of secrecy which surrounded them, a knowledge of the more sensational Familist tenets began to seep into popular consciousness through Dutch scholars and booksellers in European cities like London. While Dee might have been well acquainted with the subtleties of Familist ideas about universal religion as a result of his time spent in Louvain, for example, Edward Kelly was probably more familiar with the popular notion that Familists practiced communal living and even shared their wives rather than adhering to the monogamous bonds of holy matrimony. This charge was always strongly refuted by the Familists themselves, who pointed out that their community was one of "spirit," not property and body. Nonetheless, discussions of their lifestyle appear in many polemics, especially those published in England.⁹¹ One of the most bizarre and infamous aspects of Dee's angelic doctrine

89. Ibid., p. 32. Laski and Dee visited Emden on their way from England to Cracow and remained in the town from 17 October 1583 to 20 October 1583.

might relate to this suspected Familist practice: namely, the angels' instruction that Dee and Kelly should share all things between them, including their wives.⁹² This was one of the angels' most difficult requests, and it stretched Dee's faith in the angel conversations to the breaking point.

Dee did not adhere to any of the many religions present in Europe during the sixteenth century. In his eyes, no religious doctrine was infallible except for that espoused by the angels, which promised to restore religion to a central doctrine revealed by God and capable of unifying many faiths into a single faith. This angelic religion was the religion of the world to come, the newly restored and perfected natural world that would follow the End of Days. Dee's own role in the perfection of nature, however, would depend upon his mastery of the divine language of creation and a new exegetical tool, "the true cabala of nature."

"The True Cabala"

Reading the Book of Nature

Of this fair volume which we "world" do name,
 If we the sheets and leaves could turn with care,
 Of Him who it corrects, and did it frame,
 We clear might read the art and wisdom rare?
 Find out his power which wildest powers doth
 tame,

His providence extending everywhere

But silly we (like foolish children) rest
 Well pleased with colored vellum, leaves of gold,
 Fair dangling ribbons, leaving what is best,
 On the great Writer's sense ne'er taking hold;
 Or if by chance our minds do muse on aught,
 It is some picture on the margin wrought.

—William Drummond of Hawthornden
 (1585-1649)

To have wisdom is a gift from God: To have
 knowledge comes from the creation and created
 things.

—John Dee's angel conversations

John Dee had crucial responsibilities in the final days and the restitution of all things as an interpreter of both the angels' revelations and the Book of Nature, and as a prophet spreading news of the upcoming changes to the elect. Yet the moral fall of humanity and the decay of the natural world had rendered the Book of Nature illegible and beyond comprehension. As Nalvage told Dee, "all things grew contrary to their creation and nature," which made God withdraw from the world, because "the Elements are defiled, the sons of men [are] wicked, their bodies [have] become dunghills."¹ To help Dee draw closer to God and

1. *TFR*, pp. 76-77.

nature, the angel Raphael gave him a new exegetical tool: the true cabala of nature, described as "simple, full of strength, and the power of the holy Ghost." Using it, Dee would be able to decipher the rapidly disintegrating Book of Nature and accurately interpret the eschatological signs embedded there.

The cabala of nature enabled Dee to have both wisdom (a revealed gift) and knowledge (an acquired understanding of the complexities of the created world). This mixture of wisdom and knowledge, of revelation and natural philosophy, lies at the heart of the cabala of nature. With his admission into the colloquium of angels and his instruction in the cabala of nature, Dee believed that he had achieved a state of intellectual virtuosity similar to that enjoyed by Adam "before his fall," who "not only knew *all* things, but *the measure and true use thereof*."² As Dee continued to employ the cabala of nature, he believed the world was moving toward the long-awaited eschaton that would heal and restore it. Dee's mastery of the cabala of nature was based, first and foremost, on his skill with the divine language that Adam and God had shared in Paradise. The divine language then enabled Dee to reform and restructure the existing Hebrew and Christian cabalas, restoring this science to its true power and intent.

Reclaiming the Divine Language

Dee's angel diaries are filled with a preponderance of mystical letters, numbers, and strange words. They leap from the pages, their strange squiggles and incomprehensible phrases catching the eye as surely as Dee's showstone caught the rays of light in his study. These passages contain what Dee believed was the divine language of the Book of Nature lost to humans since the days of Adam. Dee referred to the language as the "celestial speech," the "language of the angels," the "speech of angels," the "speech of God," and the "language of Adam."³ Dee's use of these terms indicates his understanding that the divine language preceded Adam's expulsion from Paradise, thus escaping the imperfections that plagued the world after the Fall.⁴ Modern scholars,

z. Dee, AWS 11:226-227; Dee's emphasis.

3. Ibid., pp. 232, 332; *TFR*, p. 19.

4. Modern scholars have complicated the situation by using the term "Enochian" to denote the language of the angel conversations, thereby referring to Dee's interest in the biblical figure Enoch as well as to a particular revealed book which Dee received during the angel conversations. Dee uses Enochian to describe a tablet or book reputedly given to Enoch, but seldom

far removed from Dee's worldview and hampered by the scattered and imperfect nature of the manuscripts, have not adequately examined this aspect of the angel conversations, though Nicolas Clulee has suggested that Dee's fascination with the angels was based on his intention to recover Adam's divine language and ability to communicate with the heavens, and that his interest was part of a widespread fascination with recovering God's language.⁵

Early modern humanists, intrigued by the possibility of restoring ancient texts, explored the history of God's creative language and its subsequent corruption. The first biblical reference to language appears in the initial passages of Genesis, where God created the world through speech. Early modern authorities agreed that God shared His creative language with the angels and Adam in Paradise. After Adam sinned, his mastery of the divine language was lost along with his ability to communicate with the Book of Nature and God. Thus the disintegration of Adam's linguistic and communication skills was inextricably tied to the fall of mankind and the decay of the natural world. The precise moment of Adam's "linguistic Fall" differed, however, from author to author. Some believed that Adam left Paradise still possessing divine language, which gradually deteriorated over time as humanity moved farther and farther from God's intended plan. Others adhered to a more cataclysmic mechanism to explain humanity's loss of the divine language, suggesting that either Noah's flood or the destruction of the Tower of Babel had erased God's language from the earth.⁶ The Tower of Babel was also held responsible for the confusion of earthly tongues and the division of the earth's peoples into nations with linguistic differences.⁷ What had once been a united people with a single language became seventy distinct

uses the word outside of this direct context. See Clulee, 221; Donald C. Laycock, *The Complete Enochian Dictionary* (New York: S. Weiser, 1978), passim.

nations with seventy separate tongues. The language Adam spoke after the Fall, already weakened by the Flood, was further dissipated.

Commentators on Genesis also disagreed about which extant early modern language was most closely related to the divine language. Most of the scholars Dee consulted, including Johannes Reuchlin, thought that the likeliest candidates were the three biblical languages (Hebrew, Greek, and Latin), with Hebrew at the forefront.⁸ Guillaume Postel was committed to Hebrew as the source for all terrestrial, postlapsarian languages and argued that it was closest to the divine language, both etymologically and chronologically.⁹ Agrippa agreed with Postel, calling the Hebrew alphabet "the foundation of the world," and explaining in his *De occulta philosophic*) how every creature and language in the world was related to the divine language through Hebrew.¹⁰ More creative answers followed: Swedish natural philosopher Andreas Kempe (1622-1689) argued that God spoke to Adam in Swedish, Adam spoke to the animals in Danish, and the Serpent spoke to Eve in French.¹¹

In the angels' conversations with Dee a compromise was reached among divergent theories about the survival of the divine language. The angels revealed that Adam knew two languages, and that both had been lost. The first was a "greater" language that Adam used to communicate his deteriorating "knowledge of God [and] his Creatures" to his descendants; the second was a "lesser" language that Adam used in everyday speech and communication. The first language was formed from remnants of the divine language shared by God, the angels, Adam, and the Book of Nature. With his "greater language" Adam partook of the spirit of God, knew all things in the created world, spoke of them properly, named them correctly, and conversed with God and the angels.¹² The angels were forthcoming about the precise nature of Adam's linguistic Fall and his use of the second, lesser language, reporting that Adam lost most of his mastery and understanding of the "greater" language after disobeying God's commands and eating fruit from the Tree of Knowl-

edge. During his first days after his expulsion from Paradise, Adam retained a sense of the divine language and began to craft an ancient form of Hebrew from it - which declined along with the rest of the world during the intervening centuries.¹³ Early modern Hebrew was merely a descendant of this second Adamic language, and thus retained only the barest traces of the divine language.

Dee, a bibliophile to the last, asked the angels whether Adam had written anything in his postlapsarian language, alluding perhaps to biblical passages in Jude 14-15, where the books of Adam and Enoch were mentioned.¹⁴ The angels' reply was ambiguous. One angel said that all traces of Adam had been lost in Noah's flood, along with all remnants of the first, prelapsarian language. "Before the flud," the angel told Dee, "the spirit of God was not utterly obscured in man. Theyr memories were greater, theyr understanding more clere, and theyr traditions, most, unsearchable."¹⁵ What prompted Dee to ask the question was his belief that he possessed Adam's *Aldaria*, or *Book of Soyga*. Uriel confirmed that the book was "revealed to Adam in paradise by God's good angels,"¹⁶ and the angels' later comments help to clarify why Dee believed the book was so valuable - though they contradict the angels' other explanations of the moral Fall and its linguistic consequences. First, the angels told Dee that the *Book of Soyga* contained the language Adam was taught "by infusion" in Paradise; the contents thus predated the Fall and expulsion. Unlike the divine language, however, the language contained in the *Book of Soyga* was used after the Fall, and it continued to be used until the destruction of the "Ayrie Tower" - the Tower of Babel.¹⁷

Adam was the key figure in the angels' discussions of the divine language because he had used the language to name all the creatures in the garden, bestowing true and essential names on all animals and plants.¹⁸ After Adam's fall, only select individuals were made aware of the divine language, and only fragments of it were revealed. The angels

18. This important idea stems from biblical tradition and figures prominently in Neoplatonism and the cabala. For a modern study that explains the genesis of the idea and its inclusion in early modern natural philosophical, magical, and cabalistic texts, see Allison P. Coudert, "Forgotten Ways of Knowing: The Kabbalah, Language, and Science in the Seventeenth Century," in *The Shapes of Knowledge from the Renaissance to the Enlightenment*, ed. D. R. Kelley and R. H. Popkin (Dordrecht: Kluwer Academic Publishers, 1991), pp. 83-99, especially 91-93.

told Dee he was receiving an unprecedented amount of the divine language, a fact that provoked an enormous amount of excitement. Not even the powerful biblical prophets Esdras and Enoch had known the language in its entirety while they were on earth, yet Dee was receiving the language's alphabet along with texts written in the language, free from the vicissitudes of earthly corruption and decay.

Dee's attention to Adam's use of the divine language related to his interest in the esoteric Jewish wisdom of the cabala. Because scholars previously believed that Dee's knowledge of Hebrew and the cabala was slight, few comparisons have been made between the angel conversations and Jewish or Christian cabalistic systems and ideas.¹⁹ While Clulee outlined the connections between Dee's earlier intellectual interests and his later participation in the angel conversations, he deemphasized the potential place of cabalistic ideas in the angel conversations, thus restricting possible connections between them and natural philosophy.²⁰ Though Clulee's purpose was not to analyze Dee's interest in the angels comprehensively, his brief discussion of the apocalyptic and redemptive nature of the angel conversations points to several fascinating associations between Dee's philosophy of nature and his attempts to communicate with the angels.

Dee related his efforts to learn God's divine language to his study of the cabala and Hebrew as early as 20 March 1582. In marginal remarks, he referred easily to passages in several authoritative cabalistic and Hebrew texts, including works by Johannes Reuchlin and Petrus Galatinus.²¹ In a later exchange concerned with the secret names of God, a popular topic in works of Christian and Jewish cabala, Dee told the angels that he had "re[a]d in the Cabala of the Name of God . . . [represented in] 42 letters" but had not come across any reference to the name of God represented in only forty letters, which the angels were proposing.²² To ensure that the angels were clear about this discrepancy, he inscribed all of God's names using forty-two Hebrew characters (Figure 5) in his diary. The inclusion of the names of God in the angel diaries suggests that the diaries may contain additional information to help modern scholars assess Dee's familiarity with Hebrew; other passages in Hebrew, some quite lengthy and others consisting of only a word or phrase, may also be of use.²³ When this information from the angel

22. Dee, AWS 11:65- 23. For example, ibid., pp. 7 and 65.

diaries is examined in light of Dee's library, it is clear that his interest in and knowledge of Hebrew and related languages must be reexamined.

Dee's library contained more Hebraic materials than any other library in England during the period, and many of the works were annotated.²⁴ He owned several introductory works by Elias Levita (1469-1542), a Jewish scholar and translator of medieval Hebrew texts for a Christian audience, including his *Composita verborum et nominum* (1525), a book of rudimentary Hebrew language instruction.²⁵ Dee's annotations appear in another introductory work written by Savonarola's pupil Sanctes Pagninus (1470-1536), the *Hebraicarum institutionum libri III* (1549).²⁶ Dee used Guillaume Postel's book on twelve ancient languages - which included Hebrew, Arabic, and Chaldean - as a place to practice his Hebrew letters; it provided margins wide enough for Dee to make Arabic vocabulary lists as well.²⁷ In many of the works, Dee annotated and underlined passages in both Hebrew and Latin, a practice which supports the claim that he understood at least basic texts.²⁸ In his bilingual copy of Saint Matthew the Evangelist's letter to the Hebrews (1557) with a commentary by Sebastien Muenster (1489-1552), Dee made notes and corrections against the Hebrew text in both Hebrew and Latin.²⁹ Another Latin-Hebrew text by a more obscure linguist, Wigan-

24. A thorough comparison of the contents of Dee's library with other early modern English libraries can be found in Jones, *The Discovery of Hebrew*, pp. 275-290. Jones assesses Dee's Hebrew abilities on pp. 168-174.
25. Elias Levita, *Composita verborum et nominum Hebraicorum* (Basel, 1525), trans. Sebastien Muenster, Roberts and Watson, #1594. For more information on Levita, see Jones, *The Discovery of Hebrew*, pp. 5-6; G. E. Weil, *Elie Levita: Humaniste et Massorete* (Leiden: E. J. Brill, 1963), passim.
26. Dee's is Roberts and Watson, #1569. For Dee's marginalia, see p. 15 and passim. For more information on Pagninus, see Jones, *The Discovery of Hebrew*, pp. 40-44.
27. Dee's copy of Guillaume Postel, *Linguarum duodecim characteribus differentium alphabetum* (Paris, 1523) is Roberts and Watson, #1623; like so many of his language books, this copy accompanied Dee to the Continent. The work was annotated by Dee and by a later owner. Dee's Hebrew language practice can be found on sig. [Ciiii^v]; his Arabic vocabulary list on sig. E^v. Postel was in contact with the Jewish scholar Elias Levita, whom he first met in Venice in 1537. See Kuntz, *Guillaume Postel*, p. 26.
28. See Dee's copy of Levita, *Composita verborum et nominum Hebraicorum*, sig. Cc4^r, for an example.
29. Details about Dee's copy can be found in Roberts and Watson, #1588. For Dee's annotations, see the title page and passim. This volume was taken to central Europe in 1583. For more information on Muenster and his association with his teacher, Elias Levita, see Jones, *The Discovery of Hebrew*,

dus Hapellius, also contains marginal notes revealing Dee's interest in Hebrew.³⁰ From other manuscript marginalia we know that Dee felt sufficiently comfortable with his Hebrew to correct an exegesis of the tetragrammaton in his copy of Henricus de Herphs's *Theologiae mysticae* (1556).³¹

Although Dee's knowledge of Hebrew might have been poor by angelic standards or when compared to devoted Hebrew scholars like Reuchlin, it was perfectly adequate for understanding scriptural passages and the rudimentary principles of cabalistic exegesis. The angel diaries confirm that Dee was a highly knowledgeable Christian cabalist if not a highly proficient Hebrew scholar. Today an expertise in cabala is dependent upon a secure foundation of Hebrew, but the two were often mutually exclusive in the early modern period. Agrippa, for example, was not a proficient Hebraist, yet he was able to draw from the *Sepher Yetzirah* and Joseph Gikatilla's *Sha'are Orah* - neither of which was available in Latin. Francois Secret has pointed out that, in the case of Christian cabalists like Agrippa and Dee, limited language skills did not necessarily stand in the way of a knowledge of Jewish ideas and cabalistic techniques, even from obscure Hebrew texts.³²

Except for the Hebrew language texts in his library, our knowledge of Dee's exposure to Jewish intellectual traditions remains speculative. We cannot rule out the possibility that he received formal training in Hebrew and cabala. Christian scholars interested in biblical antiquity frequently consulted Jewish instructors in the fifteenth century, as is indicated by Moshe Idel.³³ Rabbi Elijah Manahem Halfan commented on the continuance of this practice in the sixteenth century: "In the last twenty years, knowledge has increased, and people have been seeking everywhere for instruction in Hebrew." Christian students of Hebrew were seldom satisfied with language lessons alone but requested instruction in the cabala - a more problematic area of study, as Halfan explained, because among

pp. 44-48, and B. Barry Levy, *Planets, Potions and Parchments: Scientific Hebraica from the Dead Sea Scrolls to the Eighteenth Century* (Montreal: McGill-Queen's University Press, 1990), p. 25.

30. Dee's copy of Wigandus Hapellius, *Linguae sanctae canones grammatici* (Basel, 1561), contains annotations on pp. 59-60; Roberts and Watson, #1600. This work remained in England in 1583.

31. Dee's copy is Roberts and Watson, #223; his annotations appear on p. 9'. Dee took Henricus's work with him to central Europe in 1583.

the Jews there were "but a small number of men learned in this wisdom, for after the great. . . troubles and expulsions, but a few remain."³⁴ Dee might have sought out one of these scarce individuals in Louvain, where he purchased most of his Hebraica in the 1560s. Louvain was well known as a center of language study, and the university's trilingual college would have given Dee access to a number of proficient Hebraists.³⁵

An advanced knowledge of Hebrew would have been of limited use in the angel conversations, however, because Dee was receiving God's own language rather than the decayed terrestrial tongue. The angels began delivering characters, words, and names in the divine language in March 1582 when Dee began his relationship with Edward Kelly.³⁶ The basis of the divine language was an alphabet of twenty-one regular characters and one aspirated character.³⁷ Here Dee would have seen a similarity between the divine language of God and contemporary Hebrew, since the Hebrew alphabet contained the same number of characters.³⁸ In addition, each character of the divine language also bore a name. When the characters were strung together to form words, the words were - like Hebrew - to be read from right to left.³⁹ Later, when words and phrases were drawn together into revealed books, they were arranged like a Hebrew text, with the first page of the book at the back of the volume and the final page at the front.⁴⁰

The divine language's alphabet related only superficially to Hebrew, however, and even less to other known languages. The attempts of several scholars to ground Dee's angelic alphabet in various ancient, medieval, and early modern sources have met with mixed results. The most provocative and unsubstantiated suggestion concerning its origins was made by Donald Laycock, who argued that Dee may have been familiar with an Ethiopic version of the Book of Enoch, which most scholars believe reentered the Western tradition in the eighteenth century after disappearing for over a thousand years.⁴¹ If this argument were proven, it would help to explain both the divine alphabet, which resembles Ethiopic in some respects, and Dee's angelology, for the extracanonical Book of Enoch had a rich and diverse assortment of angels. It is also

possible that texts and orally transmitted knowledge about the prophet were circulating in early modern Europe; Guillaume Postel, for example, consulted an Ethiopic priest about the possible contents of Enoch's lost book earlier in the sixteenth century.⁴²

However, we need not rely on Dee's possession of an unrecorded copy of the Ethiopic book of Enoch to explain his interest in the divine alphabet, for his extensive linguistic studies would have provided him with sufficient provocative information about God's "lost" language. A more likely source for the angels' divine alphabet is Giovanni Pantheus's *Voarchadumia contra alchimiam*, which Dee owned and annotated.⁴³ Pantheus's work contained an alphabet labeled "Enochian" that strongly resembles Dee's divine script. Dee's seventeenth-century editor, Meric Casaubon, believed that the characters of the divine language derived from Theseus Ambrosius's *Introductio in Chaldaicam linguam, Syriacum atque Armenicam et decent alias linguas* (1539). Although Casaubon might have based his argument on his own careful study of ancient languages, Dee did own a copy of Ambrosius's work.⁴⁴ Agrippa's *De occulta philosophia* also contained ancient-looking alphabets derived from Hebrew that would have supported the purported antiquity of the angelic alphabet revealed to Dee.

When Dee received the divine language from the angels he was not receiving a musty lexicon and grammar. Instead, he was given a living language that promised to reconnect parts of the cosmic system. Learning, speaking, preserving, and ultimately mastering the creative power embedded in the language provided Dee with a new course of study that he felt would take him toward wisdom. The language also provided him with an *activity* essential to the long-awaited restitution of the Book of Nature: a restoration of the lost communicative links between Adam, the angels, and God. This set Dee's study of the divine language apart from his earlier studies of ancient languages. Every mistake he made while learning the language took on cosmic significance.

Unfortunately, the divine language did not conform to any known rules of grammar, syntax, or pronunciation, and Dee was faced with a difficult task when it came to learning its basic principles. He paid scrupulous attention to the proper spelling and pronunciation of every word the angels revealed, though he was frustrated by the enormous

variations contained in the language. Dee's humanistic training was more a hindrance than a help in this process as each of the angel's speeches was minutely recorded and, later, reconciled to earlier diary entries. He worried about each discrepancy, repeatedly asking the angels for clarification. He was not reluctant, for example, to note, "I suspect this to be an imp[er]fect phrase" against dubious passages.⁴⁵ Many passages in the divine language were recorded along with marginal notes indicating English words that might help Dee with the erratic pronunciation schemes, as when he noted that the ending for "lusache" should be pronounced "as *che* in che[r]ry."⁴⁶ Spelling, or the "true orthography" as Dee called it, provided further difficulties, and he expressed his consternation over the "diverse sownds" accorded to the letters "g," "c," and "p."⁴⁷ For Dee, a scholar educated with humanistic standards of linguistic accuracy and suffering under the pressure of trying to learn a sacred language on which the future of the world depended, the lack of a systematic foundation for the divine language was intensely frustrating.

Dee spent most of his energy trying to master the way the divine language was to be spoken. The angels told him that this was crucial because it would render his speech unlike that of other mortals and more like the voices of angels.⁴⁸ The divine language would enable Dee "to talk in mortal sounds with such as are immortal."⁴⁹ As with so many aspects of Dee's angel conversations, there are provocative connections between these features and Dee's knowledge of Jewish beliefs. For Reuchlin and other cabalistic scholars, the real power of the tetragrammaton resided "not only [in] the characters and the word, but also [in] its pronunciation, which is occult and hidden."⁵⁰ According to the scholars, only Moses had been instructed in the proper way to vocalize the tetragrammaton, so Dee's preoccupation with the pronunciation of the divine language is understandable in light of his desire to follow in the footsteps of biblical sages and prophets.

Dee's efforts to learn the pronunciation rules, not to mention the grammar and syntax, for the divine language was further complicated by the time-consuming methods the angels used to convey God's language. Characters, phonetic pronunciations, words, and phrases all had to pass through the filter of the showstone and the scryer before they were avail-

able to Dee. One of the most common ways in which the angels conveyed a text was to appear standing in the showstone on a table covered with letters (Figure 6). The angels would point to each individual letter of the lesson with a long rod, spelling out entire prayers, one character at a time. It is not surprising that angel conversations concerned directly with the divine language could last over seven hours. As the hours and days stretched on, Dee's frustration mounted. Finally, he dared to ask whether the angels could not devise some better and more speedy way to deliver their language. After all, Dee argued, it was surely not in God's best interest for the process to take so long. The angels scolded Dee for his presumption and demanded that he learn the language on God's terms, not his own.⁵¹ But Dee's temerity did lead the angels to modify their methods. As a concession to his human frailty, the angels began to convey long prayers by recitation, which Dee was permitted to record phonetically.⁵² But the additional time Dee won through the speedier transmission was lost when he realized he then had to translate the prayers twice: first into the divine characters, and then into English.

Dee was not a model pupil in the angels' "celestial school," and the angels often took him to task for what they perceived as his lack of devotion to linguistic matters. Dee complained when the angels chided him, replying that he "had diverse affayres which at this present do withdraw me from peculier diligence using these Characters and theyr names."⁵³ Exceptions, muddled "orthography," and a complete absence of systematic pronunciation must have made Dee despair of ever understanding how the divine language functioned. The angels were initially sympathetic to his plight, but their patience soon expired. They told Dee that "*the ende and Consummation of all thy desired thirst*" for knowledge would result from his mastery of the language and not from the direct question-and-answer method that he preferred.

Dee believed that the divine language represented the final step in his climb to divine wisdom because of its initial infusion into the Book of Nature at the moment of Creation. Though some early modern scholars believed that God created the cosmos by use of the Word and shaped the first human, Adam, from the substance of the created world, the angels told Dee that the divine language played a more comprehensive role. As they recounted it, the divine language was the shaping or "plasmating" force for both the Book of Nature and humanity.⁵⁴ Thus it was

51- Dee, AWS 11:267. 52. Ibid., p. 268. 53. Ibid., p. 242.

54- TFR, p. 371. I am indebted to Brian Copenhaver for explaining the Greek origins of the word *plasmation* and the use of the term *plasso* in the Bible.

the divine language which lent coherence and structure to the entire creative act.

Given the prominent place of the divine language in ordering the Book of Nature, Dee believed that it contained a great deal of power. Because God and the Word were so intermingled in the early modern period as to be almost indistinct, the divine language was thought to contain not only the creative, ordering principle of the cosmos but also the power to avert evil and the power over life and death. Religious authorities and natural philosophers agreed that the search for God's own language was a fruitful and valuable intellectual project. Pope Leo X (1475-1521), for example, was reputed to have received an angel who brought a sample of holy writing from heaven. Pope Leo, in turn, gave it to King Charles V of Spain to serve as a protective talisman against evil.⁵⁵ The pope's interest in the divine language and his belief in its mystical power of language to protect the pious must have been well known at the time; Giovanni Pantheus's study of the relationship between language and alchemy, which so interested Dee, was dedicated to Leo X.⁵⁶

Much of the divine language's innate power depended on how it was used. The primary reason Dee wanted to learn it, after all, was to communicate with both the terrestrial and the celestial levels of the cosmos with a minimal interpretive gap between God's Word and his own limited human understanding. Dee wanted to serve as a bridge between humanity and divinity, to act as a mediating angel conveying God's messages to the waiting world. But the divine language could not make Dee or his associates equal to the angels. Because the angels' powers and abilities were linked to their familiarity with the "Powre of the primitive divine ... or Angelicall speche," Dee understood that his own skill with the language would always be a poor reflection of theirs.⁵⁷ Though the angels told Dee that his use of the divine language would make him "*differ. . . in speche frome a mortal Creature*" they never suggested how this difference would be manifested, or to what extent Dee would be exempted from human limitations.⁵⁸

Dee's angel diaries show no sense that the divine language was a "dead" language limited purely to textual methods of transmission. Instead, it was a living language that humanity had lost but might one day reclaim. Dee was sensitive to both the spoken and written power of the divine language and remarked that he was receiving both the "voice" and the "language" of God and the angels - the language in both its

spoken and written forms.⁵⁹ The proper pronunciation of the divine language was crucial because of its role in communication between the celestial and terrestrial parts of the natural world. The divine language had once been a crucial link between disparate levels of the cosmic system, and in the early modern period it had the potential to reinstate communication between God, the angels, humans, and the Book of Nature. Agrippa negotiated his way through pronunciation problems by arguing that the divine language was not, and never had been, vocalized like human speech. Rather, Agrippa believed that the divine language could pass from God to humanity, and then from mind to mind, through the imagination.⁶⁰ Because human imaginations were too weak to enjoy such communication in their present, decayed condition, only the angels and God still used the divine language to communicate. Guillaume Postel agreed that Adam had not needed to rely upon hearing God actually speak, but instead received the divine language directly into his mental faculties.⁶¹

Dee did not envision entirely mystical applications for the divine language that would involve a complete withdrawal from terrestrial affairs. Despite his special relationship with God and the angels, he remained committed to pursuing a knowledge of "the creation and created things" that could be shared with humanity.⁶² Employing the revealed, divine language Dee continued to study the natural world. He believed that a combination of the divine language and natural philosophy would unlock the secrets of the created world. Cabala provided a way of uniting language and natural philosophy, and it was through a reformed cabala that Dee found a way to apply the divine language to the Book of Nature.

Restoring the Cabala

A full exploration of the intricacies of the cabala is beyond the scope of this study, yet some familiarity with this mystical system is necessary to an understanding of Dee's "cabala of nature." The cabala, or *Kabbalah* as it is known within the Jewish tradition, was a medieval mysticism that developed in the twelfth and thirteenth centuries and continued to

59. Ibid., p. 233. 60. Agrippa, DOP 111:413.

62. Dee, AWSILnS.

grow and change throughout the early modern period.⁶³ Like many other forms of mysticism, Jewish and Christian, the key cabalistic text was the Bible. In addition, cabalists relied on Rabbi Moses de Leon's *Zohar* and other medieval commentaries for guidance and instruction. While other forms of Jewish mysticism, including *Hekhalot* and *Merkavah* mysticism, relied on direct revelation to supplement and enhance biblical teachings, the *cabala* was based on the interpretation of ancient and biblical texts through an exegesis of words, phrases, and symbols.⁶⁴ Cabalistic exegesis was never strictly limited to written texts, however, but extended to other symbolic expressions.

For Jewish cabalists, the most important symbolic expression of God was contained in ten successive emanations known as the *sefirot*. Often depicted in the form of a tree, the ten *sefirot* were a microcosmic representation of the relationship between God and the Creation. In the *cabala*, emanation provided a mechanism of causation that allowed God to be present in everything yet still removed from the created world.⁶⁵ The light metaphysics of some medieval Christian scholars, including Robert Grosseteste, depended on divine emanation, as did the elaborate

63. Because Dee and the Christian authors he drew on for sources use the word *cabala* rather than *Kabbalah*, and because it has become common to use the latter designation only in relation to the Jewish mystical tradition, I have adopted the Christian spelling. The most important introductions to the *cabala*, with differences in interpretation and emphasis, are Gershom Scholem, *Kabbalah* (Jerusalem: Keter Publishing House Jerusalem, 1977); and Moshe Idel, *Kabbalah: New Perspectives* (New Haven and London: Yale University Press, 1988). Additional information about how *cabala* intersects with other forms of Jewish mysticism can be found in Gershom Scholem, *Major Trends in Jewish Mysticism* (London: Thames and Hudson, 1955). A brief yet thorough general discussion of Jewish mysticism, including the *cabala*, is included in Geoffrey Wigoder, ed., *The Encyclopedia of Judaism* (New York: Macmillan Publishing Company, 1989), pp. 512-515. Francois Secret's work on Christian *cabala* is the most reliable, though dated, treatment of this important body of early modern philosophy. See *Les Kabbalistes chretiens de la Renaissance* (Paris: Dunod, 1964) and *Le Zohar chez les kabbalistes chretiens de la Renaissance*, *Etudes Juives*, vol. 10 (Paris: Mouton, 1964). Additional insights into Christian *cabala*, though less reliable, can be found in J. L. Blau, *The Christian Interpretation of the Cabala in the Renaissance* (New York: Columbia University Press, 1965).

64. Wigoder, *Encyclopedia of Judaism*, p. 512.

65. See Idel, *Kabbalah*, pp. 112-122, for a discussion of the role of emanation in the process of creation and the *sefirot*.

angelologies with which Dee was familiar. The concept of emanation was also closely linked to linguistic theories of the Creation, because the Word emanated from God and, *ex nihilo*, formed the world. These ideas about emanation were probably influenced by Neoplatonic thought.⁶⁶

In addition, the *sefirot* were linked to the Bible by an intricate and subtle series of correspondences, so that nearly each word in the Bible corresponded to one of the *sefirot*, increasing the exegetical potential of biblical texts.⁶⁷ God, divine revelation, the created world, and its micro-cosmic representation in the *sefirot* thus became a single, complex system for the cabalist to understand and master in order to ascend toward divine wisdom and the Godhead. Christian cabalist Johann Reuchlin figured the *sefirot* were a ladder to the heavens: "[the *sefirot* are] the ten rungs of the ladder on which we climb to know all truth, be it of the senses, or of knowledge, or of faith."⁶⁸ The *sefirot* also offered another possible use as intriguing as it was potentially dangerous. Just as a cabalist could use a combination of cabalistic techniques, God's revelations in scripture, and His emanations in the *sefirot* to climb to God, so the same path could be used to draw divine, celestial powers down into the sublunar world.

This strand of cabala, called "practical cabala" or "theurgic cabala," is similar to other types of spiritual magic in the medieval and early modern periods.⁶⁹ Though the *sefirot* provided an avenue for the descent of the celestial powers, the secret names of God and the angels provided the means by which the powers were called down into the sublunar levels of the cosmos. Thus the theurgic, practical branch of cabala relied on the invocation and manipulation of secret names to draw divine emanations into the natural world. The Christian West became attentive to these ideas with the publication of Pico della Mirandola's cabalistic theses in 1486, and they were subsequently developed in two ways: first, to reclaim and appropriate the cabala to prove that Jewish beliefs contained prophecies of Christ and Christian teachings; and second, to explore the cabala's esoteric and magical possibilities.

The angels' cabala of nature shared several features with the Jewish and Christian cabalas. These similarities must have pleased Dee, because

he considered his cabala of nature the original, uncorrupt cabala from which the Jewish and Christian cabala derived. Like the latter, Dee's cabala was revealed wisdom. The art of cabala had first been given to humanity, as Reuchlin explained in the *De arte cabalistica*, through direct revelation.⁷⁰ Many centuries of human frailty stood between that time and the cabala in use in the sixteenth century. Dee, on the other hand, received a direct cabalistic revelation from God. Any similarities between the extant Jewish and Christian cabalas and Dee's cabala of nature, in his view, demonstrated the places where ancient systems had managed to retain their "true" features despite the vicissitudes of time and human understanding.

Cabalistic systems - Jewish, Christian, and even Dee's cabala of nature - depended on exegetical interpretations and the belief that language was instrumental in the Creation. But the language of Dee's cabala of nature was not Hebrew; it was the true, divine language God used in His first creative acts. Because the divine language was alphanumeric, like Hebrew, Dee believed that he could apply traditional cabalistic exegetical techniques to names, words, and phrases the angels conveyed. The angel diaries suggest that Dee used the three main cabalistic exegetical methods of *gematria*, *notarikon*, and *temurah*. *Gematria* was the most mathematical method, as it involved taking the numerical value of words and phrases and searching through scriptures for other words or phrases with a similar numeric value. In *notarikon*, the letters of a word were seen as abbreviations for entire sentences. The third cabalistic exegetical technique, *temurah*, transposed letters within a word to create new words.⁷¹ These three cabalistic methods, as Reuchlin explained, ensured that no "word, no letter, however trifling, not even the punctuation, was without significance."⁷²

References to the three methods appear throughout the angel diaries. Each letter of the angelic names inscribed on the Sigillum Dei signified another angel in a form of angelic *notarikon*.⁷³ In another example of *notarikon*, an angel explained to Dee that his words contained sentences of wisdom.⁷⁴ Dee also had "diverse talks and dyscourses of Transpositions of letters," or *temurah*, while engaged in the angel conversations, a method he had discussed earlier in his *Manas hieroglyphica*.⁷⁵ Like most cabalists, Dee believed the transposition of letters should follow

certain rules, and he shared his "rule for to know certainly how many wayes, any number of letters . . . might be transposed" with Edward Kelly during their conversations.⁷⁶

The most complex incorporation of cabalistic exegetical techniques in the angel conversations occurred in Dee's use of *gematria*, the exegetical method that relied on numerical interpretations. *Gematria* depended upon the alphanumeric quality of the divine language. The angels Gabriel and Nalvage explained that "all the World is made of numbers," but the "Numbers we speak of, are of reason and form, and not of merchants."⁷⁷ The numerical quality of the divine language was not the mundane mathematics of Dee and his contemporaries, but was part of the world of divine essences and true forms. The angels' distinction resembled one made by Agrippa in his *De occulta philosophia*, where he differentiated between the "vocal numbers" used by merchants, and rational, formal, and natural numbers that contained the mysteries of God and nature.⁷⁸ Dee also adhered to this distinction between earthly and heavenly numbers. For him there were two types of number: "Number Numbyring," the numbers in the Creator, in spiritual and angelic minds, and in the soul of man; and "Number Numbred," which were found in all other parts of the created world.⁷⁹ Because numbers played a major role in both the cabala and in Dee's conception of nature, it is not surprising that he was interested in the numerological overtones of the divine language and the angels' cabala of nature. Numerology, though not strictly speaking cabalistic, could be related to Jewish mystical beliefs by Christian authors and might have gained an aura of extra authority because of this association. Descending from a rich assortment of ancient and medieval theories, the numerological beliefs of the early modern period were incorporated into architecture, music, and natural philosophy.⁸⁰ Numerological speculations derived from scripture were a feature of the most authoritative biblical commentaries and provided fuel for popular prophecies as well.⁸¹

Other references to cabalistic ideas and authors appeared throughout the angel diaries. Some references were no more than a notation of the

word *cabala*, or Dee's notes to look for further information in a book by Reuchlin, Agrippa, d'Abano, or some other cabalistic authority. When the angel Galuah stepped forward in 1583 and told Dee that her garments were called "HOXMARCH," for example, he immediately associated the word with one of the ten *sefirot*: *Hokmah*, or divine, redemptive wisdom. The first of the divine emanations, *Hokmah* was the *sefirah* associated with the moment of God's initial conception of the Creation - the moment when all things remained perfectly conceived and contained by God.⁸² Though Galuah's explication of the word's meaning has been obliterated in the manuscript, Dee's next remarks expressed his belief that the beginning of wisdom was found in the fear of God.⁸³ Even the description of the cabala of nature as a "three-fold art" capable of "ioyning Man (with the Knowledge of the *WORLD*E, the GOVERNMENT of his Creatures, and the SIGHT of his Maiestie" is reminiscent of the cabalistic "three-fold art" of *gematria*, *notarikon*, and *temurah*.⁸⁴

Adam's Legacy: True Names and Lost Meanings

The divine language's ability to refer to objects in the natural world fully and completely was an important aspect of early modern interest.⁸⁵ This interest increased in the seventeenth century when debates began about the merits of creating a "universal language" that would reflect the essential consonance between human speech and the Book of Nature and reduce the confusion of tongues. Though artificial, this language was described as a "natural language" to distinguish it from the divine language used by God in the Creation and spoken by Adam.⁸⁶ Adam enjoyed a special level of communication with the Book of Nature which stemmed from one of his first acts in Paradise: giving each thing within

(London: Longmans, 1966), pp. 370-397; and Thomas C. Singer, "Hieroglyphs, Real Characters, and the Idea of a Natural Language in English 17th Century Thought," *Journal of the History of Ideas* 50 (1989): 49-70.

the Book of Nature a true name that reflected its essential nature. As the angels explained to Dee, Adam "named all things (which knew it); and they are so in dede, and shallbe [*sic*] forever."⁸⁷ Dee, on the other hand, named the parts of nature incorrectly because his voice captured only a corrupt remnant of the divine language.⁸⁸

The notion that words could refer to the essences of things has a long history not limited to discussions of Adam and the Creation. Plato's *Cratylus* suggested that language was capable of making words and their referents correspond exactly, though it was ambiguous regarding whether language was entirely natural or at least partially conventional.⁸⁹ D. P. Walker believed that the "verbal force" associated with the divine language of creation and other very ancient languages depended upon a linguistic theory that included "a real, not conventional, connection between words and what they denote."⁹⁰ Dee adhered to such a belief in his angel conversations and thought that Adam's language was capable of capturing the essences embedded in the Book of Nature.

Because Adam's true names had the potential to disclose the secrets of the Book of Nature, Dee was warned that he and his scribes must not recite the names and words given to them in the divine language as they were received. By working in this fashion of "dubbe repetition," Raphael warned, "you shall both write and work all at ones [*sic*]: which mans nature can not performe." Instead, Dee was to wait until a time appointed by God to utter the words and phrases.⁹¹ To circumvent the problems associated with Dee's having to hear, repeat, and write lengthy passages in the divine language, his angelic teachers began to utter their revelations in reverse order. When it was time for Dee to "activate" nature, God would instruct him to reorder the passages and unlock their dormant power. Dee was pleased by this method and understood its benefits, "else, all things called would appear: and . . . hinder our proceeding in learning."⁹²

A knowledge of true names was also important to Christian and Jewish cabalists of the period, especially the true names of the angels, for they enabled a natural philosopher or cabalist to transcend the limits

of the decaying sublunar world and communicate with divinity. The true names for the angels appeared early in Dee's surviving angel conversations - even earlier than the characters of the divine alphabet, which we would consider a crucial starting point. For Dee and his contemporaries, however, beginning with the true names of God's angels was a more logical starting place, for it was through their mediating efforts that additional exposure to God's mysteries took place.

Several volumes in Dee's library were concerned with the secret names belonging to God, Christ, and the angels. Pico della Mirandola, in his cabalistic "Conclusions," argued that these names, especially the name of Jesus, contained powerful and persuasive messages about Christ's divinity and relationship to God.⁹³ In *De verbo mirifico*, Johannes Reuchlin built on Pico's theories in a treatise devoted to the marvelous effects that could be achieved with the names of Christ and other "wonder-working words" embedded in the Book of Nature. Reuchlin believed that these words were capable of restoring natural philosophy and would give human beings the same mastery of nature which Adam had enjoyed in Eden.⁹⁴ One such word was the tetragrammaton; two others, "Pele" and "NA" appear in the angel conversations, along with Dee's marginal notes regarding their explication in Reuchlin's *De verbo mirifico* and *De arte cabalistica*.⁹⁵

Dee's interest in the power of names was part of his fascination with the occult properties of nature. Pico della Mirandola was one of the first to suggest the strong connections between magic, language, and nature, and his concept of a linguistic magic is often called "practical cabala" because of its active potential. Pico's ideas spread quickly through Eu-

93. Giovanni Pico della Mirandola, "Conclusiones," from *Opera omnia* (Basel, 1572), pp. 108-109. Dee owned a 1532 edition of the "Conclusiones," Roberts and Watson, #974. William Sherman believes that British Library 1606/318 was Dee's copy, based on the annotations. William H. Sherman, "A Living Library: The Readings and Writings of John Dee" (diss., University of Cambridge, 1992), p. 300.

94. Johannes Reuchlin, *De verbo mirifico* (Lugduni, 1552). Dee took his copy of the work, a Cologne edition of 1532, with him on his trip to central Europe and it has not been recovered. For insights into the ways in which other European philosophers incorporated ideas about secret and true names into their work, see Brian P. Copenhaver, "Lefevre D'Etaples, Symphorien Champier, and the Secret Names of God," *Journal of the Warburg and Courtauld Institutes* 40(1977): 189-211.

95- Reuchlin, *On the Art of the Kabbalah*, p. in. Dee, AWS 11:28-30.

ropean intellectual circles following the publication of his cabalistic *Conclusiones*.⁹⁶ Reuchlin's *De verbo mirifico* placed a similar emphasis on the supernatural actions that certain words could produce.⁹⁷ Language was even more operative in Agrippa's *De occulta philosophia* because the magus's knowledge of secret, true names was required before any magical procedure could take place.⁹⁸

From the angels. Dee received the true names of God, the names for multitudes of angels, the true names given by God to geographical regions of the earth's surface, the names of parts of the heavens, and the proper names for stages in the alchemical process. The secret names of God were first given to Dee when he received the Sigillum Dei design.⁹⁹ Later, on 21 March 1582, the angels gave Dee a tablet containing more arcane information: the "*Names of God, not known to the Angels*" which could not "be spoken or re[a]d of man."¹⁰⁰ Though Dee was able to record these names, the angels told him he would not be able to utter them until the final days, when they would elicit the appearance of the seven angels of the seven heavens closest to the earth, which "*stand allwayes before the face of God.*"¹⁰¹ Most angel conversations empha-

98. Agrippa, OOP 1:70. 99. Dee, AWS 11:71-78.

100. Ibid., p. 93.

101. Ibid., 94. It would seem from this description that the seven angels mentioned were the angelic rulers of the "seven heavens," which would have been mentioned in the Sepher Raziel (an early medieval cabalistic work of great popularity), Peter d'Abano's *Heptameron*, and Agrippa's *De occulta philosophia*.

sized the names of angels, however, especially those who supervised the natural and supernatural worlds. Dee received, for example, the names of forty-nine separate angelic Governors who oversaw everything from princes and trade to the quality of the earth and the waters and the motions of the air.¹⁰² Dee spent several days receiving these angels' names and grouping them into seven orders of seven.

Dee explored the exegetical potential of the true names of God and His ministering angels whenever they were revealed. When the angels gave Dee the angelic names to inscribe on the *Sigillum Dei*, he was told that each letter of each angel's name could bring forth a "daughter," and each daughter's name could bring forth another daughter.¹⁰³ This method of nominal exegesis was derived from *notarikon* and had been used by other cabalistic scholars. Reuchlin explained in *De arte cabalistica*, for instance, how the four letters of the tetragrammaton could yield seventy-two angels "as if by divine issue," demonstrating once again that ideas in Dee's angel conversations are not entirely idiosyncratic.¹⁰⁴ Through *notarikon*, Dee received an intricate linguistic genealogy of angels, though it is not evident whether he subjected other angelic names to similar cabalistic processes.

The Cabala of Nature

The exegetical potential and magical power of true names represented the first step in a much larger exegetical task: deciphering the Book of Nature. A proper exegesis of the Book of Nature was crucial to Dee's natural philosophy. The Jewish cabala was intended for scriptural exegesis, not for an exegesis of nature, a distinction that problematized Dee's use of cabalistic techniques to explain and understand the world. These difficulties did not, however, prohibit natural philosophers like Dee or Giovanni Pantheus from exploring the possibilities of a cabala suitable for the Book of Nature. Dee's *Monas hieroglyphica* and Pantheus's *Voarchadumia contra alchimiam* demonstrate how cabalistic exegetical techniques were applied to interpretive problems in the natural world.¹⁰⁵ Even so, the Jewish cabala and the natural world did not interact as neatly as many natural philosophers wished. As with so many

104. Reuchlin, *De arte cabalistica*, p. 267.

105. An analysis of the cabalistic overtones in Dee's *Monas hieroglyphica* can be found in Michael T. Walton, "John Dee's *Monas hieroglyphica*: Geometrical Cabala," *Ambix* 33 (1976): 116-123.

of Dee's intellectual difficulties, the angels provided him with a way out of this dilemma. They did so by revealing a body of information which they referred to as the "true cabala of nature." Dee was intrigued by the possibilities offered by this interpretive art, which depended on his grasp of the divine language and Adam's true names. Understanding the place the cabala of nature occupied in Dee's natural philosophy and theology brings a modern reader to the heart of his angel conversations and to the reasons why he was so consumed by their revelations.

First, it is important to clarify that the angels' cabala of nature was not a direct derivative of the traditional Jewish cabala, or even the Christian cabala. Though the cabala of nature is provocatively reminiscent of many basic tenets of cabalistic study, because the cabala of nature was intended to disclose the secrets of a different "text" - the Book of Nature rather than the Book of Scripture - its exegetical techniques were significantly different. If we see the cabala of nature as analogous to, but not dependent upon, the Jewish and Christian cabala, it becomes possible to examine Dee's cabala of nature on its own terms. As a result, we gain an understanding of the cabala of nature both as it distantly related to the Jewish and Christian cabala, and as a system of exegesis in its own right.

Given the scholarly dismissal of the angelic language as a hodgepodge of unutterable sounds and a strange assortment of names and phrases, it is understandable how the angels' "true cabala of nature" might also be consigned to virtual oblivion. Fragmentary because of the loss of sections of the angel diaries, seemingly devoid of a systematic foundation, and delivered in a scattered, piecemeal fashion, the cabala of nature is frustrating to study. That Dee himself was usually confused about the precise applications of the art and its intricate methods is little consolation. Even its designation as a "cabala" of nature has done little but complicate the situation, since an exploration of the works of other early modern cabalists has failed to uncover useful comparative information.

Dee's cabala of nature was based on the interplay between the elemental and spiritual numbers of the numerological tradition: four (signifying fire, air, earth, and water) and three (signifying the holy trinity of Father, Son, and Holy Spirit), respectively. Alone and in combination, these numbers governed the Book of Nature's cabalistic system. The most important combination of the two numbers in the cabala of nature was seven, which signified a combination of the elemental and the divine. As the angels explained to Dee:

Seven comprehendeth the Secrets of Heven and e[a]rth: seven knit-teth mans sowle and body together (, in sowle, and 4 in body) In 7, thou shalt finde the Unitie: In 7, thou shalt finde the Trinitie[.]

In 7, thou shalt finde the Sonne, and the proportion of the Holy Ghoste. . . . Thy Name (O God) be prayed for ever, from thy 7 Thrones, from thy 7 Trumpets, and from thy 7 Angels. . . . In 7 God wrowght all things. In j, and by 7 must you work all things.¹⁰⁶

The emphasis on the number seven was not unique to Dee's angel conversations. Seven occupied a prominent place in biblical commentaries because of the frequency with which it appeared in Revelations, the final book of the Bible. In Revelations 8:2, for example, seven thrones, trumpets, and angels warned humanity of the coming Apocalypse. Dee's cabala of nature included many permutations of seven, such as forty-nine angelic Governors and their "calls," and forty-nine gates of nature and their "keys." The cabala of nature also included thirty Aires ruled by twelve angels, and forty-nine-page books - and these numbers can be obtained by adding and multiplying the numbers three and four in various combinations.¹⁰⁷

Dee's cabala of nature can be divided into two branches: one primarily concerned with drawing celestial influences down into the natural world; the other primarily concerned with restoring the communication between humanity, divinity, and the Book of Nature. Each facet of the cabala of nature was angelically delivered, followed by a short pause while Dee digested the new information, asked questions, and received angelic tutoring. Then the delivery of the cabala of nature resumed. While both branches of the cabala of nature were parts of a single system, they could also stand separately.

The first branch, like theurgic or practical cabala, promised to enable Dee to draw celestial influences into the sublunar natural world. Referred to here as the "angelic" system of the cabala of nature, this branch consisted of the secret, true names of the "Sons and Daughters of Light" and the "forty-nine angels who govern the earth." Both the Sons and Daughters of Light and the angelic Governors had specific roles in nature but were not present in the terrestrial world. Dee needed to employ special "calls" to bring the angelic Governors into the natural world to do God's will.¹⁰⁸ This angelic system was articulated at an early point in the Dee-Kelly relationship, and remained a part of the angel conversa-

106. Dee, AWS II: 80-81; Dee's emphasis.

107. The thirty Aires $[(3+4 + 3) \times 3]$, ruled by twelve angels $[3 \times 4]$, and forty-nine page books $[(3+4) \times (3+4)]$.

108. The angelic calls are *not* the "claves angelicae" revealed to Dee in Cracow in 1584, now British Library Sloane MS 3191. Rather, the "claves angelicae" were the "keys" to open the Gates of Nature and were part of the second, apocalyptic branch of the cabala of nature.

tions, because the large wax seal, or *Sigillum Dei*, was inscribed with the names of the Sons and Daughters of Light.

The role of the Sons and Daughters of Light in the cabala of nature is ambiguous. Typically, Dee was introduced to each angel, given his or her proper name, and instructed concerning their duties and responsibilities. In the case of the Sons and Daughters of Light, though, the possible uses for the angels were seemingly indefinite, as was their number. Successive generations were described in a complex and confused fashion, gathered into imprecise genealogies of "Sons of the Sons of Light" and "Daughters of the Daughters of Light," and so forth. A total of twenty-eight Sons and Daughters of Light was specifically mentioned, but the later generations were not introduced fully to Dee; not even their names were given to him. The names of the Sons and Daughters of Light were inscribed on the *Sigillum Dei*, and one of their roles was to facilitate the manifestation of the angels in the showstone. This made sound metaphysical sense, since all angels were creatures of light, and the Sons and Daughters of Light were tied nominally to God's emanations. Other functions for the Sons and Daughters of Light were less clear. Seven of the Sons of Light appeared carrying metal balls of gold, silver, copper, tin, iron, mercury, and lead - but the angels did not tell Dee whether the balls were meant to signify only the metals, or other features of the natural world associated with them, such as the planets.¹⁰⁹

More integral to Dee's cabala of nature were the forty-nine angels who governed the earth. These angels were the cornerstone of Dee's angelic cabala, and were linked to the divine language, the natural world, and the cabala of nature in many ways and on many levels. First, through the Governors, Dee gained a valuable, "angelic" perspective on the natural world, a point of view that was above and beyond immediate sensory experience of the terrestrial world.¹¹⁰ Second, the names of the Governors make an explicit reference to the natural world and the divine language that created it.¹¹¹ Each Governor's seven-letter name began with a "B" - the first letter of the divine language, the first letter of the Hebrew Genesis, and the letter that began God's creative process in the cabalistic text *Zohar*.¹¹² The cabalistic belief in the power of names and the potential for names and words to disclose secret and profound infor-

109. The latter is more likely, as the planets were celestial bodies that were thought to be made of light - there was no sense in the sixteenth century, as there is today, of the planets as solid bodies. Dee, *AWS* 11:88-89.

110. *Ibid.*, p. 119.

111. The conversation took over seven hours. It appears in *ibid.*, pp. 102-130.

112. Whitby, *AWS* 1:125.

mation was present in Dee's understanding of the Governors' names. Uriel told Dee that, within their names, "The Fontayne of wisdom is opened. Nature shalbe knowne: Earth with her secrets disclosed. The Elements with theyr powres judged."¹¹³

The Governors were grouped into seven orders of seven angels. This arrangement numerologically underscored their significance in the elemental world created in seven days, and in the heavenly world of the seven planets. Each of the seven orders governed a specific feature of the created world. The first order governed wisdom; the second, earthly kings; the third, the waters; the fourth, the earth; the fifth, living creatures; the sixth, the motions of the air; and the seventh order was responsible for banishing evil angels and spirits. These tasks were more complex than simply overseeing some part of nature, for the forty-nine angels governed the intangible (wisdom) as well as the tangible (the earth and living creatures). The seven orders of Governors were not democratic, with equal powers enjoyed by every angel. Rather, they were arranged hierarchically, with one angel designated as the king and another as the prince; the responsibilities of the five remaining angels in each order were not clearly stated, or have not survived.

Within the orders, the duties of the king and the prince differed. The kings had jurisdiction over a specific aspect of the world while maintaining an overall responsibility for everything the order governed. The princes had more specific and limited duties. While King Bnaspol governed the earth, for example, his prince, Blisdon, was particularly responsible for the subterranean. The king governing wisdom, Bobogel, had under his subjection Prince Bornogo, who knew how to "make nature perfect" and about the earth's minerals and metals - in other words alchemy.¹¹⁴ Though the relationship between kings and princes was logical, the delivery of this information was not. The angels first revealed the kings and their responsibilities, then the princes. This caused some confusion when Dee tried to draw the system together into a coherent whole. Finally, however, Dee was able to place the names of the angels into a circular wheel, similar to Lullian and cabalistic wheels, and clarify their relationships.¹¹⁵

An angel's visual appearance could provide valuable clues to his role and responsibilities, and the Governors were no exception to this rule. Their appearance was especially helpful to Dee, given the confusion surrounding their duties. The seven kings carried emblems of their pow-

113. Dee, AWS 11:124. 114. Ibid., pp. 141 and 147.

115. Ibid., p. 129. For the wheels' possible relationship to cabalistic wheels in Rabbi Akiba ben Joseph's *Book of Formation*, see Whitby, AWS 1:124.

ers, which Dee faithfully noted. These emblems exemplified their function in the cabala of nature; thus the angel in charge of wisdom held books while the angel of the earth carried herbs.¹¹⁶ Princes who served under the Governor of wisdom, King Bobogel, appeared as "Auncient and grim Cowntenanced men in black gownes" holding books, "and some had stiks like Measures," which Dee thought might relate to an expertise in geometry.¹¹⁷ Though the angels referred to them as the "Princes of Nature," both their clothing and their place in the angelic order indicated that they were connected to wisdom, and Dee noted in the margins "philosophers," to describe their appearance and the role that their appearance reflected.

Dee was preoccupied with his ability to communicate with the angelic Governors and how he might benefit from their knowledge of the natural world. To resolve these concerns, the angels gave Dee forty-nine "calls" (sometimes referred to as "claves" or "keys") between 31 March 1583 and 6 April 1583.¹¹⁸ The angelic calls were contained in a separate book, except for one call not known by Dee or anyone else save God.¹¹⁹ The angels conveyed the calls in the divine language, character-by-character, which took a great deal of time, especially as Dee and Kelly were too distracted with other matters to master the intricacies of the alphabet.¹²⁰ At last the angels made a concession to Dee's other responsibilities and began to recite the calls in the divine language, but even so the delivery, recopying, and discussion of the calls took nearly a month. Today, forty calls survive in the divine language. The angel diaries suggest that the final eight calls were received and placed "in 'other boke,'" possibly with an English translation, but they have not been located.¹²¹

The angels promised Dee that he would one day be able to use the calls to resolve the corruptions of the Book of Nature. With the help of the angelic Governors, he would "work in the quieting of the estates, In *lerning* of wisdom, pacifying the Nobilities judgement... as well in the depths of waters, Secrets of the Ayre, as in the bowells and entrails of the Earth." Dee could not use the calls until God deemed it was time, however. Until that time, Dee could only gain the support of the Gover-

118. *Ibid.*, p. 263-321. 119. *Ibid.*, p. 227. 120. *Ibid.*, p. 259.

121. *Ibid.*, p. 320. Dee might have destroyed it when thirty angelic books were thrown into a furnace in Prague at the angels' command, though he later claimed that all materials had been restored except for the angel conversations with Francesco Pucci. It is likely that the English translation was lost in the bottom of the London confectioner's pie plates. *TFR*, p. 418 and Dee in Josten, p. 249.

nors by "*Invoking uppon the Name of GOD*" through prayer.¹²² Even then, the Governors would act only according to God's will, which could be withdrawn if Dee did anything contrary to His wishes.¹²³ In the cabala of nature, as in every other aspect of the angel conversations, Dee was a supplicant requesting that God use him for His purposes, rather than a magus manipulating the forces of nature.

The angelic system of the cabala of nature with its angels of Light and Governors of the Earth, despite promises of information and fascinating names, was soon put aside in favor of the earthly patronage opportunities afforded by the arrival of Count Laski. Not until Dee and his household joined Laski and moved to Cracow in 1583 did the cabala of nature return to the forefront of the angel conversations, this time with an increasingly apocalyptic tenor and purpose. The conversations became more apocalyptic when the angels instructed Dee to move from Cracow to Prague in July 1584 and used imagery which reinforced Dee's belief that the final days were imminent. The cabala of nature responded to the change in mood. Endless catalogues of angelic names and angelic roles in the Book of Nature were replaced by fearsome prayers that called upon entirely new and unfamiliar angels who were to play a part in the Day of Judgment.

The apocalyptic system of the cabala of nature was based on the forty-nine Gates of Nature and their "claves" or keys, the thirty Airs governed by the angels of the twelve tribes of Israel, and the Book of Enoch, which contained "the Invocation of the names of God and of the angels by the names of God."¹²⁴ The angels emphasized Dee's *use* of the information contained in this second branch of the cabala of nature. Still, there were many similarities between the angelic and apocalyptic branches of the cabala of nature, both in the methods of delivery and in the way that the systems were structured.

The angels conveyed the Gates of Nature to Dee between 13 April 1584, and 14 May 1584 while he was in Cracow. From the onset the angels were unusually forthcoming about Dee's use of the Gates: their knowledge would enable Dee to "judge, not as the world doth, but perfectly of the world, and of all things contained within the Compasse of Nature, and of all things which are subject to an end."¹²⁵ These results

122. Dee, AWS II:125; Dee's emphasis.

123. Though Whitby believes that the "forty-nine governing spirits make the magical system [of the angel conversations] daemonic in a very practical way" this is not the case, for the angels' actions did not hinge upon Dee's abilities or desires. Whitby, AWS 1:129.

124. *TFR*, p. 189. 125. *Ibid.*, p. 77.

are significantly different from those described in the angelic branch of the cabala of nature, for while Dee's knowledge of the angelic Governors would help him shape the policies of the nobility and further human understanding of the Book of Nature, his knowledge of the Gates would increase his powers of discernment and his ability to *judge* aspects of the natural world. Within the Gates, the angels told Dee, he would discover the "Dignity and Corruption of nature," and would be made aware "of the secret Judgments of the Almighty."¹²⁶ Nalvage told Dee that the keys to the Gates of Nature contained the "mysteries and secret beings and effects of all things moving, and moved within the world."¹²⁷ Dee was to receive the information in two ways: secret judgments were to come immediately from God, as they did to the Apostles; and information about nature was to be mediated through angelic revelations. The angel Nalvage, Dee's tutor in the intricacies of the apocalyptic system, told Dee that he would share forty-eight keys that would open nature and the gates of understanding.¹²⁸ As in the case of the forty-nine Governors (one of whom could not be summoned), one of the Gates of Nature was to remain closed for God's use.

The "keys" were revealed by Nalvage, who appeared in the showstone bearing a rod and poised within a grid of alphabetic tables. He then pointed from letter to letter with his rod, spelling out each word and phrase of the keys.¹²⁹ Nalvage shared the exact location of every character in the tables, and Dee noted this information in puzzle-like formulas of ascending and descending squares. Because the angel diaries do not contain an explanation of how these tables related to the Gates, it is difficult to grasp why Dee found the locations of the letters so intriguing. One possible interpretation lies in the descriptions of the tables revealed a few days before the keys. Nalvage showed Dee several different tables beginning on 10 April 1584, including a "round Table of Christal, or rather Mother of Pearl" that had "an infinite number of letters ... as thick as one can stand by another" on its surface.¹³⁰ The round table represented "the beginning and ending of all things," and Nalvage attributed the substance of the table to God the Father, its circumference to Christ ("the finger of the Father, and mover of all things"), and "the order and knitting together of the parts" of the table in their "due and perfect proportion" to the Holy Ghost.¹³¹ The table was thus a representation of both the Trinity and the cosmos in its substance, motion, and coherence.

126. *Ibid.*, p. 77. 127. *Ibid.*, p. 94. 128. *Ibid.*, p. 77.

129. See, for example, *ibid.*, p. 79. 130. *Ibid.*, p. 73.

131. *Ibid.*, p. 74.

Two days later, Nalvage reappeared with another table. Dee noted that its division into ten or eleven sections distinguished it from the earlier mother-of-pearl table. It would have mattered very much to Dee from which table, and even from which section of the table, the characters were drawn, because their location would indicate whether they were related to the Father, the Son, or the Holy Ghost. By extension, this information would have related to the substance, action, and order of what the words designated. Even without any explicit link between the first and second tables, Nalvage's earlier remarks would have been on Dee's mind, and his synthetic skills would have been put to use forging connections between the tables.

Dee's efforts to distinguish between substance, action, and order were cast in a different light a few days later when Edward Kelly questioned the angels' use of both number and letters in their discussions of the divine language. Gabriel responded cabalistically: each letter's numerical designation, when combined into a word, signified the "member" or formula of that substance to which the entire word referred.¹³² Every word, taken as a whole, represented the substance's "quiddity" or true essence. Letters and numbers thus provided a formulaic relationship between the divine language and the Book of Nature. A cabalistic exegesis of these formulas using the *gematria* method could help Dee to reorder the disordered and decaying world, as Gabriel confirmed when he explained that the letters on Nalvage's tables were "separated and in confusion," and had to be rearranged using their numerical formulas before they could be given to Dee.¹³³

Numbers were equally important in the angels' instructions surrounding the thirty "Airs" and the angels of the twelve ancient tribes of Israel who governed them. After conveying a few of the Keys to open the Gates of Nature, the angels abruptly switched gears and began introducing Dee to what has been seen as a dramatically new system.¹³⁴ Though the Airs had not been mentioned before in the diaries, there was no radical demarcation between the Airs and the Governors, or the Airs and the Gates. Instead, there was such continuity between the two parts of the cabala of nature that the thirty Airs were also the final thirty Keys which opened the Gates of Nature.¹³⁵ The Airs did differ from other parts of the cabala of nature, however, in their more apocalyptic tone and purpose. Though the Governors were to share their knowledge of the Book of Nature with Dee, and the Gates were to give Dee the power to judge and ultimately restore nature through the recovery of natural "formu-

132. Ibid., p. 92. 133. Ibid., p. 64.

134. See, for example, Whitby, AWS 1:153-154. 135. TFR, p. 145.

las," the Airs were destined to play a crucial part in the final reordering of humanity.

The thirty Airs were described as "bands" in the heavens distributed at twelve-degree intervals around the three-hundred-and-sixty-degree circumference of the earth. This arrangement provided Dee with a restored zodiac on which to base a reformation of astrology, as well as the names of the twelve angels who governed the thirty twelve-degree divisions of Airs in the heavens. These twelve angels were known for overseeing the twelve tribes of Israel, and their appearance in the midst of the vast majority of idiosyncratic angels who fill Dee's angel conversations makes them stand out in sharp relief.

When we take Dee's apocalyptic convictions into account, their position in the cabala of nature becomes even more consequential. In the Judeo-Christian tradition, the angels who watched over the twelve tribes of Israel played a major role in the growth of separate nations and the divisiveness and dispersal of human society.¹³⁶ The twelve tribes of Israel originated with the twelve sons of Jacob and their families and continued to serve as the organizational basis for Israelite society until the death of Solomon, when ten tribes seceded to form the Northern Kingdom. This kingdom later fell to the Assyrians and the Israelites were deported, assimilated into Assyrian society (as recounted in 2 Kings 17:6) and, ultimately, dispersed throughout the earth. Both Jeremiah 31:4 and Ezekiel 37:16 prophesied the return of the ten tribes, and, especially in Ezekiel, the return of the lost tribes was linked to the final days.¹³⁷

The Thirty Airs in Dee's cabala of nature combined biblical ideas about the tribes of Israel with cabalistic ideas concerning the theurgic potential of secret names and apocalyptic ideas about the restitution of the Book of Nature. Each of the thirty Airs contained three divisions, and each Air was governed by an angel of one of the twelve tribes. A

136. The information for this and the subsequent paragraph was drawn from articles on the ten and twelve tribes of Israel contained in R. J. Zwi Werblowsky and Geoffrey Wigoder, eds., *The Encyclopedia of the Jewish Religion* (New York: Adama Books, 1986), p. 390.

137. In Ezekiel's vision, the twelve gates of the city of God (the apocalyptic Jerusalem) were inscribed with the names of all twelve tribes of Israel (Ezekiel 48:31-34). The names over the gates were to restore the tribes to order. Ezekiel's vision of the holy Jerusalem was repeated in Revelations 21:10-27, where the city was described in more detail. Revelations 21 was not the only place where the twelve tribes were mentioned, however. They were also a prominent feature in John the Divine's vision of the Last Judgment, when 144,000 people drawn from the twelve tribes were marked to save them from God's wrath (Revelations 7:1-8).

single angel could oversee several divisions within the heavens, and they were assisted by armies of other angels - a total of 491,577 angels, to be exact. The large number of angels was needed because each of the 90 celestial divisions corresponded to a discrete region of the terrestrial world and the people who lived there. It is quite likely that Dee understood the armies of angels as guardians of human souls - only 144,000 of which were to be saved, according to the Book of Revelations - that would help to sort the "marked" from the "unmarked" in the Last Judgment.

In keeping with other branches of the cabala of nature, Dee was given the seven-letter "true names" for the geographic regions supervised by the Airs, but was told that the thirty Airs had no names - they were known by their numbers.¹³⁸ Later, however, Dee was given three-letter names for the thirty Airs and was told that the names designated their "substance." Dee was dismayed by the discrepancy, which was never resolved.¹³⁹ Despite these contradictions, the numerological consistency of the seven-letter geographic names must have pleased the occult and mathematical facets of Dee's intellect, just as the information that the true name of Egypt was in fact "Occodon," and that Mesopotamia was known to God and the angels as "Valgars" must have pleased his geographical sensibilities. Dee's efforts to link his new system to his substantial geographical knowledge might have been too far-reaching, however, for Nalvage had to caution him that God did not practice the geography of Ptolemy or other terrestrial geographers.¹⁴⁰

Not even Edward Kelly's "discovery" of some of the true names in the works of Agrippa, or his scryer's adamant refusal to have anything more to do with angels that had to look in books for their information, dampened Dee's enthusiasm for the Airs and their part of the cabala of nature. Dee simply expressed his delight with Kelly's bibliographic expertise. Always the humanistic scholar, Dee also had been searching in his library for more information on the geographic divisions of the earth in works by Mercator and Mela, but had met with no success.¹⁴¹ If he was at all suspicious of Kelly or his motives in producing this damning evidence against the angels, he did not betray it. Nor was this incident, in fact, likely to have made Dee suspicious. After all, some shreds of "true" information should have survived the centuries.

Through the thirty Airs, Dee believed he was being given the means to restore the people of the earth to their ancient tribal associations. Despite the fact that the people of the twelve tribes were scattered all over the

138. *TFR*, p. 140. 139. *Ibid.*, p. 209. 140. *Ibid.*, p. 153.

141. *Ibid.*, pp. 158-159.

globe, the angels were still responsible for them and knew where each tribe's descendants could be found. Dee's information regarding the twelve angels could be used to gather all people under the supervision of their rightful angel - even if they were (as in the case of the angel of the twelfth tribe) stretched out from Mauritania to the South Pole, to Chaldea, to the North Pole, and beyond.¹⁴² On that long-awaited day when the city of God descended from heaven, the people of the earth would be able to enter the gates in an orderly fashion - and they would have Dee to thank for it. Although there is something humorous in the process by which Dee received the information concerning the thirty Aires - from the long days when names and places were given, to his hasty addition of the number of troops in angelic armies and Kelly's triumphant production of Agrippa - the ultimate purpose for this information would have imbued the proceedings with a momentous tone.

Dee's anticipation heightened when he received the next component of his cabala of nature, the Book of Enoch. Though this book has provided historians with a short, if inaccurate, rubric for Dee's entire angelic system, the materials associated with Enoch were not the only (or even the most central) feature of the cabala of nature.¹⁴³ The Book of Enoch was simply one of the materials Dee believed could bring him closer to a perfect understanding of the natural world. The angels first instructed Dee to make a book of forty-eight leaves.¹⁴⁴ One page from Enoch's book was not actually revealed to him, because its information was being withheld for God's use in the final days. The book was to contain both an "Invocation of the names of God" and invocations "of the angels by the names of God."¹⁴⁵ The angels told Dee that the information in the Book of Enoch would relate both to the heavens and to the future. Ontologically Dee was climbing higher and higher on the angelic ladder of wisdom and knowledge. Yet this description of the Book of Enoch contradicted subsequent revelations. At one point, Dee was instructed to seek answers to questions about "human affaires" in Enoch's book because it was "worldly."¹⁴⁶ If Dee tried to resolve this discrepancy between a supposedly heavenly book and a "worldly" book, we no longer have evidence of it, and his energies were instead diverted to desperate attempts to preserve his rapidly crumbling position in Prague.

142. Ibid., pp. 146-153.

143. See, for example, *The Enochian Evocation of Dr. John Dee*, ed. and trans. Geoffrey James (Gillette, NJ: Heptangle Books, 1988).

144. *TFR*, p. 159. 145. Ibid., p. 189. 146. Ibid., p. 394.

Several features of the Judeo-Christian tradition are relevant to the high place of Enoch in Dee's cabala of nature.¹⁴⁷ Enoch was a seventh-generation descendant of Adam, and he was also the seventh son of Noah. Thus, he fit numerologically into the cabala of nature, with its reliance on combinations of elemental and spiritual numbers. Enoch lived prior to the devastation of the Flood, and so was closer to the Adamic past as well. To mystics, however, the references to Enoch in Genesis that describe him as someone who "walked with God" and did not die but was "taken" by God (Genesis 5:21-24) were far more intriguing. These references suggest that Enoch (like Elias) knew about God, the angels, and the natural world in ways that other humans did not. Enoch's mystical connotations received more attention from Jewish authors, especially *Merkavah* mystics who believed that when Enoch was taken by God he was transformed into the archangel Metatron. Though this association was never fully endorsed in Talmudic scholarship, the angel Enoch/Metatron was revered as a teacher and a heavenly guide, and through these associations entered into the Western European magical tradition. Nor was Enoch ignored by more orthodox Christian commentators, who saw in his transcendence a prophetic precursor of Christ; and authors such as Tertullian and Irenaeus used Enoch to support the authenticity of Christ's physical resurrection.

Given these intriguing and powerful connections, it is unfortunate that the Book of Enoch is the least lucid part of the cabala of nature as it survives today. The angels' instructions are contradictory in several key places. Dee was distracted from the angel conversations by his attempts to acquire Rudolph II's support and his efforts to evade the papal authorities. Edward Kelly's attention was also absorbed by other matters, and he began to indicate that his allegiances were shifting from Dee and the angels to the emperor's alchemical experiments. In addition, we are missing significant parts of the angel diaries from the time during which the angels conveyed the Book of Enoch, and Dee might have been given other books to use with the book that were consumed in his furnace after the breakdown of relations with Pucci. We know that Dee had a

147. Information on Enoch for this and the subsequent paragraph was gathered from Steven D. Fraade's article in Mircea Eliade, ed., *The Encyclopedia of Religion*, vol. 5 (New York: Macmillan Publishing Company, 1987), pp. 116-118, and Gustav Davidson, *A Dictionary of Angels, Including the Fallen Angels* (New York: Macmillan, 1967), pp. 192-193. Further information on the book of Enoch can be found in Josef T. Milik, ed., *The Books of Enoch* (Oxford: Oxford University Press, 1976) *passim*.

book containing "the Science of understanding of all the lower creatures of God," which was to be used with Enoch's book.¹⁴⁸ Earlier, Dee had been given four tables which he believed were "full of matter," including medicine, the knowledge of all elemental creatures, a complete knowledge of metals and stones (including their locations and uses), the knitting together of nature and its destruction, a knowledge of mechanical crafts, and instruction in formal, though not essential, alchemical transmutation.¹⁴⁹ These tables might have comprised the book entitled *The Mystery of Mysteries and the Holy of Holies*, which Dee confessed he did not then understand and which is no longer extant.¹⁵⁰

The Book of Enoch represents a disappointing final note in the cabala of nature. Though the elements of a system can be discerned, a real understanding of how the system was intended to operate eludes the modern reader, as, one suspects, it eluded Dee. The scattered and fragmentary manuscripts of the angel diaries may yet be coaxed into yielding information, but Dee's cabala of nature remains an aspect of his thought that needs further exploration and explication. What is clear, however, is that Dee's belief in the utility of his cabala of nature was similar to the beliefs of other Christian cabalists, including Agrippa, who thought that cabala gave its practitioners a knowledge of the natural world and "the operative power to change the conditions of existence."¹⁵¹

Adam's Alchemy

The Medicine of God and the Restitution of Nature

Behold, I show *you* a mystery;

We shall not all sleep, but we shall all be changed,

In a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall be changed.

—I Corinthians 15:51-52

Once he had attained mastery of the divine language and the cabala of nature, Dee believed that he was in a better position to discern and decipher corruptions in the Book of Nature. While this might have satisfied some natural philosophers, Dee conceived a much greater role for natural philosophy in the improvement of the human condition. The question facing him in the 1580s and 1590s was how to *practice* natural philosophy in a deteriorating world. This question was answered, and the final aspect of Dee's newly revealed natural philosophy took shape, when the angels delivered to him a form of alchemy that had not been practiced since the days of Adam.

Much of the rationale behind Dee's alchemy, both before and during the angel conversations, was linked to his belief in a "sickness" affecting the Book of Nature. Yet humanity was unable to diagnose or cure the Book of Nature without divine help, for alchemy itself had decayed and was unable to restore Nature's health. With the angels' assistance, Dee believed that he could restore the art of alchemy and then bring about a restitution of nature. The healing process would be based on his mastery of the "medicine of God," a divine substance that promised to redeem matter. The "medicine of God" was linked in important ways to Dee's other revealed science, the cabala of nature, and provided a unified base for the new natural philosophy.

When the apocalyptic and restorative features of the angel conversations are drawn together it is possible for us to understand why Dee believed that the conversations represented his highest achievements as a Christian natural philosopher. Dee was concerned with the consequences

of the moral Fall and the subsequent afflictions of the Book of Nature, yet contemporary natural philosophy was unable to arrest, or even comprehend, the deterioration. Dee's new tools - including his showstone, the divine language, the cabala of nature, and other lessons learned in the angels' "celestial school" - would help him grasp the intricate workings of the Book of Nature and judge their decline. Alchemy was the last subject covered in the angels' lessons, and the great rewards Dee was promised once he mastered the practice of "Adam's alchemy" place the angel conversations even more firmly within the context of early modern natural philosophy.

The Promise and Practice of Alchemy

The role of alchemy in early modern natural philosophy, and in the thought of the period more generally, has been assessed by a number of scholars who offer evidence that Dee's belief in the healing, perfecting, and restorative powers of alchemy was not unique.¹ Alchemy's reputation as an art practiced by disreputable and desperate men demonstrates that the aspirations of natural philosophers like Dee were not always recognized by people outside alchemical circles. There are two reasons for the misperception. First, not all alchemists were philosophically inclined, as was Dee. Regular prosecutions of counterfeiters posing as alchemists fueled the popular belief that alchemists were fraudulent. Second, the obscure narratives used by philosophical alchemists in an

1. Two classic and reliable early studies are H. Stanley Redgrove, *Alchemy: Ancient and Modern* (New York: Barnes and Noble, 1922), and John Read, *Prelude to Chemistry: An Outline of Alchemy* (Cambridge, MA: MIT Press, 1966). More recently, William Shumaker has described aspects of alchemy in *The Occult Sciences in the Renaissance* (Los Angeles: University of California Press, 1972), pp. 161-198. Scholars who have studied particular figures or regional centers include R. J. W. Evans, *Rudolf II and His World* (Oxford: Oxford University Press, 1973); Betty Jo Teeter Dobbs, *The Foundations of Newton's Alchemy* (Cambridge: Cambridge University Press, 1975), Bruce T. Moran, *The Alchemical World of the German Court: Occult Philosophy and Chemical Medicine in the Circle of Moritz of Hessen (1572-1632)*, *Sudhoffs Archiv Zeitschrift für Wissenschaftsgeschichte*, Beiheft 29 (Stuttgart: Franz Steiner Verlag, 1991); William R. Newman, *Gehennical Fire: The Lives of George Starkey, an American Alchemist in the Scientific Revolution* (Cambridge, MA: Harvard University Press, 1994); and Pamela H. Smith, *The Business of Alchemy: Science and Culture in the Holy Roman Empire* (Princeton, NJ: Princeton University Press, 1994).

effort to protect their secrets made material transformation seem even more mysterious than it actually was.

Some authors explicitly discussed practical applications of the alchemical art, including the Siennese metallurgist Vannoccio Biringuccio (1480-1539?). Biringuccio's *Pirotechnia*, published posthumously in 1540, includes metallurgical information as well as a discussion of more obscure alchemical topics.² Such a work can help the modern reader to locate the angelic alchemy in a firmer, less allegorical context than Dee would have used. Biringuccio would not have been surprised at Dee's desire to learn about alchemy from angelic schoolmasters, for example. Biringuccio believed, after examining the ideas of the alchemists, "that unless someone should find some angelic spirit as patron or should operate through his own divinity," the art was doomed to failure.³ He also felt that alchemy could never truly replicate natural processes, despite assertions that it could hasten the growth and perfection of the natural world. Nature, Biringuccio wrote, operated "in things from within" and caused all things to grow and mature according to a gradual, divine time frame.⁴ Alchemy, on the other hand, was an art "weak in comparison" that trailed after "Nature in an effort to imitate her," attempting to bring about change quickly and unnaturally.⁵ Hastening nature, Biringuccio pointed out, was not feasible, as was evident from the vast resources squandered by princes on alchemical schemes.⁶

Despite Biringuccio's skepticism, he could not banish alchemy from the respected enclaves of learning altogether, in part because of its laudable objectives in the hands of truly adept, religious practitioners. Biringuccio distinguished between the "just, holy, and good" alchemy practiced by natural philosophers such as Dee, and the "sophistic, violent, and unnatural" alchemy practiced by charlatans.⁷ Those who practiced the "holy" type of alchemy believed they were "true physicians of mineral bodies, purging them of superfluities and assisting them by augmenting their virtue and freeing them from defects."⁸ Though Biringuc-

2. For a modern edition of this work, see Vannoccio Biringuccio, *The Pirotechnia of Vannoccio Biringuccio*, trans. and ed. Cyril Stanley Smith and Martha Teach Gnudi (New York: Dover Publications, 1990). Dee owned two copies of the work: the original Italian edition of 1540 (Roberts and Watson, #6771 Bio8), which he took with him to the Continent in 1583, and a French translation of 1556 (Roberts and Watson, #459), which remained in England. Neither has been recovered.

cio confessed that he did not know whether any alchemist had been able to cure the natural world by alchemical means, he conceded that the "sweetness offered by the hope of one day possessing the rich goal this art promises ... is surely a fine occupation."⁹

Alchemy, like other branches of early modern natural philosophy, was vitalistic. Its symbolism suggested connections between the alchemist's work in the laboratory and the divine process of cosmic creation, decay, and restitution as presented in the Book of Scripture. Alchemy posited masculine and feminine principles, for instance, which combined to give birth to a "child"; metals underwent "generation," "digestion," and "putrefaction"; and the work itself took place in a closed vessel that alchemists called a "womb."¹⁰ In an analogue to biblical accounts of cosmic history, the alchemist subjected his metals to a process of transformation that progressed from chaos, to differentiation, decay, and death, until, finally, the metals were "resurrected" and became the philosophers' stone - a marvelous substance that could cure all sickness, render the alchemist immortal, and perfect nature.¹¹ Thus it was possible for alchemists to draw a parallel between their creation of the philosophers' stone and the resurrection of Christ's body.

This parallel was based on a pervasive belief that death and decay were necessary if rebirth and restitution were to take place. As the German alchemist and physician Paracelsus (1493-1541) explained in his *Die 9 Bücher de Natura rerum* (1537):

Decay is the midwife of very great things! It causes many things to rot, that a noble fruit may be born; for it is the reversal, the death and destruction of the original essence of natural things. It brings about the birth and rebirth of forms a thousand times improved. . . . And this is the highest and greatest *mysterium* of God, the deepest mystery and miracle that He has revealed to mortal man.¹²

Although the decay of the Book of Nature made it difficult to read its contents with any degree of accuracy, decay itself could still be a form of revelation to natural philosophers, because God was showing humanity the way into the future through gradual deterioration. The culmina-

12. Quoted in Paracelsus, *Selected Writings*, ed. Jolande Jacobi, Bollingen Series, vol. 28 (Princeton, NJ: Princeton University Press, 1988), p. 144. Dee's copies of *Die 9 Bücher de Natura rerum* (Roberts and Watson, #1485 and #2268) have not been recovered.

tion of this process was restitution, followed by the repetition of the cycle. Philosophical alchemists like Dee were in a unique position to help society follow the path toward redemption because of their practical knowledge of the cycle of decay, death, and ultimate rebirth.

The goal of every philosophical alchemist was the philosophers' stone, a powerful substance capable of perfecting other substances with which it came into contact. Analogies between the perfecting power of the philosophers' stone and the healing power of medicines were not lost on alchemical practitioners. Paracelsus was particularly influential, because he elaborated and modified traditional alchemical ideas to link alchemy (healing the imperfections in nature) with medicine (healing bodily sicknesses and imperfections).¹³ In Paracelsus, alchemy served as the foundation for medicine, as well as the crucial discipline needed for inquiry into the Book of Nature. He argued that alchemy brought the natural philosopher closer to the secrets of nature and God because it was based on redemptive principles and Christian theological concepts.¹⁴

The ideas of Paracelsus and other alchemical thinkers of antiquity, the Middle Ages, and the early modern period were well known to Dee. Alchemy was one of Dee's lifelong passions; the spiritual and material quest for the philosophers' stone was as appealing to him as communicating with angels. The works of Paracelsus occupied a significant place in Dee's library, and though few of his personal copies have been recovered, the sheer number of volumes in the collection indicate that he was familiar with Paracelsus's ideas. He did not embrace the philosophies of Paracelsus in their entirety, however: rather than adopting his three-principle (salt/mercury/sulphur) theory of alchemy, Dee's *Monas hieroglyphica* continued to use the two-principle (mercury/sulphur) theory derived from Arabic alchemy.¹⁵ Still, a combination of traditional and Paracelsian ideas provide the background for the angels' restored alchemical art.

A better understanding of Dee's alchemical beliefs can be gleaned from the *Monas hieroglyphica*, especially theorems XVIII and XIX. Both theorems connected the symbol of the *monas* to the process of alchemical transmutation. In alchemy, according to Dee, heat was applied to ele-

13. The most comprehensive study of Paracelsus can be found in Walter Pagel, *Paracelsus* (New York: S. Karger, 1958). For additional interpretations, see Charles Webster, *From Paracelsus to Newton: Magic and the Making of Modern Science* (Cambridge: Cambridge University Press, 1982), and Allen G. Debus, *The English Paracelsians* (1965) (New York: Franklin Watts, 1966).

14. Debus, *English Paracelsians*, p. 41. 15. Clulee, pp. 96-98.

ments in a closed vessel, but the heat was mediated and made gentle by the protective use of dung. To explain the components of the closed vessel and their transformation, Dee first used a representation of an egg, a common alchemical symbol.¹⁶ Dee arranged the elements of the transformation along orbital lines in the egg according to the corresponding placement of their ruling planets. He delineated the egg further into a central "yolk" made up of Sol, Mars, and Venus (the metals gold, iron, and copper) and a "white" made up of Jupiter, Saturn, Luna, and Mercury (the metals tin, lead, silver, and quicksilver). Dee never clarified how the "chalk" or shell of the egg was comprised, though it did play a role in transmutation. Material transformation took place when the "yolk" enveloped the "white" through a process of "rotation." In the *Monas hieroglyphica* the process was symbolized by a spiral derived from Arabic alchemy, where "turning the screw" was used to describe transmutation.¹⁷

Dee linked the seven rotations or revolutions in the alchemical process of transmutation to the ultimate goal of philosophical alchemy: the divinization of the alchemist. While "vulgar" alchemy was concerned only with the material transformation of base metals into silver and then gold, "philosophical" alchemy attempted to transform the alchemist's soul from human to divine. This, too, was symbolized in the *monas*. Dee explained that the terrestrial body in the center of the *monas*, when activated by a divine force, would be united in a perpetual marriage to a generative influence. When the marriage took place under appropriate solar and lunar influences, then the terrestrial center of the *monas* could no longer be "fed or watered . . . until the fourth, great, and truly metaphysical revolution was completed." After this material "advance" occurred, the alchemist "who fed [the monad] will first himself go away into a metamorphosis and will afterwards very rarely be held by mortal eye." Dee was probably referring to a particular step in the seven revolutions of the alchemical process when he mentioned the "fourth, great, and truly metaphysical revolution." Ontologically, the fourth revolution would have been the mediating step between lower and higher levels of the alchemical process and would occupy the same intermediary position in alchemy as angels and mathematics did in the cosmos.

These references in the *Monas hieroglyphica* demonstrate that Dee understood the traditional division of alchemy into two different branches of inquiry. Practical alchemy was primarily interested in turning lead or other base metals into gold. Alchemical texts varied regarding

17. For the principles of the Arabic mercury-sulphur theory and its relationship to Dee's *monas*, see Clulee, pp. 97-100.

how this transformation from base matter was to take place, but in its most rudimentary form it involved the purification of various materials, the application of heat while the materials were in an enclosed vessel to engender color changes, increasing the strength of the mixture through multiplication, and finally projecting the resulting mixture onto other matter to cause transmutation.¹⁸ Spiritual alchemy was a more complex and philosophical process wherein the ascent of the matter toward the philosophers' stone was a material reflection of the spiritual and intellectual ascent of the alchemist toward God. As in many occult sciences, successful alchemists were thought to have been divinely selected to achieve their goal because of their inner purity and strength of purpose. Some equated the soul of the alchemical philosopher with the material to be transmuted: when the material in the alchemical vase reached a state of quintessence, then the soul of the philosopher would reach a state of spiritual enlightenment and power.

Adam's Alchemy: Restoring the Alchemical Art

The angels' alchemy did not correspond exactly to the philosophical alchemy practiced by Dee and his contemporaries. Like the cabala of nature, the angelic alchemy was interesting to Dee precisely because it did *not* correspond exactly with what he knew, and thus could be seen as an improvement in the state of learning and knowledge. As in the case of the cabala of nature, Dee faced each discrepancy between angelic and traditional alchemy with a firm belief that he was receiving Adam's "true" alchemy. Alchemical motifs, ideas, and parables in the angel conversations, therefore, are analogous to, but not strictly derivative from, the alchemy Dee had been practicing.

One of the benefits of practicing "Adam's alchemy" would have been its resolution of the early modern alchemical competition between the ancient sulfur-mercury theory of elemental transformation and the new three-principle theory articulated by Paracelsus, which added salt.¹⁹ Dee purchased many books by Paracelsus - well over a hundred - and Paracelsian ideas, which would not be widely accepted in England until the seventeenth century, were familiar in the university culture of Louvain when Dee was there.²⁰ So why did Paracelsus not persuade Dee on

18. See Read, *Prelude to Chemistry*, pp. 118-163.

19. *Ibid.*, pp. 25-27; Debus, *English Paracelsians*, p. 27.

20. Thorndike, V:329. For Paracelsus's adoption by English natural philosophers, see Debus, *English Paracelsians*, especially pp. 55-57, although his belief that "It was not until 1585 that any Englishman took notice of the

this pivotal aspect of alchemical theory? Though Paracelsus's influence on Dee has been insufficiently studied, the list of titles he owned suggests that it was manifested in surprising ways, and that his influence may not have been primarily alchemical.²¹ Five copies of two of Paracelsus's early works on medicine, the *Paragranum* and the *Opus paramirum*, attest to Dee's interest in Paracelsian "universal" medicine despite the fact that Dee was not a practicing physician.²² Dee also owned later works by Paracelsus, including ten treatises on surgery²³ and seven copies of his comprehensive survey of occult philosophy, the *Archidoxa*, which is reminiscent of works by both Agrippa and Johann Trithemius.²⁴

It is likely that the debates between Paracelsian and Arabic alchemy

comprehensive Paracelsian theories" should be qualified in light of Dee's collection and contemporary (though negative) Elizabethan reactions.

21. Clulee makes only one reference to Paracelsus (p. 141). French makes more frequent allusions to the chemical physician, but they are not extensive. See Peter French, *John Dee: The World of an Elizabethan Magus* (New York: Routledge and Kegan Paul, 1972), pp. i, 37, 52, 60-61, 76, 127-128, and 136. In addition, Dee is not featured in Allen Debus' *English Paracelsians*, but only mentioned on pp. 101 and 131.
22. Paracelsus, *Chirurgia magna* (Frankfurt, 1566), Roberts and Watson, #65; *Cheirurgia magna* (Basel, 1573), Roberts and Watson, #70; *Cheirurgiae libri tres* (Frankfurt, 1562); *Chirurgia magna* (Augsburg, 1566), Roberts and Watson, #1479; *Chirurgiae magnae partes tres* (Frankfurt, 1562), Roberts and Watson, #1480; *Chirurgiae Magnae tractatus tres* (Antwerp, 1556), Roberts and Watson, #1500; *Cheirurgia minor* (Basel, 1570), Roberts and Watson, #1503; *Cheirurgia magna et minor* (Basel, 1573), Roberts and Watson, #2220; *Cheirurgia vulnerum* (Basel, 1573), Roberts and Watson, #2230; *Chirurgia minor* (Basel, 1573), Roberts and Watson, #2231.
24. Paracelsus actually studied under Trithemius, as did Agrippa. See Paracelsus, *Archidoxa* (Basel, 1572), Roberts and Watson, #1475; *Archidoxa* (Munich, 1570), Roberts and Watson, #1475; *Archidoxa* (Augsburg, 1574), Roberts and Watson, #1492; *Archidoxa* (Augsburg, 1570), Roberts and Watson, #1494; *Archidoxa* (Basel, 1570), Roberts and Watson, #1502; *Archidoxa* (Basel, 1570), Roberts and Watson, #2227; and *Archidoxa* (Augsburg, 1570), Roberts and Watson, #2263. The *Archidoxa* is available in a reprint edition of the 1656 translation by Robert Turner. See Paracelsus, *The Archidoxes of Magic* (1656), trans. R[obert] Turner (New York: Samuel Weiser, 1975).

did not trouble Dee, because the angels were revealing new, uncorrupt information about alchemical materials and processes.²⁵ Dee still adhered to the two-principle theory of transmutation in 1564 when the *Monas hieroglyphica* was published, and the angels' use of the two-principle theory ultimately resolved the question as far as Dee was concerned. Dee discovered, for example, that "Dlafod" was the real name for sulfur, and "Audcal" the true name for mercury. The angels also shared the names of other alchemical materials, as well as instructions about the mysterious processes leading to "Dar," or the philosophers' stone. Dee needed to use the cabala of nature to reach the philosophers' stone, so that he could "judge, not as the world doth, but perfectly of all things contained within the Compasse of Nature, and of all things which are subject to an end."²⁶ Then, Dee would be able to apply the *medicina dei* or *medicina vera* - the medicine of God or true medicine - to the Book of Nature to help restore and heal it. Gabriel discussed the *medicina dei* with Dee, where it was described as "the true, and perfect science of the natural combination, and proportion of known parts."²⁷ In order to heal any sickness within nature, Dee had to know both "celestial radiation," which was the cause of natural combination, and "elemental vigor," which was the cause of natural proportion.²⁸ Dee was impressed, and found the lesson on the medicine of God "very apt."

The angels linked the *medicina dei* to the cabala of nature and the divine language, telling Dee that the power in the angels' words was akin to the alchemical properties of the medicine. Dee found this notion appealing, perhaps because he could relate it to Paracelsus's belief that all natural philosophers must base their exploration of the Book of Nature on the "true foundation" provided by the cabala.²⁹ After Paracelsus's death, "R. Bostocke" endorsed this idea in a work entitled the *Difference betwene the auncient Phisicke. . . and the latter Phisicke* (1585). Bostocke wrote: "The true auncient phisicke which consisteth in the searching out of the secretes of Nature . . . collected out of the Mathematicall and supernaturall precepts ... is part of Cabala. . . ."³⁰ This symbiotic relationship between alchemy and cabala is evident in Dee's angel conversations, where both were integral components of a newly reformed and revealed natural philosophy.

The physics and metaphysics of light were also important to the *med-*

icina dei, because only a natural philosopher proficient in "celestial radiation" could manufacture the substance. Dee's fascination with Giovanni Pantheus's *Voarchadumia contra alchimiam* provides insight into the unification of alchemy and optics, as do Dee's published works.³¹ In the *Voarchadumia*, Pantheus cabalistically equated the letter O with both "lux major" and "lux minor"; the letter A with "materia prima artis," or elemental first matter; and the letter S with fire or air, which were "lux minor."³² Depending on the combination of these elements, and the desired transformation, Pantheus assigned each letter a numerical weight, or proportion. In the *Propaedeumata aphoristica* Dee modified Pantheus's ideas and argued that each of the four elements was comprised of different proportions of elemental matter, lux major, and lux minor (which was itself composed of a mixture of air and fire).³³

Light played a significant role in Dee's alchemical philosophy, and thus alchemy became another science susceptible to opticomathematical interpretation. When Dee referred to alchemy as "inferior astronomy," he was not simply employing a common trope but expressing his belief in the mathematical connections that might exist between celestial light and elemental matter. Robert Grosseteste's metaphysics of light was influential in the formation of Dee's interest in optics, and he might have influenced Dee's beliefs in alchemy and light as well. Like Dee, Grosseteste believed that light governed the interaction of elements and elemental change and that both processes were regulated and directed with the mediation of the celestial bodies.³⁴

31. Dee may have received further insights into Pantheus's theories from Giovanni Baptista Agnelli, a Venetian alchemist living in London. Roberts and Watson persuasively argue that Agnelli gave Pantheus's work to Dee based on Dee's inscription "ex dono magister Johannes Baptistae Danieli" on the title page. Is it not inconceivable that this was Dee's erratic (and largely phonetic) latinization of Agnelli's name. See title page, Joannes Augustinus Pantheus, *Voarchadumia contra alchimiam: ars distincta ab archimia, & sophia: cum Additionibus: Proportionibus: Numeris: & Figuris* (Venice, 1530). Dee's annotated copy is now in the British Library, Roberts and Watson, #Dr6. Agnelli is a fascinating and neglected figure in the history of English alchemy, but he was well known in the period and participated in the assays and trials of Martin Frobisher's mysterious gold in the late 1570s. Dee had a copy of Agnelli's book on alchemy, the *Apocalypsis spiritus secreti* (London, 1566), in his library; Roberts and Watson, #1449. Dee took Agnelli's work with him to the Continent in 1583; it has not been recovered.

Enacting Adam's Alchemy

When the angels instructed Dee in Adam's alchemy, it was always a lively, theatrical exchange. The angels' alchemical ideas were ideally suited to visual and oral methods of transmission. Color and figural symbolism played a prominent role, for example, for alchemical materials were thought to alter in color from black to white, from white to green or yellow, and finally from green or yellow to red. While a figure who appeared in the showstone in red garments bearing a sword might in traditional symbolic terms signify war or the god Mars, in alchemical terms such a figure would convey additional meanings relating to stages in the alchemical process, metals, and planetary influences. Symbolic representations of the alchemical process known as *emblemata* were popular throughout the early modern period and were first issued in printed form in the seventeenth century.³⁵ Materials and steps of the alchemical process were personified in contemporary texts, as when masculine and feminine figures representing Sophie Sulphur and Sophie Mercury joined in a chemical wedding. The philosophers' stone resulted from the union, variously personified as an androgyne or "royal child." In one of Dee's conversations, a boy wearing a crown transformed a woman into a man, and then the boy wed the androgyne to a queen, just as if an emblem book had come to life within his showstone.³⁶ This shared matrix of symbols rests on what William Ashworth calls the "emblematic world view," which he defines as "the belief that every kind of thing in the cosmos has myriad hidden meanings and that knowledge consists of an attempt to comprehend as many of these as possible."³⁷

Unlike two-dimensional emblem books, the allegorical parables in the angel conversations were capable of movement and action. This unique

35. See, specifically, Gerard Heym, "Some Alchemical Picture Books," *Ambix I* (1937): 69-75, and Stanislas Klosowski de Rola, *The Golden Game: Alchemical Engravings of the 17th Century* (London: Thames and Hudson, 1988), passim. Mario Praz, *Studies in Seventeenth-Century Imagery* (Rome: Edizioni di storia e letteratura, 1975), also contains valuable information on the place of alchemical *emblemata* in the larger emblematic tradition.

37. William B. Ashworth, "Natural History and the Emblematic World View," in *Reappraisals of the Scientific Revolution*, ed. David Lindberg and Robert S. Westman (Cambridge: Cambridge University Press, 1990), p. 312. For another analysis of the use of images in the angel conversations, see Deborah E. Harkness, "Shows in the Showstone," passim, which was an early version of some material in this chapter.

feature of Dee's angel conversations enabled alchemical ideas to be mediated through a language of signs, colors, symbols, and gestures suited to the didactic purposes of the celestial school. The angelic schoolmasters spun series of images and actions into an alchemical narrative to explain complex alchemical processes. Often these lessons included additional instruction in the divine language, and Dee was given the "true" names for stages and materials of the alchemical art. The parables also addressed the immediate apocalyptic significance of Dee's alchemical practices.

One of the richest didactic parables was shown to Dee during the afternoon of 16 November 1582. John Dee and Edward Kelly were together in Dee's private study in Mortlake. They had not waited long when a male angel appeared in the stone dressed in a long, purple robe with a triple crown on his head.³⁸ The angel brandished a red rod, and the earth below him shook. Seven other angels approached, holding a seven-pointed copper star. One of the seven spoke to Dee, saying, "I am he which have powre to alter the corruption of NATURE, with [*sic*] my seal, I scale her and *she [nature] is becom[m]e perfect. I prevayle in Metalls: in the knowledge of them.*" Another angel came forward and told Dee, "I am *Prince of the Seas: My powre is uppon the waters. I drowned Pharao . . . My name was known to Moyses. I lived in Israel. Beholde the tyme of Gods visitation.*" After prophecies about the destructive power of the sea, the angel opened his robe, revealing feathers and a golden girdle. At this point, a "black cloth was drawn" inside the stone, which Dee noted "is now appointed to be our token . . . that we must leave off[f] for that instant."

After a break, Dee and Kelly resumed their conversation. The crowned angel appeared, as did three angels still holding the copper star. One stepped forward, saying, "*My powre is in Erth: and I kepe the Bodies of the Dead. Theyr members are in my bokes. I have the key of Dissolution. . . . Behold, the bowels of the earth are at my opening.*" Dee, who was feeling some financial pressure at the time, asked the angel for help in finding hidden treasure so that he could pay his debts. The angel of the earth chastised Dee, replying that the treasures hoarded in the earth were reserved for the destruction of the Antichrist. Instead, the angel was giving Dee the power of his "seal," which he would be able to use to govern the earth and unlock its secrets. Another angel stepped forward, who was "*the life and breath of all things in Living Creatures.*" This angel made birds, dragons, and other creatures appear in the stone, and said, "*the Living, The ende, and beginning of these things, are known*

38. Dee, AWS 11:147-157; all emphases are Dee's.

unto me: and by sufferance *I do dispose them untill my Violl be run.*" Then the angel held up a vial containing five or six spoonfuls of oil. When the sixth angel pulled open his red clothes, fire issued forth from his sides, which Dee reported "skarsly of mans eye can be beholden."

Finally, the seventh angel spoke to Dee and Kelly, saying "The powres under my subjection, are Invisible ... I will teache the[e] Names without Numbers. The Creatures subject unto me shalbe known unto you. Beware of wavering. Blot out suspicion of us for we are Gods Creatures, that have rayned, do rayne, & shall rayne for ever. All our Mysteries shalbe known unto you." The conversation ended with some final words from the first angel: "Behold, these things, and theyr mysteries shalbe known unto you, reserving the Secrets of him which raigneth for ever. . . . Whose name is Great for ever. . . . Open your eyes, and you shall see from the *Highest to the Lowest.*" Once again the black curtain signaled the parable's end.

This parable emphasized ideas that would have resonated with Dee's natural philosophical interests and intentions. The first angel, whose knowledge of metals permitted alterations in nature, had obvious links to both his alchemical and his apocalyptic interests. The second angel was of great antiquity and had advised Moses, linking Dee to the wonders of the past. Dissolution and decay were covered by the third angel, while the fourth knew about the ending and beginning of all living creatures. Promises of the knowledge of Adam, the Book of Nature, the past, and the future were all contained in a single angel conversation. In addition, the symbolism was provocative without being too specific, which permitted Dee and his associates to discuss the "lesson" at length and spin out its possible permutations.

One potential meaning of the parable that no one would have missed was apocalyptic, for in this conversation apocalypticism and alchemy collapse into a single narrative designed to convey the message that Dee and Kelly could be instrumental in the world's progress toward the Final Days. The first angel who spoke with Dee had the "power to alter the corruption of nature" and would perfect nature, while the second angel told Dee to expect the time of "God's visitation." The angels had been divinely instructed to share their powers with Dee - and thus he, too, could master the natural world.

Similarly alchemical messages were delivered repeatedly during the course of Dee and Kelly's five-year association. Another conversation on 4 May 1582 was infused with an assortment of speeches, gestures, special effects, and symbolism to deliver a similar message. On this particular day Edward Kelly was professing doubts about their exercises and refusing to begin the prayers that served as a preamble to each

attempt to contact the angels. Dee, undeterred by Kelly's doubts, went into his oratory "and called unto God, *for his divine help* for the understanding of his laws and vertues . . . which he hath established in and amongst his Creatures for the benefyt of mankind."³⁹ Soon Kelly reported seeing two angels, Michael and Uriel, who joined them in prayer.

Suddenly, seven bundles appeared "from heavenward." While Michael collected the bundles, Uriel placed "a thing like a superaltare" on the table "and with a thing like a Senser" made "perfume at the fowre corners of the Table." The censer sank through the middle of the table, and Uriel took the seven bundles from Michael and placed them on the superaltar. A "Glorious man" unwrapped the bundles, revealing animals. The "Glorious man" took a bird, "as byg as a sparrow," and the bird began to increase in size, seeming "to be as great as a swanne: very beutifull [*sic*]: but of many cullours." Another bird went through the same metamorphosis, and the "glorious man" joined their wings together. Kelly reported that "All is suddenly dark, and nothing [*is*] to be seen." Then he heard a voice like the angel Michael's saying, "It was a byrd, and it is a byrd, absent their [*sic*] is nothing but Quantitie. Beleve. *The world is of Necessitie: His Necessity is governed by supernatural! Wisdome.* Necessarily you fall: and of Necessitie you shall rise again."

The showstone brightened and Michael and Uriel returned to show Dee and Kelly the remainder of the parable. The two birds reappeared, and grew until they were "*as big as mowntaynes.*" They flew toward heaven, their wings touching the sky. One bird took stars into his beak which the other bird replaced in the heavens. The birds then flew over cities and towns, striking down bishops, princes, and kings with their wings as they passed. The "Simple" folk - beggars, the lame, children, old men and women - were left standing, untouched by the birds.

At this point, the imagery took a different turn. The two birds lifted the bodies of three dead men and a child, all wearing crowns, from the ground. The four began to quicken from their death, and then rose up and departed. The birds rested upon a hill, where the first bird "gryped the erth mightily and there appeared diverse Metalls." The birds tossed an old man's head until it broke open, spilling out "a stone, rownd, of the bignes of a Tennez ball of 4 cullours, White, black, red, and greene." The birds nibbled at the stone, and were transformed into crowned men with golden teeth, hands, feet, tongues, eyes, and ears. The men carried "Sachels . . . full of gold," which they "seemed to sow . . . as come, going or stepping forward, like Seedmen." Here the parable ended, and Michael informed them that he had shown Dee and Kelly how they

39. Ibid., pp. 130-138.

would be joined, by whom, to what intent and purpose, what they are, what they were, and what they should be.

Decoding the parable requires that it be divided into two symbolic cycles: the first extending from Uriel's actions at the altar until the kings and bishops were struck down; and the second extending from the revivification of the dead to the sowing of gold in the earth. The first cycle was consonant with traditional symbols, while the second relied heavily on alchemical imagery. At the beginning of the first cycle of images, Uriel's use of the censer to consecrate the altar bears a striking similarity to Revelations 8:3-6, where the consecration of an altar serves as a link between the opening of the seventh seal, which brings a profound silence to the world, and the sounding of the first trumpet of the war between good and evil. Kelly and Dee were cast into the parable as birds transformed from sparrows - the most humble of birds - into conjoined swans. Generally, birds symbolized the human spirit; throughout the Middle Ages the swan symbolized the soul's journey toward salvation through its ascension to the kingdom of heaven.⁴⁰

Spiritual transformation and salvation were mimetically underscored by the words of the angel Michael, who said, "Necessarily you fall: and of necessity you shall rise again." That spiritual redemption would lead to mastery over the natural world was dramatized when the two birds reached into the heavens and reordered the stars. The reordering of the stars had apocalyptic overtones, and any changes in the heavens were a sign of great importance in the sixteenth century. The significance of the new heavenly order might have been revealed in the birds' next action, when they leveled the mighty with their wings, leaving the weak standing. In Revelations 6:15-17 a similar event serves as a precursor to the apocalyptic days of wrath:

And the kings of the earth, and the great men, and the rich men,
and the chief captains, and the mighty men, and every bondman,
and every free man, hid themselves in the dens and in the rocks of
the mountains; And said to the mountains and rocks, Fall on us,
and hide us from the face of him that sitteth on the throne, and
from the wrath of the Lamb; For the great day of his wrath is come;
and who shall be able to stand?

The second cycle of images, though it has apocalyptic significance, was drawn primarily from the alchemical tradition. The cycle begins with the birds' revivification of the dead. Death followed by rebirth was a common motif in alchemical literature, and alchemical theory posited

40. Louis Charbonneau-Lassay, *The Bestiary of Christ*, trans. and abridged by D. M. Dooling (New York: Parabola Books, 1991), pp. 251-252.

that nothing could "be multiplied or propagated without decomposition."⁴¹ A more explicit link to alchemy occurred when the earth opened to reveal the hidden world of metals, followed by the appearance of the philosophers' stone - the multicolored stone the size of a tennis ball - which the birds ingested. The divine food of the philosophers' stone transformed the birds (symbolizing Dee and Kelly) into men of perfect gold, thus linking the goal of the alchemical process with the redemption of their souls. Their perfection would enable them to sow the seeds of rebirth in the Book of Nature, as demonstrated when the two men began to sow their bags of gold in the earth.⁴² These images were common in alchemical texts, and in Mylius's *Philosophia reformata* (1622) an engraving appeared which included, not only the revivification of the dead, but also the philosopher sowing gold and an angel blowing a trumpet signaling the Apocalypse, when the dead shall rise and be damned or redeemed (Figure 7).

Whereas the parables of 4 May 1582 and 16 November 1582 are replete with alchemical ideas, later alchemical parables contain a bewildering assortment of symbolic images that cannot always be made to yield a coherent alchemical narrative. In some cases, neither the color symbolism nor the personifications of elemental materials adhere to early modern alchemical theory: the colors appear throughout the actions in an incorrect order, or the alchemical characters appear in unusual sequences and combinations. Whether the jumble of images and ideas reflects alchemical developments invented by Dee and Kelly, or whether Dee and Kelly went on to practice the alchemical processes suggested by the angels' parables, is not clear.

Four angel conversations that took place between 1584 and 1585, when Dee and Kelly were in Prague seeking an audience with Rudolf II, are illustrative.⁴³ All contain allusions to birds, rivers, towers or castles, gardens, fire, and flowers. While we might be tempted to quickly pass over these images, they are common alchemical symbols.⁴⁴ Birds, for

41. Basil Valentine, quoted in Read, *Prelude to Chemistry*, p. 202.

42. For the significance of the vegetation of metals, see Dobbs, *Alchemical Death and Resurrection*, p. 10 and Read, pp. 94-95.

43. See conversations for 30 April 1584 (TFR, pp. 111-114); 20 June 1584 (TFR, pp. 168-171); 20 August 1584 (TFR, pp. 219-222); 14 January 1585 (Dee, TFR, pp. 355-361).

44. For further insights into the rich symbolic possibilities of alchemy, see Lyndy Abraham's *Dictionary of Alchemical Imagery* (Cambridge: Cambridge University Press, 1998). The information in this paragraph and in subsequent pages is drawn from Abraham's study.

Figure 7. An angel blows a trumpet to awaken the dead, while an alchemist sows seeds of gold, in this illustration of "Fermentatio," from Mylius's *Philosophia reformatata*. Reproduced by permission of the University of Wisconsin, Madison Library Department of Special Collections.

example, indicated the combination of masculine and feminine principles into a "volatile spirit" - a crucial stage in alchemical transformation. Rivers or streams commonly denoted the "mercurial water" that transformed one element into another. The alchemical furnace was often depicted as a tower or castle in alchemical treatises, and some authorities went so far as to point out the advisability of constructing an alchemical furnace that was not only functional but visually pleasant.⁴⁵ Entire gardens could also symbolize alchemical equipment, in this case the closed vessel in which material transformation took place. Alchemists often protected their unique designs for closed vessels, referring to them in their treatises as "secret" or "protected" gardens. Fire, of course, was the element most associated with alchemical processes and a widely used

45. Pantheus's work contains several designs for furnaces, as does George Baker's translation of Conrad Gesner's work on distillation, *The newe lewells of Health, wherein is containyed the most excellent Secretes of Phisicke and Philosophie, devided into fower Bookes* (London, 1576).

symbol of transformation and refinement. Finally, flowers appear throughout alchemical treatises and emblem books. The most common, the rose and the lily, were used to indicate color changes of the alchemical process and to differentiate between masculine and feminine principles.

In the four alchemical conversations that took place in the second half of 1584 and the beginning of 1585, these symbols were accompanied by additional symbols of alchemical processes and transformations. On 30 April 1584, for example, seven men in white priestlike robes (a personification of the seven planets) traveled up a hill carrying a tankard of transparent bone.⁴⁶ A partridge appeared (birds signified the union of masculine and feminine principles), but it had legs of different lengths. One of the men took the partridge and plucked most of its feathers off before cutting the longer leg. The partridge retained its wing feathers, however, and flew away (flight was a symbol of material volatility). Next the men arrived in a garden planted with roses and fruit trees (symbols of fertility and change). Inside there was a large white bird that flew about and beat down the bushes and trees with his wings. The bird attacked one of the men, who retaliated by cutting the bird's carcass into two parts and throwing them into the river.

Despite these setbacks, the men continued on the bridge and came to a round building with no windows that was nonetheless "bright." "It is a frame," Kelly explained, "made as though the 7 planets moved in it." Within the room was a suit of white armor, which one of the men donned before kicking the moon and turning it into a powder (powders were often used in alchemical processes). The men traveled on and came to a crowned priest (the masculine principle) who gave them a staff and a bottle before sending them on their way. They continued on to a great wilderness full of naked wild men. Finally, they reached a great river on the very top of the hill with "a rich tower all of precious Stones." Here the men filled their tankard, and one said, "This was my coming, and should be my return." Kelly reported that all seven men reappeared at the bottom of the hill, where they dug into the earth and removed a lion's carcass, which they revived by giving it a drink from their tankard.

The final alchemical conversation shared by Dee and Kelly took place on 14 January 1585.⁴⁷ This conversation is more symbolically elusive than the others, and also more confusing. Despite these drawbacks, the conversation was probably of utmost importance to Dee, because it

46. *TFR*, pp. 111-114. 47. *Ibid.*, pp. 355-361.

seemed to present the story of creation in alchemical terms. The angel Levanael appeared wearing an ash-colored veil (possibly a reference to the alchemical fire) in a garden full of fruit (representing the closed alchemical vessel). On a mound in the center of the garden stood a house that was perfectly round outside, but square inside. Four round windows and four doors faced in the cardinal directions. The north door was black, the east door was white, the south door was red, and the west door was green - the four dominant colors used in alchemical treatises. Within the east door, a fire burned. Within the west door, streams and rivers flowed. The south door was full of smoke, and the north door contained grey dust. Dee labeled these doors (respectively): fire, water, air, and earth. Lavanael left the house and met seven men (symbolic of the seven planets) vainly digging in the side of the hill. Levanael broke into the images at this point and told Dee and Kelly that "the Earth is a Monster with many faces: and the receptable of all variety. Go home, stand not idle. Provide by Arts for the hardnesse of Nature. ..."

After a break, Dee and Kelly resumed their conversation with Levanael. The seven men were still digging, but in the process they were destroying their tools, complaining all the while that their purpose was unknown. A smith appeared who fixed their tools and made their work easier. One workman found a white substance, described as being like alabaster or salt. The workmen continued to dig until the earth was removed all the way to the round house's foundation. The workmen halted, unsure of how to proceed, lest they destroy it. Lavanael instructed them to continue but asked them to use their hands to dig. When the men uncovered the house's foundation, it was as clear as glass and burned with an interior fire. "[K]ernels of apples" burst from the house's north door, along with slime, "water thinner than slime," and pure water. "Stuff like yellow earth, which the fire wrought out of the black earth" appeared, and pure water seeped into the yellow earth. The fire receded, and creatures came forth. Levanael informed Dee and Kelly: "Here is Creation, and it is the first."

Levanael took a lump of earth and broke it into six round balls. He mixed yellow earth and water in an iron vessel, and the substance took on a greenish cast. Levanael, satisfied with his work, said, "Thou art strong, and wilt beget a strong Child" - a clear reference to the combination of masculine and feminine principles to yield an androgynous principle. When Levanael removed the substance from the iron vessel, it was transformed into gold. Lavanael repeated the process with another ball of earth, saying, "Corruption is a thief, for he hath robbed thee of thy best Ornaments, for thou art weaker in the second." When the

second parcel of earth was removed, it was silver. The remaining balls of earth yielded copper, iron, and tin - the remaining metals in the alchemical hierarchy.

The angel's alchemical lessons continued, but they diminished in detail. Despite the confused allegories and murky meanings, it is clear that alchemy played a prominent role in the conversations. Increased alchemical knowledge would have been a strong incentive for Dee to continue the conversations, as would the angels' assurances that he was being "perfected" through his communication with them so that he could, in turn, restore the flawed human knowledge of nature and then perfect nature itself.⁴⁸ This relationship between the reformation of natural philosophy and the restitution of nature was strengthened when the angels told Dee that the true cabala of nature would enable him to attain mastery over nature and purify the earth as the final days unfolded.⁴⁹ In the *Monas hieroglyphica*, Dee had already come to believe that his synthesis of the human arts and sciences, especially those like alchemy and cabala which linked the perfect celestial world with the imperfect terrestrial world, would enable him as a natural philosopher to "effect a healing of the soul and a deliverance from all distress" and also empower him to gain "great wisdom, power over other creatures, and large dominion."⁵⁰

Epilogue

Unfortunately, the religion that promised to reconcile all the people of the earth, the alchemical art that would have resolved debates between ancient and modern practitioners, and the *medicina del* based on the reformed sciences of cabala and alchemy were not enough to heal the rift between John Dee and Edward Kelly. A few scattered angel conversations survive from the period after the angels revealed their reformed alchemy in 1585, and they indicate Kelly's growing absorption with his independent laboratory work and his efforts to fulfill the alchemical requests of noble patrons in Trebona and Prague. In 1589, Dee and Kelly parted company. The events of the interim period have been largely lost to us, so our questions about the alchemy described so briefly in 1585 remain unanswered, as do those about Dee's state of mind in 1588, when the marvelous year mentioned in the prophecies failed to usher in a complete restitution of the cosmos.

Dee's ongoing commitment to the angels after the dissolution of his partnership with Kelly is the most striking testament to his faith in their wisdom. Almost two decades later, he was still talking to the angel Raphael with the assistance of his last known scribe, Bartholomew Hickman (Figure 2). Perhaps Dee decided that his initial interpretation of the angels' prophecies about the year 1588 were faulty, and that the restitution of nature would actually occur in 1688 rather than 1588. During his last extant conversation, Raphael comforted Dee about his philosophical studies, confirmed the merits of the angelic revelations, and promised him a long life. Dee's finances, as ever, were, a problem, and there are signs in the angel conversations that Dee was peddling his angelic revelations in exchange for money. Dee asked Raphael about buried treasure and the actions of a thief named Thomas Webster on behalf of a client who had come to the natural philosopher for assistance.¹ Dee even considered entering the service of the earl of Salisbury and was willing to let James Fs council know of his "beggary."² After

i. *TFR*, pp. *36 and *39. 2. *Ibid.* p. *32.

Dee's death, astrologer Richard Napier recalled that he was forced to sell some of his precious books to make ends meet.³

The image of Dee in his final years is far different from that of the confident young man enjoying the intellectual riches of Louvain or Paris, or even the vocal prophet-philosopher of Prague. The older Dee was beset with financial problems and plagued with doubts and worries. He had fallen on hard times, and his former patrons in England - such as the earls of Leicester and Pembroke, and William Cecil - were dead. No help arrived from Prague or Trebona, and ultimately Dee's repeated requests for increased livings and responsibilities came to nothing. On a more personal level, he was concerned for the welfare of his few surviving children, especially his son Arthur, who returned from his medical studies in Basel only to depart for Russia to become a physician to the tsar after his father's death.⁴

Dee was pacified in this troubled time by the angels' assurances that his work with them would be remembered for years to come. The angels once told Dee: "Whilest [*sic*] heven endureth and earth lasteth, *never shall be razed out the Metnorie of these Actions.*"⁵ In this, as in the prophecies concerning the queen of Scots and the Spanish Armada, the angels' remarks proved true. Raphael told Dee that, when he died, people would marvel "that such an one was upon the earth, that God by him had wrought great and wonderful Miracles in his service." In addition, Raphael promised Dee, who had struggled throughout his life to improve the human condition through a more perfect understanding of the Book of Nature, that "thou shalt die with fame and memory to the end."⁶

Despite the infamy of Dee's angel conversations, however, they have remained an enigma. They can only become less enigmatic when placed firmly within the context of his life, work, and times. Though an advocate of the mathematical sciences that were to become increasingly im-

portant in the centuries after his death, Dee was nonetheless immersed in the intellectual traditions passed down to him from the Middle Ages as well as those surrounding him in sixteenth-century Europe. These included the eschatological views of Guillaume Postel, the occult philosophies of Agrippa and Trithemius, the chemical medicine of Paracelsus, and the Christian cabala of Reuchlin. All helped Dee to formulate his own Christian natural philosophy, in which the word and works of God could be mastered, partially through study and contemplation, and completely through the gift of divine revelation and angelic communication.

A careful and comprehensive examination of Dee's angel conversations reveals that many of our preconceptions about them have been misleading. Neither secret, nor pagan, nor overtly magical, Dee's conversations resonate with a wide range of early modern contexts. R. J. W. Evans perceptively alluded to the context of Dee's angel conversations in his study of the court of Rudolf II. After analyzing the secular and clerical interest in Dee and his angels at the very highest levels of the Catholic and Rudolphine hierarchies, Evans concluded that Dee was an important and dangerous figure in the eyes of the papacy because the angels' revelations were "both *relevant* and *meaningful* to his [Dee's] Prague audience."⁷ Anxieties expressed by Dee's contemporaries did not focus on whether the angel conversations were true or false. Rather, witnesses were worried about how Dee and his angelic prophecies could be managed, contained - perhaps even coopted - by existing religious and political hierarchies.

We have come to see John Dee through a darker glass than that provided by his own time. The dynastic change from Tudor to Stuart, the deaths of so many former patrons, and Dee's continued adherence to the idealistic aspirations of post-Reformation eschatologists all contributed to his declining prestige. Once praised as one of the most learned men in his native land and received by foreign emperors, kings, and universities as a distinguished member of the European intellectual community, Dee soon slid into ridicule and obscurity.

Dee's mysterious last days and the confusing events following his death have diminished the angel conversations and their role in his natural philosophy. Even the date of his death is now unclear. While scholars have traditionally dated it as December 1608, Julian Roberts and Andrew Watson have supplied persuasive marginalia to support a later date of 26 March 1609.⁸ The absence of factual information is

7. R. J. W. Evans, *Rudolf II and His World* (Oxford: Clarendon Press, 1973), p. 223.

8. Roberts and Watson, p. 60.

emblematic of a much greater loss, however, for we lack a sense of the years preceding Dee's death as well. The few transcripts of angel conversations now extant are the greatest, yet still inadequate, access into Dee's life during his struggles with poverty, old age, and disappointment when the angels' promises of earthly rewards failed to materialize. During these years Dee published only apologies and supplications. Other work he might have completed, library purchases he might have made, and correspondence with European natural philosophers, have all been lost, leaving historians with little information upon which to draw. References in Dee's library books do, however, point to the identities of his final intellectual associates: alchemists John Pontois and Patrick Saunders.⁹ Both men won Dee's confidence, and Pontois appears to have been especially favored.

Saunders was probably an alchemical assistant, for his name appears in connection with a loan of some of Dee's alchemical books to Henry Percy, the "Wizard Earl" of Northumberland.¹⁰ Saunders later practiced medicine in London, and drew the unfavorable attention of the Royal College of Physicians in 1613. He was prohibited from practicing what Roberts and Watson describe as "Polish and German methods," which may indicate that Saunders learned Paracelsian ideas from Dee and through his library collection. Saunders was allowed to resume his medical practice after receiving a degree from the University of Franeker in 1619. Elias Ashmole knew Saunders and his activities, describing him as an astrologer and physician as well as a scryer with a reputation for seeing visions in crystals." It is not surprising, in light of this description, that Saunders found a place with Dee.

Pontois was first mentioned in Dee's private diary in 1592.¹² The angels approved of him, and in 1607 Dee was preparing to embark on another journey - at the venerable age of sixty-five - accompanied by Pontois. The angel Raphael described Pontois as "a very honest and well-disposed young man," who would prove to be Dee's "greatest comfort and special ayd, next unto the Almighty."¹³ Dee was concerned for the safety of his library during the journey, and Raphael told him to let Pontois take care of it. John Selden, in *De dis Syris* (1629), suggested that Dee bequeathed the control of the library to Pontois rather than to

9. See *ibid.* pp. 57-68 for their account of the dispersal of Dee's books and for more information concerning his relationships with the people mentioned in this paragraph.

his own son, Arthur Dee.¹⁴ In a letter to Elias Ashmole dated 26 December 1672, Anthony Wood reported that Dee had died in a house in Bishopsgate Street in London, the same street (perhaps even the same house) where John Pontois lived.¹⁵ In 1619 Pontois traveled to Virginia, where he became a prominent figure in colonial politics and administration. It is not known whether he took any of Dee's books with him, but Pontois returned to England in 1624 and died shortly thereafter.¹⁶

After Pontois's death in 1624, the remains of Dee's great library were formally sold.¹⁷ But what of the angel diaries, the holy table, and other objects used in the angel conversations? Who possessed them after Dee's death? Were they, too, sold in Pontois's estate sale? Some items - most notably the ring and lamine - were no doubt buried with Dee. According to statements made by Patrick Saunders and a London grocer, Thomas Hawes, some other items were in the possession of John Pontois prior to his death.¹⁸ In depositions taken during the settlement of Pontois's estate, Saunders described Pontois's double study, which contained some of Dee's books, a few old trunks, "a Table . . . which Pountys [*sic*] rec[k]oned to be of great value," and a "stone or Jewell of Cristall." Hawes's description of the double study was more detailed. The grocer referred to "a certain round flat stone like a Christall which Pountis said was a stone which an Angell brought to doctor dye wherein he did worke and know many strange things." The valuable table was also more fulsomely described as a "Table with Characters and devises uppon it which was kept covered by the said Pountis in the innermost of the upper studdyes."

As for the angel diaries, the volumes later printed by Casaubon were purchased from Pontois's estate by Sir Robert Cotton along with the holy table.¹⁹ The fate of the remainder, those unpublished until Christopher Whitby's edition, has remained more conjectural. Another man, John Woodall, has been linked to Pontois's death. Elias Ashmole recorded that it was through Woodall that the diaries came into the hands of the London confectioner Mr. Jones.²⁰ Woodall was a Paracelsian

Debus, "John Woodall, Paracelsian Surgeon," *Ambix* 10 (1962): 108-118; Allen G. Debus, *The English Paracelsians* (1965) (New York: Franklin Watts, 1966), pp. 99-101.

physician and a member of the Virginia Company. When Pontois departed for the colonies, he left the keys to his studies, counting house, and stillhouse with Woodall.

Between 1624 and 1672 we know nothing of Dee's diaries. Elias Ashmole came to possess them from the widow of confectioner Jones, who had purchased a wooden chest from a "parcell of the Goods of M^r John Woodall Chirurgeon." The chest contained Dee's earliest angel diaries in a secret compartment.²¹ Though Ashmole credits Woodall with purchasing the item "after D^r Dee's death, when his goods wer exposed to Sale," it is also quite possible that Woodall made off with the diaries - either wittingly or unwittingly - after Pontois's death. Once in the Jones's household many folios from the angel diaries were destroyed. Finally, the diaries passed from Ashmole's hands into the collections of the British Library through Sir Hans Sloane, although the exact delineation of this transfer is not clear.²²

Dee's death and the dispersal of his possessions failed, as the angels had promised, to delete his angel conversations from memory. Once selections from the angel diaries were published by Meric Casaubon in 1659, Dee's activities became public knowledge. Tantalizing glimpses of a sustained interest in scrying and angelology after 1659 suggest that the seventeenth century was no less interested in the occult features of the natural and supernatural worlds than Dee had been. Not everyone remembered Dee's efforts for the same reasons, or was interested in the same aspects of the angel conversations, however. Some scholars, like Casaubon, were committed to suppressing and discrediting Dee's angel conversations so that others would be discouraged from scrying. Natural philosophers, on the other hand, were interested in the methods and theories that provided the theoretical basis for the conversations, and some might have been intrigued by Dee's references to the prophet Elias's return. Generally, people were intrigued by the angels, as well as by the ritualistic aspects of the conversations.

The subsequent interest in Dee's angel conversations deserves further consideration. Although a detailed examination of seventeenth-century attitudes promises to reveal new information about experimental practices, the status of the occult sciences, and the growing belief in the power of reason over the power of revelation, such an undertaking is beyond the limits of this study. One of the most prominent seventeenth-century natural philosophers to express an interest in scrying, for exam-

22. Christopher Whitby discusses the murky chain of events that might have led from Ashmole to Sloane. See Whitby, *AWS* 1:3-7.

pie, was the chemist Robert Boyle (1626-1691). Boyle, by his own admission, was "tempted" to try his hand at scrying.²³ In autobiographical remarks dictated to his friend Gilbert Burnet, Boyle reported several scrying episodes, including one involving a cleric who offered to show Boyle "strange representations" in a glass of water.²⁴ Though Boyle did not accept the offer, he later felt "the greatest Curiosity ... in his life" when a gentleman brought him "an Ordinary double convexe glasse" in which to see spirits.²⁵ Boyle overcame his intense desire to scry and considered this denial of a potentially sinful activity his greatest moral achievement. Such a reaction is intriguing, especially in light of Boyle's belief, shared by Dee and Ashmole, that communication between a natural philosopher and the supernatural or spiritual parts of the cosmos would facilitate the genesis of the philosophers' stone.²⁶

As observed, in Dee's work the philosophers' stone was linked to the restitution of nature as well as the figure of Elias. The role that Elias would play in the restitution of nature continued to exert a powerful influence on seventeenth-century natural philosophers, particularly those influenced by Paracelsus. In central Europe, Gerhard Dorn, Johannes Montanus and Alexander von Suchten publicized Paracelsus's belief that "Elias artista" would restore the arts and sciences before the final days.²⁷

27. Herbert Breger, "*Elias Artista*—a Precursor of the Messiah in Natural Science," in *Nineteen Eighty-Four: Science between Utopia and Dystopic*, ed. Everett Mendelsohn and Helga Nowothy (New York: D. Reidel Publishing Company, 1984), p. 56. Dee owned a particularly rich collection of works by both Dorn and von Suchten. In the case of Dorn, Dee's books included: two copies of the *Lapis metaphysicus* (1570), Roberts and Watson, #i447-Fr and #2285; *Monarchia physica* (Basel, 1577), Roberts and Watson, #i5i2-T; *Chimistici artificii partes tres* (1568), Roberts and Watson, #1524-^ *Clavis chimistica philosophiae* (Lyon, 1567), Roberts and Watson, #i525-T. The works of von Suchten in Dee's library consisted of three copies of his *Libellus de secretis antimonii* (Augsburg, 1570), Roberts and Watson, #1454-T, 1529-T and 2276-T. In this work, von Suchten makes specific references to Elias, as Breger notes. Dee criticized Dorn for using his *monas* symbol without acknowledgment ("sine grata nostri mentione") on the title page of his copy of part one of the *Chimistici artificii*, now New York Society Library no. 86.

Though Herbert Breger notes that the "Elias artista school of thought became widespread in the last three decades of the sixteenth century," it is evident that it did not cease to be important after Dee's death.²⁸ Nor was interest in Elias confined to followers of Paracelsus. Both Jan Baptist van Helmont (ca. 1577-1644) and his son, Francis Mercury van Helmont (1618-1699), spoke of Elias in their works. Ultimately, Breger credits the gradual disappearance of Elias from natural philosophical texts to the "decline in the belief that the world was soon to end . . . and the rise of a new mechanical and rational philosophy."²⁹ Scholars have not, as yet, precisely studied Elias's disappearance, but this promises to be a fruitful avenue of inquiry.

Not all natural philosophers - not even all occult philosophers - were proponents of the blend of eschatology and natural philosophy found in Dee and Paracelsus, however, and some were deeply skeptical of Dee's angel conversations. Meric Casaubon, now known almost exclusively for his role in the publication of the angel conversations, found much to fault in Dee's reliance on spiritual advisers and direct revelation. Casaubon's preface suggests that, though the tenets of Christian natural philosophy were still known, people were unsure of its methods and results. In Casaubon's estimation, for example, Dee was undoubtedly "a very free and sincere Christian," but Casaubon was not convinced that he really deserved the title of mathematician, despite his piety and devout prayers.³⁰ Ultimately, Casaubon's low opinion of Dee's angel conversations stemmed from his belief that he had been deceived by bad spirits masquerading as good angels. Casaubon hoped that the publication of the sordid details of Dee's angel conversations would convert atheists to a belief in the spiritual world, moderate the opinions of advocates of prophecy and revelation (such as the Anabaptists) who relied too much on spirits for answers to their dilemmas, and encourage people to appreciate the power of prayer. In addition, the publication would reorient people who consulted astrologers and conjurers - as well as those who read about such dangerous ideas in books.³¹

Despite Casaubon's fervent desire that people would abstain from attempting to contact "false lying Spirits," *A True and Faithful Relation* seems only to have encouraged such activities.³² A set of manuscript diaries now in the British Library records the activities of a group that gathered between 24 July 1671 and 18 December 1688 to converse with angels through a crystal. The dates of the last conversations suggest that

28. Breger, *"Elias artista,"* p. 57. 29. *Ibid.*, p. 62.

the group initially became involved with the angels after reading Casaubon and discovering that there was some ambiguity in Dee's mind as to whether the much prophesied year of cosmic restitution was actually 1588 or 1688. Like Dee, the group employed a scribe "E. R[orbon]," and two other regular participants are mentioned: "R. O." who occupied Dee's role in the conversations, and another referred to at times as "E. C." and occasionally as "Brother Collings."³³ The angels the group conversed with were identical to Dee's, and the angels Madimi and Galuah frequently appeared - two of Dee's most idiosyncratic angels. Although these later conversations superficially resemble Dee's, however, the practitioners were not deeply engaged with natural philosophy but were primarily concerned with their financial security, and there was a great deal of interest in the recovery of buried riches.

Although a wider circle of readers was exposed to his attitudes toward the contents of the angel diaries through Casaubon's publication of *A True and Faithful Relation*, his criticisms of the work were not nearly as dismissive and damning as those of the natural philosopher Robert Hooke. It is evident from Hooke's reference to the "many Discourses" he overheard among his friends at the Royal Society that the angel conversations were a popular topic there.³⁴ In a lecture given to the Royal Society on the subject, Hooke referred scathingly to the angel conversations as "Dr. Dee's Delusion," though he considered Dee to have been "an extraordinary Man, both for Learning, Ingenuity and Industry."³⁵ Hooke rebuked Casaubon as well, stating that *A True and Faithful Relation* was "extravagant," despite the fact that he agreed that the documents were a valuable weapon against atheists, "Enthusiasts, who altogether depend upon new Revelations," and those unfortunate enough to seek out witches, conjurers, and astrologers.³⁶ Nevertheless, Hooke, like Dee and Casaubon before him, found something of interest in the diaries. He believed that the conversations should not be accepted at face value, but were a form of cryptography - one of Hooke's own passions - which hid valuable political information that Dee had gathered for Queen Elizabeth.³⁷

The angel conversations took on a different cast outside the world of scholars and natural philosophers, and hints of Dee's interest in angels appeared in several seventeenth-century dramas. Dee's troubled and star-crossed life may have lent itself to dramatization even before the publication of the angel conversations. Frances Yates has suggested that sto-

ries of Dee's alchemical and angelic activities provided the model for Ben Jonson's play *The Alchemist* (1610).³⁸ This seems likely, given the plot, yet Casaubon had not printed the diaries at that early date. Jonson would have had to draw on popular lore for his information, and there are no precise references to Dee's angel conversations in *The Alchemist*. After Casaubon's edition of excerpts from the angel diaries, however, Samuel Butler was able to include more detailed information about Dee's activities in his satirical poem *Hudibras* (1664). There Butler describes a Rosicrucian cunning-man and natural philosopher, Sidrophel:

H'had read Dee's prefaces before,
The Dev'l and Euclid o're and o're
And, all the intregues 'twixt him and Kelly,
Lescus [Laski] and th'Emperor [Rudolph] would tell yee. . . .³⁹

Later in the poem, Butler found a way of expressing his own opinion of the angel conversations:

Kelly did all his feats upon
The devil's looking-glass, a stone,
Where playing with him at Bo-peep
He solv'd all problems ne'r so deep.⁴⁰

Butler was well versed in the contents of *A True and Faithful Relation*, though he dismisses the conversations as a form of charades produced by Kelly.

The protracted metamorphosis of Dee's angel conversations described here - a transformation which led from his own conception of them as the pinnacle of Christian natural philosophy and the way to practice natural philosophy at the end of the world, to the moment when Casaubon published them to discourage conjurers, to Hooke's theory that they were a form of cryptography - has the potential to tell us something about other changes that affected natural philosophy. "Dr. Dee's delusion" was not how the angel conversations were described in his own time; this description surfaced in the century after his death, when the effects of humanism and the Reformation were being felt and expressed in very different ways. In the seventeenth century, Dee's emphasis on the Book of Scripture and the power of divine revelation was replaced by an emphasis on the Book of Nature and the power of human reason. Because Dee's goals were shrouded in eschatological prophecies, alchem-

40. *Ibid.*, pp. 631-634.

ical parables, and cabalistic allusions, they were identified as part and parcel of natural philosophy's bookish and allegorical past rather than its experimental and observational future.

More recently, Dee's angel conversations have been cast out of natural philosophy entirely, and little space has been reserved for Christian natural philosophers like John Dee. Yet Christian natural philosophy was a vital part of the early modern period's complex intellectual life. The men who advocated and practiced it - such as Agrippa, Paracelsus, and Postel - were among the most lauded scholars of their time. Keith Thomas, in his examination of early modern prophets and their activities, warned that it is "not enough to describe such men as lunatics." Instead, Thomas encouraged historians "to explain why their lunacy took this particular form."⁴¹ In the case of Dee, it was his challenge to practice natural philosophy with a corrupted text - the Book of Nature - which encouraged him to find a new, incontrovertible source of natural philosophical information. John Dee's angel conversations came into being at a particular moment and time, and blended into a unique, but comprehensible, attempt to practice natural philosophy at the end of the world.
